Fish Commissioner Henry C. Stanley, of Maine, was in Boston the other day. He is greatly pleased with the result of the recent fish and game legislation in that State. "They have given us everything we asked for," he remarked. "Maine is waking up to the value of her greatest interests. The legislature has given us our appropriation, and amended the laws at almost every needed point. The whole State is with us, even the Governor. Commissioner Wentworth and myself have the Commissioner of Forestry, Mr. Oaks, to help us, and he is a good man, and will work with us. The Maine Game and Fish Protective Association is with us, almost to a man; the society has tendered us unmistakable assurances of this. The new law has given us almost too much power, besides the means for enforcing the statutes, as well as continuing our fish and game propagation. We have the power to stop any and all fishing and shooting if the need be, even in the open season. The old wardens were all legislated out by the new law, and the selection of the right men is in our hands. These wardens will each one be required to give a bond of $2,000 for the faithful performance of his duty. What could be better? The Governor will appoint the men we want, and we have the means to aid them in enforcing the laws, or better still, to so patrol the more dangerous portions of the State that there will not be so much need of enforcing the law. The State has put great confidence in us, and matters look very bright. There is extremely little opposition to the Fish and Game Commission. Occasionally, somebody is displeased, but considering the size of our territory, the great number of interests we come in contact with, and the many people with whom we have to deal, there is very little trouble." The warm endorsement of Mr. Stanley I have from other sources than his own words. The fishermen all over the State are in sympathy with him. To his labors they attribute the success of land-locked salmon in the many lakes and ponds in the State. They are greatly pleased with the fact that in many of the ponds, formerly given over to pickerel, but more lately stocked with black bass by the commission, trout are actually beginning to be abundant. Mr. Stanley's theory is, and many of the sportsmen of the State endorse it, that the bass destroy the pickerel, while not troubling the trout. As the pickerel disappear, the trout return; all of the ponds in Maine have once been trout ponds.

The legislature just adjourned in that State was a most peculiar one. It was well understood all through the session that the fish and game interest was the most important one before it. It was termed "The fish and game Legislature," by some of the sarcastic and jealous farmer members. One of the members writes a Boston friend: "The game and fish legislature has adjourned. It has adjourned because there are no more fish and game laws to pass. If there had been another six-inch trout in any brook in Spoodunk that needed a law passed for his protection, the legislature would have remained in session another week."

Mr. L. Dana Chapman, secretary and treasurer of the Megantic Club, is just out from a flying trip to Stratton, Me., on club business. On the 12th of April he had a rather novel experience. He was driven from Stratton to Eustis in a sleigh, and the snow was frozen, with the sleighing excellent. There were still nearly two feet of snow on the ground in that region. The streams were locked in ice, and it did not seem as though spring fishing could be very near at hand. Mr. Chapman is back and at the tackle trade at Dume, Stoddard & Kendall's again. Outfitting for the spring trolling is making good progress in the tackle stores here. At Appleton & Basset's it is mentioned that orders for outfits, to be ready when the ice is out of the Maine lakes, are unusually good.

SPECIAL.

Can Still Go Fishing.

TARPON SPRINGS, Fla.—The freeze has killed all my roses, cut down all my trees, and demoralized my plants generally. But the fishing is good. Game is plenty. The town is full of guests; they are all satisfied, and your humble servant is happy as a clam. TARPON.

Salmon Fishing For Sale.

Freehold; on the best fishing waters of the Southwest Mirimichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York City.—Adv.

SOME MONTANA FISHING.

In the cold, swift waters of the Missouri, standing at the foot of a pier of the foot bridge at Great Falls, Montana, armed with a common cane pole, ten-cent line plain hook, and mustard bottle full of 'hoppers, I have landed thirty greyling and white fish in forty minutes. When I took my catch to the office of one of the leading papers of Great Falls, upon which I was engaged, I was indeed surprised that any doubt should have been manifested that the greyling were caught at that point. It took a practical illustration to prove to the editor-in-chief that they came from the Missouri—and that, only three blocks from the office. The greyling may not belong to the aristocratic family of gorgeous-hued trout, but as a gamester and food fish there is none better to my taste.

A few hundred feet up stream from the point I speak of is a railroad bridge, about the piers of which a species of eel, which I was told were ling, are caught. Whether they are true loto molva I am not prepared to say, yet the description given of lings in natural history tallies with the fish I have mentioned. They weigh from a half to two pounds each, and have a ready sale at the restaurants at fifty cents to one dollar each. The sight of the bait used to catch these ling almost made me fall off the bridge, being nothing less than maggots. Twenty feet from this bridge is a dam, above which is a wide lake, known as Broadwater Bay, about the docks of which pailfuls of dace are taken with beefsteak as bait.

In the mountain streams of the Belt range, forty miles away, trout abound. I was shocked to learn, a short time after my arrival at Great Falls, that the usual method employed by the people thereabouts to catch trout was to explode a portion of dynamite upon the waters. This practice, I am pleased to learn, has been so severely criticized by the Montana press that it is almost stopped.

Below Black Eagle Falls, four miles north of the city of Great Falls, numerous dip nets constructed of wire screen are employed to catch white fish, and the business is a profitable one during the months of April to July. In my rambles, I explored the mammoth spring two miles down stream from Black Eagle falls, and was surprised to notice that upon the bottom of this body there were hundreds of blue catfish averaging three and five inches. The water comes bubbling up in huge billows among the great square chunks of stone, so cold, that in July one can hardly hold his hand in it a minute. Tons of matter a minute are thus heaved up in a space of twenty feet in circumference, and form a rushing, roaring cataract, which terminates in the Missouri a hundred feet away. How these fish came there I do not know. One party told me the only explanation seemed that they came from some mountain river which fed the spring. No other species of fish were noticed in the water. All the fish were dead, and looked as though they had been plunged in hot water. Whether the cress, which grows in abundance about this spring, or their conjectured swift passage through the earth, is responsible for their death remains for some other than me to explain.

Breckenridge, Mass. F. J. S.

A New Fishing Resort.

BOSTON, April 3.—Scytheville, N. H., a small town of the Granite State, hitherto but little known, will soon take its leap into prominence and become as famous, at least among the angling fraternity of New England, as it was formerly obscure. The event which will give this great notoriety to Scytheville will occur on May 1, the opening day for trout fishing in New Hampshire, and consists of giving the privilege to fish in the waters of Pleasant Pond, an interesting sheet of water lying close to the village. There has been a close time on this pond for six years. The law covering it has lately been repealed, and as the pond has been heavily stocked during and even before that time, it is reported to be now fairly alive with trout. No restrictions are placed on the stories as to size, and very large figures are put before the weights of some of those recently seen. Forty or fifty boats will be ready for the use of expectant fishermen at the opening week, and as the pond is about two miles in diameter, plenty of room can be had for the enjoyment of the sport by all comers.

The artificial minnow as a bait for trolling is nearly as well known to fishermen as the ancient spoon itself. The celebrated phantoms, Caledonian and white bait minnows have been made in almost every shape and size, and their killing qualities have been unquestioned for years. But one thing seemed wanting to make them more effective as a lure, and that was life-like motion in the water. To accomplish this purpose, Mr. H. O. Stanley, the well known Fish Commissioner of Maine, has devoted considerable time, and has finally produced a minnow which thoroughly covers the desired points. The new lure will be made of aluminum (minnow shaped) in two sizes, and is well supplied with hooks. It is so built that when drawn through the water, it darts from side to side, at the same time preserving a rotary motion. It will be named the "Stanley smelt," as it closely resembles the favorite salmon bait when under water. Patent rights have been applied for, and the new bait will shortly appear on the market under the joint ownership and management of Mr. Stanley and Mr. L. D. Chapman, of Boston.

HACKLE.

Woods Holl Aquarium.

The fish commission has greatly improved its facilities for taking care of living marine animals in its handsome show tanks at its Cape Cod station. The aquarium is not large, its total capacity not much exceeding 2,000 gallons, distributed in seven tanks, but it is well arranged, properly lighted, has an ample supply of pure water, and is located in a rich field for collecting.

During last fall a number of curious fishes were taken by Mr. Edwards, one of them a banded chætodon never before seen in these waters. He obtained also the African pompano, a very rare fish around the cape. This was seined along with the common pompano at Nobska beach. Eleven of the Africans and thirty-eight of the common kind—all young—were secured for the aquarium.

The black margins of the tail, back and belly fins made a very pretty contrast with the sober silvery colors of the ordinary species. Both kinds endured captivity well, and

took food regularly. Less can be said of the striped bass, however, for while they lived from September to January, and were then killed by excessive cold, they never were seen to take a mouthful of food.

Tom cods are invariably larger than they were last year, and they are free from parasites, contrary to the usual rule. There are no small fish among them, and their abundance is greater than usual. Mr. Edwards is informed that the tom cod spawns in brackish water, at all events the eggs have not been successfully hatched in pure salt water at Woods Holl. The very young fish are taken only in brackish water near the mouths of streams. Fishermen claim that they often see the adults huddled together in such surroundings, spawning much like the alewife.

There has been much speculation about the spawning habits of the common eel; it will therefore interest many persons to learn that Mr. Edwards secured a number of small specimens, scarcely one-half inch long, Feb. 18, in a surface-towing net. Although these individuals still retain certain embryonic characters, there is no reasonable doubt that they are common eels. When touched by the collector's forceps they coiled themselves tightly around the instrument, forming a compact little ball. These were taken in salt water on a clear and calm day, when the temperature at the surface was 30 degrees Fahrenheit—pretty cold weather even for water babies.

T. H. B.

A Brooklyn Fly-Fisher's Club.

A few sportsmen meeting accidentally at the office of Register Harman, in Brooklyn, a short time ago, suggested the idea of forming an association of anglers, all of whom should be familiar with fly casting. No sooner was the idea proposed than the party began seeking proselytes, with the result that on April 2 a meeting was held and the "Fly Fishers Club of Brooklyn" was organized with fifty charter members. At a meeting of the club held on Monday, April 8, the following officers were elected for the ensuing year: President, Charles A. Bryan, (manager Equtiable Life Ins. Co.); Vice-President, Dr. F. S. Howard, (President Fourteenth Street Bank); Treasurer, James Rice, (diamond importer, 10 John street); Secretary, Lody Smith, (President People's Trust Co., Brooklyn); Among the members are Granville A. Harman, Geo. J. Jackson, Kit Clarke, R. D. Robbins, E. W. Seymour, E. B. Rice, J. D. Adams, Dr. E. Palmer, C. G. Leviston, C. B. Boynton, A. C. Fitzpatrick, Henry A. Wells, R. S. Sayre and A. H. Watson. It having been decided that fifty should be the limit of charter members, no more were admitted at the meeting, but a constitution and by-laws were framed, membership being fixed at $50, and 170 members were proposed for admission to be acted upon at the next meeting. It is intended to limit membership to 300, and already negotiations are pending looking towards the founding of a near-by preserve and the erection of a club house.

Country Rod and Gun Club.

NEW LONDON, Ct., April 15.—At the annual meeting of the Country Rod and Gun Club, the following officers were elected for the ensuing year: George Bindloss, president; John J. Gannon, vice-president; Stephen M. Crocker, secretary and W. A. James, treasurer. The club house is situated in the town of East Lynne, within an easy distance of several good trout streams, but the season is not sufficiently advanced to offer very great inducements, although a few small catches have been made. The club regrets the loss of Mr. H. A. Penrose; he will be greatly missed by the sportsmen in this vicinity, but our loss will be their gain.

The club mourns the loss by death of one of its most highly esteemed members, Mr. Charles A. Chase, of New Haven, Ct., who died April 8. He was an enthusiastic sportsman, and it was largely through his efforts that the club was made a success. Although well along in years, he enjoyed a trip down a trout stream as well as anyone, and he was the best of company. He was a friend to the poor, and he had the respect and esteem of a large circle of friends, who sincerly mourn his loss.

WARE. DREDD.

A Proposed Invention for Anglers.

I must tell you of a proposed invention of a St. Louis genius, which should be appreciated by anglers. It is to be a spear. Now fishermen know it requires considerable skill to spear a fish even with a five-tined spear, and when a fish is running rapidly, only an expert can get him. In the new invention, a steel rod will pass through the handle of the spear for its whole length. By pressing out the top of this rod a contrivance will be thrown out at the bottom, consisting of about one hundred steel tines with barbs, and so arranged as to cover a circle of about thirty inches in diameter. This will make a formidable weapon, and he must be a poor angler who would let a fish escape from a thrust covering such a space. In fact, in a school of fish a number could be secured by a single jab, and such opportunities would often occur. The new contrivance should certainly be popular with fish takers. As your Mr. Hough tries all the new inventions and reports on same, I anticipate with much pleasure his vivid description of taking fish with the improved spring gear. He can undoubtedly do much to bring it to the favorable attention of anglers generally. As the fish supply of our waters has been so greatly reduced, anything which enables the angler to make a fair catch, such as the proposed spear, will no doubt be welcomed.

St. Louis, Mo. ABERDEEN.

A Terror on Vermin.

GREENBRIER, Ala.—Hon. Jno. S. Gill, of this county, an enthusiastic sportsman, is an inveterate foe to vermin of every kind. An excellent mimic, he can entice, it is said, any bird that answers to a call, within easy gunshot.

Thinking it would interest readers of Forest and Stream, I wrote to him requesting his record. During five years, ending Jan. 1, 1895, 219 owls, 436 hawks and 826 crows have fallen to his gun. WILL SCRIBBLER.

Connecticut Notes.

PRESTON, April 9.—The opening of the trout season here is a lamentable failure, and there is very little activity among the anglers as yet. There is considerable ice in the swamps, and the weather continues cold and windy. The streams are low and the water too cold for successful fishing. What we want is a good warm rain to put the streams in good condition. Two or three small catches have been recorded since April 1, J. N. Weaver taking the lead with ten trout of fair size. F. D. Palmer, usually an expert angler, captured two of over a pound each, and A. Mitchell, Jr., took three, the combined weight being one pound eight ounces, certainly a poor showing, compared with former years.

The largest black bass ever recorded as caught in this section was taken Thursday from Woodstock Lake by Everett Carver. It tipped the scales at just seven pounds.

There is money in everything above and under the water, even in the much abused sucker. The "Warm Springs, "while seining in the Yantic cove, above the Union station, took 1,000 pounds of suckers, and sold them for one and a half cents a pound. The local papers state that they bring $9 a barrel in New York; this looks like a pretty tall statement. E. M. BROWN.

Live Elk in Market.

We learn that a correspondent of Forest and Stream has a number of live elk which he wishes to dispose of. The animals are, we understand, yearlings, and in good condition. They are now in the West. Any of our readers who may be interested in this subject can send letters for this correspondent to us, and we will forward them.

Kill Your Fish When Caught.

SAND LAKE, Mich.—Allow me to add my mite in connection with the Boston "dumb animals." Good advice, to kill your fish as soon as possible after taking from the water. Instead of carrying a baton in your pocket, simply slip your right thumb into the mouth of the fish, after dislodging the hook, and give the head a quick bend backward. This dislocates the neck, and death is instantaneous. Try it. I have never had one struggle after treating in this manner; and the good friend who taught me this act of mercy saved many a pang over the repeated protest of the slowly dying captive in the basket. Besides, if killed, your fish will keep in good condition one-third longer than when allowed to suffocate in the creel. C. M.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.

April 25 and 26.—Toronto, Canada.—Toronto Kennel Club. W. P. Fraser Hon'y. Sec.

May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.

Shpt. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at —— P. T. Madison, Sec'y, Indianapolis, Ind.

Nov. 28.—Trials A. U. S. F. T. Club.—W. B. Stafford, Sec'y, Trenton, Tenn.

PITTSBURGH DOG SHOW.

Entries, 443. Dogs Benched, 412.

The third annual dog show of the Duquesne Kennel Club was held at Pittsburgh, Pa., April 9 to 12. In every sense the venture proved to be a successful one, and will no doubt encourage the club to fall in line with an annual fixture. Pittsburg has always been a good show town, but hitherto most of the exhibitions have taken place in the old Rink, near the river, a dirty, dark hole of a place that appealed to no one with any sense of refinement. This time the show was held in the Old City Hall, a building far better adapted to the purpose both in the matters of increased floor space, light and ventilation, the only objectionable features being the flight of stairs leading from the street and the rather unsavory neighborhood. Shows were held in this building in 1878 and in the early eighties when the old Poultry Association was alive.

The benching was nicely arranged by Spratts Co., the stage at one end of the hall being used as a resting place for the smaller dogs; and there was still room for fifty or sixty more dogs. The Smoky City can turn out a very respectable local entry especially in English setters in which breed the quality is always very strong and the same applies in a less degree to the Irish setters. For most of the quality in the other breeds, however, the show depended upon breeders from a distance, the "old guard" showing up in force with their best strings; consequently in many classes competition was very keen, and the judges could not afford to "slu:" their classes. This fact probably accounted for the judging extending until late Wednesday evening, with Mr. Mason's classes and numerous specials. Pittsburgh is noted for the variety and extent of its special list and this show fully sustained the reputation. One cannot speak too highly of the management, the bench show committee and other members of the club having no ambition to shirk their duties. Mr. John Moorhead, Jr., the President, devoted himself entirely to a general supervision of affairs and although his crack bull terrier bit the sawdust of defeat that fact did not in any way lessen his enthusiasm and energy. He was ably seconded by Mr. W. E. Littell, the secretary, who worked hard both early and late, and Dr. J. S. Philips and H. M. Breckenridge were always willing to help in the conduct of the show. Mr. E. M. Oldham made his debut as superintendent and that he acquired honors in his new sphere was the general opinion of those best qualified to judge. He has considerable executive ability and his watchful presence permits of no shirking of work of those under him. The aisles were kept in apple pie order, in fact some of them painfully so, Mr. Oldham having arranged for prizes to those attendants who kept their aisles in the best order; at few shows have we seen the dogs better cared for, the commissariat as usual being in charge of "Capt." Murphy, which is a guarantee that the dogs get their Spratts on time. The way in which Mr. Oldham acquitted himself as superintendent, his firmness and courtesy, and knowledge of what the dogmen want, suggest no lack of future engagements in this line.

The show passed off without any unpleasant happening unless the judging of the Spratts specials for the best conditioned dogs may be construed as such. The specials read: "Spratts' Patent Limited (American), offers two ten dollar gold pieces, $20 in all, to be given to the kennel men of the two exhibitors who show the two dogs, of any kind, in best condition; open only to customers of Spratts' Patent (American) Limited. To be judged by Mr. H. W. Lacy." The management construed this to mean only regular kennel men in charge of individual kennels, and, we think rightly so. This construction, therefore, debarred the all round handlers who, while they might be customers are not the "kennel men for the exhibitors." W. E. Warner, of Mr. Gould's kennel and Donald Monroe, of Messrs. Rutherford's kennel, won the pieces, though very closely pushed by Joe Lewis with the Oak Grove kennel's Irish setters. The building was kept free from offensive odors with "Sanitas," and like the proverbial kennel, was always "sweet and clean," although the temperature was at times rather chilly for the more tender dogs. There was little "kicking" about the awards as far as we could learn, though necessarily there was, in some few cases a difference between the judges' "think" and the owner's private train of thought. The judges were: H. W. Lacy, New York, for St. Bernard's, pugs, beagles and bloodhounds. Chas. H. Mason, New York, for pointers, setters, all spaniels except toys, greyhounds, collies, and bull terriers. James Mortimer, New York, taking mastiffs, great Danes, Russian wolfhounds, deerhounds, poodles, all terriers, except bull terriers, dachshunds, Italian greyhounds, toy spaniels, foxhounds, bull dogs, and miscellaneous classes. The size of the building did not admit of more than two rings, and these were fairly well served. Messrs. W. D. Brenton and J. S. Horne acting as stewards for Mr. Lacy; Messrs. Henry and Horne for Mr. Mason and Dr. Philip and W. D. Brenton for Mr. Mortimer.

Among the principal exhibitors and visitors present from a distance were Mrs. Lee, of Toledo, O.; Miss A. M. Griffin, Detroit, Mich.; Mrs. Glynn, of the same city; Mrs. Nims, of Painesville, O.; Ed. Booth, New York; M. L. Vite, H. Jarrett, C. A. Shinn, Ben Lewis, Philadelphia; Geo. Douglas, Woodstock, Ont.; W. J. Tuck, Jr., Hamilton, Ont.; Frank F. Dole, New Haven, Conn.; Al G. Eberhart, Cincinnati; Edwin W. Fiske, Mount Vernon, N. Y.; W. E. Warner, Lakewood, N. J.; Dr. J. Hartman, Latrobe, Pa.; F. H. Hoyt, and Mr. Porter, Sharon, Pa.; T. A. Howard, Columbus, O.; D. Monroe, Allamuchy, N. J.; Joe Lewis, Moodus, Conn.; Mark Lewis, Jr., Canonsburgh, Pa.; Harry Northwood, Ellwood City, Pa.; Mr. Mahler, Avalon, Pa.; W. J. Higginson, Rochester, N. Y.; F. C. Unis, Painesville, O.; John Shaum, McKeesport, Pa.; Geo. Thomas, Salem, Mass.; Mr. Baker, New York; James Robinson, Saratoga, N. Y.; W. Tebbits, who brought over the bull dog, Portswood Tiger in 1888, but has dropped out of sight in late years. About one half of the exhibitors were Pittsburghers or from adjacent towns.

The display of mastiffs was a disappointment, B. F. Lewis' Ethel, in challenge class, being the only one with any pretension to form. Open dogs proved a blank and the prize was withheld from Bess, the only bitch, and second only given to E. E. Andrews Young, the pup. They were very poor.

St. Bernards, while not turning out in any force, twenty-nine being benched, showed a good deal of quality, especially in smooths. That sweet, all round typical bitch, Miss Anna, was the only challenge rough, and she afterwards beat Empress of Contocoock for the special for best bitch exhibited; while scarcely so deep in muzzle as the smooth, she beats in general cleanness of outline, bone and hind parts. Duke of Lincoln overshadowed the well formed smaller dog, Alta Kennels' Grand Master, and was beautifully shown, looking much better than at New York, his action is perfect and not being covered with fat, one is now able to form a correct idea of his splendid body and outline. He is without doubt one of the best on the bench. The others were not in the same class with these, Belle Isle Kennels' Carl Douglas' quality, coat and good body, entitling him to third prize, however. Belle Isle Kennels' Artilla scored nicely in open bitches, beating a good rangy bodied bitch, Alta Kennels' Santa Monica, in depth of muzzle, coat, color and body; third went to Rice, St. Bernard Kennels' Arline, commented on before. A nice, Grand Master pup in Vespers won in puppies from a little brother; shows a better shaped head. In novices Artilla, Santa Monica and Arline was the order, Empress of Contocoock, well shown, was the winning challenge smooth. In open dogs I preferred Nicode, the winner, in shape of head, quality and legs and action, a little light in body yet, but is only eighteen months old. F. H. Morris' Lord Milton loses in head and expression and fore legs; Mr. Gusky's Buster, third, is rather coarse in expression and bully headed in shape, good bone and body, faulty in legs, but might go higher up under other judges. Alta Kennels' Judith took the bitch prize; looked a little fat. Nicode and Belle Isle Kennels' Clovis furnished the novice winners.

The Barzoi's were all from one kennel, and have been repeatedly described. They were Ch. Argoss, Ch. Princess Irma, Ataman IV and Riga; one in each class. Great Danes were not very striking, the well formed New York winning pup, Major McKinley, Jr., winning easily in open dogs, and Mrs. Glynn's Wolverton Hadie scored well in head and front from the third winner, Ella, in bitches, second being withheld. The prize was withheld from the only deerhound shown.

Greyhounds were a choice lot, but quality depended upon the well-known winners, Ch. Bestwood Daisy won over Ch. Southern Beauty in challenge class but there is scarcely a point where she beats in correct formation and Beauty was fairly well shown. Southern Rhymes was alone in challenge dogs, but for the special, Gem of the Season beat Southern Rhymes, though he cannot do it at either end.

Toon and Thomas's Southern Fury and Joe Lewis' Spring of the Valley took the money in open dogs, and Southern Belle easily accounted for Mr. Wolfenden's Spot in bitches, the latter being sore and mangy and should have given way to F. H. Hoyt's Martha.

The foxhounds made quite a pretty display, and were supposed to be divided into Engilsh and Americans, but as usual there was some confusion in types. In the English classes, N. S. Money's Songster outclassed R. Durning's Roy, which is more of an American in type, long ears and long, flat-sided body. The well-known Rosemary, from Chestnut Hill Kennels and N. S. Money's Mermaid are truly English in type. In Americans, Walker and Hagan's Big Strive and H. G. Twaddell's Sweep took the prizes, the former beating the other in head and bone, but, though an American in breeding, is more an "Engilshman" in general characteristics. In bitches first and second went to Walker and Hagan's Pearl Strive, and M. Lewis' Queen, who is beaten in body and bone and breadth of muzzle. The bloodhounds were all from Roger D. Williams' kennel. Vigilant, in challenge class, Buccaneer in open dogs and Lady Margaret, a fair headed one, the only representative in bitches.

There was lots of quality in pointers, but most of the winners have been doing the circuit. In heavy weight challenge dogs Glenrock Kennels' Molton Banner was alone and looked very fit. No entry in corresponding bitch class. Rinada Kennels' new purchase, the big, coarse dog, Rod H., whose only conspicuous fault is a full, stary eye, pulled off premier honors, followed by J. Davidson's Captain Meteor, a leggy light ribbed dog; third prize was withheld. In bitches the well-known Emblem scored over J. R. King's Lola Montez, who, well formed otherwise, has a wild, light, stary eye. Frank Kruse's Frankie, third, is a doan faced black with good forepart. Ridgeview Comet beat Ridgewood Penny in challenge lightweight dogs, and G. J. Gould's Lady Gay Spanker did the same to Miss Rumor, though not in the best of shape. The winners in open dogs were: G. J. Gould's Ridgeview Chancellor, Rinada Kennels' Spendthrift and J. S. Adams' Lad of Rush, the latter losing to both in head. Rinada Kennels' came

to the fore again with Ridgeveiw Sal, a plain muzzled bitch that should be better in stop; second, to Dr. Retter's Lady of Rush, a well ribbed bitch, H. Jarrett's Bessie G, came in well for third place. The puppies were not noticeable and Rod H. won in novices, second going to Frankie. George J. Gould took the kennel prize and Molton Banner was considered the best dog, Lady Gay Spanker the best bitch, and with R. Comet took the brace special.

English setters, as might be expected, made a splendid showing, there being a preponderance of true type among them and in the top divisions were well placed especially considering the crowded ring in both open classes. Cactus once more defeated Glendon and Maid Marion made her first win in a challenge class, being well shown. Open dog winners were Victoria Kennels' New York winner, The Earl, E. A. Burdette's Cincinnatus' Pride and Mahoning's Kennels' Knight Templar, all these dogs of typical formation, the latter losing in quarters and body. There were seventeen shown in this class, H. Northwood's Wordsley Dude being fairly entitled to reserve. Another hot lot of fifteen came forward in the "ladies' " division, and, the sweet headed Oak Grove Kennels' Monk's Nun appealed to the judge for premier honors; second going to Dr. Hartmann's Rita H., a well formed one, losing in head to the other; Count Howard's Pride, took reserve, both from Dr. Hartman's Kennel. In giving Aurora vhc., a slip was made, as in addition to a poor, snipy, flat head she is bowed and out in front. Among the puppies, G W. Lang's Roger O'More, was much the best, he won in dogs. The novice class was a big one and here Cincinnatus' Pride won well with Knight Templar second. Dr. Hartman took the kennel prize and Maid Marion got ample revenge for her neglect at Chicago by taking the special for best in the show, a well merited honor. There was a long list of specials, but space cannot be devoted to them here.

Irish setters were very well represented, the Oak Grove and the local Kildare Kennels sharing the principal honors. Many of the winners have been commented upon during the circuit. Oak Grove Kennels' Ch. Kildare beat Kildare Kennels' Finglas once more, but following type Kildare Glenmore should come second; Champions Queen Vic and Norna occupied their accustomed positions. D. L. and A. Carmichael's Lord Echo, Jr., has a more typical head than Muckross Kennels' Henmore Shamrock and was placed first with Kildare Kennels' Dick Finglas third, that partakes more of his dam's, Ruby Glenmore's type than his heavy headed sire. In bitches a very nice long, clean headed one in Nancy Finglas was to the front, owned by Kildare Kennels, the same owner's Ruby Glenmore II losing to the other in head, coming second; F. L. Moe's nice bodied bitch Nona whose worst faults lie in muzzle and eye, was third, with H. Jarrett's now purchase, Seminole Fly, a good reserve. D. L. and A. Carmichael's Shamrock Mardo, touched with chorea behind the shoulder, was the winning dog puppy. A good colored one of handsome outline. Nancy Finglas was the novice winner. Oak Grove Kennels took the kennel prize and Ch. Kildare was correctly considered the best in the show. The special lists in setters were long ones and entailed tedious judging. The Gordons' brought out seven and with two exceptions were owned by Dr. Dixon. T. Bollye's Fred, the only new face, reserve in novices, is faulty in muzzle. Santa Marie beat Leo B. for the special for best in show but the old dog is more of a Gordon. Ben Lewis took all the money offered for Gordon's, $71, not a bad days's work.

Spaniels turned up in force, and several old winners added to their records. In fields, open black dogs, Drayton Warwick not having arrived until the third day, Toon and Thomas's Ebony Chief and M. A. Viti's War Dance took the money. Warwick, however, was awarded an extra first on his arrival. M. A. Viti's Scandal, a nice headed pup beautifully shown scored alone in bitches. There were no entries in "any other color." The cocker classes made hard work for the judge, being nicely filled. Ch. Black Duke and Red Roland were the challenge winners in their respective colors. Open black dogs saw E. Fiske's Chief a nice winner over G. Douglas's Woodland Robbie, the latter losing in body. Woodland Princess scored easily in bitches over the E Fiske's old favorite Fashion, who seemed in whelp. B. J. Rae's Red Duke, a high, round peaky-headed sort won in red or liver dogs over E. Fiske's Billy, rather coarse, his kennel mate Vernon, an excellently fronted one, gaining reserve. In bitches Red Niobe, coarse in head but fairly well formed, beat Geo. Douglas' Lady Golden who shows more quality but is snipy. St. Lawrence Beauty won in any other color class, followed by Woodland Bessie, a reversal of their New York positions. The only Clumber, Endcliffe Bustler, has bad eye and was not in good shape. C. A. Shinn's Belva was well ahead of B. F. Lewis's Kitty of Cork in coat, topknot and head.

Collies made a pretty showing and the Chicago winner Lady Gay had a field day. She is a catchy little bitch, but that she can beat such a sterling good dog as Woodmansterne Trefoil is a very open question. She is shallow in head, light ribbed and not in best of coat, shows lots of quality and makes the most of herself in the ring; she is very much overshot. Wellesbourne Charlie and Flurry III. furnished the challenge winners. That good dog Woodmansterne Trefoil rightly scored over his kennel mate Woodlawn Trefoil and Chestnut Hill Kennels' Domino II. that did so well at New York. A pretty family pet in Goldmine, a kennel mate of Domino's took reserve, nice coat, heavy down ears. S. B. Stannard's Lady Gay won over Ormskirk Susie and Woodlawn Sunset, once more, she beats in ears but not in coat and substance or head. Chestnut Hill Kennels showed two good selling pups, the only entries. Woodlawn Park kennels took the kennel prize. Wellesbourne Charlie won the speical for best in show and Lady Gay was considered the best in open classes as well as the best bitch.

The poodles (black curly) were all from the Meadowmere Kennels, are well known and made a pretty collection; there were eight entries with four absentees. The bull dogs with one exception were from the Woodlawn Park Kennels' strong team. The showing was remarkable for the first appearance of the English crack Facey Romford, who arrived a few days before the show. Although not in very good shape, his grand bull dog qualities, compact formation, grand front and body make it certain that the cracks on this side will have a hard time of it. Lorna Doone won third in bitches, she is down faced.

Bull terriers were a splendid lot and the meeting between Streatham Monarch, Cordona and Duke of Rochester was worth seeing in every way. While Streatham Monarch may be counted the best dog, his chance was destroyed by his lack of front teeth and as Cordona can beat Duke of Rochester who also had a suspicious looking tail, Frank Dole accepted the blue ribbon with a yell and a skip that would have done credit to a Sioux Indian; something entirely novel in the conduct of this usually sedate exhibitor. This little excitement over and after he had found his hat Frank returned to win with Ch. Starlight, easily enough, over Lady Dinah. In heavy dogs his Dutch Billy scored over the rather coarse headed Billy Bulger, with the faulty fronted Topsparkle third. Mr. Dole scored again in bitches with Queen Lily, commented on at Chicago; his E. Flossie was second and a bossy shouldered one in Daisy Belle from the Rochester-Pittsburgh Kennel, third. Harper's Whiskey won over J. L. Arden's Little Billy, but was protested and found 4 1-2 overweight, so Little Billy took the ribbon. G. Wash Moore's Neglect, with a poor head, took first in the corresponding class over the slack, heavy bodied short faced Nellie Harper. Little Billy and E. Flossie were the puppy winners. It is interesting to note that Frank Dole either handled or owned every first prize winner but one in these classes, as well as winning the kennel prize; honor enough for one week, not to mention being made President of the New Bull Terrier Club. Cordona took the special for best in the show.

Dachshunds made a pretty showing and were divided into hound and terrier type, but there was not much difference in this respect, all being more or less of the English type. Fritz K, getting gray and coarse, took the challenge prize. Jay S. beat Pretzel in head and length in gem dogs (hound type), the coarse, high standing pup, Bismarck K. taking reserve. In terrier type, Lovely K had to succumb to Polly Finders once more; though I like her better in muzzle and crook, but she was not shown in very good form. Feldman K, a very nice promising pup, took reserve, and then first in puppies.

With the exception of Joe Lewis' Ringleader, there was nothing extra in beagles. No challenge entries, and but seven in open classes.

In bitches, Molly L, shown very heavy in whelp, was turned down and first given to S. B Arthur's Ginger, a very fair sort, that would have pushed Molly close in any case. Ringleader won easily the best in the show. This strangly made, typical dog, should do a great deal of good in correcting type, and putting bone and substance into some of the deteriorating stock seen too frequently on our benches.

Foxterriers had a capital entry, the largest in any breed. The winners are all familiar faces, and the Rutherford Kennel, as usual, just now, proved invincible. Their Warren Safeguard and Captious, took the challenge prizes, while in open dogs, they went 1, 2, 3 with the smart pup Daybreak, Tip Top and Warren Scamp, an excellent coated one, but rather leggy and long in body. The coarse fronted Hillside Royal took reserve. Warren Capture and Cowthorpe Gem were correctly placed in bitches, but it was close while Wawaset Lucy and Warren Sentence, the latter a beautifully fronted bitch, a little light in body yet, were placed equal, third, but it is pretty safe to say that Sentence will make up into the better one. The puppy prizes were all "captured" by the Rutherford Kennel. Wire hairs did not come out very strong. The winners are all well known, but Mister Great Snap, reserve, to the coarse headed wide fronted Tipster, second, I could scarcely follow. Irish setters were a capital lot, and the winners were Merle Grady who this time beat Jack Briggs and Jackanapes, while Dunmurry scored again over Candor, who is out of coat just now. Open dogs followed New York awards—Brian O. K. and Briggs Best. Bitches were poor comparatively. The only "Scottie" was the well-known Merry Coll.

There were no Dandie Dinmonts, and Elphinstone and Endcliffe Maggie were the only Skyes.

Black and tan terriers made a fair showing with the Canadian dog Darkie scoring well over Chicago Spider in body, head and correct thumb marks and pencillings. Ch. Gipsy Girl won in bitches over Queen III, reversing their Chicago positions and upholding our criticism. The Yorkshires were divided by sex, and the well-known Bradford Rejected and Pinkie Yorke took care of firsts for each sex.

The pug classes were filled with quality, the Howard Kennels and Rookery Kennels taking the cream of the awards. Bob Ivy seemed out of shape and would not show; in challenge class, Haughty Madge won nicely, followed by Duke Howard. In open dogs Al Von in Young Penrice's absence scored, followed by Finsbury Duke, beating in body, ears and head, the dark Patsy Bolivar coming third. In bitches the Chicago winner Hooker, had to give way to the young bitch Princess Madge, who showed herself a very different animal this time, and beat in muzzle principally. In was a close thing in puppies between the sisters Princess Madge and Queen Madge, but the former gets it in muzzle and color a trifle; Pinafore, reserve, is very promising. Eberhart Kennels' Cyrene scored easily over Lady Curtis in novices. The kennel prize competition was close, but I thought the Howard Kennel a more even lot. Young Penrice took the special for best but looked a little tucked up and was a close call with Haughty Madge, not much thinner than at Chicago.

A fair King Charles in Merryview Dixey, won alone. No Blenheims and but one Ruby, a poor one.

Italian greyhounds made a pretty display and the winners are nearly all well known—Ch. Sprite, Tinie II., and Daisy Lee, a good headed one, but ears are wrong.

Miscellaneous classes brought out nothing very startling, the Basset Bow and Al. Eberhart's corded poodle Ponce de Leon taking the money in dogs and a nice sized Mexican hairless in Beauty being the only bitch. Ben Lewis and George Thomas took the handlers prizes. Before concluding, a word of praise is due for the excellent catalogue issued. In fact it was one of the best published this year, and the management deserve praise for getting out a marked catalogue with so few errors, by Thursday morning. Prof. Burton's dog circus proved amusing; he has some excellent jumpers in the troupe.

H. W. LACY.

POINTS AND FLUSHES.

HUNGRY DOGS.

I note N. E. D.'s remarks on hungry dogs in Forest and Stream of April 13, and will endeavor to answer some of the questions he raises in connection therewith. I desire, however, at the outset, to assure him that I do not look upon a discussion of so interesting a subject as a contention of an unpleasant nature. I appreciate also that N. E. D.'s remarks were for a higher appreciation of the dog's position as an assistant to man in the pursuit of sport afield. It is only by thorough discussion that full knowledge and just conclusions can be reached. The fair manner adopted by N. E. D. is the proper manner by which to acquire the knowledge and reach sound conclusions. In replying to N. E. D.'s last letter, I shall endeavor to point out what to me at least appears erroneous conclusions, ones drawn from false premises.

N. E. D. says that his remarks apply more to bird dogs, which thereby he implies are special seekers of birds alone; that furthermore, such dogs hunt for the love of the sport, and apart from any consideration of profit in obtaining food. I think that on more mature reflection he will concede that there is no such thing as a bird dog in the restricted sense which he applies, and that there is no such thing as a bird dog exclusively, except in the artificial distinction adopted by man; that is to say, no dog is distinctively a bird dog in the sense that he hunts birds to the exclusion of everything else. Both pointers and setters dearly like to hunt rabbits, and it is in most instances the result of many weeks' training to perfect their work to the gun so that they will not chase rabbits. Then, after being broken, they are quite as fond of rabbit chasing as they were before, as is shown by their fondness for self-hunting after rabbits when they have an opportunity to indulge in it. It requires not a little punishment to train a setter or pointer to perfect steadiness to wing or fur. Good behavior in this respect is merely a matter of compulsion. Even when trained, he will at times give way to temptation. Unsteadiness is merely the effort of the dog to capture the prey for himself. Setters and pointers will hunt rabbits from a very early age. Indeed, they will hunt them in preference to birds, and they show a keener enthusiasm in their pursuit. They take to it from the first opportunity, and the trait is uniformly present in the breed. As a matter of choice, all dogs prefer to hunt rabbits rather than to hunt birds. The instinct to hunt birds is in most instances developed at a later period than the instinct to hunt rabbits. When the dog works to the gun and refrains from hunting rabbits, it is because he has been punished for chasing them. He does not chase, because he dare not. His inclination, however, is as much for a good chase as it was in the beginning of his hunting career.

In regard to a dog being hungry, if he is fed well once a day, his diet containing a large ratio of meat, he is not hungry when at work, or at least not hungry in the sense that he has insufficient food. It is a mistake to assume that the needs of man are a measure by which to measure the needs of the dog. They are widely distinct in their natures. The dog is carnivorous, and therefore needs less food, less often, than the herbivorous or herbi-carnivorous animals. The ox must consume vast quantities of food to supply the needs of his system, and a large part of his time is devoted to eating. The dog and cat eat infrequently, and a small quantity comparatively supplies their needs. Dogs which are overfed are slothful and predisposed to disease. They are disposed to accumulate fat and become indolent. A dog which is thin in flesh, even though he may appear to be insufficiently fed, is in a healthier state than the overfed dog. I once had an opportunity to observe the practical effects of feeding dogs in the morning before they were worked. In Minnesota, in 1882, a number of dogs so fed were all afflicted with a bowel trouble, which was not affected beneficially by the most careful treatment. Two or three of the dogs died from it. The food consisted of corn meal bread, broken into beef broth, and good boiled beef mixed with it. On the advice of a veterinarian, they were fed largely on meat diet and only had one meal a day, when they were fed all that they could eat. The trouble soon disappeared.

Now, in regard to the dog hunting for sport. N. E. D. advances some traits common to all dogs, such as their promptness in killing rats, etc., as tending to prove that they hunt and kill for sport. It does not seem to me that such is a correct interpretation of those acts, nor does it seem wise that dogs out of pure wantoness should kill animals which they cannot eat. This trait, on the contrary, is undoubtedly of material benefit to them in their struggle for existence. While it is true that dogs in domestication do not need all the instincts which serve them so well in a wild state, it is also true that they still retain many of them. And if dogs are turned into the wilderness they soon revert to their former wild state and manner of existence. Indeed, dogs do not entirely lose their wild traits even in domestication, as witness the peculiar fondness dogs have for going in packs and prowling about. If a dog can get but one companion, he is then very likely to sally forth in the night and commit predatory acts. In this manner, the bad habit of killing sheep is generally acquired. The manner of the wild ancestor in hunting in company seems to develop into destructive action when dogs run together at large. When the dog is kept by himself or not permitted to assume vagrant habits, he rarely develops any offensive habits. We note that, in the animal world, the matter of securing a food supply is but one factor in the great problem of self-preservation. Many animals which prey upon others are in turn preyed upon or have most unrelenting enemies. Thus, besides securing a food supply, there is required the most unremitting vigilance of self-preservation. The teeth of the dog are therefore weapons of defense as much as they are for attack. He uses them on animals which compete with him in the same field for a food supply and on such vermin as annoy him. The rat will not only steal his food, but it can annoy him as well by disturbing his repose by its predatory habits. In domestication, the dog is prone to kill any animal which interferes with his master's home if it be an intruder. He soon learns what animals he can kill and win his master's approbation, or gratify his inherited enmity against them.

There is an ancient enmity between the dog and the cat, yet while they are rarely good friends, they maintain about the hearthstone a civil neutrality. But if the dog can catch a cat away from home, he manifests the most active hostility. Yet one would hardly call this ancient enmity an exhibition of sporting tendencies.

In short, the whole intelligence and instinct of the dog are much the same in their application as are those of other animals. That is for the preservation of the animal. He attacks some animals for food, while others he attacks because they are injurious to him, and he is safer or more comfortable if they are destroyed.

In domestication, he will do much to win the approbation of his master, and being both brave and intelligent, he will fight many times at his master's command. He jealously guards the home against any intruders, and always with the most unselfish motive, since he does not approve of a possible competitor.

B. WATERS.

COON HUNTING.

Among the numerous valuable articles of Forest and Stream, I read occasionally of a coon hunt, which is my favorite sport; not as a matter of choice, but as big game is a thing of the past here in Southern Ohio. We have to take sport in hunting what is left, that is, the fox, coon and rabbit, principally, upon which we work our hounds. So we do the best we can—hunt them, and read Forest and Stream, and learn what our brother sportsmen are doing who are more favorably situated.

The season just past has been a good one for the sport, in this section of the country. Fifteen coons and as many opossums were caught, holding the best record, catching ten coons and as many opossums in two nights, five coons and one oppossum each night. We are favorably situated for hunting, having woods on every side of us from one to two miles, and one mile from the Little Miami River, with high hills on either side covered with heavy timber and a thick growth of underbrush which make a good harbor, and a hard place to travel through.

In the first part of the season the coons are not found here, but in the flats, back from the river, where they rear their young, there is plenty of corn and mast, and the lesser streams furnish small fish and crawfish, upon which the coon mostly lives. The coons return to the river hills late in the season after the young are grown, where they are hard to capture, taking to the river as soon as they are closely pursued, a place where they know they are safe. They drown dogs which try to take them out.

Our first night's experience resulted in making a big

catch. Starting for the woods one Saturday night in October, with a neighbor who is an old coon-hunter, and taking along my well broken hound, Spot, we had hardly reached the woods when we heard Spot's musical voice echoing over the valley beyond. By the way he went through the woods, we knew it was a hot track. Presently the music changed to a welcome bark. We hurried to the tree. Each of us had a lantern in his hand. We kill the coons by shining and shooting at the eyes, which is much easier than chopping or climbing, as some of the hunters who write in Forest and Stream do. We saw a pair of small, red eyes shining in the fork of a limb. My companion, taking aim, fired, and down came ring tail. Spot was there to welcome him, but he was too far gone to make much of a fight.

We went to another woods near by; here Spot found another track, which was soon run, and proved to be that of a big opossum. It was resting on the first limb, usually the stopping place of coons. One shot and he was down.

On we went further into the woods. Spot presently found another track, which was a little cold, but he stuck to it, as all good hounds do. After half an hour's work the coon was treed high up in a tall sugar maple. Two shots were required to dislodge him, but finally he came down in good fighting shape, but was soon shaken to death by Spot.

This making us a good load, we resolved to start for home. We passed through a small sugar camp where two well known dense trees are standing. Reaching the camp, we entered the corner of the woods where the trees were. Spot, knowing what was up, went ahead, and soon we heard him sing out in a way which we knew indicated a hot track. Back and forth through the woods he went yelping at every breath. Meanwhile we were congratulating ourselves on being able to find so many hot tracks, and hoping this time there were two or three together.

"There!" he says, "treed." We went to the trees, lanterns on our heads. To our joy, we saw three pair of eyes, making targets of a kind which take a little practice to hit. Taking turn about, we knocked them out one at a time, giving Spot all the fighting he wanted for once. We two concluded we had all we wanted to carry. Five coons and one opossum were caught, so we went home well satisfied with our Saturday night's hunt, resolving to try it again the next Saturday night.

Ohio. CLAYTON HUFFMAN.

The S. P. C. A.

The people at large, generally speaking, have but a vague and limited idea of the work done by the American Society for the Prevention of Cruelty to Animals, and oftener they have no idea at all. Indeed, in some instances, a prejudice exists against the society on the assumption that it is unnecessarily meddlesome and oppressive in enforcing matters of mere sentiment as matters of humane usage Be this as it may, there is always an underlying principle of good purpose in their actions, and society at large is a debtor to the S. P. C. A. for its unremitting efforts in behalf of humanity. It is not only an active factor in the punishment of brutal acts, but it is a constant monitor and wholesome check on those who are brutally inclined. Its efforts in behalf of humane treatment are far-reaching and practical.

The twenty-ninth annual report of the society recounts many instances of brutal treatment, and the conviction and punishment of the offenders through the prosecution of the society. All domestic animals alike come within the scope of the society's protection and care, and many a horse, dog, cat, cow, goat and chicken, if they could but talk, would express their earnest gratitude for the needed protection. An excerpt from the address of the president will best show the earnestness in the cause and the efficiency of the work. He says, "During the past year there has been a notable diminution in the number of animals suspended from labor on account of sickness and other disability. The fact indicates no decrease of efficiency or fidelity in our officers. What it indicates is that the number of animals which are abused in that way is less than it ever was before. In producing this result, the fear of legal penalties has doubtless been effective; but it may be hoped that a sentiment of humanity has also been growing among the owners of draught animals, since it is observed that the watering fountains which have been erected in many parts of the city are more frequently used by drivers than heretofore.

"Our ambulance service is an important part of our system. The ambulance house is within a block of our headquarters, and is connected with it by telegraph, and a code of signals is used under which orders can be given and obeyed at a moment's notice. Two large ambulances, with derrick and slings attached thereto, are in constant readiness to answer any call. It is interesting to remember that ambulances for the relief of horses and other large animals were first introduced by our own society. They have since been introduced elsewhere, but in our own service we believe there are improvements which render them superior to all others. The efficiency of the derrick and slings in the extrication of horses from holes and excavations has been practically proved in very many cases. It is noteworthy, however, that they have been less frequently required of late than they were only a year or two ago, and the reason is that contractors are now treating their horses much more humanely. It may be observed, for example, that in making excavations, steam power has been introduced to a very large extent, so that the number of horses actually in use are employed rather to guide than to drag the carts, since the pulling force is supplied by steam.

"Under Chapter 115, of the laws of 1894, approved by the Governor on the 8th day of March last, our society was invested with all the powers and functions which were formerly intrusted to the city government in the licensing of dogs, in the capture of estrays, and in the detention, and if necessary, the humane destruction of captured animals at the city pound. The powers with which the society has thus been invested are large, and the responsibility which has been imposed upon us is heavy. It may be taken for granted, I trust, that in performing the duty which has been devolved upon us, we shall endeavor to act in the interest both of the public and the animals that may be captured; but I do not conceal from myself that the exercise of such functions exposes us to a constant danger of interference with the rights of our fellow-citizens, and that, in the absence either of ample facilities for efficient service or of vigilant supervision by competent persons, we must expect that our administration would be inefficient and would speedily become odious. I could by no means advise the extension of the provisions of the new law to societies in small places, and I should particularly deprecate it if the object of local societies in seeking such powers were to be the increase of their revenues by license fees. The fact is that the license fees in a small city would not nearly pay for the maintenance of a sufficient establishment and a sufficient corps of servants, and still less could they be expected to pay for that sedulous and unremitting supervision which is indispensable to succeed. Our own service at the present date requires four ambulances and two wagons specially constructed for their purpose, eight horses, with necessary stable room, and twenty-two persons who are at work in different relays by day and by night. The employees, of course, make daily reports, and are in hourly communication with headquarters, to which they apply for instructions in every case of doubt or difficulty The building which is used for the shelter is not what we should like it to be; but it is 100 feet in length by 25 feet in width, and is fitted up with every possible convenience for the maintenance of the captured animals, and for destroying them without pain, in case they are not claimed within the time fixed by the law.

"The shelter has been in operation for barely eight months. The undertaking was necessarily experimental; but its arrangements were carefully planned in advance, and thus far they have been carried out with reasonable success. There is only one institution in the world with which the shelter can be compared; I refer to the Battersea Home for Dogs in London. On examining the thirty-third annual report (1893) of that excellent institution, I find some interesting particulars. The Battersea House has the assistance of the metropolitan police of London; its operations extend throughout the city and county of London, with a population about three times as much as that of the city of New York. I find that in 1893 it received 17,928 homeless dogs; and it may be inferred that in a city of one-third the population, it would have received 6,000 in twelve months, or 4,000 in eight months. Our own shelter, by the work of our own employees, and with no assistance whatever from the police, has received in eight months 5,111 dogs alone; that is to say, in the first eight months of existence, with new machinery, and acting under a new law, the shelter has received over twenty-seven per cent. more dogs than Battersea Home, after thirty-three years of experience, and with all the assistance of one of the best organized police forces in the world, had received for an equal population in the same period of time. But this is not all; for the Battersea receives dogs alone, whereas our shelter receives cats and other animals, and the number of animals of all kinds which have been received during our first eight months has been 22,028, of which 632 were lost animals restored to their owners. . . . It has been observed by some of the newspapers that the summer of 1894—the first summer for many years in which dogs have been allowed to go unmuzzled—is the first summer in which there has not been a single paroxysm of popular apprehension of hydrophobia."

Of dog fighting the Superintendent reports:

"As will be noticed by the subjoined summary, the dog and cock fighting fraternity were rather quiet during the past year, owing either to the constant surveillance kept over their rendezvous, or to a change of heart, as expressed by an old sporting man, who said: 'I am ashamed to say I have been present at dog and cock fights, and declare that such fights are not only cruel to the animals, but degrading and demoralizing in their effect upon the human mind; they are a disgrace to our civilization, and are promoted and carried on only by those whose instincts are brutal and low.' It is to be hoped that in the near future such cruelties will be known only as scenes of the past."

With such vigilance and efficiency and the healthier public sentiment sedulously fostered by the society in respect to the lower animals, there is no doubt but what the brutal features mentioned will entirely disappear.

Bull-Terrier Club Organized.

On Wednesday evening, April 10, the bull terrier fraternity organized a specialty club to be known as the Bull Terrier Club of America. The meeting was held in Hotel Schlosser during the Pittsburgh show. The following officers were elected: Frank F. Dole, president; John Moorhead, Jr., vice-president; W. D. Brereton, secretary and treasurer. Executive committee: The above officers ex-officio and W. Mariner, Albert C. Stevens, W. J. Higginson, J. W. Church, J. Otis Fellows. Messrs. W. D. Brereton, G. W. Moore, and W. J. Higginson were appointed a committee to draft constitution and by-laws and report at a meeting that was to be held April 12, at 10.30 a. m.

The Death of Belhus.

BOSTON.—I regret to write you that my well known blood hound dog Belhus (13868) is dead. He was out hunting in the woods the other day, along with my other hounds, and some how or other, he must have injured himself internally. He never got over it. I am, however, expecting a couple of hounds from England. They left Liverpool last Friday on steamship Bovic. I hope they will reach here all right, in time for the Boston show. C. A. LOUGEST.

Oakes Coursing Meeting.

The second annual meeting of the Oakes Coursing Club was brought to a successful close on Thursday, April 11. The stake was for 32 all-aged dogs, at $5 each, with $100 added by the club. There were 26 starters, an increase of 10 over last year's. Rabbits were plentiful, in most instances wild. Many of the slips were very long, and the jacks either ran very swiftly or fell an easy prey to the dogs. A very few moderate courses were had.

The grounds are a little too rolling for convenience, but are different from last year in being free from cactus or thistles.

Tuesday, the first day, was pleasant, but too warm for comfort before the card was run through.

The first pair in slips was H. C. Waterhaus's Revenue vs. Eastern Coursing Kennel's Royal Crest. The bitch was very shifty, but Crest had too much speed, and put her out. The jack escaped.

In the second course, the Woodhaven Kennels' Prince Fullerton disposed of Eastern Coursing Kennels' Will o' the Wisp with little trouble, showing speed and cleverness. Puss also escaped.

A. P. Slocum's Rendezvous went down before N. P. Whiton's Lucian Swift in the third, Swift showing wonderful working qualities.

Lott White's Queen got the flag over J. H. Davis' Good Leather, a long course with little work.

Laplander, owned by J. McNickle, went up fast, doing some good work. In the fifth going out of our sight. The flag finally came back for J. H. Rew's Ragnarock.

W. W. Good's White Stocking put out H. Jessup's Raven in the sixth, a long, desperate course.

Rachel was hard pressed by Sam in the seventh, but Sam pulled out winner after Sam killed off her turn. Rachel belongs to A. P. Slocum and Sam to J. H. O'Connor.

In the eighth, Melrose and Durbin's Long Odds put out J. Curtain's Lucy, a short course in which they killed.

Melrose and Durbin's Gilkirk disposed of J. B. Smith's Gilbert after a long course in which Gilbert was of little help to her, finishing with a kill.

In the tenth, No Mercy did all the work, Woodhaven Kennels' Prince Tonia being no help to her.

In the eleventh, Ino, owned by W. W. Good, put out Eastern Coursing Kennels' Judge Burmby.

In the twelfth, Eastern Coursing Kennels' Lady Dedlock soon disposed of Wm. McMurchy's Flora.

A. P. Slocum's Gold Coin got the verdict over C. W. Davis' Blizzard.

This finished the day's card. The only mishap was when the judge's horse fell in the seventh course, rolling clear over. They were both soon up and after the dogs. The judge's decisions were given quickly and decidedly. He soon got the confidence of the nominators, and the minds of the few doubtful ones were soon at ease with the way he demonstrated that he knew a course.

The second day's running was marred by unpleasant weather. A cold rain fell at times during the day, but the card was run through twice regardless of the rain. Prince Fullerton and Royal Crest opened the day's sport, Crest falling an easy prey to Fullerton, both in speed and working qualities.

Lucian Swift did a lot of work in the second, with little help from Queen.

In the third, Rognarock easily put out White Stocking.

Rachel fell before Long Odds in the fourth.

In the fifth, Gilkirk and No Mercy ran an undecided. In the run off, Gilkirk won by the kill.

The sixth was Ino's, although Lady led up many lengths, but Ino worked her out in a long course.

Gold Coin, a bye.

The third time through the card brought Prince Fullerton and Lucian Swift to slips. Prince showed the most speed, but Lucian put him out after a lot of work.

In the second, Long Odds fell to Ragnarock, a long pumping course.

Gilkirk did not give Gold Coin a point in the third; a weak jack. Ino, a bye.

The stake was finished on Thursday. Lucian Swift and Ragnarock were the first in slips. Lucian won after a well-worked course.

Gilkirk had a long, pumping, one-handed course and left no room for doubt.

Lucian Swift and Gilkirk then divided.

The officers worked for the interest of the nominators and succeeded in bringing the meeting to a successful close. Everything went off smoothly and satisfactorily, and good nature prevailed.

The judge, Mr. W. M. Stephenson, continued his good work throughout the meeting. Mr. Stephenson has probably judged more meetings than any other man in America, outside of John Grace. His work in the saddle has demonstrated to those who were present that he is qualified for the position. I noticed he carried no card or cared to look at any one's dogs. No one could say he was governed by prejudice. C. R. HUNTLEY.

A New Bench Show Club.

Toledo, O.—A club to be known as the Toledo, Ohio, Fanciers' Association was formed this week with the following officers: President, Dr. E. E. Cowdrick; Vice-Presidents, F. C. Shepherd, and J. W. Mulinix; Treasurer, L. E. Clarke; Secretary, A. W. Bell; Committee, G. D. Dale, C. P. Detweiler, Geo. Felt, S. H. Philips and A. W. Pancoast; while the club embraces breeders of dogs, poultry and pigeons, the majority of the ninety-six members are ardent lovers of the kennel; and, while a good bench show has not as yet been attempted in Toledo, we can see no reason why such show should not be a decided success, as Ohio contains a very large number of first-class kennels, whose owners have always carried off their share of the blue ribbons at the leading shows of the country. Even in Toledo, we know there are a number of kennels, chief among which are the Alta, the Maumee, the Poag until recently, but all of whose dogs are now distributed among the club's members; Montrose Beagle Kennels, Auburn, Lincoln, and Monroe also help to swell the list of kennels to a goodly number.

We trust that our Toledo fanciers will see fit to put their best foot forward for a large bench show in '96, and we predict for them the support and assistance of all true lovers of the dog. Starting out with such a membership, Toledo should soon be one of the leading cities on the winter bench show circuit.

A. W. BELL.

DOG CHAT

Mr. W. L. Washington, the well known Irish setter breeder, is now engaged in the manufacture of steel products at New Castle, Pa., he holding an important position with the Washington-Elliott Steel Works.

We take special pains to oblige our readers in the matter of advice and treatment for sick dogs. In many instances, where the cases were urgent, we have forwarded the advice and prescription by mail. In some instances the letters were returned indorsed "unclaimed," and it may be that good dogs were the sufferers from the owner's false pride, which would not permit him to give his name and true address in connection with matters pertaining to his dog. Those who have put in false addresses with their queries concerning sick dogs will now understand why they have received no reply, as will also those in future who do likewise, or write anonymously.

There is sorrow in Engine Co. 13, Brooklyn, for Ben, the company's dog, is dead. Ben was not just a dog which led a dog's life of sleeping somewhere and eating when he was hungry. He entered into the company life and was a part of it. From puppyhood he showed great intelligence. He was trained to lead the horses to water, and when a newspaper was wanted Ben was sent to buy it. He learned the meaning of the gong signals, and led the way dutifully ahead of the galloping horses to the fire. He was a great favorite with the residents in the

vicinity of the engine house, who took pleasure in giving him meals when opportunity offered; but Ben never strayed far away, and he has been known, on several occasions, to jump through basement windows to join his engine at the first sound of the gong. A few days ago he was leading his engine bravely, barking vigorously, when he was charged upon by a vicious dog, which fastened on his throat. Both dogs went down, and in an instant the engine ran over them, killing the vicious dog and breaking Ben's back and one of his legs. A veterinarian was called and did everything in his power, without avail.

Ben was beyond the healer's art, and was shot to mercifully end his sufferings. And that is why the stalls in engine house No. 13 are draped in morning.

The following from Our Dogs, merits the attention of dog owners for the valuable information it contains: "The following notice is being very widely circulated by the Manchester Branch of the Royal Society for the Prevention of Cruelty to Animals: 'A dog's mouth is like a safety valve, and will not bear too much pressure. Dogs perspire through the tongue, not through the pores of the skin, and when running, breathe through the mouth, and not through the nostrils. It is both dangerous and cruel to use such a muzzle as will prevent a dog from opening his mouth freely to breathe, perspire and drink. A leather muzzle is in most cases better than a wire muzle. If you use a strap muzzle it should be fastened very loosely.'"

Several sales were made during Pittsburgh show. Mr. Jarrett sold the collie Goldmine to Mr. Henry Darlington, of Pittsburgh. Miss A. M. Griffin disposed of her St. Bernard, Earl Douglas, to Mr. H. L. Lynes, Cambridgeboro, Pa., and also sold several puppies. Mrs. Lee, of the Alta Kennels sold a promising puppy at a good figure, while Mr. Morris got $150 for a Lord Milton puppy. Al G. Eberhart sold the toy terrier Colonel to a Mr. Ritner, of Greensburg, Pa.

The bull dog King Orry has already had seven services booked at a $100 fee.

Mr. H. W. Lacy has accepted the agency of "Crack Dogs of the Day," fine engravings, published by Messrs. F. Mansell & Co., London. The plates have been produced in the highest style of the art. Those issued up to the present time include Champion D'Orsay, Cribbage, the bull dog Dockleaf, the Irish terrier Brickbat, the dachshund Pterodactyl, the Manchester terrier Prince Eric, and there will soon be another issued, that of the bull dog Monkey Brand. The size of the plates vary from 15x11, to 20x15 inches. Mr. Lacy's address is Nutley, N. J.

We note with pleasure the wise action of the Manitoba Field Trials Club in repealing the unwise rule which it passed at its meeting last fall in respect to permitting a dog to win twice before it became ineligible to the All Age Stake. Forest and Stream pointed out at the time the many hardships to amateurs which would follow, and urged the repeal of the rule.

In our business columns this week, H. L. Kreuder, Nanuet, N. Y., offers beagles. St. Bernard puppies are offered by Messrs. Fox & Fox, Buffalo, N. Y., also by J. W. Churchill, Salem, Mass. Mr. Wm. Mohr, Jr., Lafayette, Ind., has pointer puppies for sale, and the Bethel kennels, Philadelphia, offer dogs of all descriptions. Mr. John T. Mayfield, Bickwell, Ind., has room for four dogs in his string for training on chickens

---

Mr. Charles Stedman Hanks writes us that he has just completed arrangements for a twelve-months' absence or more in Europe, and for that reason he has concluded to sell his entire kennel of Russian wolf hounds and fox terriers. He announces it more specifically in our business columns.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W V. Rieger, Sec.

April 23, 24.—BATTLE CREEK, Mich.—Annual tournament of the Michigan State Trap-Shooters' League. Annual meeting and election of officers on the evening of the first day. W. H. Willard Secretary.

April 23-24.—ELIZABETH, N. J.—Third bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds; events open to all. Robt. E. Chetwood, Pres.

April 23-26.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club: first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 8-10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O.; $200 added money. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 15-19.—SAN ANTONIO, Texas.—Nineteenth annual meeting and tournament of the Texas Sportsman's Association. Open to the world, $500 in cash and $500 in merchandise added to the purse4. O. C. Guessaz. Sec'y.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $3,000 added to the purses.

May 22-24.—ROME, N. Y.—Annual tournament of the Rome Gun Club; two first day at targets, third day live birds. W. P. Rayland, Sec'y.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—EAST MCKEESPORT, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert. Sec.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith Sec'y.

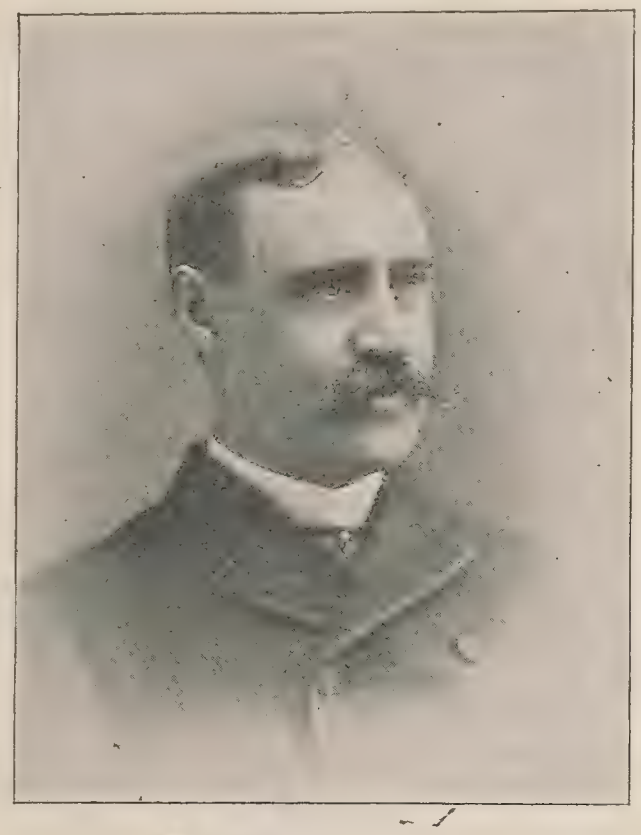
June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association: $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.



Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

The Interstate's Secretary-Treasurer.

The success of every organization depends in a very large measure upon the work done in its behalf by the Secretary. The two fold position of Secretary-Treasurer, while not perhaps doubling the duties of the first named official, entails a vast amount of work upon its holder where the organization itself is of any size or merit. Much of the success of the Interstate Association during the past two years may be directly attributed to the energetic and businesslike manner in which its Secretary-Treasurer, Mr. J. A. H. Dressel, of the U. M. C.

MR. J. A. H. DRESSEL.

Company, attends to the routine and other work connected with his office.

During the Grand American Handicap weeks of 1893, 1894 and 1895, Mr. Dressel smiled through the window of the cashier's office as he raked in the entrance moneys and paid out their winnings to the skilful shots. There is something peculiar about the way in which Mr. Dressel discharges his duty at these meetings. On no occasion has he come out ahead—on the contrary, the close of each of the above weeks has found him out of pocket. The week at Willard Park which has just closed, owes him, so he affirms, $10.52. That no fault can be found with his handling of the moneys of the Interstate Association is evidenced by the fact that he is now serving his third consecutive term as treasurer of that association.

DRIVERS AND TWISTERS.

There's no doubt about it—Mascroft's a great live bird shoot! On Wednesday morning, the "Mayor of Sutton," Mass., gave an exhibition of what his Parker gun, held to his shoulder and directed by his skillful eye and hand, could do. A crow was flying past about 65 yards from where the Mayor was standing; the distance was no bar, the crow falling at the first shot, being scored "dead with the first"!

In the March shoot of the New York German Gun Club at Dexter Park, L. I., F. Sauter and Dr. G. V. Hudson tied on 8 straight for the club's first and second medal. On the shoot off at 3 birds Sauser won the first medal, the doctor taking No. 2. J. Steuernagel, J. Schlicht and J. Frazer, tied for third medal on 7 out of 8, Schlicht winning on the shoot off.

The Emerald Gun Club, of New York, held its regular monthly shoot at Dexter Park on Tuesday of this week. As usual there was a large turn out of members.

Owing to the pressure on the trap columns last week the following important item of news was unfortunately left out: The American E. C. Powder Company and Messrs. Von Lengerke and Detmold have severed their business connection. W. Fred Quimby, the moving spirit of the W. Fred Quimby Co., will in future act as sales agent for the E. C. Powder Company, Messrs. Von Lengerke and Detmold devoting their attention to Schultz powder.

While returning from the Wellington grounds of the Boston Shooting Association on Wednesday afternoon, April 10, the shooters were afforded the treat of seeing "MissKay," of the Boston Gun Club, handle her gun and smash doubles. The B. G. C. grounds are adjacent to those of B. S. A., and not a minute's walk from the Wellington station. "MissKay," who, by the way, is none other than Miss Kirkwood, was given a round of applause when she had finished her five pairs. I understand that Miss Kirkwood has only taken up shooting in the past 12 months.

One of the most interesting items in connection with the report of a big event, such as the Grand American Handicap, ought to be a table of guns, shells and loads of each individual shooting in that event. It is robbed of much of its interest, however, and a fraud is perpetrated upon the public by the giving of false information by certain shooters in answer to queries regarding the above. In justice to Frank Class it is only fair to state that the mistake in his load of powder was not his fault; he told me that the powder he was using was Schultze, the error was mine. To make such a report complete and of value, the wadding should really be given—a most important factor in the loading of shells. Manager Shaner asked for and obtained two shells from each contestant during the 7th round of the handicap; thus the only correct and perfect table is in the hands of the Interstate Association.

Mr. R. Van Gilder, Secretary of the Knoxville Gun Club, writes as follows: "The club now has cash to the amount of $2,750, which assures the full purse or over, perhaps, by entrance. The meeting promises success beyond our expectation. All who anticipate coming to this meeting, and to be certain of an entry, had better send in their names and entry fee of $10 at once, as our limit is positively 125 entries and no more."

An item from Baltimore, Md., dated April 11, states that State Attorney Duncan has found criminal information against George Hronek for cruelty in shooting a pigeon released from a trap. The case will be tried next Tuesday. The case grows out of the arrest of trap shooters at Highlandtown on February 22.

The Norwich, Conn., Shooting Club, held its annual meeting on Friday, April 12, at the West Side Club's grounds. There was a large attendance of members. The club will fit out its grounds with new traps, and anticipates fine sport during the coming summer.

Mr. David Brown, President of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., has issued the following circular in regard to the tournament next month: "This association will hold their Fourth Annual Spring Tournament on May 9, 10 and 11; first two days clay birds, last day live pigeons only. Our tournaments have from the first been a success, our own membership (150) guarantees a large attendance, and the crack shots always attend in large numbers. Purses will be added to the principal events."

The Capital City Gun Club, of Washington, D. C., has elected the following officers for the ensuing 12 months: President, Blair Lee; Vice-President, J. DeWitt Arnold; Treasurer, James M. Green; Secretary, Arthur P. Mattingly; Fifth member of Executive Committee, R. W. Barker; Captain, J. Henry Gulick.

W. F. D., Secretary of the Eureka Gun Club, of Chicago, Ills., writes as follows: "The opening shoot for 1895 of Eureka Gun Club took place April 6, with about twenty shooters in attendance. The new traps, batteries, pulls, etc., were in position and worked nicely, throwing the birds very swiftly, and making the boys hustle to catch them before they got out of the county. The weather was pleasant, excepting for a high wind which made the shooting hard at times. Next shoot takes place Saturday, April 13, at 2 P. M., all shooters, members and non-members cordially invited to be present and take part. The scores got misplaced and so are not sent in."

"Uncle Billy" Hughes, aged 73 years, the oldest trap shooter on Long Island, and probably as old as any in the United States, has won the Pfaender badge, emblematic of the championship of the Coney Island Rod and Gun Club for the year ending 1895. The badge will be presented to him at the annual meeting of the club next month.

Mr. Robert E. Chetwood, President of the Elizabeth, N. J., Gun Club, has issued the programme for his club's Third Bi-monthly Tournament to be held on Tuesday and Thursday of next week, April 23 and 24. The first day's programme consists of 12 events with a total of 175 targets. The second day has a large number of events for a live bird day: No. 1 is 7 birds, $5; No. 2, 10 birds, $5; No. 3, 25 birds, $10; birds extra; No. 4, 4 birds, $2; No. 5, 5 birds, $5; No. 6, 7 birds, $5.

The following note appeared in the New York Herald of April 6: "The Harvard Shooting Club is making strenuous efforts to send a winning team to compete this spring with the Yale and Princeton clubs for the silver cup offered two years ago by Forest and Stream, as an intercollegiate shooting trophy. Yale has won both matches this year." Honor to whom honor is due. The trophy referred to was presented, not by Forest and Stream, but by Shooting and Fishing Publishing Company of this city.

The Keystone Shooting League, of Philadelphia, Pa., has decided to use Empire targets at the State shoot, which will be held in August next at Holmesburg Junction, Pa. At all previous State shoots in Pennsylvania the Keystone target was used, having been adopted by the State Sportsmen's Association as its target.

On May 22, 23 and 24, the Rome, N. Y., Gun Club will hold its annual tournament. May 22 and 23 are target days; May 24, live bird day. As W. P. Rayland is the moving spirit of this tournament, there ought to be a good shoot at Rome on the above dates.

Next week's list of fixtures is a large one: April 22-27, tournament of the Missouri State Game and Fish Protective Association at Kansas City, Mo.; April 23-24, the Battle Creek, Mich., tournament and the Elizabeth, N. J., bi-monthly shoot; April 23-26, the Galesburg, Ills., Shooting Club's tournament; April 24-26, Peekskill, N. Y., Gun Club's tournament.

The Continental Gun Club of Reading has elected the following officers for the ensuing year: President, A. S. Reifsneider; Vice-President, Joseph Romig; Secretary, Howard Heil, Treasurer, George Romig.

The Worcester, Mass., Telegram, of April 7, contains the following: "The trophy offered by the Forehand Arms Co. to the Worcester Sportsman's Club, to be shot for as an individual trophy, has been received from the manufacturers, the Gorham Manufacturing Co., of New York, and has been placed on exhibition in the window of F. A. Knowlton. The trophy consists of a handsome sterling silver cup, resting on a solid ebony standard. The standard is of plain polished ebony, six inches high, and nine inches across at the base. The cup is 15 inches high, and is handsomely embossed. It bears the inscription: 'Forehand Arms Co. trophy: Worcester Sportsman's Club.' It is urn shaped, with wide, sweeping handles. The large part of the urn is six inches through, and the cup is tapered into a handsome circular top. The cup is one of the handsomest ever offered in the city."

The programme of the Interstate Association's tournament at Wilmington, N. C., on Thursday and Friday, May 9 and 10, arrived rather too late this week for any adequate note of its contents to be made for this issue. Next week a more extended notice will be given.

It will be interesting to watch how the "crackajacks" come out at the Pittsburg, Pa., shoot; the system of handicapping adopted by the Interstate Association is one that it will be extremely hard for them to break even at.

An important addition was made last week to the ranks of the subscribers to the Interstate Association, the Winchester Repeating Arms Co., of New Haven, Conn., joining the association.

EDWARD BANKS.

The Boston Tournament.

There are tournaments and tournaments. It is very seldom that trap shooters, professionals and amateurs, are able to attend a shoot where everything is run in a businesslike manner, and yet where one feels that the object of the club in giving the tournament, is not so much business as it is to give its guests a good time. The Boston tournament, which was held last week, on April 9, 10 and 11, was just such a tournament. O. R. Dickey, Superintendent of the Boston Shooting Association, needs no introduction to trapshooters who have read Forest and Stream; it was to Mr. Dickey's manner of running a shoot that the association was indebted, so far as I could see, for the successful results attained last week. To average something like four squads in every event right through the programme is a big thing nowadays, more particularly when there is no added money advertised. Of course Dickey received excellent support from his fellow club members; several of the latter were here, there and everywhere, doing their best to make their guests feel at home and succeeding admirably in their efforts. Again, the members of the Boston Shooting Association are fortunate in possessing one of the best club houses in the country, as well as most conveniently arranged grounds. The club house is a two story frame building, finished in hard wood. Downstairs is the club room proper, fitted with any quantity of lockers and gun racks; above all there are ample pegs on which to hang hats and overcoats; a little thing that means much, and one that is far too often overlooked. The cashier's office, with its brass rod fence, gives the place the appearance somewhat of a hotel office; a well-filled cigar case at one end of it adds to the illusion. A large stove, a very necessary article last week, heats the room comfortably. Upstairs is a large dining-room, capable of seating, I should judge, about 80 persons. In this room on each day of the shoot, was served an excellent dinner, provided by Caterer Jesse A. Dill, of Boston, a member of the association. These dinners are a feature of the club's tournaments, and no wonder; they are something decidedly out of the ordinary. And while I am on the subject of these dinners, I will just make a statement without fear of contradiction (at least not for over a week) as no one can argue contra: Too many clubs when giving tournaments look upon this mid-day meal as superfluous—"Anything will do for a lunch; the boys come to shoot, not to eat!" That's true to a certain extent, but give the boys a chance to do both, and you'll find that more of them make clean scores with a knife and fork than with a gun and nitro powder, and enjoy the operation. Set a good meal and charge a fair price. There wasn't a kick to be heard in regard to the payment of 75 cents for one of Mr. Dill's dinners. The edibles were good, and the service just as capable. But then—there are not many Dills around; the Boston Shooting Association is extremely lucky. As a matter of fact, and to cut short that which could easily be made into a long story, if any visitor to the shooting grounds at Wellington, Mass., on Tuesday, Wednesday or Thursday of last week, did not feel at his ease and enjoy himself, it was his own fault, and not that of the members of the association. Among those who looked after us were: Captain E. B. Wadsworth, President of the club; C. W. Dimick, of the U. S. Cartridge Company; the Bennett Bros., Will and Fred; Captain J. S. Sawyer, of Cambridge, Mass.; B. "Le Roy" Woodward, of Campello, etc. To Mr. Dimick I am indebted for the following pedigree of the Boston Shooting Association: In 1876, James Emery, Jr., W. B. Witherell, C. W. Dimick, and several other gentlemen, used to meet every Thursday evening at the Boylston Rifle Gallery, 22 calibre rifles being the weapons with which they were accustomed to try their skill. From this nucleus was formed in 1877 a glass ball shooting club, called the Raymond Sportsmen's Club, with grounds at Beechmont. Among the members of this club, in addition to those above named, were: D. Kirkwood, C. A. Loud, etc. "Frenchy" Johnson, the colored glass ball champion and oarsman, was also a member. After two years had passed, the name of the club was changed to the Fox Gun Club. A year later, in 1880, it was known as the Malden Gun Club. In 1881 the name was changed to the Wellington Gun Club, its grounds being located where the Boston Shooting Association, as the Wellington Gun Club was called in '92, now has its grounds. The association owns its club house and grounds. At the north end of the house is a two storied extension. On the ground floor is the storage room and target factory! Overhead is the culinary department. The target factory is a special feature of the association's means of revenue. It has a machine for making its own targets out of the broken bits that are gathered up on the field after every shoot. These fragments are re-melted in a vat and are then made over again into targets as good as new, with very little waste of material. As the club's target maker can make and pack between 2,000 and 3,000 targets a day, the prime cost to the association is not great. Altogether, a better equipped shooting organization it would be hard to find.

THE THREE DAYS OF THE SHOOT.

After the above introduction, it is next in order to say something about those who were there A glance at the scores given below in a tabulated form will show that the Eastern men are addicted to shooting under assumed names. As this is mainly done with a view to keeping their names out of the local papers, purely from a business point of view, and out of regard for the feelings of some of their friends, who ought to know that "all work and no play," etc., is almost as true a thing as ever was written. Capt. Wadsworth, for instance, hides his really shining light under the name of "Puck." It's a perfect disguise, as, although the captain is a charming host, he is decidedly un-Puck like. "Jones" and "White" whenever they appear in Boston scores refer to the Bennett Bros.; "Herbert" is Herbert Federhen, of Quincy, Mass., a capital target shot, and a fit running mate for B. "Leroy" Woodward, of Campello, Mass. Capt. J. S. Sawyer, Cambridge, Mass., found his grip on the third day; look at "Snow's" 87 1-2 per cent. on that day! H. Boynton, of Lowell, Mass., alias "Rule," was present on the first day and shot in every event, breaking 90 1-2 per cent. of his 230 targets. "Climax," of course, was J. E. Burns, also of Lowell, a representative of the U. S. Cartridge Company. Among the visitors from a distance were: E. D. Fulford, Utica, N. Y.; Sim Glover, Rochester, N. Y.; Rolla Heikes, Dayton, O. and F. Van Dyke, of Newark, N. J., both ably representing the Winchester Repeating Arms Co.; B. A. Bartlett, shooting his Burgess gun well, although slightly under the weather, and paralyzing the spectators with his rapid and skilfull work in trick shooting; Gus Greiff, of Von Lengerke & Detmold, of New York city, talking and shooting Schultze powder; Neaf Apgar, of Evona, N. J.; T. H. Keller, of New York city, and Plainfield, N. J., a brother-in-arms of the above mentioned "Climax"; "Dutchy" Smith, of Plainfield, N. J., who, in company with Seth Clover, of Fredonia, N. Y., prevented anybody from getting the blues; "Billy" Hobart, of Newark, N. J., shooting decidedly below his ordinary gait; J. T. Mascroft (the lightweight Mayor of Sutton, Mass., y'know!) and V. D. Kenerson, of Worcester, Mass.; W. L. Davis and A. W. Wall, from the last named city, members of the well-known Worcester Sportsmen's Association; George Strong, New London, Conn.; W. Howe, Hingham, Mass, and Wm. Allison, of Marblehead, a good and reliable shot; G. A. Winn, of Arlington, Mass.; H. W. ("Denny") Eager, and H. G. ("Parker") Wheeler, Marlboro, Mass.; S. Bowker, Natick, Mass., etc., etc. Capt. Money, of the American E. C. Powder Company, and Charles Hebbard, of the Empire Target Company, of New York, both put in an appearance during the morning of the second day. It was a goodly gathering and one that was decidedly congenial.

Of the weather on the first day I can say nothing positively, as I did not reach Boston until the morning of the second day after a pleasant, but slightly rough, passage on the Fall River boat, Puritan. The scores piled up by the shooters on Tuesday show, however, that the day must have been somewhere about right. Van Dyke properly leads with 93 1-2, Heikes being second with 92 1-2. Dickey, of course, was too busy to do any shooting, but he found time to shoot just 50 targets each day, the events being a 50 target race, known angles, on Tuesday; a similar race on Wednesday at unknown angles, and on Thursday he shot in the team race, 50 targets, 25 known and 25 unknown angles. In the first of the above he broke 48; in the second 41, while in the team race he was near to the top with 22 at known angles and 25 at unknown angles, a total of 47.

The second day was a cold one; a heavy wind, that during the afternoon rose to the dignity of a gale, blew across the flat and produced that style of flight among the targets known as "dippers" "scooters," "droppers," and "towerers." At times whole strings of misses would be recorded, the wind being sufficient to blow the shooter off his balance. In the 50 target race at unknown angles the wind was right behind the shooter; this event was shot, as were all the unknown angle events, on the No. 2 set of traps. This set was made up of five Clover traps, which did their work extremely well during the whole of the tournament. Seth had practically no trouble at all with them; this means more than it seems, the result being that he was able to devote his whole attention to his audience. By the way, his story of Rolla Heikes' experience with some duck stools, while on a trip last fall with Jack Parker in the "Iolanthe," is bound to be a favorite. Seth was born just about 600 or 800 years too late! What a snap he would have had as a court jester to some of those old monarchs! Returning to the 50 target race, the force of the wind was much felt. When Heikes was at No. 1 trap in the 41st round, he called "Pull"; no target left the trap, the boy not being ready. Heikes was leaning slightly forward to meet what slight recoil there might be; just at that moment, a gust of wind came up and nearly blew him over as he was totally unprepared for it. That gives some idea of how strong the wind blew. His 92 per cent., on this day speaks plainly regarding the quality of his work.

The third day was perfect for shooting, although there was a decided nip in the air that made great coats and heavy sweaters a necessity. The percentages went up and the pace set was exceedingly warm. In the team race, the scores of which immediately follow, the best shooting of the whole tournament was done. The Massachusetts team's average of 95 1-2, per cent., 239 breaks out of 250, is pretty nearly, if not quite, a record for the number of targets thrown. A $3 optional sweep was made up to enable those not on a team to shoot along in this event. The totals show three with 49, two with 48, four with 47, and four with 46; these were the winners in the optional sweep, their general average being about 94 2-3 per cent., the total amounting to 615 breaks out of a possible 650—35 targets missed! The full scores in this event, with the conditions are as follows:

The scores made each day have been tabulated so that the number shot at, the breaks, and percentages, can be seen at a glance. Of course this method of running scores involves a greater amount of labor than is demanded by the usual mode, but it seems to me that it is much more intelligible and far preferable for ready reference.

FIRST DAY'S SCORES.

Although Winn, by virtue of his record of 47 out of 50 made in three separate events, is entitled to first place on the list given below, there are several other averages which must be classed considerably higher. Van Dyke's 93 1-2, Heikes' 92 1-2, the 91 per cent. made by both Apgar and "Climax," together with the averages of 90 1-2 recorded by Fulford, Glover and Rule, are all really better, each of these seven men having shot at 230 targets, known and unknown angles and traps in reversed order, as against Winn's 20 known angles and 30 unknown angles. Nos. 1, 3, 6, 8, 10 and 12 were at known traps and angles; Nos. 2,4, 7, 9 and 11 at unknown angles; No. 5 at traps in reversed order. In No. 10, the 50 target race, the association guaranteed a purse of $100; as there were only 18 entries at $6, the purse was actually $90, the association being called upon for $10 to fill the guarantee. Targets each day were thrown at 2 cents each, the price being deducted from the purse, all entrance moneys during the tournament being in the proportion of 12 cents per target in the event. Scores:

"Snow"							5			7			15	40	27	.67 1-2
Allison								9	10	5		15	19	90	58	.64 1-2

Dickey shot in No. 10, scoring 48 out of 50; G. E. Greiff scored 8 out of 10 in No. 6.

SECOND DAY'S SCORES.

As told above, the weather on this day was all against high scoring, the gale that was blowing making havoc of the averages. The following table shows that the "Bald Eagle" from Ohio shot a great gait, all conditions considered, making what was actually the best average of the whole tournament:

Events:	1	2	3	4	5	6	7	8	9	10	11	12				
													Shot			Per
Targets:	10	10	20	20	10	20	20	20	10	50	20	20	at.	Broke.		c't.
Heikes	9	10	18	19	8	15	19	19	10	48	19	17	230	211	.92	
LeRoy	9	10	17	18	8	19	17	17	10	45	17	19	230	206	.89	1-2
Fulford	9	9	14	20	7	16	19	17	9	44	18	20	230	202	.88	
Glover	9	9	17	18	9	17	17	16	6	46	17	18	230	199	.86	1-2
Van Dyke	8	10	15	20	10	18	19	18	9	39	16	16	230	198	.86	
"Climax"	9	8	18	16	9	14	19	16	10	44			190	163	.86	
Winn	10	9	16	18	8	14	18	19	8	46	15	16	230	197	.85	2-3

"Pickles"				9			13		15					60	37	.61 2-3
"Snow"	7		5			6				10		9		60	37	.61 2-3
Foote												11	13	40	24	.60

H. W. Eager broke 10 straight in No. 9, an average of 100 per cent.; Dickey scored 41 out of 50 in No. 10, averaging 82 per cent; Elliott broke 7 out of 10 in No. 9, and "Purdey," 14 out of 20 in No. 11; Johns scored 6 out of 20 in No. 11.

Nos. 1, 3, 5, 8 and 11 were at known angles; Nos. 2, 4, 7, 9, 10 and 11 at unknown angles; No. 6 at traps in reversed order. In No 10, the 50 target race, there were the same number of entries as on the first day, the association having to add $10 to the purse.

THIRD DAY'S SCORE.

Six averages of over 90 and two others only a fraction below that figure show that the boys took advantage of the perfect weather and smashed the targets in a manner that would make an amateur very small indeed. The accompanying table, like black powder, "speaks for itself":

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15		
																Shot	
Targets:	10	10	20	20	10	20	20	50	10	10	20	20	10	20	20	at	Bke

Dickey shot in No. 8, breaking 47 out of 50, an average of 94 per cent; Warren broke 7 out of 10 in No. 9.

The percentages made by those who shot in more than one event are as follows, in order of merit: Heikes, 93 1-3; Glover, 91 4-5; Herbert and Leroy, 91 1-2; Puck, 90 1-2; Van Dyke, 90 1-3; Fulford, 89 2-5; Apgar, 89 1-4; Sanborn, 88 1-2; Smith, 88 1-7; Snow, 87 1-2; W. Bennett, and Mascroft, 87; Allison, 84 4-5; Bartlett, 84 1 5; Money, 83 1-2; Keller, 83 1-3; F. Bennett, 83; Hebbard, 82 1-3; Winn, 82 1-4; Bowker, 80 3-4; Gore, Grieff and Wall, 80; Kenerson, 75 3-4; Martin, 75; Daniels, 74; Hobart, 68; Hyde, 66 1-4; Davis, 65 1-2; Payson, 53 1-3; Clover, 52.

The programme for this day was shot through twice with the exception of No. 8, the team race, and No. 6, 10 pairs. Nos. 1, 3, 7, 9, 11 and 15 were at known angles; Nos. 2, 5, 8, 10, 13 and 14, at unknown angles; 4 and 12 at traps in reversed order, and No. 6 at 10 pairs from three traps.

EDWARD BANKS.

Fargo Gun Club.

Fargo, N. D., April 4.—The following scores were made by the Fargo Gun Club this afternoon: No. 1, 10 targets, unknown angles: Lyon, 4; Carpenter, 8; Smith, 3; Robbins, 9.

No. 2, 10 targets, unknown angles: Roberts, 6; Lyon, 4; Carpenter, 7; Robbins, 8.

No. 3, badge shoot: 15 targets, unknown angles, 5 pairs: Lyon, 16; Carpenter, 10; Roberts, 10; Robbins, 15.

No. 4, 25 targets, 10 at known angles, and 15 unknown angles: Carpenter, 15; Lyon, 16; Roberts, 12; Robbins, 23. C. E. R.

Programme of Coming Events.

At this season of the year, every trapshooter of note, and the management of every sportsman's paper, receives from week to week programmes of tournaments that are to be held in the near future. The programme of the present day is an elaborate article; its compilation has been carefully handled: its illustrations are for the most part artistic as well as interesting, while the reading matter touches upon every point that relates to the running of the tournament. It might be well to suggest to tournament committees that a note, usually overlooked, be added to all programmes, detailing how, and to what address, cases of loaded shells for use at their tournament should be sent, so as to insure their being found on the grounds during the morning of the first day. This little bit of information will often save a lot of trouble.

Among the programmes recently received by Forest and Stream is the one issued by the Buckeye Gun Club, of Dayton, O., for the ninth annual tournament of the

OHIO TRAP SHOOTERS' LEAGUE.

This programme opens with the following prologue: "The ninth annual tournament of the Ohio Trap Shooters' League will take place at Dayton, Ohio, May 14, 15 and 16, under the auspices of the Buckeye Gun Club. The management presents herein a programme which cannot fail to be satisfactory alike to both amateur and expert. The Buckeye Club refers with pardonable pride to the fact that they are the first of the league clubs to add money to the purses of the state tournaments. They hope thereby not only to stimulate the healthful and gentlemanly sport of trap shooting, but insure for 1895 the most successful of all state tournaments. To this end we trust, that our cordial invitation to trap shooters of Ohio to be with us, will be met with their hearty and generous response."

After giving a list of the officers of the Ohio Trapshooters' League, and of the Buckeye Gun Club, together with the committees appointed to look after special departments of the tournament, the programme gives the following notes on rules governing the league tournaments: "Dimick's revision of American Shooting Association Rules will govern all contests. Traps will be arranged to throw targets at unknown angles, except in Smith Cup contest. Divisions of money will be made as specified below, except when otherwise named." This it follows with a copy of rule 19, full of interest to all intending competitors: "For the purpose of providing for the mutual good of amateurs and experts, the following conditions shall govern distribution of purses in all matches: There shall be no classification or handicapping otherwise than as herein provided. The entrance fee of all shooters shall be equal, and all the conditions governing the shooting the same for all participants. The net amount of purse shall be divided into two equal parts, Nos. 1 and 2, and each of these parts into three purses, 50, 30 and 20 per cent. No match shall be at a less number than six targets or live birds. All shooting shall be class shooting. Those making the three highest scores shall be entitled to the respective amounts into which purse No. 1 is divided; those making the next highest three scores shall be entitled to the respective amounts into which purse No. 2 is divided. Should more than three contestants tie for any one of the six mentioned purses as subdivided, and not divide same by consent of all, the tie shall be shot down until three or less are entitled to same; then, if either of the participants express a wish for a division of the purse, it shall be divided. If any shooter shall share in any of the three subdivisions of the higher or No. 1 purse three times during any tournament, he shall be excluded from participating in any of the subdivisions of purse No. 2 herein named. Amendment by Executive Committee. Any contestant for a division of purse No 2, who, in the tie shooting at nine or more targets, scores a higher average than 80 per cent. shall not participate in any of the divisions of purse No. 2 in the subsequent events of a tournament."

Next comes a list of "What you want to know," as follows: "Targets, two cents each. All ties divided, except in prizes. Lunch and a good warm dinner will be served. Shells, both hand and machine loaded, will be for sale. The programme events will commence promptly each day at 9 A. M. Be on hand at that hour and thereby assist the management. Two set of traps will be in operation on Monday, preceding the shoot, at which sweepstakes to suit shooters will be the order. The Phillips House, a strictly first-class hotel, will be headquarters. A uniform rate of $2 per day will be charged. Electric cars can be taken at the door for the depot or the Buckeye Shooting grounds. The annual meeting of the Ohio State League will be held Tuesday, May 14, at 8 P. M., at the Phillips House, Room No. 197. Members of the Ohio State League, will you not aid us in discountenancing the pernicious habit of dropping for place. Merit and not intrigue is alone the basis upon which our purses should be divided."

Additional information may be summed up briefly as follows: Purses in all open events will be divided into four moneys. In addition to the $200 added by the Buckeye Gun Club for league events, merchandise prizes have been donated by several merchants of Dayton for averages: three for general averages and 12 for daily averages; shooters to qualify for the daily averages must shoot in all league events of the day; for general averages in all league events of the tournament. The trophy events are three in number, one on each day. The first is the Ohio State Journal Cup, value, $200, at 30 targets, unknown angles; this event is shot at 1 P. M. on May 14. At the same hour on May 15 is the L. C. Smith trophy, value, $500, emblematic of the championship of Ohio; this contest is at 50 targets from three traps. The third is the Sportsmen's Review, of Chicago, Ills., Cup for two men teams, emblematic of the State team championship; this contest takes place at 1 P. M. on May 16. The programme for open events consists each day of events as follows: Nos. 1 and 2, 20 targets, $2 entrance; Nos. 3-7, 20 targets, $2.50 entrance; No. 8, 25 targets, $4 entrance. Any further information that may be desired will be gladly given by Edwin Taylor, Secretary-Treasurer, Ohio Trapshooters' League, Cincinnati, O.

Another programme is that of the

DUPONT TOURNAMENT,

which will be held at Cincinnati, O., on May 7-10. In Forest and Stream of March 23, will be found a very full notice of this tournament, the facts and figures contained therein being taken from a prospectus issued the week previous. There is very little to add to that notice, the ground having been well covered by the prospectus. This tournament will unquestionably be one of the best of the season, the programme offering sufficient attraction, outside of the large amount of added money—$1,200, to draw together a considerable number of shooters. With the Waddell Bros. in charge of the management, there is no chance of there being anything to cause dissatisfaction. Although the system under which the tournament will be run, each shooter practically classifying himself, is bound to make extra work for the cashier's office, the Messrs. Waddell have thoroughly covered this point, and will take care that no failure in this important branch shall mar the Dupont Tournament of 1895.

The programme of the

PEEKSKILL GUN CLUB

is also to hand. This tournament takes place next week, on the grounds of the Peekskill, N. Y., Gun Club. This club has been in existence for some time, but its record was made last year, when the club's team of 8 men scored 193 out of 200, an average of 96 1-2 per cent., in a contest with the Marlborough Gun Club. An insert to the programme gives a cut of the winning team, together with each man's score as follows: B. C. Everingham, 25; Frank Southard, 25; Dr. S. F. Horton, 25; Dr. P. H. Mason, 24; W. H. [illegible], 24; John B. Halstead, 24; Dr. H. B. Wygant, 23; M. S. Perry, 23. In our issue of April 13, the death of Dr. Wygant and the resolutions of condolence passed by the Peekskill Gun Club, were noted. Dr. Wygant's absence at this, the fourth annual tournament of the gun club, will be felt by many.

The dates of the shoot are April 24-26. The first two days are devoted to targets, the third to live birds. The target events are varied enough to suit everybody, while the price of entries, 10 cents a target, is bound to please the amateur, there being several 10 and 15 target races each day. Twelve entries or over, 4 moneys, under 12, three moneys. Note this: "No entries

O. R. DICKEY.

taken in any event after first squad has shot." The live bird events are as follows: No. 1, 5 birds, $5; No. 2, 10 birds, $7; No. 3, 15 birds, $10; handicap rise, birds extra. Two other items are worth noting: "Only smokeless powder to be used," and "All complaints to be made to members of the tournament committee, and positively all kicking to be done by them."

Work vs. Duryea.

A match at 100 live birds between George Work and Louis Duryea has been on the tapis for some time. It was postponed once or twice for various reasons, but was at last brought off on the grounds of the Westminster Kennel Club, Babylon, L. I., on Tuesday, April 9. Work came out ahead by 7 birds, killing 92 to Duryea's 86. In dead out of bounds Duryea made a remarkable score—12 out of his fourteen lost birds dying beyond the boundary; in all he actually killed 98 out of his 100, but then—dead out of bounds do not count Work lost five birds that fell dead over the boundary, his total kills amounting to 97. Thus, but five out of the 200 birds trapped succeeded in getting away. As the birds were a good lot, sitters being rare exceptions, the score made by Work is a good one. Duryea's number of lost birds is attributed to his becoming rather slow with his second barrel on the last half of the match. Work allowed his antagonist one yard as a handicap.

Both men started well, Work being the first to lose one, his 15th, which fell dead out of bounds; he killed his next 10, Duryea in the meantime running out his first string of 25 without a miss, the score standing, Duryea, 25; Work, 24. The latter caught Duryea on the 33d round, after Duryea had lost his 32d dead out of bounds and his 33d, one of the two which got away from him. The 38th and 45th birds for Duryea both fell dead out of bounds, as also did his 50th, Work only losing his 47th. This made the score stand 48-45 in Work's favor at the end of the 50th round. From that point Duryea fell behind, at one time losing three birds (his 54th, 55th, and 56th) in quick succession. At the close of the third string of 25 the score stood

CAPT. E. B. WADSWORTH.

71-64 in favor of Work. This lead of 7 was increased to 8 when Duryea lost his 76th bird. Out of the remaining 24 birds, Work lost 4 to his opponent's 2, Duryea ending up 6 to the bad. The long runs were: Work, 31, 16, 14 and 14; Duryea, 31, 13 and 11. The score was as follows:

George Work (31)	1221111112112 2*2111121112	—24
	1211111111212212112210212	—24
	*1121122222211122*1122121	—23
	2112222012112*1122112011*	—21—92
L. T. Duryea (30)	1122221111222222222222222	—25
	222211*02222*111222*1222*—	20
	212*0*22112212222**222*12—	19
	*22222222*2*2112212221222—	22—86

Trenton Gun Club.

Trenton, N. J., April 11.—The regluar monthly shoot of the Trenton Gun Club was held at its grounds to-day. The weather was perfectly lovely, not a cloud obscured the sky nor was there a breath of wind to cause the targets to pursue an erratic course. Shooting was all done from five traps. The club contest was for two badges, first and second; the conditions, 30 targets per man; each man first shooting at 15 for place, the men breaking eleven and over being placed in the first class, and the men under eleven in the second class. Then each man shot at 15 for the badges, the highest in each class to take the badges; Thomas won first and Bainbridge second. The following are the scores:

No. 1, shoot for place:

W Taylor	111111111111101—14	H Bumbogh	011011100111101—11
C Allen	111111111111011—14	Bainbridge	001110111100111—10
W Mickel	111011111011111—13	E Carson	111010010100101— 8
G Thomas	111011111110111—13	D Williams	110100110010011— 8
W Williams	101111011111110—12		

No. 2, shoot for badges:

*G Thomas	111011111011111—13	Bumbough	111010110100101—
W Micke	101011111111111—13	Bainbridge	101111100111001—10
W Williams	100011111111111—12	Carson	011001111100011— 9
C Allen	110001111111111—12	D Williams	110111011110100—10
W Taylor	111001101111011—11		

* Thomas beat Mickel on the shoot off at 10 targets by 10-7.

No. 3, 25 targets:

C. H. Allen	1111111111111111111111111—25
Wm. Taylor	0011111101110111011111101—19
Wm. Mickel	1101110111101011100111111—19
G. N. Thomas	1110011011101101111011110—18
W. Williams	1101111000111101111101110—18

Medal Shoots at Syracuse.

Syracuse, N. Y., April 4.—The following scores were made this afternoon by members of the Syracuse Gun Club in the medal shoot at the Croton street grounds:

Class A.

D. Lefever (50)	0101111111111111110100111	
	1111010110111111111111111	—42
Willard (50)	0101101011110111100110101	
	1111111111111101111111111	—40
Becker (50)	1010110111110011111110110	
	1111111100110111110111011	—38
Wilcox (46)	1100111000011111111111111	
	1110111011011101111101	—35

Class B.

Morris (48)	1110100001100011111011111	
	1111110111111111010000111	—34
F. Lefever (45)	0101100100011111111111011	
	1111111011011111101	—34
Duguid (50)	1010010001100011001111111	
	1101111111011111000111100	—34
Hunter (48)	1011010000101100101100110	
	1111011110000C000111111	—26

Class C.

Eddy (50)	1111110111111001001111110	
	1100110110100101111001111	—35
Dey (50)	1110001011110010011111011	
	0111100001010001010110111	—29

In the shoot off at 10 targets for the medal in Class B, Morris won, scoring 8 to Lefever's 7, and Duguid's 3.

April 11.—The Onondaga County Sportsmen's Club held its regular medal shoot this afternoon. The weather was fine, and all conditions favorable, making the lowness of most of the scores attributable solely to spring fever. George Holloway won in Class A medal with 45, winding up his score with 32 straight. H. Duguid did some good shooting in Class B, scoring 42. J. Boyd walking off with the Class C medal without any difficulty; he scored 41 out of 50, finishing his string with 23 straight breaks. Scores: 50 targets, unknown angles:

A Class.

A. R. K.

Rochester Rod and Gun Club.

Rochester, N. Y., April 3.—The Rochester Rod and Gun Club began its 1895 series of prize shoots this afternoon. The weather was unfavorable for trapshooting, which accounts for the small attendance. The scores were as follows:

Griffith (38)	1111111110111001010111111	
	1110001111111	—30
Meyer (32)	1111110111011001111111	
	1101111	—26
Norton (32)	1110011111111011101111111	
	1010111	—26
Stewart (30)	1111111110100111111011110	
	11111	—25
Hicks (33)	1010111111111111010111111	
	10100010	—24
Borst (34)	1101001111111001101010111

	1011100100011010	—21
Gardner (38)	0111100011000011010111011	
	1010100110001	—20

E. D. HICKS.

Hartford Gun Club.

Hartford, Conn., April 12.—To-day was a bad one for our tournament, the weather being cold and windy; the attendance was consequently proportionately small. Following are the winners in the various events:

No. 1, 10 targets; Risley and J. A. P., first; Goodwin, McGuinty and Burbridge, second; Sterry, third; Olmsted, fourth.

No. 2, 10 targets, Olmsted, Sterry and Burbridge, first; Goodwin and J. A. P., second; McGuinty, third.

No. 3, 10 targets, Risley, first; Sterry, second; Goodwin and Burbridge third; Guiven, fourth.

No. 4, 15 targets, Risley, first; Sterry, second; Burbridge and McGuinty, third; Goodwin, fourth.

No. 5, 10 targets, Burbridge, first; Sterry and J. A. P., second; Olmsted.

No. 6, 10 targets, Burbridge, first; Risley, second; Goodwin, third; J. A. J., fourth.

No. 7, 10 targets, Sterry, first; J. A. P., second; Goodwin, third.

No. 8, 10 targets, Risley and Burbridge, first; Sterry and J. A. P., second; Olmsted, third; McGuinty, fourth.

No. 9, 10 targets, Risley, first; Godwin, second; Sterry, third.

No. 10, 10 targets, Sterry and Olmsted, first; Risley, second; Burbridge, third; Goodwin, fourth.

No. 11, 10 targets, Risley, first; Sterry, second; Olmsted, third.

No. 12, 10 targets, Sterry, first; Goodwin, second; Burbridge, third.

D. S. W.

Missoula Rod and Gun Club.

Missoula, Mont., March 31.—The Missoula Rod and Gun Club was doing business at the old stand yesterday under the most favorable conditions, not a cloud in the sky, nor a breath of wind stirring. Considerable practice shooting was done before the hour for the medal shoot. At the usual hour the latter was called, and fifteen able bodied sportsmen responded. At the conclusion of the contest it was found that the gold and silver medals each were to be worn for the week following by shooters each having made a score of 16 out of the 20 singles, known traps and unknown angles. W. P. Brayton secured the "A" Class (gold) medal, Frank Woody the "B" Class (silver) medal.

Class A.

J P Menard	11111010111001110111—15
W H Mace	11101100111001111111—14
W P Brayton	11011011001111111111—16
J K Wood	10100100101001111111—12
Lieut Deval	01001111001111100110—12
E A Searles	11011101010011010101—12

Class B.

J M Evans	11000001100010010101— 8
F Allinson	01000000000010000110— 4
H W Thompson	01001011010000110001— 8
F Woody	11110011111101111110—16
T E Evans	00000001001000011011— 6
A M Sterling	01011101111011010000—11
A M Stevens	00000011111100111010—10
P P Kern	10001110101100111010—11
L L Hunt	10100100000000011000— 5

After the medal shoot sides were chosen for a team contest H. A. Stephens heading one team, and W. P. Brayton the other.

The first contest, 10 singles unknown angles, the Stephens team won by a score of 32 to 28; another contest of like conditions resulted in a score of 40 to 39, in favor of the Brayton team. To settle the contest it was then decided to shoot 5 down, and this resulted in a draw, 19 to 19. Being then out of targets, the shooters were compelled to leave the championship still unsettled. Had there been birds enough on hand, the boys would have been at it until now.

April 7.—The Missoula Rod and Gun Club seems to be in especial favor with the clerk of the weather this season. No matter what quality of weather obtained between times, when the hour for the weekly contest arrived, the weather conditions for the shoot have been thus far almost perfect. To-day was no exception; consequently a lively interest prevails among our trap shooters. W. H. Mace comes to the front to-day with a score of 17 out of 20 targets at known traps and unknown angles, and will wear the gold medal for a week. Frank Woody will wear the silver medal another week in consequence of having won the shoot off for first place in the "B" Class. Scores:

Class A.

W H Mace	11111001111111111110—17
Chas Searles	11111111110011101101—16
J K Wood	10100000111010100000— 7
W P Brayton	11111011001011001100—12
Lieut. Deval	01111011111011001001—13
J P Menard	10110101100011001111—12

Class B.

H W Thompson	00000101000101100100— 6
T E Evans	10101100111100100001—10
L L Hunt	10101011111010101100—12
P H Woody, Jr.	11101011101000111110—13
A M Sterling	11111001110000111000—11
J M Evans	11001011110110000111—12
Capt. Andrews	01000111010111111011—13
A M Stevens	10000101100100011100— 8
F P Kern	10100000100101011111—10

As usual, after the medal contest the boys considered the proper thing to be a team shoot. H. W. Thompson and L. L. Hunt chose sides and two lively shoots at 10 birds each man was the result. The first contest ended in favor of Thompson's team by a score of 34 to 31; the second in a victory for the same team, the score being 40 to 35.

WILL CAVE.

Cockburn Puts Up.

Mr. H. P. Good, editor of the Canadian Sporting News, of Toronto, Can., has mailed us a marked copy of the above paper issued on April 13. The passage marked refers to our note on Cockburn's letter in our issue of April 6. The close of that note ran as follows: "It is hard to see how, if he wants a match with Brewer, Cockburn can fail to accept the above (Brewer's) terms." Cockburn wants the match and has deposited, as Brewer stipulated, the whole of his stake money of $250, in the hands of Mr. H. P. Good, of the Canadian Sporting News, as proof that he is anxious to meet the American. It now remains for Brewer to make good his stake money, go to Canada, and meet Cockburn on his own grounds.

The pith of the note in the Canadian Sporting News lies in the following: "Mr. Cockburn has already put up with us his full stake of $250, and if Captain Brewer, who has not yet shown a dollar, will cover the amount, the match can be considered made and nothing will remain to do but to settle upon a date. As soon as Mr. Cockburn receives intimation that Capt. Brewer has posted his stake, articles will be drawn and the date set for the contest at two weeks after the signing thereof. The conditions, as already stated in the Canadian Sporting News, are Old Dominion rules, with the exception that the rise will be 26 instead of 21 yards. Capt. Brewer has been notified that Mr. Cockburn's full stake of $250 is now in our hands and that consequently now everything depends upon the promptitude with which he covers it."

The Ideal Hand-Book No. 6.

The sixth edition of the "Ideal Hand-book of Useful Information for Shooters" has just been issued. It contains much new matter relative to tools for new rifle cartridges, and also to shotgun shell loading implements. Any shooter who has not an "Ideal Hand-book" should send for one at once as he will gain from it a great amount of useful, practical information not to be had in any other form.—Adv.

West Newburgh Gun and Rifle Association.

Newburgh, N. Y., April 11.—As usual we had a very pleasant time at our regular shoot this afternoon, the following scores being made:

No. 1, Prize shoot, 10 known angles and 15 unknown angles:

*Higginson	11111011111111111111111—24
Stansborough, 3	11111111111011111111110100—24
Taylor	11111111011111001111101111—22
Mitchell, 2	11100111111010101011101111—20
Likely, 3	01111011111001100101101101—19
Taggert, 4	01010111111000000111101110—19
Wood, 5	10111100110001001110001101—18

* Higginson and Stansborough tied for first, Taylor winning a heat for second; each badge must be won five times.

In practice at live birds the following scores were made, each man shooting at the number which appears in brackets after his name: Higginson (17), 14; Taylor (10), 10; Likely (10), 7; Patton (15), 10; Mitchell (15), 11; Taggart (15), 13; Stansborough (5), 3; Wood (6), 3.

DAVID BROWN, President.

Edey Was Out of Form,

Babylon, L. I., April 10.—W. S. Edey, the Westchester, N. Y., Country Club crack, who did such good shooting at Willard Park last week in the Grand American Handicap, and his fellow club member, H. "Gilbert," shot a match at 100 live birds to-day on the grounds of the Westminster Kennel Club. Gilbert defeated his antagonist very easily by the score of 83-69, Edey being clean off in his shooting, the fast birds at the above grounds proving far too fast for him. Both men stood on the 29 yards mark. Score:

H Gilbert	00202222220222100220022022—16
	22222222222222220221222212—24

W S Edey	02020022222121202002202220—16
	22020121200110222222212122—20
	22022020122200200202001 20—15
	22202012202222220200122012—18—69

Chicago Trap Notes.

Chicago, Ills., April 9.—The following scores were made today by members of the Chicago Shooting Club at John Watson's Park:

Eddie Bingham	122111221011021*1—14
L. M. Hamiline	002121110110221*2—13

April 10.—The members of the South Chicago Gun Club held their club shoot for the live bird medal to-day. Scores were as follows:

L. C. Willard	11221012122212101120—17
F. E. Willard	11121110102222210212—17
A. W. Reeves	10212111202121011011—16

For the target medal, at 30 Empires, L. C. Willard scored 27, A. W. Reeves, 26; F. E. Willard, 21.

RAVELRIGG.

Elk River Ducking Club.

Philadelphia, Pa., April 12.—The Elk River Ducking Club had its customary spring shoot this afternoon at the farm of Mr. Frank Hendrickson, Sewell, New Jersey. Conditions were: 15 birds each; one trap; 50 yards boundary; 12 bore guns, 28 yards; 10 bore, 30 yards. A strong wind was driving, which made drivers and left quartering birds very difficult. Score:

J. C. Heywood (28)	11212210110100 2—11
G. W. Campbell (30)	10212100022210 2—10
L. Cottingham (28)	00000212120212 0— 8
J. H. Campbell (28)	10011202122021 0—10
F. Hendrickson (30)	01022011210021 0— 9
E. Denison (28)	21120222011202 1—12
C. R. Jarden (30)	00022200200210 0—6

HEMINGWAY.

John F. Weiler Gun Club.

Allentown, Pa., April 2.—The regular monthly shoot of the John F. Weiler Gun Club was held to-day. The gold trophy was won by Maguire and the silver by Porter. The attendance was excellent and several new men participated in the event. Each shot at 25 targets with this result:

Grim, 9; Benning, 20; Porter, 18; S. Weiler, 12; Hohe, 16; Heil, 18; A. Weiler, 18; Miller, 15; Mohr, 15; Acker, 17; Geissinger, 16; Maguire, 20; Ulmer, 17.

At the conclusion of the club shoot, the match between John G. Honecker, of this city, and J. Schock, of Weissport, for $50 a side, 15 birds, Long Island rules, took place. Honecker showed remarkable skill and won quite handily. The score:

Honecker	10111011111101 1—12—3
Schock	00*01101111111w—9—4

There was a dispute about Schock's third bird, and the referee did not render a decision as it would not have changed the result.

MASON.

Lynchburg Gun Club.

Lynchburg, Va., April 9.—Team No. 1, wet to practice to-day The wind was also out trying what it could do with targets and toyed with the scores most provokingly. The boys had a hard time hitting the atmosphere with any degree of certainty. The scores show for themselves.

Nelson	0100101101—5	Dornin	1100110110—6

F. M. D.

Suggests Another System.

Philadelphia, April 1.—Editor Forest and Stream: Having read of different systems of dividing moneys in sweeepstake shoots for prevention of the so-called dropping for place, I would suggest for instance in a ten bird (blue rocks) shoot, $1 entrance, say 10 entries, 3 moneys, each in first place, to get a premium of $1, each in second place to get a premium of 50 cents, and each in third place to get a pro rata share with first and second men of the balance. For example:

10 birds, $1 entrance, 10 men 2 cents per bird deducted, carrying a balance of $8.

Score.	Prem.	Pr.	Total.
1..9	$1 00	$ .71	$1 71
2..9	1 00	.71	1 71
3..8	50	.71	1 21
4..8	50	.71	1 21
5..7	P.R.	.71	71
6..7	P.R.	.71	71
7..7	P.R.	.71	71
8..6			
9..5			$7 97-3 cents.
10..5			

Princ. $8, prem. $3; balance $5. Divided in seven parts makes the pro rata, 71 cents and 3 cents over.

Under this system a club may offer a larger premium for first, second, third or fourth moneys according to size of shoot and number of moneys. I would like you to try how this works with different scores and premiums.

S. L. G. C.

Rifle Range and Gallery.

Cincinnati Riflemen.

Cincinnati, O., April 7.—The following scores were made by members of the Cincinnati Rifle Association at their range today. Conditions, 200 yds., off-hand, at the standard target. Negotiations have been made with the Central Sharpshooters' Association, of St. Louis, for another match on April 21, 1895. Conditions, same as previous matches, except that there will be 12 men for each team, and the German Ring (union) target will be used. Heavy wind and rain during the A. M. Scores:

Texas Rifle Association.

The sixth annual meeting and tournament of the Texas Rifle Association took place at Vogel's Valley, under the auspices of the Vogel's Valley Club, on April 6 and 7.

The meeting was very enthusiastic, and the local club, under whose management the shoot was conducted, acquitted itself well in the discharge of its duties toward its numerous guests.

The leading events were the team off-hand and rest shoots, and resulted as follows:

Off-hand team match, 100 yards. Teams of 5. Score:

San Antonio Team No. 1.						Vogel's Valley Team, No. 1.					
Texas Field	9	8	11	11	7—46	H Schmidt	7	6	4	9	10—36

Mr. Henry Adams, the representative of the Cut-off Rifle Club, distinguished himself by winning the handsome medal indicative of the individual championship of the State, by making 103 on the rest prize shoot, and 91 on the off-hand target. Mr. E. Seffel, of San Antonio, made the best off-hand score of 97, closely followed by Albert Steves, with 92 and Wm. Conrads a good third. Mr. Adams also won the handsome gold State medal, offered for the most 10s. As a general thing, however, the San Antonio Club carried off most of the honors.

At the meeting held on the evening of the first day, Capt. Ernest August Dosch, of San Antonio, was re-elected President, and F. W. Stuves, Secretary-Treasurer. Green Valley was chosen as the next meeting place in April, 1896.

Thus closed one of the happiest of rifle meetings. To say that everybody had a good time, one need not possess an elastic imagination.

TEXAS FIELD.

Revolver Shooting in England.

On March 20 the following shot in the revolver competitions of the North London Rifle Club at 20yds.:

Lieut Richardson	677657—78	Howe	564557—32
Major Palmer	775775—38	Ricketts	757415—32
Rand	775675—37	Denyer	575555—32
Lowe	747666—36	Franzman	555766—32
Hore	667773—36	C Knapp	755965—31
Comber	467747—35	J McKormac	566562—30
Frost	377647—34	Brading	437466—30
Carter	754647—33		

March 27.—Scores at 50yds.:

Major Munday	755377—36	Major Palmer	565227—25
Comber	267756—33	A Comber	252742—23
Richardson	477346—31	McKormac	447025—22
Luff	354747—30	Knapp	430733—20
Carter	246274 25	Ricketts	333334—19

Prof. Loris' Challenge to Carver.

London, England.—*Editor Forest and Stream:* I should think Jack Loris wants a cheap advertisement, doesn't he, when he challenges Carver with pistols and rifles (presumably on the target), weapons which he knows Carver does use. You can take it from me that he has not found any one in England fool enough to back him against Carver, or any other person; and, as to his showing over here, he has made none. He has never shot a match with any one; and although he called himself "champion shot of the world," and offered to shoot any man in the world for five hundred pounds, he had not a penny, and no one to back him. We put up fifty pounds in the hands of Sporting Life for a boy, not more than sixteen years of age, to shoot him a match; we also offered to back a weel-known lady exhibition, shot against him, but he dare not shoot against either of them, his whole object being to get notoriety. He came to this country about two years ago, and commenced by abusing every other stage shot in England. His career here was not startlingly successful. American stage shots do not, as a rule, set the Thames on fire, I can assure you. The British public knows something about shooting; the quality presented must be of a very high order, or it had better stay at home.

G. H. FOWKES.

Canoeing.

FIXTURES.

June 29, Marine and Field Club annual, Bath Beach.
July —, W. C. A., 10th annual meeting, Ballast Island, Lake Erie.
Aug. 9-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'ty-Treas., Chas. E. Cragg, Port Henry, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

Pursers.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. W. Cutler, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

A Canoe Cruise on the Potomac.

A bright, warm morning in the month of June, 1894, finds two travel-stained canoeists at Cumberland, Md., impatiently waiting the arrival of the freight agent that they may procure their canoes and duffle, and start on a two hundred mile cruise down the Potomac River to Washington, D. C. The canoes, Viking and Mochdomus, are open cedar paddling canoes, sixteen feet long by thirty inches beam; they are equipped with water-proofed canvas covers, buttoned down at sides to keep the canoes tight and dry when running in rough water; a strong pair of double-bladed paddles for propelling power, a small "Marque" shore tent, two folding-cots, large double blankets, a set of cooking irons and utensils; some canned provisions, a slight change of clothing, and the outfit is complete; but no, we must not omit a small 4 x 5 camera—that is to play a part of no small importance in this vacation cruise. As to the canoeists, Viking is an amateur on his first cruise, but destined to go through like an old-timer; Mochdomus is an old rapid runner—veteran of many cruises

Our start at Cumberland is made under favorable circumstances, and is graced by a sprinkling of the small boy, as well as the oldest inhabitant; once afloat our spirits rise in the tones of a bugle, as we dash through a rift of perhaps two hundred yards in length. The river at this point is about fifty yards in width, with a varying depth from a few inches to many feet, and flows with a strong current over a sparkling pebbly bottom.

Our start not being made until afternoon, we find a fine camping spot in the course of a few miles; and, being wearied by a night of railroading, we decide to go into camp and enjoy a good rest; our tent is soon up and the coffee-pot and frying-pan find employment to the satisfaction of our digestive organs, a plunge in the river at our feet, and we lie down under our own roof with the song of a rapid to lull us to sleep.

We are awakened by the return of some fishermen from a down the river night fishing excursion, the result of their efforts being many pounds of catfish and eels. They inform us that the river in front of our camp is a favorite resort of bass fishermen, we act on the suggestion and a delightful breakfast of bass marks the beginning of the day; we pack our duffle in good shape, and push away for a day's run. About noon we reach Old Town, Md., it may be old, but its growth has been decidedly stunted, for a few houses and a store are all that tell the tale; we purchased a few additional provisions, as we know not where night may find us.

The river, though small, is filled with many large islands, which give employment to our judgment in selecting the channel, right or left being the question. Taking the West Virginia side of a rather large island we hear an ominous roar, and note a decided increase in the current; we soon find the reason, as we rush down over a heavy ledge of rock forming, as it were, a natural dam. We long to try it again, but we will no doubt have abundant opportunity to display our nerve in the many rapids we are to encounter daily ere we reach the tide water at home.

One unpleasant feature of this river is the large number of eel racks or fish boxes which obstruct the channel; on the rivers on which the writer has cruised, these abominations have long been unused and are rapidly being destroyed by ice freshets; the State Legislatures have also enacted laws against the use of these dams, erected by covetous men for the wholesale destruction of fish; but, strange to relate, we found the dams on this river in excellent repair, and were informed that in the fall of the year eels are caught in them by the wagon load. A description of these traps, for that is what they really are, might not prove uninteresting, they are constructed of loose stone, collected principally from the bed of the river, and piled up, forming a wall sometimes several feet high; the wall having two wings, arranged in a V shape, with the apex pointing down stream; in this point the basket or box is placed which on this river is a large wooden box, not unlike a wagon body, with the up-river end open, the box being placed at an angle of about twenty-five degrees, the lower end being elevated by posts set in the river bed; of course, fish and eels swimming down stream will naturally make for what appears to be the channel, only to be caught by this unseemly obstruction. It is said that fish make their escape by jumping over the sides or lower end, but eels fall an easy prey. To find a channel sufficiently large for a loaded canoe, over the more than one hundred of these obstructions in low river is no easy matter, in high river they would no doubt make a pleasant little drop.

We reach Great Cacapon, W. V., in the afternoon of our third day, and encounter the first of the large dams erected by the Chesapeake and Ohio Canal Company to furnish water for the canal. The dam is about twenty feet high, and is not provided with either a fish-way or rafting channel (as are the dams on the northern rivers), the reason being the obstruction known as Great Falls, a cataract above Washington City, which effectually prevents fish from running up the stream.

As we cannot shoot a dam of this height, we carry around on the West Virginia side; it is a rather steep carry but not lengthy, an easier way would be to lock into the canal and carry back into the river a short distance below the dam, but the sight of a small rapid just below the dam was the reason for our pursuing the first course. Our camp and paddle down to Dam Number Five, a distance of about thirty miles, proved uneventful and uninteresting owing to the paddle of about ten miles on slack water above the dam, with a strong head wind to retard our progress. This dam is of dressed stone, about twenty-two feet in height; there is not a good carry so we are locked into the canal by the obliging lock-tender; about half-mile below, finding a good carry, we are again on the river; where the horsefly does not molest. This sentence had better be explained; owing to the large strike in the coal mining regions traffic on the canal is suspended, and the myriads of horseflies used to feeding upon the mules of the tow-path are looking for a square meal, so that when we commence our short trip upon that body of water we are immediately given a grateful reception by the hungry flies, and many are the deaths in the incest family, but unpleasant are the thoughts of the canal, which, were it not for these pests, would make nice cruising for a small steam yacht, or the non-rapid running canoeist. Late in the afternoon we reached Williamsport, Md., where we find mail awaiting us and enjoy a little civilization in the shape of ice cream. The small boy in this town collects in quantity and passes many compliments upon the style and speed of our craft, arising from a declination on our part to allow the boys in swimming a chance to connect with the stern of the canoes for a tow; a connection which would, perhaps, have resulted in a rather damp catastrophe.

About twenty-two miles below Dam Number Five we encountered Dam Number Six, of stone construction, and about the same in height as the other dam; we again use the canal, there being a lock into the same about a mile above the dam, the canal company using the level above the dam as a part of their water-way, having the tow-path along the river side; these large stretches of slack water would make a splendid sailing course, but for the paddling canoeist are not enjoyable; about two hundred yards below dam we carry into river, and running a few eel racks reach Shepherdstown, W. Va., about the middle of the afternoon.

The next day being Sunday we decided to remain at this place until Monday morning; so leaving our canoes upon the beach we seek the village and are relieved of our wandering appearance in the form of whiskers; making arrangements at the hotel for our meals, we returned and erected our tent among the rocks, there fortunately being a spot large enough for our small residence. On Sunday we attend the morning services in one of the many churches with which this quiet town is blessed, as we take our seats in church we are surprised to find spittoons in the pews, and they look, too, as if they were in a state of action, surely a distance of a few miles makes a great difference in the habits and customs of our people.

After a quiet rest in the afternoon we decided upon a little walk before supper, there being a wooden dam about a mile below the town that has recently burst in several places, we think it might be well to ascertain our chances of a successful shoot on the morrow. The principal break is a wild-looking opening with plenty of loose timber lying around, but there seems to be a good depth of water with an immensely strong current, so we decided that to run the same, even with the prospect of a swim, is preferable to another canal trip While we engage in speculation the weather man does business, and before we are ready to return a very heavy shower begins operations, we take shelter behind the abutments of the dam, and for a while all is well, but the wind shifts and we receive the water in great quantity. There is no use tarrying here, so we make a run for the hotel, distant more than a mile. A sorry sight we are when we arrive, and the laugh is not on our side; changing our clothes we don knickerbockers and sweaters, and decide that when our dude clothing is dry we will express it home, and do the latter part of our cruise in the present outfit.

As the shower does not relax we spend the night at the hotel, our tent and duffle having been carefully stowed in the canoes in the morning, and they, protected by their covers, are as tight and dry as one could wish. In the morning we have a warm walk to Sharpsburg, Md., where we visit the Government Cemetery at Antietam battle-field, and a sight never to be forgotten is presented as we gaze upon the long lines of small, white headstones, making the last resting-place of the mortal remains of the many gallant heroes that sacrificed their lives in this memorable battle.

A tramp to the bridge over Antietam Creek, known as Burnside's Bridge, where many hundreds perished in a successful attempt to take the bridge from the Confederates, view of the old Dunkard Church, where the heaviest fighting occurred, and a tramp to Bloody Lane completes our visit, and we return with a fair idea of one of the bloodiest battles of the great Civil War.

A start at noon on a very warm day is not desirable, but we must reach Harper's Ferry at night, a few strokes of the paddle, and we are at, in, and through, the dam; a rush it is, with the canoes dropping to the lower part of the broken dam, they strike on the loose frame-work, but the speed is so great that we do not pause for examination. Sponging out the water that has found its way in around our covers, we push rapidly on, about the middle of the afternoon we reached the dam above Harper's Ferry, and left our canoes over, there being insufficient water for a shoot over it, which could be made very nicely on a high river; and now begins our first experience in a large rapid on this river. The channel is literally nowhere, the principal flow of water is on the Maryland side, with small islands scattered here and there, making a miniature of the Thousand Islands of the St. Lawrence River; we dash down what is apparently the deeper of the numerous small channels, and, dodging rocks to the right and left, we are soon through the first part of the rapid, which is proabbly two miles long. Arriving at the railroad bridge we tie up the canoes, and proceed to the hotel for supper; our ideas of cruising are to sleep in a tent, and cook our own meals, but when near a village, as in the present instance, by all means to get meals at a hotel, as it saves a deal of time and trouble. We find a suitable camping, or rather sleeping, spot in the evening near a canal lock on the Maryland side, the lock tender kindly offering to "keep his eye" on our canoes during the following day; while we are visiting the historical grounds in this vicinity.

After our morning meal we go by rail to Charlestown, W. Va., the place of trial and execution of John Brown, the history of which all are familiar with we photographed the court-house where the trial occurred, and while thus engaged are accosted by Colonel John T. Gibson, who introduces himself to us, and very kindly offers to point out the places of interest. We visit the spot of execution, which is now marked by the elegant residence of the colonel; after hearing from our escort a brief description of the exciting times we bid farewell to the entertaining gentleman and visit St. George's Chapel, about a mile outside the town. We find the building in ruins, but the sight is well worth the walk, the chapel was erected by the English about 1730 A. D., constructed principally of materials brought over from England.

(TO BE CONTINUED.)

Caulking Light Planking.

Clayton, N. Y., April 6, *Editor Forest and Stream:* Referring to the method of caulking, mentioned in the recent articles on the "One Design Canoe," I would say that letters patent were granted to Nelson S. and Edward R. Bowdish on Jan. 18, 1887, No. 356,096, by which the forming a groove by pressing down the fiber along the bottom of the groove in the edges of boat planking in combination with any suitable filling strip or material, whereby the expansion of the fiber so pressed down will expand and render a seam tight when acted upon by moisture, making what we claim is a "self-caulking" seam. We now have full control of the patent, as by virtue of a contract formerly made with the Bowdish manufacturer of Skaneateles, N. Y., all rights reverted to us on Nov. 18, 1894. As to the "special tool" mentioned, it was made by myself about a year ago, and I own the only one in existence, and claim and reserve all rights. I believe it has been decided by the courts that the use of a part of an invention is an infringement of the rights of the patentees. The same holds good, and even in this case we have the matter fully covered; but, if we desired to modify our claims by the use of a special tool we have a year yet to perfect and claim the same. We have, however, the opinion of good counsel that the matter is fully covered and protected. Now, in justice to us, we claim that the permission for a party to make use of the tool and right to make a sample cance does not justify them in the appropriation of more rights than were allowed, neither can they claim more. We do not wish to interfere with or injure any one's business, but we simply wish and intend to claim and maintain our own rights.

N. S. BOWDISH.

War Canoe Racing.

Mr. Chas. E. Archbald, of the Pointe Claire C. C., Montreal, was in Boston last week, and called on Vice-Com. Appollonio. He was much interested in examining the Puritan war canoe, and was anxious to arrange a war canoe race between the crew of his club and any representative American crew. His idea met with great favor among the members of the Wawbewawa War Canoe Association, of Boston, and they are now in correspondence with the Pointe Claire's with a view to making satisfactory arrangements.

The chief difficulty is that all the Canadians race fifteen men crews, while all the war canoes in New England are fitted for nine paddlers, as it is almost impossible to ship by rail canoes over 30ft. in length.

It is hoped that the clubs can agree on the size of the crew to be entered, as a race of this kind would be a great attraction at the A. C. A. meeting on Lake Champlain in August.

The Wawbewawa's now hold the championship of the Eastern Division, A. C. A., and the New England Amateur Rowing Association, and there is no question but that a race between them and the Pointe Claire's would be a fine sight, even more interesting than the very exciting war canoe race at Springfield last May, when the Wawbewawas pulled out first place in so close a race that the five crews could have almost been covered with a blanket at the finish.

A. C. A. Membership.

Eastern Division: Chas. D. Heywood, H. M. Chase and Philip H. Thwing, Holyoke, Mass.; James Thompson, Arthur C. Scott and Geo. A. Davis, Worcester, Mass. Atlantic Division: Alfred Oakley, James A. Barker and Geo. T. Holmes. For associate membership: Mrs. C. F. Schuster, Jr., Holyoke, Mass.

CANOE NEWS NOTES.

The well known fast cruising canoe Francis, of Boston, has been purchased by William J. Marlor, a young canoeist of Lynn, who will rename her Lillian. The Francis is 14ft. long, 32in. beam, and was built by J. H. Rushton, of New York.

The Holyoke C. C. has elected as President, Mr. F. H. Metcalf, and as Secretary, Mr G. L. Emerson. The club now has a membership of 48, and a fleet of 9 canoes. If suitable land can be obtained, the club proposes to build a club house at a cost of $5,000.

FIXTURES.

Season of 1895—Races and Cruises.
* Dates marked thus are unofficial.

APRIL.

19. Musquito Fleet open, Boston Harbor.
18. Corinthian, Atlantic City record, Atlantic City.
20. Huguenot cruiser's race, Sound.

MAY.

3. Cor., Atlantic City record, Atlantic City.
4. San Francisco opening, San Francisco Bay.
5. San Francisco open race, San Francisco Bay.
11-12. San Francisco cruise, San Francisco Bay.
18-19. San Francisco cruise to Mare Island.
18. Cor., Atlantic City record, Atlantic City.
18. Huguenot, cat-boat class, New Rochelle, Sound.
24. Royal St. Lawrence, opening and squadron sail, Montreal.
25-26. San Francisco cruise to Goat Island.
26. California annual regatta, San Francisco Bay.
26. Williamsburg opening sail, Sound.
30. Atlantic opening race, New York Bay.
30. Harlem annual, Sound.
30. Brooklyn opening, Gravesend Bay.
30. Audobon annual, Hudson River.
30. Cor., San Francisco race, San Francisco Bay.
30. San Francisco cruise, San Francisco Bay.

JUNE.

1. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal.
1. Cor., Atlantic City record race, Atlantic City.
1. Atlantic special, New York Bay.
1-2. San Francisco cruise to Vallejo, San Francisco Bay.
8. Knickerbocker annual, College Point, Sound.
8. Atlantic special, New York Bay.
8. Huguenot special, New Rochelle, Sound.
8. Royal St. Lawrence cruising race to Cascade Rapids, Montreal.
11. Atlantic annual, New York Bay.
11. Williamsburg Club, Sound.
13. New York annual, New York Bay.
15. Atlantic special, New York Bay.
15. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal.
15-16. San Francisco cruise to St. Quentin, San Francisco Bay,
15. Larchmont spring regatta, Sound.
15. Philadelphia annual, Tinicum-Delaware River,

17. Massachusetts open, Nahant-Massachusetts Bay.
17. Cor., Atlantic City special cup, first race, Atlantic City.
22. Yankee Doodle—Norwood race, Hudson River.
22. Douglaston annual, Douglaston Sound.
22. Atlantic special, New York Bay.
22. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal.
22-23. San Francisco cruise, San Francisco Bay.
23. California regatta, San Francisco Bay.
24. Seawanhaka Cor. annual, Oyster Bay, Sound.
24. Pavonia annual, Communipaw, New York Bay.
25-26. Seawanhaka Cor. annual race to New London, Sound.
29. Atlantic special, New York Bay.
29. Yankee Doodle, Vamoose, Rex. race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29. New Rochelle annual, New Rochelle, Sound.

JUNE.

1. Royal St. Lawrence fourth annual, Sir Donald A. Smith Cup, Montreal.
1. Cor., Atlantic City record, Atlantic City.
1. Indian Harbor special, Greenwich, Sound.
3. Seawanhaka Cor. race to Larchmont, Oyster Bay, Sound.
4. Larchmont annual, Larchmont, Sound.
4. Boston City open, Boston Harbor.
4. Lake Michigan Y. R. A. annual, Milwaukee.
4. Cor, Marblehead Club, Marblehead (Mass.) Bay.
4. Northwestern International Y. R. A. race, Seattle, Puget Sound.
4-7. San Francisco cruise, up river, San Francisco.
5. American annual, Milton Point, Sound.
6. Royal St. Lawrence Commodore's Cup, Montreal.
6. Riverside annual, Sound.
8. Seawanhaka Cor. special, Oyster Bay, Sound.
9. Horseshoe Harbor special, Larchmont, Sound.
10. Huguenot special, New Rochelle, Sound.
11. New York Athletic Club annual, Travers' Island, Sound.
12. Larchmont, 34 and 21ft. classes, Sound.
Larchmont-Atlantic combined annual cruise.
12. Rendezvous at Larchmont.
13. Royal St. Lawrence cruising race to Beauharnois, Montreal.
13. Cor., Marblehead first champion, Marblehead (Mass.) Bay.
13. Hempstead Harbor annual, Sound.
14. San Francisco open race, San Francisco Bay.
15. Savin Hill open, Savin Hill, Boston Harbor.
15. Riverside annual cruise, Sound.
17. Cor., Atlantic City Special Cup, second race, Atlantic City.
17. Cor., Marblehead cruising and knock-about classes, Marblehead.
20. Sea Cliff annual, Sound.
20. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal.
20-21. San Francisco cruise, San Francisco Bay.
21. Cor., San Francisco regatta, San Francisco.
27. Indian Harbor annual, Greenwich, Sound.
27. Quincy, Quincy Point, Boston Harbor.
27. Cor., Marblehead, second champion, Marblehead (Mass.) Bay.
27. Royal St. Lawrence, 18ft. skiff and steam yacht class, Montreal.
27. San Francisco club sail, San Francisco Bay.
28. San Francisco outside sail, San Francisco Bay.
30. Cor., Atlantic City annual, Atlantic City.
New York Y. C. annual cruise rendezvous and race, Glen Cove.
July 29. Rendezvous and race, Glen Cove, Sound.
* July 30. First run, Sound.
* July 31. Second run, Sound.
* Aug. 1. Third run to Newport.
* Aug. 2. Goelet Cups, Newport.
* Aug. 4. Fourth run to Vineyard Haven.
* Aug. 5. At anchor, Vineyard Haven.
* Aug. 6.
* Aug. 7.
Aug. Special races at Newport.

AUGUST.

Lake Michigan Y. R. A.

2. Lincoln Park, Chicago.
3. Columbia, Chicago.
7. Racine, Racine.
15. Green Bay, Green Bay.
3. Monatiquot open, Boston Harbor.
3. Shelter Island annual, Greenport, Shelter Island, Sound.
3. Larchmont, 34ft. and 21ft. classes, Sound.
3-4. San Francisco chowder cruise to Pinnacle Rock, San Francisco.
13. American open, Newburyport.
14-15-16. Cor., Marblehead mid-summer series, Marblehead Mass.) Bay.
15. Cor., Atlantic City Special Cup, third race.
10. American special, Milton Point, Sound.
10. Winthrop open, Great Head, Boston Harbor.
10-11. San Francisco cruise to California Y. C., San Francisco Bay.
15. Sea Cliff special, Sound.
17. Huguenot annual, New Rochelle, Sound.
17. San Francisco cruise to Mare Island, San Francisco Bay.
17. Roton Point Imp. Co. annual, Roton Point, Sound.
17. Cor. open, Marblehead (Mass.) Bay.
17-18. San Francisco cruise to Mare Island, San Francisco Bay.
17. Royal St. Lawrence Hamilton trophy, 18ft. and 21ft. classes, Montreal.
19. Manchester open, Manchester, Mass.
24. Norwalk, Norwalk, Sound.
24. Squantum open, Squantum, Mass.
24. Horseshoe Harbor annual, Larchmont, Sound.
24. Cor., Marblehead third champion, Marblehead (Mass.) Bay.
25. San Francisco open regatta, San Francisco Bay.
29. Cor., Atlantic City Special Cup, fourth race, Atlantic City.
30. American special, Milton Point, Sound.
31. San Francisco cruise to Benicia, San Francisco Bay.
31. Larchmont, 34ft. and 21ft. classes, Sound.
31. Huntington annual, Huntington, Sound.
America's Cup trial races, New York Bay.

SEPTEMBER.

Seawanhaka Cor., 15ft. class, Oyster Bay.
2. New York Y. R. A. annual, New York Bay.
2. Larchmont fall regatta, Sound.
2. Cor., Marblehead Club, Marblehead (Mass.) Bay.
2. Lynn open, Nahant (Mass.) Bay.
5. Larchmont, 34ft. and 21ft. classes, Sound.
7. San Francisco cruise to Mare Island, San Francisco Bay.
7. New York America's Cup, first race, New York Bay.
—. New York America's Cup, second race, New York Bay.
—. New York America's Cup, third race, New York Bay.
7. Revere open, Marblehead (Mass.) Bay.
7. Larchmont cabin cat classes, Sound.
8. San Francisco squadron sail, San Francisco Bay.
9. San Francisco sail to Sausclito, San Francisco Bay.
12. Sea Cliff special, Sound.
13. Cor., Atlantic City record, Atlantic City.
14. Larchmont, 34ft. and 21ft. classes, Sound.
15. Cor., San Francisco regatta, San Francisco Bay.
21. Huguenot cruiser's race, New Rochelle, Sound.
21-22. San Francisco informal sail, San Francisco Bay.
27. Cor., Atlantic City Special Cup, fifth race, Atlantic City.
28-29. San Francisco cruise to Petalumna Bridge, San Francisco Bay.

OCTOBER.

6. San Francisco closing sail, San Francisco Bay.
6. California regatta, San Francisco Bay.
12. Cor., Atlantic City record, Atlantic City.
12. Huguenot cruiser race, New Rochelle, Sound.

The mountain, of 325,000 suggestions, has brought forth a very small mouse in the name of the new Herreshoff Cup defender, announced on April 16 in the New York Herald, which conducted the competition. The name chosen by the members of the syndicate, Messrs. Vanderbilt, Iselin and Morgan, is—Defender. The new boat is a defender, and has been so termed, in default of a better name from the first, but there is nothing distinctive or even attractive in a generic term such as this, which has been freely applied for years to Puritan, Mayflower, Volunteer and Vigilant. The popular enthusiasm awakened by those names is likely to be lacking in the present case.

Madeline—Countess of Dufferin
Mischief—Atalanta
Puritan—Genesta
Mayflower—Galatea
Volunteer—Thistle
Vigilant—Valkyrie
Defender—Valkyrie III.

In none of the previous races have the names of either defender or challenger been so commonplace, and so poorly calculated to add to the interest of both sides in the races.

There is a ray of hope in the report which comes as we go to press, that the Defender is, after all, to be a centerboard boat and thus "of the national type." The detailed statements of her keel construction are in no way contradicted, but now that the casting for her stem has been seen, it is said that she will have a small auxiliary centerboard forward, to be used if required, as in Pilgrim and Jubilee. This will, of course, make her a centerboard boat, and thus ease the minds of the old centerboard school to a certain extent.

From all reports, the stem and stern of the new boat, both brass castings, are ready, and the frames nearly up, and as the plating and rivets are at the shops, work can be pushed more rapidly from this time on. It is unlikely, however, that the yacht will be afloat before June. In the meanwhile, her crew, under Capt. Haff and Mate Berry, will be at work on board Colonia, which yacht is now fitting out at South Brooklyn. The story published generally a few weeks ago of new spars making at Piepgrass' yard, had no better foundation than the fact that Vigilant's spare spars, stored for two years in the big ship-house, were mistaken by a yachtsman for new. Within a week, however, there have been towed to the yard two large sticks purchased by Mr. Morgan several years since when he talked of putting a cutter rig on Constellation. These sticks have lain in the mud at Erie Basin ever since, but will now be worked up by Piepgrass into mast and boom for the new boat. Mr. N. G. Herreshoff is now at work again, and under the stimulus of his presence the boat will take shape rapidly.

From the remarks, more pointed than polite, of the Boston Herald, it is plain that our comments on its method of printing wild guesses as authenticated facts have hit very near the mark. The Herald makes no attempts to explain why it vouched for 22ft. beam and 23ft. draft one day and for 27ft. beam and 19ft. draft a day later, afterward repudiating the latter beam dimension; but in its accustomed manner it loses its temper and indulges in wild shouts of "Anglo-maniac." This, of course, it intends as convincing evidence that the Herald is right and the Forest and Stream wrong.

Dacotah's races in the Mediterranean have netted her $3,250 in cash, besides "objets d'art," and other valuable prizes. She is now on her way to Glasgow by steamer, her skipper and crew having returned home before her.

On April 11, Vigilant under yawl rig, sailed from Southampton for New York, with a favoring breeze. Upon her arrival, the new centerboard will be shipped, and the yacht at once fitted out for racing.

The art of not racing steam yachts is apparently quite as well understood abroad as in this country; the offer of valuable prizes in the Mediterranean has resulted in several postponements, and finally a so-called race in which Mr. McColmont's Giralda was the sole competitor. This craft covered the 26 1-2 miles at a speed of 22 3-5 knots, something unapproached in this country in a large steam yacht.

The bill now before the New York Legislature would, if enacted, prevent the use of the naphtha launch as a yacht tender, and interfere seriously with the convenience of yacht owners to no good purpose. The New York Times very properly condemns the bill, as follows: "A somewhat absurd measure about naphtha launches pends in the Legislature. It requires anybody who operates a naphtha launch or an electric launch to take out a license as an engineer.

"Now, everybody knows that the main uses of the launch are to serve as a tender to a yacht, or as an adjunct to a country place. The man who runs the launch is commonly a humble sailorman, at $15 a month, who could not pass an engineer's examination, or any other, except perhaps in composing a Mathew Walker. Sometimes he is a gardener, or a man of all work, who could not pass an examination in anything.

"If any owner of launches proposed to carry passengers for hire, it might plausibly be required of him to take out licenses for the men who run his launches. But when he intrusts to the launches only the lives of his family and his guests, the exaction is absurd.

"What could possibly have put it into the head of Assemblyman Gleason to introduce this ridiculous measure? There is no money in it. There is no popularity in it. There is nothing in it."

Isolde.

The trial trip of the new 20-rater Isolde was made on April 8, with Mr. N. G. Herreshoff at the stick. The performance of the yacht was very satisfactory, but in coming to her moorings she touched the bottom. On April 11 she was out again, this time carrying topsail in a fresh N. W. breeze. She will soon be shipped by steamer from New York.

The Yacht Racing Union.

The movement for a uniform arrangement of racing dates, among the Sound clubs, inaugurated some time since, has not only been successful in itself, but has gone much further than its projectors dared to hope, in the organization on a permanent and systematic basis of the Yacht Racing Union of Long Island Sound. At the preliminary meetings, though the main topic of discussion was that of non-conflicting fixtures, it was evident that the Sound yachtsmen were in favor of a general union of the clubs; and a special committee, Messrs. F. B. Jones and C. W. Wetmore, was appointed to report on a scheme of organization at a meeting on April 15. The Seawanhaka Cor. Y. C. offered its town house as a place of meeting, and on Monday night some twenty-five yachtsmen were present, representing the following clubs: Douglaston by F. E. Barnes; Knickerbocker, O. H. Chelborg Horseshoe Harbor, E. P. Cronkhite; Indian Harbor, F. B. Jones; Seawanhaka Corinthian, O. E. Cromwell; Huguenot, E. B. Hart, Jr.; Waterside, H. A. Irvene; Hempstead Harbor, Ward Dixon; Sea Cliff, L. L. Clark; Larchmont, J. F. Lovejoy; Huntington, J. W. Shepard; Riverside, W. J. Selleck; Yale Corinthian, G. D. Babcock; Pequot Casino Association, L. V. Clark; New Rochelle, J. W. Rough; Harlem, F. W. Cregan and the Corinthian Fleet, E. T. Birdsall. Mr. Crowell presided, Mr. Jones, who has been the moving spirit in the enterprise, acting as secretary.

The report of the committee was read by Mr. Wetmore, and each section was very fully discussed. Some amendments were made, but the proposals of the committee were not altered materially, the rules being finally adopted in the following form:

The name of this organization shall be the Yacht Racing Union of Long Island Sound.

The object of the Union shall be to encourage and promote yacht racing on Long Island Sound.

Any recognized yacht club, in good standing, having a station on Long Island Sound or the waters tributary thereto, between Hell Gate and Race Rock, shall be eligible to representation in the Union.

Each club admitted to the Union shall appoint from its members representatives to the Union, the number of such representatives to be proportionate to the number of each club's members, and to be determined as follows: One representative for each 100 or fraction of 100 members; provided, however, that no club shall be entitled to more than five representatives. Representatives shall be chosen, as far as may be practicable, from the Race or Regatta committees of the club.

The powers of the Union shall be advisory merely, and no club shall be bound by the action of the Union until it has ratified such action.

The affairs of the Union shall be managed by a council of seven of the representatives, who shall be elected annually by the Union as its general meeting. Not more than one representative from the same club shall be eligible to election to the council. Vacancies occurring between the general meetings shall be filled by the council. It shall be the duty of the council to elect clubs to the Union; to appoint special officers and committees; to frame racing rules for adoption by the Union and to arrange dates for racing events; to determine and settle all questions and disputes relating to yacht racing which may be referred to them for decision, and, further, to take such steps as they consider necessary and expedient to carry into effect the objects of the Union. The council shall elect a chairman and a secretary.

There shall be a general meeting of the Union in New York in December of each year, on such days as the council may appoint. The council may call special meetings of the Union whenever they consider it necessary, and shall do so upon the requisition in writing of seven representatives. Representatives from seven clubs shall constitute a quorum at any meeting. The council shall meet at such times and places as they may consider expedient and appoint. Four representatives shall constitute a quorum at any meeting of the council.

The expenses of the Union shall be apportioned pro rata among the clubs composing the membership according to the number of their representatives therein.

Voting by proxy shall be allowed.

Amendments to these rules may be adopted at any meeting of the Union by a two-thirds vote of those present, provided notice of the amendment has been given in the call for the meeting.

A motion was carried, empowering the chairman to appoint a temporary council of seven, including himself, until an election was held.

The following resolution was offered by Mr. Jones, and carried after discussion.

Resolved, That it is considered desirable that all yacht clubs on Long Island Sound adopt a uniform set of racing rules; but

Whereas, It is considered impracticable for this season to have the clubs change their rules, so that they shall conform exactly in all details, it is recommended that for the present the different clubs amend their rules only in so far as to make them agree upon the following points:

That all yachts be classified according to their racing length.

That the system of measurement be of length and sail area as per the formula, load water line plus the square of the sail area divided by two, equals the racing length.

That open yachts sailing with fixed and with shifting ballast be classed separately.

That crews shall be limited.

That a uniform time allowance table be used.

That a uniform system of race signals be used.

The committee also presented a paper in which the organization of the Union and the adoption of the rules was set forth; this paper being signed by such delegates as were fully empowered to act for their clubs. In the case of other clubs, the action of the meeting will be laid before them for their indorsement. The full schedule of racing dates will be published about May 1. Resolutions of thanks to the committee for its work, and to the Seawanhaka Cor. Y. C. for the offer of its house were adopted.

After the business was concluded, Mr. Cromwell invited the delegates to the dining-room, where a supper was served.

Early Centerboards.

Editor Forest and Stream:

If any good Americans are in distress over the prospective abandonment by their countrymen of the centerboard in yachts, it may relieve them to know that the centerboard is, in all probability, the invention of a Scotchman, at least the earliest adaptation of the invention in this State, of which I have ever read, took place in this quarter of the State about ninety-five years ago on Seneca Lake, and the man who built the boat was Captain Williamson, who at the time was agent for the European owners of the celebrated Putteney estate, including the site of this city Reference to the centerboard is found in a book of travels, printed in London by an Englishman, John Maude, who in detailing incidents of a trip through this region in 1800, mentions something known as a "jumping keel," which Captain Williamson was then putting in a boat. The book is not at hand, but my recollection of the passage satisfies me that the centerboard exactly as it is to-day, was put in use by Captain Williamson in 1800. Whether he invented the contrivance or merely adapted the idea of some one else was not stated by Maude.

If Captain Williamson was the "original and first inventor" of the device, while there may be some satisfaction in knowing that it was produced on our soil, our patriotic ardor may be cooled by the other fact that he was of foreign birth, and started for this country as a captain in the service of George III., to assist in putting down certain trouble in his majesty's colonies. An American snip captured Williamson's on the sea, and he was held as a prisoner in Boston during the War of Independence. But he became a naturalized citizen of the United States, and appears to have been a high-minded and able man.

I do not know that the bulb-fin is claimed as an American invention, but if it is the claim will have to go back over fifty years, for I have assurance from a perfectly trustworthy authority that a boat having that device attached was built on the Slaney River, Ireland, and sailed in St. George's Channel, off the Wexford Coast, prior to 1845. The builder, whose name was Lewis, was owner of a cotton mill, at Clairmon, on the Slaney.

EDWARD REDMOND.

ROCHESTER, N. Y., April 6, 1895.

[The centerboard, in one form or another, was known prior to this date, 1800.]

The Centerboard in Cup Defense.

The quick passages of Vigilant and Lasca last year, and the slower one of Valkyrie, were duly exploited at the time as convincing evidence of the superior speed of centerboard craft, regardless of the details of model and centerboard; the two centerboard yachts made quick passages, the keel yacht a slow one; ergo, the centerboard gives speed. The radical differences between the deep-bodied Lasca with a wooden board and no keel, and the semi-fin Vigilant, with excessive depth of keel and loaded board were conveniently overlooked. The return voyage of Vigilant, begun this week, is likely to give more convincing proof of the demerits of the keel type, as this yacht is now a keel boat without a centerboard and with the slot blocked up temporarily. Should she, as is more than likely, encounter bad weather and westerly winds in place of the favoring conditions which attended her last spring, she may take nearer thirty days than twenty to cross, which would furnish a clinching argument against the speed of keel boats. We are not aware how much the centerboard was used in the passage from New York to Glasgow probably little or none, but in the minds of many the argument is just as convincing: with her centerboard snugly housed in the trunk, she is indubitably a centerboard boat, in spite of six feet of keel; with the same board at the bottom of the Solent, and the slot blocked up, she becomes, of course, a keel boat.

The question which we recently touched on is very ably handled by the Boston Globe, as follows:

Since yachtsmen and others interested in the defense of the America's Cup have become satisfied that the new Herreshoff Cup defender is a keel boat, and that in all probability she will be the one selected by the Cup Committee, there have been many expressions of regret that the Cup defense was to be left this year to a keel boat, and that the centerboard, the "national type," which had proved so successful in previous contests, had been abandoned. Predictions of dire failure have also been made because of this change of type, and to many of the most ardent centerboard adherents, the Cup seems already in the hands of the Royal Yacht Squadron. A little careful consideration of the question will show, however, that the charge of abandoning for the first time the "national type" does not hold good, and at the same time will give promise not only of the fastest America's Cup defender yet turned out, but also of successful Cup defense.

The original American centerboard was a beamy, shallow-hulled boat, with all her ballast carried inside. She was largely dependent upon her beam for her stability and power, and was undoubtedly fast in many conditions of wind and weather. The first prominent departure from the type was Puritan, a boat which at 22ft. beam retained much of the breadth of the type, but which, with a draft of 8ft., and with 27 of the 48 tons of lead ballast carried on the keel, was a decided admission of the value of outside lead as taught by Madge and other British racing craft. She was

indeed, a compromise between the "plank on edge" and the "skimming dish," in which the good points of each were combined. The success of the compromise type was demonstrated in the defeat of Genesta, the fastest English cutter of her day.

A further development of the compromise type is found in Mayflower, a boat with about the same proportion of beam, but with a foot and a half more draft and about 40 of her 50 tons of lead ballast on the keel. Still further development of the type was Volunteer, with 23ft. beam and 10ft. draft, about those of Mayflower, but with all of her 55 tons of lead carried very low down by reason of her steel construction.

The value of the type was again demonstrated in the Thistle contests, for although England had dropped her cramping tonnage rate and had produced a beamy boat whose speed was phenomenal in her own country, yet the American boat was easily superior in both light and heavy weather. Volunteer was in her day undoubtedly the best representative of the centerboard type ever built, and in so far as the type is to be considered a "national" one, she can stand as a model.

But in the next Cup contest, that of 1893, was the "national" type adhered to, and was Vigilant such a centerboard as that upon which Americans, with Volunteer in mind, were pinning their faith? Again, a little consideration will show that a departure was made, and that she was not such a centerboard, although she was a development of the idea, which produced the famous Burgess trio.

On practically the same water-line as Volunteer, Vigilant had a beam of 26ft. and a draft of 13ft. 6in., with about 70 tons of lead. Her centerboard was not much more than half the size of Volunteer's, and was heavily weighted, to act as ballast as well as to hold the yacht up to windward. She was, indeed, a "centerboard," but hardly of the Volunteer type, since she had three feet and a half more draft than that boat, and also over a foot more draft than the America, the keel boat which originally won the Cup, or than the keel Schooner Sappho, which once successfully defended it.

Vigilant was a fast boat, and did her appointed work well, but she was far from the "national" type, as represented in Volunteer, and was far more of a keel than a centerboard boat in design. That she would have done well as an out-and-out keel of a bit more draft, the performances of Colonia show.

Here was the first departure in Cup defense building, and in considering this year's boat, those who pin their faith to the centerboard boat simply because she is a centerboard, should bear the fact in mind.

So much for the "national" type and the first departure from it; now for this year's "departure."

The gentlemen who have had the most experience with Vigilant are N. G. Herreshoff, the boat's designer, and C. Oliver Iselin, who managed her in 1893 and sailed on her in English waters in 1894, and who is now manager of the syndicate for which the new Cup defender is being built.

In seeking for a faster boat than Vigilant these gentlemen have turned to the keel type, and it is not supposable that this has been done without full consideration of all Vigilant's merits as well as faults, and of all plans which should retain the centerboard as a factor.

The adoption of the keel shows almost conclusively that Mr. Herreshoff saw no such increased speed in an improved Vigilant as in a keel boat developed from his experience in Wasp, Colonia and the fin-keels. He was looking for the fastest possible boat, and evidently saw it in a keel.

Mr. Iselin has just as evidently agreed with him, and the new Cup defender is the result. It will be very strange if Mr Herreshoff cannot turn out a much faster boat than Colonia, which lacked only the ability to hold on to windward to make her the equal, if not the superior, of Vigilant.

As to what the new boat really is in confirmation of the hopes and expectations of greater speed, there is this to be said, that on about 24ft. beam and 19ft. draft here has been designed a keel boat, which, as has already been outlined in these columns, is of the fin-keel type, while retaining the ordinary form of construction; a boat of greater power on apparently little increased displacement; a boat with many of the characteristics which make the fins so speedy, and yet one which retains the high power and big sail plan which experience seems to show as a winner in the larger classes.

She will undoubtedly be faster than Vigilant, or any development of the Vigilant centerboard type which her designer could figure out. Whether she will be fast enough to defend the Cup is another question, but, if she fails, it will not be because, she is a departure from the "national" type, but because she is not the fastest keel boat which can be turned out.

There is reasonable hope for her success, admitting even Ailsa's speed, and the Cup is not yet lost, even though it be in danger, and it should be remembered, too, that Mr. Burgess had a strong leaning toward the keel boat in spite of his success with the centerboards, and would very much have liked to make the experiment in a large boat.

As to whether or not a centerboard of the national type, as represented in the Burgess trio, could be made to beat the modern keel or fin-keel, widely divergent opinions are held by those who make a study of designing, and who are not swayed by any prejudice for or against the centerboard on any sentimental grounds of "national" use.

Those who believe in the centerboard type found much more encouragement in Jubilee than in Vigilant, but even in the former the centerboard had dwindled to such a small auxiliary compared with its original prominence, as to raise the same doubts as to value of the boat as a keel as were raised in Vigilant's case.

The hope of those who are lamenting the departure from the "national" type, would appear to rest, therefore, on the making of such an improved Volunteer as would beat the latest development in the keels. There was, indeed, a movement here in Boston, a few weeks ago, to do something of the kind, but it has apparently followed the Jubilee movement, and come to nothing.

Matters had progressed so far as to get estimates of the cost, but, for some reason, the proposed syndicate was abandoned.

What the boat would have been, beyond the fact of a beamy craft of no greater draft than Volunteer, the writer does not feel at liberty to say, although he has some fairly correct information, but he can say that she would have been of steel, and would not have cost a third as much as the new Cup defender, and that her design was thought a most promising one by many men high up in the yachting world.

All Boston yachtsmen will regret the failure of this effort, in which, perhaps, the lack of sufficient time was a factor.

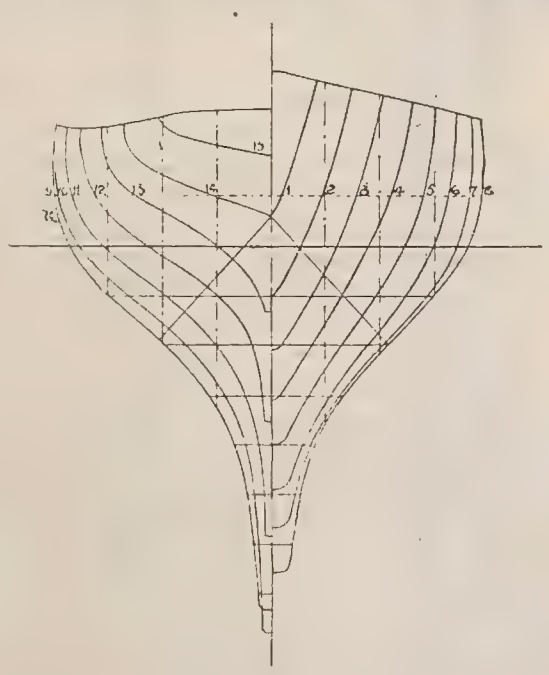
The report alluded to in the above has appeared in most of the New York papers, the Herald's version of it being as follows:

"The month of March might have created a sensation in the yachting world. During that time, and while the yachtsmen of the country were anxiously awaiting the announcement that the Jubilee would be put in commission this year and continuously raced, there was formed in Boston a syndicate to build a Cup defender. The greatest of possible secrecy was observed by all interested, and their plans were matured so quietly that the outside world knew nothing of the important business that had thus been transferred. At the last moment, however, just as the stroke that would have set all the machinery in motion was to have been made, the syndicate disappeared, and the project died as quietly as it was born, and no stone seems to have been raised to mark the resting-place of an idea and proposal that would have astonished the country.

"This Cup defender, the second, it had been determined by the syndicate, was to have been a boat in the style of the craft that finds favor about Lake Minnetonka—that is, those of the extreme skimming dish variety. She was to have been 80ft. on the water-line, 25ft. beam, to carry 13 tons of lead outside and to draw 4ft. of water. She was, in addition, to be fitted with a small rig, in order that she might claim a very large time allowance from opponents on two counts—being shorter in length and having a greatly reduced sail spread.

"The sum of $35,000 had been promised by the syndicate, but there are reasons for believing that she could have been built for $25,000. In fact, the best builder in Boston offered to take the contract for that amount, and make her of composite construction. Such a vessel as that proposed, manned by a crew of about fifty men, would sail really fast in a selected wind and water, but without exhibiting the least prejudice in the matter, those that now know of the scheme proposed are earnest in their expressions of thankfulness that the courage of the syndicate gave out as it did, for the introduction of such a craft into the field to be tried with the Cup candidates would not have been a matter of congratulation, particularly when she is compared with the yacht ordered by the New York syndicate to defend the old trophy.

"The Boston boat was to have been designed by Mr. Sidney Burgess, brother of the late lamented Edward Burgess, and he was to have been assisted, so it is reported, by Mr. John B. Paine, of Jubilee fame."



The 40-Rater Varuna.

Those of our readers who have seen the Watson 40-rater, Queen Mab, in American waters during the past two seasons will be interested in the accompanying lines from the year book of the Imperial German Y. C., of a sister-boat, built side by side with Mab at Henderson's yard in 1892 for Capt. J. Towers Clark, and raced by him for two seasons in England before being sold to her present owner, Prince George, of Schaumberg-Lippe. Varuna has the "Dora bow," with a very moderate after overhang and the keel contour in vogue three years since. The influence of the fin-keel is not yet visible in her midship section, there being the fair, sweet curve that was so soon destined to give way to the modern angle, or at least extreme hollow. The dimensions of Varuna are:

Length over all, 77ft. 9in.; length of l.w.l., 60ft. 5in.; beam extreme, 14ft. 6in.; beam, l.w.l., 14ft. 2in.; least freeboard, top of rail, 4ft.; draft, 12ft. 10in.; displacement, long tons, 55ft.; mast from fore end, l.w.l., 19ft. 3in.; mast deck to hounds, 40ft.; masthead, 8ft. 10in.; topmast, heel to truck, 34ft. 5in.; bowsprit, over all, 24ft.; bowsprit, outboard, 14ft. 6in.; spinaker boom, 41ft.; topsail yards, 29ft. 6in.—16ft. 3in.; mainsail, 2,157sq. ft.; staysail, 400sq. ft.; jib, 417sq. ft.; club topsail, 551sq. ft.; spinaker, 1,372sq. ft.

The Y. R. A. measurements in 1892 were: l.w.l., 59.17; sail area, 4,045.

Both Varuna and Queen Mab are of composite construction like the new Cup challenger now on the stocks at the same yard. In Varuna, the keel is of American elm, with a 1-2-in. steel plate keelson, the steel angle frames being 2 3-8 x 2 x 3-16in., spaced 18in. The reverse frames extend up to the cabin floor beams, and to the sheerstrake at the chain-plates for main shrouds and runners. The deck-beams and cabin-floor beams are located on each alternate frame, the former 3 x 2 1-2 x 5-16in., and the latter 2 1-2 x 2 1-2 x 3-16. The deck-beams are tied to the frames by gusset plates, 12 on each arm. The sheerstrake is 12 x 1-4in., and the stringer plate 8 x 1-4in., while the diagonal straps across the frames and

deck-beams are 4 I-8 x 1-8in. Wherever possible, the sheerstrake, stringer plate, etc., are perforated with large round or oval holes to save weight. The lead keel is fastened by Delta metal bolts. The stem, stern and deadwoods are of oak, the bottom planking of American elm, and the topsides, from the bilge upward, of 2-in. teak. The decks are of white pine, 2 x 3in., the bulwarks, plank-sheer and deck joinerwork of teak, and the rail of American elm. The spars are of Oregon pine and spruce.

VARUNA—SAIL PLAN.

Cruise of the White Squadron.

A morning in March, a smoky sou'-wester, the sky full of flying sand, the water flecked with white caps; three little yawl-rigged cruisers fighting their way to the south'rd; the Florida, Capt. G.; the Santa Maria, Com. R.; and, last, and least, the Kingfisher.

The start was made about nine A. M. on March 13; and, to say the least, was not encouraging, for after a hard day's work we only made twenty miles, which brought us to Clearwater.

March 14 came out bright, and with an early start we pushed out of the pass for a run outside. But our old enemy, the sou'-wester, soon made itself felt, and after an hour's sloppy work the Florida turns tail for the pass. The Kingfisher follows, and the two are soon working down inside, leaving the Santa Maria to fight it out alone. The narrows are soon reached, and after a little monkeying among the oyster bars and mudflats they slide through into Boca Ceiga Bay.

Here we get a glimpse over the land of the Santa pegging away at the head sea outside. We run by John's Pass, starting a noble flock of white pelicans which with numberless beach birds, gulls, etc., are having quiet a dinner on the flats.

Blind Pass is reached, and we come to, to wait for the Santa Maria.

One of the party goes ashore, but soon returns, all excitement. "Quail," he shouts, as soon as he gets within hearing.

Out come the guns, and away they go. Two shots are fired, when a settler waits on the party with the information that the place is private property, and that the quail are plants. He calls their attention to notices posted about to that effect. Shooting being out of the question, all hands turn their attention to fishing. They are fairly successful, and night comes to a tired and satisfied party.

But night does not bring the Santa; morning, and thick, no Santa.

All hands go fishing, except the skipper of the Kingfisher, who makes sail and starts back up the bay, looking for the missing boat. She is found near John's Pass, and brought into the fold, when the three again spread their wings and head to the south-'rd.

A breezy dash to windward through the bay, and dinner at Pass-a-grille.

Some go ashore to look at the cocoanut grove on Pine Key. Some bathe, some eat and some smoke, but all are soon ready for the run down inside Pine Key and through into Swan Lake. Sunset finds us all at anchor in a little cave under Mullet Key, and after supper visiting is the order; some of the older ones play cribbage, but the rest are willing to spin yarns and smoke.

Our party consists of G. and W. in the Florida, Com. R., two gentlemen from Verona, and the lone fisherman in the Santa Maria, while the Kingfisher carries Mr. B. and Mr. D. and the skipper. In the morning it is up and away for Sarasota. Mr. B. decides to go in the Florida, so he can get satisfaction from W. for the beating at cribbage last night.

We are soon off, the wind is very light and the sea heavy. The Florida takes the lead, and soon opens a wide gap between her and the Kingfisher, while the Santa brings up the rear.

The skipper of the Kingfisher would wait for the Santa, but one of his party is on board the Florida, and so he keeps going. Sunset comes just below the long bar in Sarasota Bay, the boats from three to five miles apart.

The Kingfisher pulls along, making Sarasota lights at eight o'clock, where she finds the Florida at anchor. Mr. B. having gone ashore.

In the morning the Florida starts for the pass for an outside run to Little Sarasota, the Kingfisher starts up the bay looking for the Santa. The Santa is discovered at Palm Beach, where they have landed and are making inquiries after the fleet. Together the two boats start for Big Sarasota Pass, the wind drops almost entirely as they reach the pass, and the heavy swell resulting from the long sou'-wester, is to say the least very unpleasant. But they get out after a while, and drift and sail by turns, reaching Little Sarasota Pass about 4 P. M. They find the Florida just outside, and all go up to "Webbs" together. Oysters are plenty, and we have a supper fit for anybody.

In the morning down to the pass for fishing. This is, no doubt, one of the best fishing points on the coast, and one of the best places for tarpon; there have been many caught here, and of a large size.

We were too early for tarpon, but as there was only one in the party who would take the trouble to fish for them, it was no disappointment.

I have often wondered where the fun of tarpon fishing came in. I have caught several, and for choice would as lief hook a shark; for me there is more sport in a two-pound channel bass than in a hundred-pound tarpon. All that is required for the latter is patience and a long line. That's enough for tarpon. There are people who like to fish for tarpon, and they might do worse.

Fishing at the pass was poor this year. We did not get many fish, but we did have a heap-o'-fun.

Night came, and back we go to Webbs! Some of our party go ashore for a chat with the ladies, one of whom calls us, "The White Squadron," hence the title to this story. Morning again. The Florida decides to go on inside to Casey's Pass, the Santa goes outside to Big Sarasota, while the Kingfisher wants to go through the mangroves, partly to see the place and partly to interview an old acquaintance of one of the crew. Night finds us at Sarasota. Santa and Kingfisher, Florida to be heard from.

With the day comes squally weather, but we push on up the bay until we reach Long Boat Inlet, where squalls and rain bring us to for a while. Working between the showers we reach the entrance to the bay in time for dinner. While at dinner the Florida puts in an appearance, having made the run outside. Her skipper getting lonesome had turned to find the fleet. Dinner is over, and we are away for Manatu, the wind is sou'-west and a-booming. The Florida under jib and dandy, the Santa and Kingfisher under reefed mainsail.

We go up the river flying, the Santa stops at Braidentown, while the others head for Braiden Creek, half-way, and a heavy squall overtakes us, we run for shelter and came to under the lee of a wharf. We barely get anchors down when it reaches us,

blowing great guns for a few minutes, and then all over. We soon reach the creek, go up and look over the old castle, pick orange blosssoms and amuse ourselves generally.

All night it blows hard, in the morning a heavy norther makes it unwise to start down the river, so we decide. Some stay by the boats, while the others go for a ramble. About ten o'clock along came two of the Santa's crew, having walked up from below. Later come more, and finally they are all back with pockets full of oranges and heads full of legends of the old castle.

Toward night the wind moderates sufficiently for us to run to Braidentown, where we lay in a new lot of stores. An early start across the bay, wind is N. E. and fresh, sea heavy. The Santa holds up for Bush Key, while the others run outside of Mullet Key and over the shoals to Blind Pass, which they reach in time for a late dinner. After dinner the Florida pushes on for John's Pass, while the crew of the Kingfisher go fishing. About sunset along comes the Santa. Comes near enough for a hail, and then crowds on for the upper end of the bay.

The Kingfisher is left alone, but that is not much, the fishing is good and the weather is fine.

We monkey about until dark, get supper, smoke, read and turn in.

In the morning D. starts for shells; he is back at breakfast-time with his minnow bucket half full of the little Panama shell, the prettiest shell on the coast of Florida. After breakfast we interview the fishermen, of which there are two camps here, and at ten o'clock A. M. up sail and away.

D. wants some birds, and so we head off into the narrows, running as far as Indian Pass, where we get dinner—cooking the last of our oysters. D. eats so many that he has to let out his belt. While the oysters are frying, however, D. goes out and gets a batch of beach birds, thirty in two shots. The tide is too low to go through the narrows so we pull out of the pass and turn up along the beach. Little Pass is ten miles away. We make it in two hours and twenty minutes, and arrive at Dunechir in time for supper.

We find the Santa at her moorings, while the Florida has gone on for Tarpon Springs.

To-night it rains a little, and in the morning the weather looks thick, and makes us think we are fast for the day. However, at 10 A. M. it brightens enough to warrant a start, and with varying fortunes we pick our way over the flats, and are up to the Anclote River.

The tide is ebb, of course, but with patience and a good pole we make out to reach our berth at dark, tired, but, on the whole, satisfied.

The sails are furled, and with the last rope coiled down the skipper says to all:

Good-night.

TARPON.

The Imperial German Y. C., 1895.

If the year books of the Imperial Yacht Club of Germany are to be taken as evidence, German yachting is in a flourishing and prosperous condition, not only does it enjoy the active favor of royalty, but popular support as well, while the many craft of the smaller sizes which have existed for some years have of late been supplemented with larger and faster yachts, which carry the white and black standard into foreign waters. Like its predecessors, the year book for 1895 is a handsome volume, bound in blue, with the club burgee in silver and black on the cover; and well printed. The first part contains the list of members, etc., and the record of meetings and races with details of club business. The second part contains the programme for the coming season, the third part contains accounts of the cruises and races of eighteen of the club yachts during 1894; the fourth part is devoted to the German Sailing Union, while the fifth part, as usual, contains the lines and description of some of the noted club yachts. The officers of the club are: Commodore, H. I. M. William III.; Vice-Commodore, H. R. H. Prince Henry of Prussia, and Secretary, Count Hahn. The membership, at the first of the present year, was no less than 826. The fixtures for the year are: Opening sail, Saturday, May 18; Kiel Week, June 23-29, closing sail, Saturday, Sept. 7. A feature of the book that will commend itself to all interested in yachting is the final part, containing the lines of yachts Those illustrated this year are the Watson 40-rater Varuna, which we reproduce this week, a fin-keel, Commodore, of German design and build, a comfortable, flush-decked boat of about 36ft. l.w.l., with good accommodation; and the Herreshoff fin-keel, Gudruna, now owned by Prince Henry, but known to Americans as Wenonah, the very fast 2 1-2-rater, which preceded Dacotah on the Clyde. Among other less noted yachts, the fleet of the Imperial Y. C. now includes Meteor, ex-Thistle, Varuna, Lais, Irene, and the new 20-rater now building at the Germania Works for the Emperor, from Mr. Watson's designs, to which will soon be added the Herreshoff 20-rater Isolde.

Atlantic—Larchmont Cruise.

The following programme for the combined cruise of the Atlantic and Larchmont clubs has been arranged by the joint committee, Vice-Com. Adams and John L. Bliss, of the Atlantic Y. C., and Augustin Munroe, J. F. Lovejoy and Fleet Captain George A. Cormack, of the Larchmont Y. C. The rendezvous will be at Larchmont on July 12, the date of the schooner race for the Drexel cup. A meeting of captains will be held in the evening on board the Larchmont flagship Ramona. On July 14 the fleet will run to Black Rock, lying over Sunday and sailing on July 15 for New London. July 16 will be spent in New London harbor, running to Shelter Island next day, and lying at anchor on July 18-19, and disbanding on July 20.

YACHT NEWS NOTES.

The new 34ft. class is gradually taking shape, though strange to say, all of the boats thus far, with one exception, are centerboards. An order has been placed lately with Hanley, the noted builder of the Cape cats, for a 34-footer for the Hanan Brothers, who have owned and raced so successfully for several seasons the Hanley Cat Almira. The new boat will be a powerful craft, of the Cape type, with sloop rig. The boat for Mr. Tyson is now well along at Mumm's yard, Bay Ridge; Lawley has one in hand for J. E. Rothwell, Webber is building one for F. M. Freeman, owner of Madrine, and McGiehan is building one for Commodore James D. Smith. Mr. J. F. Ackerman, of the Atlantic Y. C., having sold his Sloop Iola, has ordered a keel yawl 45ft. over all, 30ft. l.w.l. 1,2ft. beam and 5ft. 5in. draft, from a design by Gielow, which will be built by Abramson, at South Brooklyn, and will come within the limits of the class.

Duquesne, steam yacht, built for Mr. Theodore Hostetter, of Pittsburg, Pa., was launched at the Herreshoff Works on April 6. She is 130ft. over all, 110ft. l.w.l., 15ft. beam and 5ft. 6in. draft.

The annual meeting of the Jamaica Bay Y. C. was held on April 6, the following officers being elected: Com., H. F. Hewlett; Vice-Com., Louis Bossert; Fleet Capt., Benj. F. Daly; Fin. Sec., L. D. Burnham; Rec. Sec., Louis Pflug; Meas., Jacob Van Alen; Fleet Surgeon, J. Frank Valentine, M. D.; Board of Trustees, Philip Liebinger, F. A. Myer, Charles Engert, Theodore Englehardt, C. C. Pearsall, Charles L. Smith, Joseph Rolino, William Shear and M. H. Christopher; House Committee, George Becker, Charles T. Krauss and John G. Landman. The club has a fleet of forty-six yachts, and a membership of one hundred and sixty-one.

The new steel steam yacht building at the Crescent Yard from Mr. Cary Smith's design will be fitted with Almy boilers. She is expected to show good speed in regular service.

On Thursday, April 4, the annual meeting of the Yacht Masters' and Engineers' Association was held at their rooms, Tebo's Pier, South Brooklyn, the following officers being elected: Pres., George E. Wicks, master, steam yacht Electra; Vice-Pres., W. H. H. Curtis, master, steam yacht Nourmahal; Sec., John Leonard, chief engineer, steam yacht Utowana; Treas., J. George Hermes, chief engineer, steam yacht Corsair; Trustees, Ervin T. Johnson (chairman), chief engineer, steam yacht Sapphire; W. H. H. Curtis, master, steam yacht Nourmahal; David A. North, chief engineer, steam yacht Electra; A. C. Fickett, master, steam yacht Orienta, and Charles E. Bailey, master, steam yacht Corsair.

Sylvia, steam yacht, is on the ways at Mather & Wood's yard, Port Jefferson, for general overhauling and alterations to her interior. She will be fitted with electric lights, and the deck-house will be enlarged, and other changes made.

Drusilla, fin-keel sloop, has been sold by L. M. Rutherford to A. G. Tyler, of New London.

At Thatcher's yard, New Haven, a centerboard cutter, designed by Arthur Binney, is now under way, the owner being Robert M. Burwell, of New Haven. The yacht is 44ft. 6in. over all, 27ft. 9in. l.w.l., 10ft. 6in. beam, and 5ft. 3in. draft, without board, the lead keel weighing 1,100lbs.

The Hoboken builder, A. Hansen, has on the ways a large cabin cat, said to be for use on the Gulf of Mexico, by a New Orleans yachtsman. She is 28ft. over all, 24ft. l.w.l., 11ft. 6in. beam, and 2ft. 6in. draft. She has 1ft. 8in. freeboard at the lowest point.

Visitors to the World's Fair, in 1893, who remember the handsome steam yacht Oneida, built in that year by the Marine Iron Works, will be interested to learn that the yacht has lately been added to the fleet of the Southern Y. C. of New Orleans, having been purchsed by Col. Eugene May, of that city. In order to fit her for her new use, being originally fitted for service in connection with the Fair, many alterations were necessary, and these have been carried out very perfectly by Messrs. Lhote & Co., of New Orleans, from designs by Mr. James M. Parmelee. The open spaces forward and aft have been converted into pilot-house, and galley, and into a saloon and toilet-room, the interior being conveniently arranged and elegantly finished.

The Columbia Y. C., of Chicago, has arranged the following programme for the season: First event, club race for fifth-class sloops, sarting at 2 P. M., Saturday, June 1, over the club course, the direction to be governed by the wind, two prizes; second event, the annual club race, open to all, to Michigan City, Saturday, June 15, the start to be made at 1 P. M., three prizes; third event, the annual Milwaukee regatta, July 4, given under the rules of the Lake Michigan Yachting Association, to all boats belonging to the association, by the Milwaukee Yacht Club; fourth event, Lake Michigan Yachting Association race at Chicago, given by the Lincoln Park Yacht Club, Friday, Aug. 2; fifth event, Lake Michigan Association regatta at Chicago, given by the Columbia Yacht Club, Saturday, Aug. 3; sixth event, Lake Michigan Yachting Association regatta at Racine, given by the Racine Yacht Club, Wednesday, Aug. 7; seventh event, Lake Michigan Yachting Association regatta at Green Bay, given by the Green Bay Yacht Club, Thursday, Aug. 15; eighth event, the annual club race, for all classes, Saturday, Sept. 14. In addition to the regattas there are the opening squadron review and sail to South Chicago, May 30. Ladies' day in July, with a cruise, and the final review at the end of the season in Sept., ending in a clambake.

Important alterations have been begun on the town house of the New York Y. C. on Madison avenue. The furniture, pictures and models have been temporarily stored, and the house will be closed for two months. During this time the basement will be enlarged and refitted, and the entire house will be remodelled and newly decorated. The club will probably establish a station at Atlantic Highlands.

Cosette, steam yacht, has been sold by F. L. Osgood, of New London, to C. A. Tatum, of New York. Mr. Osgood recently purchased the steam yacht Fedalma of Com. Brown.

On April 13 the members of the Seawanhaka Cor. Y. C. filled the parlors of the club house to hear what proved to be a very interesting lecture by Mr. E. B. Dunn, on weather forecasts and storms. After the lecture a quarette of colored gentlemen amused the club with songs and stories, a supper being served at a late hour.

We have received from the publisher, Horace Cox, London, the edition of the "Yacht Racing Calendar and Review for 1894." The book is a reprint of the reports of the year's racing, compiled from the Field, by Mr. Dixon Kemp. The present volume is specially interesting as a record of Vigilant's racing abroad, charts of all the courses and full reports of each race being given.

At a meeting of the Carolina Y. C. on March 6, the following officers were elected: Com., Edw. H. Simons; Vice-Com., Charles E. Prioleau; Sec., Wm Lowndes; Treas., W. D. Middleton; Meas., M. de L. Haig; Fleet Surgeon, P. G. De Saussure, M. D.; Solicitor, George M. Trenholm; Boat Master, Wm. Jennings; Executive Committee, James Armstrong, H. M. Tucker, J. S. Harleston, R. B. Lebby, F. Y. Porcher, H. M. Tucker, Jr., F. Q. O'Neil and D. E. H. Mannigault. Two new yachts have been added to the fleet, and the club is in a flourishing condition.

Steam Launches.

Marine Iron Works, Chicago, have just issued their 1895 catalogue, mailed free.—Adv.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 27, 1895.

VOL. XLIV.—No. 17. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page ix.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

BUCK FEVER.

Our valued, esteemed, and usually deferred to correspondent "Kingfisher," took occasion a week or two ago to carp at the use of the term "buck fever," to signify the perturbation, excitement, agitation and helplessness which on occasion overcome a hunter. The proper designation of the malady, says he, is not "buck fever," but "buck ague," and he adds that our fathers called it "buck ague."

Did they? We have not that intimate knowledge of the ways of speech of past generations to determine whether "Kingfisher" is correct here or mistaken. A reference to Bartlett's "Dictionary of Americanisms," and that should be good authority, gives "buck fever," defined as "the agitation of inexperienced hunters, caused by seeing a deer or other large game." He quotes one of 'the fathers,' too, Hammond, who in "Wild Northern Scenes." wrote "Smith acknowledged to a severe attack of the buck fever."

Under the reference "Buck Fever," Bartlett says, "The sensation is also called the Buck-ague, the term used by Mr. Kendall, who was so agitated that he missed several fine shots at deer." And he quotes Kendall's "Santa Fe expedition:" "There is a very common disease prevalent among young and inexperienced hunters in Texas, which is known as the Buck-ague."

As for the fathers, then, there is apparently authority for both terms. May it not be that one term was employed in those regions where ague prevailed, and that fever was the expression in other parts of the country? We would be glad to receive any further notes on the subject, and if "Kingfisher" has any fathers in reserve he is invited to produce them.

THE BRIGHTER SIDE.

Filth and fiction—those are two things that ought not to go together; yet the moralists are now very busy telling us that the fiction which crowds the news stands and book stalls has largely to do with uncleanness. It is filthy, right out and openly, or by veiled suggestion, and not so thickly veiled either that it is not decidedly suggestive. The most discouraging feature of the situation, the complaints affirm, is that the worse the book the more certain and speedy and extensive is its success. Give a dog a bad name and hang him; but give a book a bad name and its sale is assured. This, they aver, is an indication of the moral decay of the age.

Perhaps it is and perhaps it is not. There has never been an age of whose literary phases anything is known, when morally rotten books did not "go," and until human nature shall be supplanted on this globe by something better, such a time will never come in the future.

But there is another and brighter side of the literary phenomena of the day. Crowding the news stands and book counters, shoulder to shoulder with these unworthy products of the pen, and now more sturdy, numerous and popular than everbefore, is the literature of outdoor life and the open air. It is a literature which is of the open and of the woodland, pure and healthful, wholesome to body and spirit. The books and the papers which relate to the streams and the fields, the plains and the mountain peaks, have in them the freshness of the upper air, the clear, clean brightness of the sunshine, the stimulating, uplifting, exalting fragrance of the forest.

We have for years held a theory—which, for years too, has been put so successfully to the test of observation and record that it may be accepted as an established principle rather than a theory—that the spirit which finds pleasure in the sports of the field forbids and precludes a support of the decadent literature of the day. Participation in the innocent pleasures of forest and stream, river, lake, bay and ocean, the rod and gun, oar and sail, works for the upbuilding of manliness, and for the purity of thought and speech, which is a part of manhood. Readers of a sportsmen's journal are not as a class supporters of unhealthy, decadent and filthy fiction.

If you are among those who believe that the world is all the time growing better, you must share the Forest and Stream's faith in a coming correction of the literary conditions of which students of morals complain. The ink-wells of the filth purveyors will go dry, and their pens will corrode; but so long as the trout shall lure the angler to the sparkling waters and the brown feathers hurtling through the cover shall cause the gunner's heart to bound, the journalism of the field will flourish, for the pure entertainment of clean-minded men.

THE NEW YORK ZOO.

The bill incorporating the New York Zoological Society and providing for the establishment of a Zoological Garden in one of the public parts of this city has passed both houses of the Legislature, been submitted to Mayor Strong, approved by him and returned to Albany. It now requires only Governor Morton's signature to become a law.

Any one who doubts the desirability of establishing a suitable Zoological Garden in New York, or who questions the interest felt in such a garden by the public, may satisfy himself on these points by visiting the collection of animals in the Central Park on Sunday. There he will see people of every age, sex and social condition gathered by tens of thousands inspecting the wild animals to be seen there, and taking the greatest interest in them. A good collection of wild beasts, well cared for and suitably labelled, would not only be a constant source of enjoyment to a very large class of our population but would also have an educational influence on them, the value of which can hardly be overestimated.

We have called attention to the fact that in times past the Legislature of New York has given other charters for the establishment of such a garden, and that such charters have been allowed to lapse, presumably because they had no money value. It is believed that the purpose of the incorporators named in the present bill is somewhat higher than this, and that they are looking not so much for an immediate return on the money to be invested, as toward putting on foot a Zoological Society which shall be a credit to the city.

THE SUN IN THE HEAVENS.

The interesting fact was recorded in these columns recently, that in Asia Minor Professor Sayce had discovered some cuneiform records of Nimrod, son of Cush and grandson of Noah, the most renowned hunter of all history. Now comes an announcement from W. M. Flinders Petrie, that some thirty miles north of Thebes he has discovered what he believes to be remains of the Amorites. The mummified bodies show that they were a large and powerful people, with a leg development which would indicate that they were mountain dwellers, as the Amorites are recorded to have been.

We are told in the Book of Joshua that when these mountain men came against the Gibeonites, Joshua was appealed to for help, and straightway gathering his forces hastened to oppose the Amorites. The Israelitish "people of war and all the mighty men of valor," made a great slaughter of the Amorites, chasing them along the way to Beth-horon, and smiting them to Azekah and Makkedah. Then, the day sufficing not for the work of destruction, Joshua commanded the sun to stand still upon Gibeon, and the moon in the valley of Ajalon. "And the sun stood still, and the moon stayed, until the people had avenged themselves upon their enemies. . . . And there was no day like that before it or after it."

This astronomical event of 5,000 years ago has been without parallel through all the ages, only to be eclipsed at last in our own day, and by a woman at that. In the chapters of her "Florida Days," devoted to St. Augustine, Mrs. Margaret Deland, describes the orb of day at sunset as sinking majestically into the sea. The geographical situation of St. Augustine is such, upon the east coast of the continent, that if Mrs. Deland did then and there actually behold the sun disappear into the Atlantic ocean, not only must the luminary have halted in its course, as it did for the Israelites, but it must have turned completely about and taken the back track from west to east. There is nothing in Mrs Deland's further pages to hint that on the next morning the sun failed to rise, as by immemorial custom, out of the east and the ocean.

The New York City Hall, upon whose fine architecture the Forest and Stream offices once looked forth, faces the south. Not long ago the Century Magazine pictured the City Hall, a front view, with the sun smiling serenely in the northwest distance beyond.

It is quite permissible, perhaps, for a gifted writer of books or an artist whose pencil finds acceptance with magazine publishers thus to trifle with the celestial bodies. But when an ordinary everyday man sets out to tell a fishing story, he must walk a straight chalk line of geographical and astronomical accuracy, or swerving from it he is on the instant tumbled into the abyss of ridicule and disbelief.

THE OLD MUZZLE-LOADER.

There are still in use many muzzle-loading shot guns, chiefly among the negroes in the South, and the farmers in the far West. The weapons are so ridiculously cheap that they go into the hands of impecunious shooters who could never dream of raising funds for a breech-loader, inexpensive as some may be.

Here and there, too, an old fogy is found, who still clings to the muzzle-loader for no other reason than that it was the arm he started out with in youth, and what was good enough for him then he thinks is good enough for him now. Quite likely he will stand up for the merits of the antiquated weapon, arguing most stubbornly and perversely but believing quite as firmly that it will shoot harder than any new-fangled gun ever invented.

When you meet such a champion of the arm of antiquity, you find in him a shooting character well worth studying; and you must take him, not indeed critically and without feeling, but sympathetically and with an appreciation of his foibles. Touched on subjects other than guns and shooting, he will perhaps be found quite as old-fashioned in thoughts and ways.

We wish well to every champion of the old time arm. May they all live yet many days to show us what the queer relics can do. Who knows but that some of the youngest of us may yet live to see the time when another generation, equipped with hand artillery not now imagined, shall deride the breech-loader, in our day so esteemed as the final triumph of the gunsmith's art?

DOES A FISH FEEL PAIN?

The subject of the sensitiveness of a fish to pain is one which must often have had the sober thought of an angler loosing the prize from the hook; and now that the problem has been broached anew by our correspondent F. S. J. C., it will be likely to have again that earnest discussion which has been given it from time to time in the past.

We take it, that the average fisherman does not accept the theory that he is inflicting any degree of suffering upon the fish when caught. Certainly the average angler would not view with complacency the struggles and floppings and writhings of his victim, if they were suggestive to him of pain. The most tender hearted people in the world will catch fish, and for them feel never a qualm of remorse or pity. This conduct may not be based on the fact that a fish does not feel pain; but it certainly is founded upon the fact that on the part of the fisherman there is no recognition of any possible pain.

Doubtless most experienced anglers have made numerous observations like those related by our correspondent, tending to show an absence of sensibility in fish.

The Sportsman Tourist.

A WEEK ON JACK'S FORK.

It was to be a week, but it fell short. Human nature is the queerest sort of nature there is. Everybody knows this, so there's no use in proving it. Grove and I had planned this trip, or more properly, a trip, some weeks before, and I said that later in the month was the best time, for the reason that then it would be more comfortable tramping, the game would keep better—for perish the thought that we wouldn't get any—and the mosquitoes, if there were mosquitoes, would be packing their grips for the lower country. But in about a week Grove said he couldn't go so well later, that maybe frost would descend on his sweet potatoes earlier than usual, and so forth and so on, and we must go a week or two earlier. I knew well enough that the fever was bad on him and must be allayed; so one morning two weeks earlier than we should have gone, we set forth in his wagon with the usual outfit and a dog. You should have seen that dog. Grove said that on one side he was setter, and on the other something else, dog or some thing, but I looked on both sides, and end to end and couldn't see any setter. He was reddish brown in color, wire-haired, about as high as a high fox terrier, or maybe a "fice," with collie ears, subdued greyhound nose and tail of pointer and Newfoundland mixed. Grove said he would tree squirrels and mice and keep snakes out of the camp, so we took him along.

We didn't know where to go but we heard about the mouth of Wolf Creek and Harlow's mill and Duggan's Ford, so we shook 'em all up in a hat and drew out Wolf Creek and started thither. It was a lovely day, and the awfulest road for stones that ever was. I think that the farmers had emptied all the stones from their farms into the road, but that is mostly the case in that region, and there were cross roads and forks galore without any guide boards, and the problem at times was very abstruse. We looked at the map before we started and saw that by the compass our course was thereby. Then if we were in doubt any time we pulled the compass and started cross country by that until we found a road that went where we thought it ought to. It was a good ways round sometimes, but we kept going, and along in the afternoon we struck a man who evidently knew what he was talking about, and he set us straight for Wolf Creek. Did you ever notice how many people there are in the world who don't know what they are talking about? I mean in the manner of directing a traveler. Of course in other matters it's just the same. You are in a strange country and you meet a man who has lived thereabout 'steen years, and you inquire the way, and he tells you explicitly, and you understand perfectly, besides noting it with pencil, nd you are much obliged and gratified and satisfied and a great load is rolled away, and good-day, sir; and when you have gone about three miles you come to a road "the third right hand road," and it's right in the middle of a thousand acre forest, and you turn down it and go a half day or so, and come to a house and inquire how far it is to what-you-call-it, and the answer is, "you're on the wrong road, you oughter have taken the next fork when you turned off back yonder;" then you turn back with divers and sundry useless expressions about the mis-director, who forgot all about a road or two, and several glooms settle down and wrap their cold folds about you, and life is a poor, miserable farce, and the little happiness there is in it is 'way down at the further end of an inverted telescope. We have all been there. Once or twice for a spell we struck a fairly smooth road in the afternoon and bowled along at a trot, which lifted a fold or two from the glooms and inspired us with the hope that we should after all find camp on the Fork that evening. And so we did, for as the tired sun sank out of sight we descended from the "breaks" or broken, elevated ridges overlooking the valley we sought, and descending by a tortuous side-hill road, crossed Wolf Creek just above its junction with the Fork, and driving along a tree-shaded road a little way, forded the Fork and went into camp among the sycamores, maples and oaks in the alluvial bottom, a locality strongly suggestive of mosquitoes, but it was suggestion only. We didn't hear a hum. The stars twinkled cheerfully, the fire burned brightly, the coffee pot sent forth vapors aromatic, and the frying pan sizzled appetizingly, and when bed time came we climbed into the wagon box, long and wide, bedded with comfortable straw, and lapping legs, Grove at the fore and I at the rear, with the sound of the ponies munching their fodder for a lullaby, we passed into the land of dreams.

Next morning, while the gray of the dawn was struggling with the shades of night, I slid down from my nest, and taking my gun, went down stream while Grove went up. The woods looked decidedly squirrelly, and the slopes of the hills and an occasional corn-field bordered by woods whispered of the skulking turkey, but though I carefully crept about, I came within one of drawing a blank.

I tramped that bottom long and well;
I hoped to pocket sundry slain,
I didn't: but one squirrel fell
Bleeding, but out of pain.

Then I went to camp, and when Grove returned with a worse record, or as the base ballers say, a "goose egg, we ate my squirrel and each took his way again. Grove up Wolf Creek and I up on to the breaks. But while we were eating breakfast, lo, from up the valley and evidently close by, came the well known, Hi! Yi! Yi! of the Missouri farmer or his boy, dogging the hogs out of the corn-field, for it's usually easier to dog the hogs than to fix the fence. I turned my eye mournfully at Grove and said: "Have we come all the way to Jack's Fork to seek game in a farmer's barnyard?" And he quoth, "It seems yes."

I climbed the hills and ranged the ridges, and searched afar through the vistas of the wood, and threaded the ravines, and came around to the stream a mile or two below camp, and maryandered back along the bottom to camp with two fox and one gray squirrel and no turkeys, and when Grove had returned with three grays and the same number of turkeys, we cooked some squirrels and other things and went fishing. Between us we caught a goggle-eye and a "sun perch" and two chub, but the stream was low, and there wasn't any good holes, and no bass, so we voted that camp a failure, and next morning retraced our steps to the main road, got directions where to go, 'way down below Harlow's mill, 'steen miles or so, where we wouldn't be waked in the morning or lulled to rest at night by the farmer's dog, and where the stream, reinforced by several smaller streams, contained much bass.

Thither after much questioning of residents, and devious roads, we came in the P. M., and descending into the narrow valley where there was no possibility of a farm, again made camp among the beautiful trees and near the beautiful stream, where deep, dark blue pools held the waiting bass galore, or else there weren't any bass anywhere. And the lovely water didn't belie its looks either, for that same morning I took out of it, not far from camp, with a gay deceiver in the shape of a phantom minnow, eleven darling small mouth bass, from one pound to two and a half. I think I shall treasure in memory's halls that hour's bliss until the last of next week, anyway.

The pool was long, and on the thither side, deep, where from the edge rose a wall of rock sheer twenty feet, as smooth as though laid by a mason, and from thence the hillside sloped away upward several hundred feet, wooded and beautiful. On the hither side a gravel beach, wide enough for good casting, bordered the stream, that gradually deepened from the edge, making the landing of the fish an easy task, and in the lower end of the pool where the water shallowed, the feeding fish gathered when the shadows began to fall. There, wading out, I cast across the pool, and drawing the whirling bait towards me, struck the following fish as it seized the unsatisfying line and played it to my heart's content. Was there ever anything more pleasant than that? I have long years blessed the inventor of the phantom minnow, and shall continue to do so as long as the bass "catch on." I have found nothing better in lures. One evening I hooked two good-sized bass on one minnow, and landed both. There was no trouble about bass; when we wanted some we went and got them, and they were generally headed our way very soon afer we went.

Our dog proved very effective in the squirrel way, and we shot quite a number over his bark. When we wished a variation in fare, we stirred up the quail a little, which could usually be found in the woods without much difficulty. We heard one morning a grouse drum, the first I had heard in the Ozarks, which was quite a surprise to me, as residents had told me they knew of no such game, and one day, while exploring a little side ravine called "Coon Holler," a couple of the fleetwings darted out from a tangle of wild grapevines that overhung the trail, one shooting across the ravine and whisking up the almost perpendicular fifty-foot rock wall, disappeared over the edge. The other rose almost perpendicularly over my head and scaling the steep bank was lost to view. Thinking it improbable that the latter had gone far, I climbed the hill a distance and searched the pine tree tops, wandering back and forth but without success. Suddenly it occurred to me that perhaps the first bird might, through curiosity, come back to the edge of the cliff to see what had frightened it, so I walked out to the edge of the bank I was on, and looking across, there was the cute bird sitting crouching on the very edge of that rocky overhanging shelf. A small mark it was, sitting head to me, but the gun was equal to the emergency, and the stricken bird fell fluttering, striking the steep bank below and so rolled, with much beating of wings, into the pool at the foot. It was a young bird, which probably accounts for the curiosity exhibited, or maybe it was a desire to rejoin its mate that tempted it. At all events, the flavor of that bird at eventide was delicious. We had wood-duck, too, as another variation to our bill of fare, which was very toothsome, so that with wild grapes and pawpaws always on hand for dessert (friend Belknap to the contrary notwithstanding) we managed to elude famine.

The weather was simply perfect. Bright sunny days that made tramping a delight, and nights with just a suspicion of frost in them without the frost, that made sleep a blessed luxury, combined to round out our happiness. We had with us a large canvas wagon cover to use in case of necessity, but the weather was so perfectly unsuspicious and so entirely auspicious and completely delicious that we had made a bed of it. One night we laid our weary bones to rest as usual, and the face of the heavens was unclouded as that of a bride, and the stars sparkled like the eyes of the bride aforesaid, and everything was as peaceful as a clam. (O, I forgot to mention the weird laugh of the loon and the domestic hoot of the owl, but my dear readers can interpolate ad. lib.) Well, along about midnight, when we were dreaming of turkeys as large as ostriches, and whale-like bass, we were rudely awakened by a clap of thunder that jingled the iron spoon in the skillet and froze the lard in the tomato can with horror. The trees were waving to and fro, and vivid lightning revealed Grove in one end of the wagon and me in the other suddenly sitting up facing each other with considerable interrogation in our looks.

"And then and there was hurring to and fro."

Grove after the lantern and I after the axe in the pitchy darkness, and we tumbled over the wagon tongue and stepped on the dog, and cut down saplings for forked uprights to put the ridge pole in, and got them all right, and then they were wrong and had to be cut off some more, and the thunder rolled and the wind blew and the lightning lightened, and we hurried, stumbling around, and got the wagon cover up over the pole, and the wind blew it galley west, and then the uprights fell down, and of course the pole came tumbling after, like Jill and Jack; and we got the poles in place again and the canvas over, holding on like grim death while the demon of the storm shrieked exultingly at us discomfited, and just as we had got the canvas secured, about two advance drops pattered on the roof, and we hopped into our nest again so thankful, and then—it never rained another drop during our outing—Hevings! If all the useless endeavor for want of a little foreknowledge could be utilized where it would count, like as not we'd live twice as long, or short. Then again if we knew what it was going to be, maybe we shouldn't be quite so happy—guess we'd better leave it as it is. The next morning was as peaceful and calm as a marble infant, and I went down stream a mile or so and as I came out of a thicket where I had been trying to locate a cotton-tail, there on the hillside fifty or sixty yards away was a gang of turkeys, five to the gang, and I like a "bound boy at a huskin' "standing there with No. 6's in my gun, but it didn't take more than a minute to exchange them for No. 1's, and notwithstanding the fact that the birds had been going up hill in the meantime, I reached the stern of the last bird, a huge gobbler, and he came all the way down the hill to see me.

And then before the time which we intended to stay had expired, and long before I should have gone, had it fallen to me to decide, Grove began to fear that his sweet potatoes would get nipped, and he wasn't feeling very well anyway (and his luck hadn't been such as to encourage him to remain) and maybe his folks were sick or something, and so it came to pass that one heavenly day when the whole universe thereabout was inviting us to remain, and the branches were whispering "stay longer, stay longer," and the stream rippled "don't go, don't go" and the barking squirrels derided us, and the quail whistled us back, we loaded the wagon, hitched the ponies thereto, and disconsolately (as to one of us) turned our faces from the lovely scene that in all probability will know us no more forever.

O. O. S.

FOUR DAYS ON ST. LAWRENCE.

Commodore Charles Vroman, Judge A. G. Rosekrans, Editor Pierre W. Danforth and myself, stepped off at Clayton from the fast express at 6 p. m. early in August of last year, and were driven to the popular Hubbard House. After tea, our trusty guides, Edward and John Page, pre-engaged, came around and we arranged for the morrow's fishing. We were to go for pickerel, much against the Judge's protest, who said he wanted something gamy. I assured him that a St. Lawrence channel pickerel is gamy enough for a Schoharie Dutchman, and he gracefully acquiesced.

That evening at 8 o'clock we boarded the steamer St. Lawrence, and made the fifty mile tour of the islands, returning at midnight. The steamer carries a great electric flash light, and this, with the pale moon and red-faced Mars, and the Greek bonfires burning all along the route in salutation of the steamer, so irradiated the islands and the water that the Commodore and the Judge, to whom this scene was new, were transported by the vision of loveliness.

The Judge said: "This is heaven." The Commodore said: "It looks so, but it can't be, considering all who are here."

The enchantment of that night's ride will abide as a charming memory to us ever, and there breathes not a man with a soul so dead who, from the altar of the Thousand Islands, does not worshipfully look up to Nature's God.

At 7 o'clock next morning we stepped lightly into our white pine skiffs. The Judge and the Editor were paired, and the Commodore and I. Bantering bets as to the beating boat were made, and with our rubbers on, for it was raining briskly, we set out for Emory's Flats.

At high 12 we were to meet for dinner at a certain fire-place on a designated island, and until then, it may be imagined, every man did his best to take the pickerel. When our boat pulled up to the island, the other was already there, and the Judge was standing at its prow, erect and proud of mien. "What have you got," he sternly said. "We are not compelled to show, until the end of the day," we evasively answered. "The order of the court is that you forthwith exhibit for our inspection your fish box, and if it happens to be a box of fish it is well."

"Judge," said I, "we must decline to obey your peremptory maudamus for the reason that you are in the Dominion of Canada, and can have no dominion over us until we return into that State, where your empire is acknowledged and your sway undisputed."

"The point is well taken," replied the Judge, "so are these pickerel??" and he stepped to their boat box and displayed a fine lot of the spotted beauties, and proudly lifting a six-pounder, gazed upon him admiringly and said: "That magnificent specimen of the genus Esox gave me ten minutes of the hardest work and choicest fun I ever had in my life. To save my rod and the pickerel, too, required the greatest skill, and at the same time—"

"Oh, give us a rest, Judge, you make me tired even to think of your Herculean labor."

"Say, Judge," broke in the Editor, "I believe papa has downed us, he's so composed, and doesn't turn green with envy; that is, I mean he doesn't look any greener than usual."

"Why should he?" spoke up our guide, taking from one box a glorious eight-pounder and holding it up by the gills so as to show to best advantage its magnificent proportions. Well, you should have seen the Judge; astounded, dumbfounded, amazed, he dropped his eclipsed beauty and cried out: "This is treason; I mean contempt of court. No, I am in Canada. I Can-na-do anything in these premises; let us go and eat."

"Judge," said I, "to save my rod and that eight pound pickerel too, required the greatest skill, and at one time—"

"Say, George, let up, let's go and eat."

And we did. Under the sails, outstretched as a canopy over our table to protect us from the heavy rain, we sat down to a royal lunch prepared before our eyes by our guides, who are professional chefs.

Boiled and stewed chicken, stewed and fried potatoes and fish omelet, boiled corn, egg toast, fried bacon, broiled beefsteak, bread and milk, coffee, pickles, pie and cheese and watermelon. What a melancholy man he must be who could sit unmoved at such a feast, and yet the Editor, who is of a bright and cheery temperament, sat unmoved when we three had done, and he continued to sit unmoved through half the dinner of the guides, who were polite enough to simply say that some days the pickerel took hold so savagely, well, just as your son does of the dinner to-day, Mr. Danforth. After dinner, the Editor calmly said: "It was the Judge's morning; it will be my afternoon." And it was so. In less than half an hour he had taken on his pliant lancewood, three fighters, from five to seven pounds in weight, right under the eyes of the Judge, who had lapsed into innocuous desuetude.

With varying fortune to our individual fishermen, the

fun went on, all striking some of the larger pickerel, saving a few, losing more, and enjoying all the time the royal sport.

As we were returning to the boathouse, the Judge said: "Let's go for pickerel to-morrow. They give more fun than bass." And we all voted for pickerel.

In the evening we selected a uniform gradation of sixteen of our catch, from the smallest to the largest, weighing in all fifty pounds, and expressed them to Middleburgh. We dubbed them: "The sweet sixteen."

A sweetly sound sleep succeeded our successful search of the day for pickerel, and at 7 o'clock the next morning, having broken our fast at a bountiful table of the Hubbard House, and eager to feel the strike and pull and run and struggle of similar game to-day, we hoist sail for Stave Island, seven miles away, and on a course straight across the river from Clayton.

We are disposed in the boats as on the day before, and a generous rivalry, bouyant as the bracing breeze which bears us briskly on, incites us to break the record and tie of yesterday.

In an hour we drop sail and let out our luring minnows into the famous waters around Stave Island. Strike succeeds strike, and the whole executive, legislative and judicial force of the boats is called upon to quell the disturbance which the rioting pickerel make. We capture many a hard fighter, and all are sentenced to close imprisonment in the boxes of the boats.

During one of the lulls which always come in fishing, the Judge, elated by his phenomenal success, and imagining that he had jurisdiction over even the inhabitants of the watery depths, waved his necromantic rod over the face of the water, and said, in tones of solemn cadence: "I see an eight-pound pickerel, twice eight feet below the boat. Pickerel arise." And immediately the great fish floated upward and lay peacefully and quietly upon the mirrowy surface. Quickly and silently the unpitying gaff of the Judge took that pickerel in.

We, in the other boat, at quite a distance, saw the act but did not hear the words, and loudly accused the Judge of harpooning a dead fish; he stoutly denied the charge; told the story as above, and said defiantly: "Gentlemen, that great pickerel was not dead, but I caught him napping." And that fish is known to us as "Lazarus" to this day.

After this experience the Commodore kept a sharp eye on the other boat to prevent the Judge and Editor from filling their box by the Aladdin process.

And so the day went on with varying luck, until at evening we trolled to Clayton, taking some fine ones by the way, but the Judge's boat had beaten us, even without Lazarus.

Off for bass the next morning to Halliday's Point, twelve miles up the river. The Judge and I chummed this time. The sailing was charming, and at nine o'clock we cast out for fish. I used a phantom minnow with two dark flies, three and six feet above it. This proved a taking lure, and I strongly recommend it for bass dragging; a very small kidney spoon may be used instead of the phantom minnow.

Perch bothered a good deal, but that cannot be helped where bass are in that river, perch will be. The best catch of bass was made on the slope of a shoal, by live minnow bait. When the surface was calm the big bass could be distinctly seen ten or fifteen feet down, moving slowly and majestically; we would draw the wriggling minnow, with line well shotted, in front of the coveted prize—he would eye it, seize it, turn it, and start off—then a strike, and five minutes of struggle and skill would be ended by the landing net.

Once, while I was tiring a three pounder, and the minnow was hanging on the snell against the fish's mouth, along came a brother bass, a little smaller than the one on the hook, and deliberately carried off the minnow, and as he slowly sculled away, he seemed to say to the hooked one: "Thanks for your taking my chestnuts out of the fire." This incident illustrates many happenings in human life, and is full of food for reflection.

That noon we lunched at the farm house on Halliday's Point, and at night we slept at the same place. Just as we were pulling in for the night a strike stopped my boat, and in a few minutes I found that I had fastened the heaviest fish in my three year's experience on the St. Lawrence, but lack-a-day, soon my trusty rod straightened, and my phantom minnow came in, chopped into hash—a great pickerel had laughed at the little hooks of the minnow.

Next morning at five o'clock we were trolling for muskelonge—four had been taken in those waters two day's before—but we took only a few fine pickerel before breakfast. The day was passed much as the day before, except that we spent much time in muskelonge hunting, and went over the waters in which two of our co-guests at the Hubbard House, took two "spotted ones" the day before, weighing twenty and eighteen pounds.

Gradually we worked down to Clayton, landing at seven o'clock, and at eight forty-five, we rolled out from the station on the night express for Albany. Thus ended four happy days, delightful in their actual enjoyment, and to memory (and purse) very dear.

Middleburgh, N. Y. G. L. Danforth.

Spring Shooting.

West Virginia.—In your issue of April 13th F. J. S. says that there will be no spring shooting in Minnesota. I am glad to hear it, and so will many other readers of your valuable paper, I think. Stop spring shooting and the sale of game in all the States, and in a few years we shall have plenty of game and some to spare. But fail to do this and in a few years the game will be a thing of the past. Keep on hammering against the sale of game and spring shooting and you will have success some time. I wish that every man who uses a gun would take Forest and Stream, for it would do a great deal toward preserving the game. Before I commenced taking your paper I thought nothing of killng a lot of quail on the ground, but I would not do it now. There is more fun in giving a quail a chance to get away. If I kill it on the wing (which I don't do very often) I have the pleasure of knowing that I gave him a chance, but that I was quicker than he was; and if I miss I console myself with thinking that he will be left for some other time. And it all comes of reading Forest and Stream. Burke Wilson.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

THE SUNNY SOUTH.—X.

TANK SHOOTING IN TEXAS.

Chicago, Ill., April 3, 1895—Mention has been made earlier of the fact that all the wildfowl of the coast country leave the salt water at least once a day and go inland to spend a part of the day on fresh water. They appear to feed both on the salt and fresh water, but seem obliged to go to the fresh water for drinking purposes. At any rate they go, and to this fact is attributed some of the finest shooting at wildfowl known in the whole of Texas, which is saying a great deal. Texas is at best a dry state and when there has been a dry period, as for the past two or three years, a great many of the water courses are drying up entirely. The cattle men on the great ranches provide against this by building dams along the streams, forming ponds of fresh water which are locally known as tanks. Such bodies of water may be from a few hundred yards to a mile or more in length, and as they are permanent bodies of water, they soon grow up with abundant natural food for the wild fowl. I do not know how far the birds go inland to visit these fresh water ponds, but certainly they crowd in untold numbers into such of the tanks as are located low down on the streams running into the salt water. There are numbers of these tanks along the strip of country from 20 to 30 miles back from the Gulf, such as the Mud Flats on the Fulton ranch, the Portales tanks on the Loreles ranch, the Laguna Largo on the same ranch, etc., etc.

The Loreles ranch is owned by a Scotch syndicate of whom Mr. Christie is secretary, and Mr. Tod resident manager. This ranch covers a vast body of land whose boundaries run up near to Corpus Christi, the tank of the "portales" ("gates") or dam being about 20 miles from the town. This tank is one famous for the vast quantities of wild fowl which visit it, but the ranch management have always forbidden shooting on the place, because it drives away the cattle from the water at their natural watering time, and so causes financial loss. The laws of trespass, under the Texas statutes, do not apply to bodies of land of over 10,000 acres under one inclosure, and it is perhaps true, as many of the local shooters hold, that the Scotch syndicate cannot legally restrain shooters from shooting at these tanks. It is certainly true that these foreign gentlemen do not in all cases partake of the American spirit of courtesy and hospitality which is universal in the South. These facts, and the miscarrying of a letter which Mr. Guessaz sent, asking for permission to take our party in to the Portales tanks, gave rise to the only unpleasant incident on the whole trip in the South, and here we received the only discourteous treatment I ever knew a Northern sportsman to receive in the South. In short, we were at first ordered off the premises, and only allowed to remain under a most grudging sort of consent from Mr. Tod, who came out in his buggy to see what was going on. He might not have allowed us to stay had it not been for the good offices of Captain Crawford, an up-country ranchman who had come down to buy a couple of thousand cattle of the Loreles people, and whom we had met on our car the night before. The whole affair was a trifle unfortunate, and we regretted it all very keenly, as we had no wish to intrude, even had we legal right to do so, which I am not sure we did. We were at fault in the matter, but only so under misapprehension, for we thought there was no objection and that Mr. Guessaz would get his letter of consent as soon as he got his mail, and so pre umed on the customs of the country and went on in, under Mr. Guessaz' guidance, the latter supposing it was all right. For my part, learning later as I did how serious a matter it is to have shooting going on at the tanks where these half wild range cattle come in to water—they remaining back on the hills and refusing to come so long as hunters stay around the tanks—I am disposed to say that the position of the ranchmen is an altogether reasonable one, and if I were in their place I should feel just as they do about it. While we felt a little troubled over this, therefore, and while Mr. Tod's action caused considerable local comment unfavorable to him by reason of his discourtesy to strangers—almost a crime in that country—I can say that I blame him, and do say that we should not have shot at the tanks of the Portales at all, nor should I wish to do so again, for I do not think it would be right. That the Gum Hollow and Mud Flats tanks on the Fulton ranch are shot on all the time by the public is due to the forbearance of Hon. George Fulton, the most generous and broadest-spirited man in the world, not to any actual right of the public to do such shooting.

DUCKS IN THOUSANDS.

But none the less, and wrong though we were in so doing even in our innocence, we did shoot on the Portales tanks of the Loreles ranch. These tanks are about 20 miles from town, so we made an early start, our party going in two covered hacks. We made the dam at about 10 or 11 o'clock in the morning, and when we looked over the great earthen bank, some hundreds of yards long and 20 feet high, which contains the flow of the little stream in a pond of perhaps quarter of a mile across, and twice that distance in length, we saw a sight which very few of us had ever seen paralleled. There was a solid half mile of ducks on that little stretch of water; thousands and thousands and thousands of them, more ducks than we thought there could be in Texas. They rose and circled in vast black clouds, and refused to leave the water. Meantime, over the low chapparral and along the sandy slough which marked the remnant of the stream, between the dam and the salt water, there came more ducks, flock after flock, string after string, and piled into the water which already seemed to be as full as it could hold. The fresh birds came in fast until directly over the centre of the pool, and then corkscrewed down in that hurtling, booming tumble through the air, which makes one of the most exciting spectacles of wildfowling. The thunder of the wings was such that we had to raise our voices to make ourselves heard. That the Northerners were excited would be putting it mildly. Each man was wild to begin, and it was only a moment before we were deployed in skirmish line along the dam, and were dropping birds at our feet as the great bodies swung out and headed toward the sea, only to come around again and circle over the pond, reluctant to leave the spot they had come so far to visit.

One would think that the shooting at such numbers of birds would be very deadly, but we soon discovered that he fowl had a very good theory of their own about the situation. They knew at once what was our purpose there, and after the first few shots they showed us that they had a mighty good notion as to the length of a good gunshot. The dam had evidently been occupied by shooters before, and though it was across their natural line of flight, the ducks began to avoid it both going out and coming in, going over it so high that only a chance shot was effective. We then scattered and made such blinds on the far side of the pond as the scanty cover allowed, and kept on at the rapid sport.

We had been shooting about half an hour when a young Mexican vaquero rode up to the dam and entered into conversation with me, who happened to be the only one at the dam at that time. He was a very polite boy, and I liked him; big hat, cigarette, "chaps" and all, and wished I had my camera along. He told me in Spanish, as I very well knew, that we must not shoot at the tank, as it scared away the cattle. I pretended not to understand Spanish—as I really do not very much, though I once lived for a time in New Mexico, where it is the language of the country. All he could get out of me was "No sabe!" But he kept on, polite and graceful—he was a pretty boy—and tried to explain that he was only acting under orders, and that I must not think he was doing it himself. "Yo' no give a damn, me," he said, flashing his white teeth pleasantly, and using the only English at his command to make me understand—as I told him I did.

It was about this time that Mr. Tod drove up in his buggy and was met by Col. Bill Peabody. The latter seemed to have hypnotized Mr. Tod some, for he said nothing, but hoped we would have a good day's sport.

He was rather glum in his wish, and I think he felt that he was imposed upon, as indeed I think he was, for all around we could see the cattle standing back from the water hole.

We could see great clouds of geese over toward where the cutting out was going on for Capt. Crawford's beef cattle, about a mile from us, and a confused gabble and screaming would every once in a while come over to us as the geese rose and circled over the feeding beds they seemed to have found out on the grass somewhere. Any way we could look, we could see signs of continuous use of the spot by such numbers of wildfowl of all sorts as the Northern man never sees and can hardly dream about from any experience of his own.

LOST AT NIGHT.

We lay about the tank pretty much all day, and did what shooting we could without decoys and without any means of keeping the birds stirred up out of their big banks out in the middle of the pond beyond gunshot. What a man could do there were he out in a boat in the middle of the tank with a blind and decoys, I should hardly like to try to guess. He could certainly kill his hundreds daily, at least till the spot was "burned out" by the shooting. We killed during the day only about seventy-five or one hundred ducks in all, mostly bluebills, theereby making glad the hearts of a great many negroes and greasers at the quiet old town of Corpus.

The most exciting part of our day was the drive home. We did not start till night, and our drivers lost the trail in the chaparral about ten miles out, and we drove around aimlessly for nearly four hours. At last we saw a light, and met a wire fence, which we followed to a junction with the light, so to speak. By much calling aloud in Mexican we at last unearthed an old, grizzled Mexican, who listened to our tale of woe in polite silence, and at length at our request agreed to pilot us to the road to Corpus. It was coming on to rain, but the old man made no complaint as he started out into the chaparral somewhere to find his horse, which presently he discovered and saddled. Then, pulling his blanket over his shoulders, he set off ahead, quietly, and in an hour showed us a place which our drivers were pretty sure they knew, saying "adios," and "gracias," for the little payment offered him in the politest way in the world. "A good Mexican is all right," said Mac, our driver, "an' a bad one aint no good on earth." Thus, by virtue of meeting a Mexican of the good sort, we at length reached our home in Corpus at 1 o'clock in the morning. We had promised Mitchell, the cook, that we would be back for dinner, for it was Thanksgiving Day, and Mitchell had gotten up as fine a dinner as could be for us to enjoy when we got in. Of course this was all spoiled, and though Mitchell didn't say much, I have no doubt he did a great deal of thinking about certain young "gemmen, over whom he felt that he had full charge, but very little control.

PSEUDO SHEEPSHEADS.

On the next day, as may be supposed, we did not feel impelled to go shooting any more. We took Max Luther's instructions and went out on the railroad bridge over the bay after a little fishing. This also proved an eventful day. An ill-conditioned black Mexican dog took a piece out of the foot of Flirt, Oscar Guessaz's dog, and we near had an international war over that, Guessaz pursuing the offending dog into the portals of his own house and nearly knocking the porch off the latter by a huge rock he threw at the dog, which missed the dog and hit a pillar. Then the owner of the dog said his mother was sick, and he didn't want his mother killed, and we said we weren't killing mothers, only dogs, and everybody was on the eve of rolling his gun, but suddenly everybody apologized all around, Max Luther promising Guessaz to kill the black dog later, and we all protesting we were sorry there was a sick woman in the business—which was very likely a fiction of a woman anyhow—and Mr. Guessaz explaining elaborately that he had thrown the rock at the dog and not at any woman or any porch. Then we went on fishing, and caught a plenty of fish, too. The trouble about our fish was that we thought they were sheepshead, we being ignorant savages from the North and not knowing a sheepshead from a drum. So we cherished in vain a long string of big and inedible drums, some very large, bass drums, about eight or ten pounds heavy I should say. Some of us had hand lines, but Wilbur Dubois, the silent man, had a rod and reel along, and he surely was the very embodiment of calm and unassailable content, as he sat with legs over the bridge beam watching the red and green float with which he had adorned his line. Every once in a while the said float would disappear, and about snychronously therewith Wilbur Dubois would give a swift jerk up and back, which would materialize in now and then a lusty trout, and now and then a catfish, as the poet says; and sometimes it wouldn't materialize at all, at which Mr. Dubois would utter no loud

word of protest, as is the custom among anglers, but would say softly and in no ill temper, "Well, I declare!" A very good tempered and courteous angler is Wilbur Dubois, and no one grudged him even the biggest of the big drums with which he now and again had desperate struggles.

THE NUECES BLUEBILL FLIGHT.

All the afternoon and far into the dusk we could see going over the bridge and along the bay back of us a continuous flight of bluebills, I think the heaviest flight of ducks I ever saw and the longest in continuance. These birds were coming from the fresh water of the Nueces River, and were a great many of them settling on the salt water in the shallow inlets of the bay n ront of Corpus Christi. They rose as they crossed the bridge, but settled at once after going over. A man who had nerve enough to lie out in the Gulf swell in a sink box with decoys could that afternoon have had all the shooting he liked. As it was, we were not shooting, but we got a better idea than even before of the enormous numbers of wildfowl which winter on the Texas coast.

Across the bay from where we were fishing we could see a low black line of cedars, and Mr. Guessaz told us that this was the famous Gum Hollow tank where he and Max Luther had made their great bags so often. The flight did not seem to be favoring Gum Hollow, but came from off the mouth of the Nueces River. Guessaz said we only needed a norther to see the greatest sort of sport at Gum Hollow, and we promised ourselves to have a try at those classic precincts before we left the country.

SWEET MARIE AND THE OPERA.

That night we ate a chile supper, as Max Luther's guests, at a certain chile restaurant of local fame, and then explored the city of Corpus. Among other celebrities we met Capt. Pat. Shiele, who led the rangers at the close of the late Garcia campaign, taking eighty-five prisoners in sixty days, where the U. S. troops had only taken ten men in four months.

Our next day was Dec. 1, and we saw no more fitting way to celebrate this wintry-sounding date than by taking off our coats and sitting about on the bridge again for a little more fishing, which latter we varied by a good deal of oyster eating. At the bridge we had visitors in the person of Mr. E. J. Martin, general passenger agent of the Aransas Pass Railroad, who came out with Mr. Roth, of the emigration bureau of the same road, on the schooner of Commodore Bennett of the Corpus yacht fleet, the flag ship coming to anchor in the bay beyond the reefs. Mr. Martin wanted to know if we were getting everything we needed, and we told him we had everything but his right of way working for us, which seemed to please him. Then we all went out to the flag ship and beat out into open water for a sail down to the wharf near our car, singing the while a certain melody by the name of "Sweet Marie," at which we had by this time become wondrous skillful by reason of ceaseless practice for two weeks. Indeed, I state it but mildly when I say that thenceforth our progress through Texas was only one continuous round of "Sweet Marie," though I must say our troubadours did acquit themselves like men. Col. Bill Peabody has a tenor voice which would be the envy of both the De Reszke boys, and Oscar Guessaz can give Tamagno cards and spades on "Sweet Marie," to my notion, or on any other classical selection he cares to name. "Sweet Marie" is good stuff, and if a lot of these foreign opera people would give us less Gotterdamerung and more "Sweet Marie" they would make more money in America; which after all, I take it, is what they want. I give them this tip for nothing. Not that I suppose they could sing "Sweet Marie" the way Col. Bill Peabody and Oscar Guessaz and Bob Burton, and Richard Merrill, the celebrated dog man from Milwaukee can sing it, for I don't think they could. It takes practice.

BLUEBILLS ON THE OSO.

One day we went out for a try at some flight shooting on bluebills at what is called the Oso, this having reference to the mouth of the same stream of water which is dammed at the Portales to the Loreles ranch. This land at the Oso is, I believe, on the Loreles ground, but it is only fair to say that Mr. Christie and Mr. Tod made no objection to shooting there, and that is an open shooting rendezvous for all sorts and conditions of men. (I believe Mr. Christie wrote to the ranchmen of the Loreles outfit to show us to any of the places on their ground except the tanks at the portales and one or two other watering places of the cattle; so let us give them all credit for extending us probably more courtesies than we deserved.) At the Oso we found the lower end of the Portales' flight, but it was lower in only one sense, for the birds flew much higher, so high indeed that it was only scratch shooting at flocks, not a very sportmanlike or satisfactory sort of shooting, as one could not tell anything about where he was holding or what bird he had killed. A great many cripples were one product of this line of fire, and Commodore Bennett, who had sailed the ten miles down the coast to the Oso and dropped anchor back of us, did a thriving business in picking up the wounded birds which went down in the salt water behind us. Even as it was, we got together quite a big bag of birds, and the Greasers and negroes were once more made happy in Corpus by Mitchell's Santa Claus activity among them. Mitchell, by reason of his high position in life, his dignified bearing and his white apron, impressed the native population as one great in authority.

LOST IN THE CHAPARRAL.

Guessaz and I had a bit of an adventure that morning we went to the Oso. It was very foggy, and as we went on ahead in a light buggy, alone, we took the wrong turn of the road at a certain gate to a big pasture of twenty or thirty miles across, and wandered away from the sea coast out into the chaparral. The others took the right road along the beach and so of course did not come up with us. The fog was so very heavy that we could only see a few yards ahead, but thinking we could strike straight across to the beach, we laid a line for the sea, and promptly got lost in the fog, in the worst bit of country I ever tried to negotiate with a horse and buggy. Then we concluded we would take our own trail back to the wagon track we had followed, but at this we must have failed had not the dew hung very heavily, for in places the wheels had left no imprint on the iron like soil. By dint of sending a trailer ahead as scout, we at length got back to the gate whence we had come, losing about an hour and a half of time at the best time of the day for shooting. This mortified us so that we did not tell the others we had been lost, but said "we had just been back in the chaparral a little." There was a small pond off the road away, and they supposed we had been there, and I suppose they will all always believe so still, if they do not happen to see this confession of uncandidness. We did stop at the pond, but the householder there said it was dried up. I noticed on the side of the house the stretched skins of two "leopard cats" (ocelots) and inquiry drew out the fact that the rancher had a few hounds, and that on "most any morning" he could go out and kill a leopard cat, a bob cat, or a wild hog, provided it did not get too hot and dry before the trail was run.

"In this big chaparral between here and the coast," said my companion, "there may be almost anything—cats, javelinas, panther, no one knows what all. No one hunts in there, and no one can who hasn't a good pack of dogs. Come down some time and we'll get the pack from Portland and go out after javelinas. If you ever get tangled up with a lot of them, I think you'll say it was the liveliest time you ever had. There used to be a good many javelinas in here, but the Mexicans killed them off pretty well at the water holes. They eat the pork, but they are the only ones, so far as I know, who are fond of javelina bacon."

Commodore Bennett offering us a sail home that evening, about half of our party, including Guessaz and myself, went in on the schooner, the others remaining for the evening flight. They chose very ill, for hardly had we gotten out of that part of the bay before a terrible Texas storm of wind and rain struck in behind us. We on the boats got in easily, but the hacks with our friends had a sad time of it, for they were wet through, and the road all went to gumbo, so that the horses could barely drag the empty vehicles. Mr. Roth, who had kindly volunteered to bring in the hoodoo buggy which had led us astray that morning, broke down entirely, and Max Luther's buggy came in to town on the end of a cowboy's lariat, he having been chartered by the way. Evidently the Italian climate of Texas wanted to show what it could do upon occasion by way of a sudden change. Still, all these damages were not irreparable, so we smiled as we ate supper, and hoped it would be a norther, for a norther is the hope of the coast shooter's heart, as it drives the fowl all back into the salt water territory from the whole country inland, perhaps far to the north of Texas.

A "NORTHER" AND SOME HUSTLING.

And a norther we got. It came about 3 o'clock in the morning, a howling, screaming, black storm of rain and shivers. We were all in bed, but Guessaz heard it coming and at once said to himself, "Gum Hollow to-morrow." The train to Portland, across the bay at the Gum Hollow getting-off place, came through at 5 a. m. We needed some supplies, and Mitchell, who advanced this last argument to Mr. Guessaz as they two talked it over together alone in the dead of the night, shivered as he looked out into the cold blackness, and said he was scared to go out alone to the market place. Moreover, he pointed out that no shops would be open at such an hour. Not so easily daunted was the Anglo Saxon soul. It seems that Mr. Guessaz said naught, but pulled on his sweater and plunged out into the rain. In the dark he fell over a ten-foot bank and into a pool of water, but still did not stop, but went on and woke up bakers, grocers, station agents, everybody, everything needed to perfect preliminaries, and came surging down to the car with arms full of supplies just before the morning train crossed the bay. When we awoke the next morning the negro meeting house that had been our landmark at Corpus had disappeared, and so had the summer skies. About us stretched a great, gray, desolate country in expanse, broken only by one dingy station house, and over us sighed and wept a wintry, dismal heaven. Then Guessaz told us how it had happened. To this day Mitchell thinks Mr. Guessaz is a wonderful man, so deeply did this sample of hustling impress itself on his mind. Mitchell was afraid of the dark, I much misdoubt, and methinks also of other things, and I am of the persuasion that when we were all away from the car, Mitchell locked the doors and drew his razor and sat backed up in a corner. But this is mere surmise, and that against Mitchell's strenuous denial, which is hardly fair to so excellent a cook.

And Gum Hollow was only five miles away.

909 Security Building, Chicago. E. HOUGH.

ROUGHING FOR DUCKS.

WORTHINGTON, Minn.—For a number of months I have watched the columns of the Forest and Stream, expecting in each succeeding issue to find a graphic account of our last duck hunt of the fall shooting, in which I occupied a prominent, though by no means dignified position. My adventures during that memorable trip caused many a laugh and jest at my expense, and I fully expected that some member of the party would carry out the threat of telling tales on me in the columns of "our family journal." As the boys have all evinced a spirit of forbearance, and spared me so mercifully, I think I can do no better than to recount our experiences myself, to some of which I fear, however, I cannot do full justice, owing to my embarrassing position and limited point of view during some of the occurrences.

To start at the beginning, George and I had been trying to kill a few ducks for some time. We hunt and fish together very often, in fact whenever we can frame an excuse, no matter how lame it may be, we sieze our rods or guns and hie to the nearest lake or field, and proceed to slaughter the innocents, or to be truthful, endeavor so to do. We like to shoot chickens pretty well, to shoot snipe and quail much better, but most of all we love to seek the wily mallard, redhead and teal. Our favorite resort is a lake of considerable size, and with slough attachments, a few miles from town, not remarkable for depth of water or beauty, but making up for what it lacks in that respect by having two or three thousand acres of marsh and a fine mud bottom of unknown depth, and unexcelled adhesive quality.

This past season the water was so low that the rushes and wild rice were left on dry land, and where we had usually made our blinds, the cattle chewed their cud, and in consequence, the ducks stayed in the open water in the middle of the lake, a mile from shore, and the only shots we got were at an occasional duck flying out or in—low enough to risk a long shot at. To make matters worse, a party of sportsmen(?) from Cherokee, Iowa, came to spy out the land, and finding it pleasant to the eye, concluded to possess it. They pitched their tents and set their household gods on the shore of our own particular preserve and announced their intention to make us a good long visit and kill all the ducks in the country.

Now these cheerful fellows were no doubt well meaning fellows, and tried to be real sociable, but they didn't understand the first principles of hunting ducks; we have all met this peculiar breed of nimrods. They dress in black clothes and make themselves as conspicuous as possible. This outfit was of that kind; every man-jack had on black clothes and hats, and one of them sported a macintosh of the same somber hue. They would walk up to one's blind, stand in full view and endeavor to start an animated conversation. I am afraid our replies were rather harsh in character and a bit personal as well, for they quit speaking to us after awhile. Their arms were of various and sundry patterns, and ranged all the way from a 45-90 Winchester rifle down to a double-barreled muzzle-loader with one hammer; and they cut loose at everything that came within a mile of them. It made things real pleasant for George and me. Frequently some of our acquaintances and friends accompany us to the lake, but last fall, after a trip or two, they would stay at home, remarking that they would remain in town and attend to business so long as these dashity dashed idiots were camped there. There were nearly a dozen, and they formed into squads and took turns at patrolling the entire shore line of the lake, and kept it up until they wore a good path along the water's edge all the way around.

After a time, even we ourselves got discouraged, for no sooner would a flock of ducks show signs of visiting our decoys than one of these funeral processions would solemnly file in sight, and then, good-bye to our chance for a shot. We saved lots of shells those days.

Finally becoming desperate, we concluded to move to greener pastures. Writing to a couple of friends to join us, we loaded dogs and guns, canvas boat and decoys on the train, and were soon rolling away in the direction of a more promising field. The brakeman and conductor wanted to put George off the train, naturally mistaking him for a tramp and it took all of my persuasive eloquence to alter their determination. I explained that his muddy and somewhat worn hunting suit was his misfortune, but not his fault, and that nature was to blame for the stubby and likewise ruddy growth that adorned his classic profile, but not until we produced our "roll" did we allay their suspicions. All of this was George's fault, for my own outfit was immaculately neat of course.

At the depot we found our friends Uri and Stein awaiting our arrival, and both eager to start for the lake, some twenty miles in the interior.

Arrived at the lake, we hastily put the canvas boat together, and dumping in shell cases and decoys, George and I pulled for the center of the lake, a shallow body of water, and setting the canvas birds to our satisfaction, were soon hidden away in a bunch of rushes, where, by exceeding care, we could stand without having the water run in at the tops of our hip boots; but woe betide the luckless wight who took a careless step. Some people may wonder why we preferred to stand in the mud and water when we had a boat along; we used to sit in the boat, but somehow or other neither of us care to do that any more. Now a canvas boat is a very nice thing as far as it goes, but there are a whole lot of dont's connected with it. One is, don't two men try to shoot at once out of it. George and I know for we tried it. After fishing ourselves and our belongings out of the water once or twice we have been content to take our chances standing in the mud and water.

We waited patiently but in vain for the countless flocks of ducks predicted by Stein. By and by a lonesome and belated blue wing teal hove in sight. Passing Uri and Stein, he was saluted with four barrels, which only caused him to slide out another reef. Passing us, George's ejector sent a couple of loads of nitro that failed to reach him in time. It was now my turn, and I mentally hugged myself as I wiped their eye in anticipation. Something was wrong, however, and I did not give them a lesson in killing ducks, for as I turned to cover that blue wing, I discovered too late that my right foot had a violent affection for the spot in which it was planted, and refused to be separated, and I sat down to think about it. My hip boots fit pretty tight, fortunately, around the tops, so I shipped scarcely any water in that direction, though the region nearest the tail of my hunting coat felt suspiciously damp. Regaining equilibrium, I turned a deaf ear to the silly remarks of my companions, and gave my sole attention to watching for the promised flight of ducks. It was snowing slightly, by this time, and the wind was turning cold, but with the falling temperature came the ducks, and soon all hands were busy. Mallards, spoonbills, teal, redheads, and an occasional canvas back kept our guns hot for some time, and then the flight ceased as suddenly as it began.

George and I had between forty and fifty ducks on the water by this time, and as there seemed no immediate prospect of more coming, I climbed into that measly canvas boat and started to gather them up; several of them were only winged, and it required some further expenditure of E. C. before I corralled them all. This was safely accomplished at length, and I started back to the blind with a load of ducks to be proud of. If it had stopped right there it would have been all right, and this story would not have been written, but just then a miserable little "trash" duck took a notion into its head to fly right over George and of course he had to shoot it. If he had killed it clean I would not have cared so muuch, but he only winged it, and from that small beginning came all my woes. I will never forgive him for shooting that duck. It fell with a splash within a few feet of my boat, and just paddled around in a most tantalizing fashion, too close to shoot but too far to reach with an oar. When I stopped rowing it would stop swimming away, and with a wink of its left eye wait until I searched for my gun, and then swim within a couple of yards of the boat. Finally I ran it into a corner, from which there was no escape, and I reached over the side of the boat to gather it in. Something was wrong, however, for I only grasped the water. George said the bird flew away with a fiendish chuckle. I don't vouch for that, for I was otherwise engaged just then. Instead of regaining an upright position when I failed to connect with that tough

little duck, the canvas boat took a part in the game, and I fetched up standing on my head with nothing left to tell the tale of my sad shipwreck but a pair of large-sized rubber boots waving frantically in the breeze. My head was buried to my shoulders in the mud and slime in the bottom of the lake. In going overboard, the top of one of my boots obligingly caught fast in the oarlock and kept me in my reversed position for, as it seemed to me, several hours. When I finally did kick myself loose and got my head above the water, I was nearer dead than alive. My mouth and eyes, ears and nose, were full of that sweet-scented slime, and those unfeeling brutes lifted up their voices and yelled themselves hoarse over my misfortunes. When I finally regained my breath, and pried the accumulated mud out of my eyes sufficiently to see, little remained visible. All that was left to tell the sad tale of my sad shipwreck was a paddle. The ducks I had gathered together with so much care were floating idly on the water. And there I stood up to my armpits in mud and water, a sadder but a wiser man, my hat hanging limp and dripping over my eyes, and a piece of decayed vegetation looped gracefully over my off ear.

Feeling around carefully, I discovered the boat on the bottom, and raised it to the surface, but as I was in so deep myself, I could not lift it sufficiently high to pour the water out. I did manage to empty enough out to make it float. Then came the task of finding my gun, the shell cases and other plunder. Feeling carefully with my foot, I succeeded at length in finding everything with the exception of one shell case. That with its contents of about a hundred and fifty good nitro shells is still there, and as far as I am concerned, will always remain there. By slow and painful degrees I gathered up the ducks again and started for the blind, pushing the boat with its contents afloat inside ahead of me, where with such assistance as George could render me for laughing, we emptied it of the water in it.

It kept on snowing and turning colder all the time, and my clothes soon froze stiff on me. I at first made up my mind to stick it out, but as there were no ducks flying, I concluded to go to a farm house about a mile away and try to get dried out a little. So climbing into the boat I rowed ashore, and right there is where I got even with George. He had filled his pockets with shells, and I left him standing in the middle of the lake, promising to come back as soon as I got some dry clothes on.

Reaching the house, I found lots of sympathy, and such aid as they could render. They built a rousing hot fire, and made me drink a cupful of some hot patent medicine, the nauseous taste of which is still vivid in memory, but there the aid ended. The farmer himself was in town, and evidently had on the only suit he possessed, and a search of our wagon revealed the pleasant fact that we had forgotten to put in the grip containing our spare clothing, so I was compelled to dry on me such clothes as modesty compelled me to retain. It was slow work drying out in that way, so I had to keep turning around before the fire like a roasting joint before the old fashioned fire place; but it felt comfortable, and I forgot all about George balancing on first one foot and then the other in the middle of the lake. After a while his shells gave out, but he had to stay there just the same, and the other boys were too far away to understand his repeated calls, or at least pretended so, and did not pick him up until it got too dark to shoot any longer. His troubles did not end with going ashore either, for he had to find the canvas boat which I had left in the rushes, and in his search tripped and fell flat in the water. I could hear him long before he reached the house, for his voice was raised high in the railings against adverse fate. He was almost as wet as I had been earlier in the afternoon, and it required considerable steaming before he was fit to travel. After a hearty supper of salt pork and potatoes, enough to give us in ordinary times a bad spell of indigestion, we started for town, not reaching there until after one o'clock in the morning, and having faced the driving snow and cutting wind the entire way. Both George and I were wet still, and the trip was far from pleasant. Taking a drink of something hot and strong as well, we tumbled into bed in short order, and awoke in the morning none the worse for our ducking. We took the train that morning for home, with the nice bag of ducks we had gone through so much to obtain, and brought our season's shooting to a conclusion, voting our last trip, though full of unpleasant surprises, none the less enoyable.

W. R. H.

A TURKEY HUNT IN FLORIDA.

Whenever an article in Forest and Stream has a heading indicating that it concerns hunting turkeys, I am all attention. I read it slowly to enjoy it, as one eats a good dinner, leisurely, thoroughly masticating it, so to speak.

When a correspondent, in a late issue, wrote in regard to a projected hunt after *Meleagris gallopavo*, that he "had rather shoot a wild turkey than an elephant," he was the one man in the world that I would like to have in camp with me at the old stamping ground, on the headwaters of the Anclote River, in this land of frozen orange trees.

I started out to give the Guild a little modest experience of mine, hoping that it might do some other fellow craftsmen as much good as their records do me. Suffice it to say, that this trip being from necessity a short one, was taken alone with my guide Johnny B. as a companion, than whom a more expert turkey caller does not exist, that's my notion, in this vast land of ours.

We started out from Tarpon Springs, and reached our old camp occupied by us before, many preceding seasons, at Cross Cypress, about three o'clock one fine February afternoon.

This camp is about twelve miles by road through the pines, up the river from Tarpon Springs, and is so named because a Cypress "branch" comes in at this point at right angles to the line of the river. As the wind, after blowing several days from the southwest, had veered into the northwest, we had reasonable hopes of quiet mornings and evenings, for some time at least, but the sequel proved otherwise.

Our tent was soon pitched near the river, which here is what is locally known as a "branch," a narrow watercourse surrounded by cypress trees and good spring water withal, not an ounce of malaria in the whole stream. Where it widens into pools it is filled with trout, or what we in "York State" would call big-mouth black bass (*Micropterus salmoides*), who in their feedings mornings and evenings would strike at minnows and frogs, the sound of which we could plainly hear in the tent, forty yards away, sounding as when one hollows the hands and brings them quickly together.

By quietly approaching one of these pools, old-timers could be seen in the clear water slowly swimming around. These pools have always been full of fish since I have camped there for the past ten years, and why they should be I cannot understand, as otters are also very numerous in them and often seen, their trail a regular beaten path; besides, old alligators, which when the weather is about to change, bellow like a Durham bull when he is angry, pawing the dirt and chasing one off from some pet trout stream that runs through his preserve, the meadow. As both the otters and alligators (the natives accent the third syllable) are sworn enemies to the "trout" for "divers reasons," how the latter survive as they do, is past my knowledge, as the pools are comparatively small and in the dry season have little streams as inlet or outlet.

But we are after turkeys, not fish, so when everything is made snug in camp, palmetto leaves cut for beds, in place of the old-time balsam boughs, to spread our blankets on, Trailer, the deer dog, a hound of quite respectable parentage, securely tied so as not to interfere with our plans, and Dexter, who whinneys at all times and places, made secure, with a liberal allowance of hay to quiet him, we eat a snack as quickly as possible, for it is getting time to cross the branch and see if some turkey's appetite has not drawn him to the fresh burn to feed.

This season the severe freezes of December and February killed the grass that had started, and the cattlemen as a consequence had fired everything to keep their stock from starving, as the new grass comes up and at that time is most nutritious. These fresh burns the turkeys love to frequent.

This new burn is directly across the branch from camp and not one hundred yards distant, being open pine woods with an occasional small patch of saw palmetto. Nothing appeared in sight as we carefully scanned the woods before entirely emerging from the palmetto bordering the branch, so we started out into the pine woods, trusting to run up on some stray turkey. We had gone about two hundred yards out toward a ridge away from the river when Johnny, whose eagle eye will see further than any eagle or Indian ever born, stopped suddenly with, "There is a turkey coming right toward us!" Luckily we were but a few yards from a small palmetto clump, and the way we got down and crawled till it screened us, was a caution. My hat fell off but stayed where it fell. Evidently the turkey had not seen us, as he continued his feeding. And now comes the skill of man pitted against the wariest bird we have in this country.

If as Franklin wished, we had him for our national bird, instead of the chicken thief that we have, and resembled him in the least, we would be a match for the world in diplomacy, for his wariness and cunning are past belief. For a short distance he can outrun a deer and when he flies a quail can make no race with him.

As he now appears to be feeding away from us, Johnny gets out his call, simply a piece of very elastic thin rubber, and placing it between his lips, stretching it by drawing it tight and blowing, he imitates a turkey hen to perfection.

This rubber call is a new scheme, as on our previous trips he has used the young and tender leaf of the bay tree or a species of oak leaf, while I have used the regular horn turkey call whenever I have been out alone, and although I have outwitted a few turkeys they have been mostly hens, which are not as suspicious as the male bird.

"Tuck—tuck—tuck—tuck—tuck—put—put—tuck—tuck—tuck!" sounds the call starting low and increasing in volume gradually toward the end. The "put" is in most cases a danger signal of the bird, and unless followed by more "tucks" will surely scare him into the next county, but given between them it seems to be irresistible.

At any rate our turkey, who is at least a quarter of a mile away, but hears the call in the still evening air, stops feeding, throws up his head and looks about. Now is the time for the "statue act," for I verily believe he could see one wink one's eye a mile away.

Everything seems to his majesty to be all right, for so it proved to be, and he resumes feeding, but gradually working our way. Again the call, again he stops and looks up, and comes nearer. He does not stop to feed so often. Now he is within a hundred yards, but concludes that he wants to reconnoitre, so he edges away and behind a large patch of palmetto, trying evidently to make a flank movement and get in our rear, but the call now given is too seductive for his amatory nature, and he finally concludes to risk it, for although he does not gobble, as but few turkeys ever do at night, except when they fly up to roost, and then seldom but once or twice, yet he thinks he will roost in a tree convenient to his lady love, and have his courtship in the early morning hours, when the red bird is whistling his first song. Poor old chap! Now he is but sixty yards away, and jumping up suddenly I have him in my power. There is no need to hurry, for my sudden appearance has completely paralyzed him, and for a couple of seconds he stands motionless, not even smoothing down his feathers—the gun cracks and he is our prize.

It is always best when the game is near enough for a shot, to rise quickly and shoot standing up. I have seen more than one turkey missed by the hunter being slow in getting a shooting position, for in so doing the bird collects his wits and puts a tree between himself and the gun in short order, and after he has disappeared you wonder how he did it.

Not until just before shooting were we sure that it was a gobbler and not a hen turkey, for he kept his head down almost continually, feeding, and did not strut. But now we have him, and one look at his glossy, iridescent plumage, with his beard hanging down nearly a foot and the spurs over an inch long, sharp as a stiletto, tell the story. He belongs to a different species from the Northern turkey, as discovered by my friend, Prof. W. E. D. Scott, and is known as *Meleagris gallipavo floridana*, the plumage being more glossy and radically different in some ways from any species hitherto reported.

"He is the most perfect bird I have ever called up," says Johnny, as we look him over and admire his points.

One of the shot has gone through the upper part of the head and another through the body, yet the plumage is scarcely ruffled. It is too early in the season for them to have strutted much, besides the spring here is late this year, so that his wing coverts are not worn, nor has he been at war with other suitors, the result a perfec plumaged bird. Johnny, who has killed hundreds o them, says he will weigh a good twenty pounds.

Now, to kill this bird took less time than it does to tell it, for we are back in camp at six o'clock, as we expect to try them again in the morning.

How many times I look at my watch before half-past four the next morning, at which time we hope to be a mile away from camp in another direction, I could not say; at any rate, it was more than was consistent with a perfect night's rest.

Always the first night in camp is a restless one. But there is going to be no oversleeping with consequent loss of a day's sport, as all is over generally by 7 A. M., if we can help it, and so break of day finds us, after partaking of a hasty cup of coffee and the remnants of last night's squirrel stew, in the range Johnny had chosen for our next attempt.

And he had chosen wisely. For just as the sun was rising and the birds were singing their sweetest songs, we get the answer to our call by a gobble that sets our blood coursing. It is a repetition of last night's work, except that this gentleman is more coy and hard to please; there are two different turkeys gobbling at first, and we have hopes of a double, but one of them has his market already made, doubtless, as he turns to the left and goes behind a cypress pond, but the other comes nearer. He in vain struts and spreads his tail, rolling it from side to side, endeavoring to entice his would-be fiancée to a tryst in his vicinity; but seeing that it is useless, and hearing her call in such enticing tones, he starts in a quick trot directly toward us. He stops again, and evidently thinks that Mrs. Turkey should meet him halfway; but a call from Johnny at this moment, with an extra "put" thrown in, is too much for his weak character, and on he comes to within forty yards of the palmetto clump in which we are hidden. The bird was now in such a demoralized condition that there is no telling how near we might have got to him, but he is near enough. Crack—bang—dead turkey. A perfect match to the bird we have in camp, although perhaps a pound lighter in weight. When I look at him, I am almost sorry that I didn't miss him, for now all sport with this bird is over, and there are none too many of these regal fellows; but the spasm of sentiment passes off, as possession gives one that satisfied feeling, and as he has been fairly outwitted, I am satisfied.

Let no one think that the gradual approach of a wild turkey gobbler is unattended with excitement, nor that there is not such a disease as "turkey fever," for there is, to my certain knowledge. My first gobbler shot here some seven years ago now hangs in my dining room, to remind me that my friend K., who was with me at the time, said that he thought I was about to faint, having turned quite a few shades whiter, but not till after the bird was dead. I remember distinctly that a near-by pine tree seemed a very good support for a short time.

One morning, in company with Johnny and O., as good a deer shot as I know, either with rifle or shotgun, and who would laugh at the idea of missing a deer, whether in front of a "jack" in the Adirondacks or before the dogs on horseback here, he missed clean three gobblers in succession which were called up separately to within thirty yards of him, and one of them was within twenty steps. He had ridiculed the idea of being rattled over such a thing as a turkey, but he was, badly. There are many other cases of a similar kind that Johnny tells of—clean misses by men that are good shots at deer—and all with the game at close range. After one has killed his first bird the disease seems to abate.

It is still early enough to try for another turkey in some other range, but we have had enough, and the deluge will not immediately follow us.

The remaining two days spent in camp are windy and we do not hear nor see more turkeys but pass the time in catching some of those large bats and shooting fox squirrels which here are twice the size of our northern gray squirrels. In this sport Trailer does his part in treeing them, and as they seldom hole and are so large, are usually easily found in the top of some pine tree, lying full length close to a limb. When they go into a cypress tree it takes a sharp eye to detect them in the Spanish moss with which the tree is draped.

The squirrel makes a welcome addition to camp fare when first parboiled in a little water and then fried brown with a liberal allowance of bacon.

The nights spent in this camp are always to be remembered. Just at dusk the owls get lively and the woods seem to be full of them, and as this is the mating season, one can hear all their notes, some of which are so demoniacal that they would make a tenderfoot's flesh creep were he not acquainted with the cause.

It was over our camp-fire after everything was made snug for the night that we discussed mostly such things as Johnny was past-master of—those pertaining to woodcraft and the habits of game. Sometimes our talk took an astronomical turn as it did one night when Johnny surprised me by saying, "Do you know that I've made up my mind that it is all humbug about the earth moving around the sun, and there are lots of people in our settlement who are getting to think the same as I do."

"Why how is that, Johnny, has the colored preacher who said, 'the sun do move,' converted you?"

"No! but I've watched it and those fellows who took me down the coast a year ago last winter as guide, tried to beat it into me that the stars didn't move nor the sun, but they can't fool me—I know."

Trying to reason him out of his belief that the sun revolved about the earth ended in failure, as his was founded in the faith.

When asked how he accounted for the change in seasons his answer was, "God made it so and that's enough for me." Still this difference between us did not affect his calling turkeys.

I have camped in these parts with "Nessmuk," with his knowledge of woodcraft and wonderful memory, which enabled him to repeat whole pages of Shakespeare, Byron, Milton, and nearly all of the standard English authors without a break and with no apparent effort, as we sat around our camp-fire on Lake Butler. Peace to his ashes.

He lived up to the teachings conveyed in "Woodcraft,"

as I have had opportunity to know, and my camps with him were indeed a good school.

So, too, with Johnny, no bird or beast could utter song or shriek that he could not at once perfectly imitate. He has called a quail so perfectly that the cock bird flew and alighted between the camp-fire and tent, not six feet apart, and it might have been persuaded to come in and visit us had he called again. One call to the owl would rarely fail to bring him from the swamp into the tall pine that overhung our tent and camp-fire. I have seen him, standing bolt upright against a huge pine, in plain sight, call a gobbler within ten feet of him. Once, one foggy morning, in answer to his turkey call, a wildcat came creeping up to him and was not a rod away when he must have winded us and made off.

I was once a few feet nearer the edge of the swamp, while Johnny was trying to call an old gobbler away from some hens, who were parading with him out on the pine ridge, for my friend O. to kill. when I, hearing a noise in the "thick" back of us, I thought it might be a deer and prepared to give him a warm reception; but soon the noise ceased, and as the gobbler preferred "a bird in the hand to two in the bush," and would not leave the society he was in, we had to give him up. On going into the edge of the swamp there were the fresh cat tracks in the soft mud, showing just where he had changed his mind about having turkey for breakfast.

At another time, Johnny told me, he was standing up against a tree calling turkeys, when he saw a man creeping up on hands and knees to get some poultry. He let him wear his trousers about out and then gobbled at him, and the way the would-be turkey hunter sneaked off was a caution. It beat firing into decoy ducks. Now, when a man can call a turkey to kill, and a man and a wildcat to kill it, he must be an expert turkey caller.

This section is as good ground for wild turkeys as any as easy accessible in the State.

The law which forbids killing them after March first should be changed by taking a month from the open season in the fall, when one shot into a bunch of half-grown turkeys will destroy more in number than would satisfy a self-respecting hunter for a season's work during February and March, when they are at their best. The hens rarely lay before May first, and if the close season began April first it would give the birds ample protection and also give the sportsman a better chance to enjoy the next best thing to calling a bull moose, which is outwitting an old turkey gobbler.

If any readers of FOREST AND STREAM wish to excel the writer's record of a 26½-pound wild turkey gobbler, shot some five years ago at this same camp with Johnny as guide, they can do no better when the "grippe" begins to rage next winter than to come down here and engage his services, which are very moderate, and I'll guarantee that he will take them to his turkey farm, and give them such sport as would satisfy an ordinary mortal. He is thoroughly competent and to be trusted. T. B. C.

A METHOD OF VACATION.

I HAVE nothing new or strange to tell you, but hope that some one may find something of interest, more especially if they contemplate a trip to the northern woods. There may be said to be three ways of spending a vacation in Maine—a sojourn at a hotel, a stay at a kept camp or camping on your own hook. Our objective point was the camp known as the King and Bartlett and Spencer Stream camps in Somerset county, Maine. We left the Quaker City behind us on August 9, and went to Boston by way of the Sound steamers, thus getting a good night's rest. The next morning we left for Portland, which is one hundred and six miles. Here we took the 1.06 P. M. train on the Maine Central Road for Farmington, eighty-one miles, where we arrived at 4.30 P. M.; then changed cars for the Sandy River Road, and arrived at Phillips at 5.30 P. M., changed locomotives and pushed on to Dead River Station on the Phillips and Rangeley Railroad, where we arrived at 7 P. M.

I have gone into the dry time-table details to indicate the character of the journey and the time it takes—an important consideration with invalids and delicate persons. It is about thirty-six miles from Farmington to Dead River, the end of our railroad journey, thus making two hundred and twenty-three miles from Boston. The interesting scenery begins after leaving Farmington, as the country then becomes mountainous, and the quaint one-seat, narrow-gauge railroad cars add to the charm of the views from the window. The Phillips and Rangeley Railroad is the pathway from the south into quite an extensive fishing country in northwestern Maine, and Dead River Station and Rangeley, the terminus of the road, a short distance beyond, are points from which tourists and sportsmen proceed to their various destinations. Dead River Station consists of the station, and that is all. It looks as though it had just dropped down into the woods from somewhere.

It was almost dark as we stood on the platform and gathered our troops together preparatory to taking the stage for Eustis, eighteen miles further. Although the 10th of August, it was bitter cold, and no thermometer was necessary to demonstrate it. Our heavy coats and wraps were in the trunks. With the aid of a horse blanket, the bear-skin robes in the stage and a borrowed sweater we managed to be fairly comfortable. There is no time in the summer when it is safe to visit the Maine woods without an abundant supply of warm clothing for use at night. Great suffering and even danger to life may be averted by remembering this fact. The trouble usually occurs at such times when one's baggage, through thoughtlessness or carelessness, is not accessible. The moon came out full in all its soft beauty, and we enjoyed our ride over a fine hard road in the keen cold air. We had supper at Green's, a place on the road, and warmed up in a comfortable parlor, heated by a good heater fire. The change was very great in contrast with the stifling heat we had lately left in Philadelphia. Among the things on the table for supper was mountain sheep, after October first to be known as venison.

At 10.15 P. M. we reached the village of Eustis, the hub of the Dead River and Rangeley region, where all provisions and guides are to be had, and where wild deer are said to be seen almost any evening from the hotel porch. The town was full of people, and the hotels, so-called, were full. The proprietor of the Shaw House kindly gave us his own room, and we retired, weary but happy. The hotel, as usual, was headquarters for the gentlemen of the town, and it was an interesting thing to go into the office and listen to and look at the motley gathering of lumbermen and guides, who doubtless found city folk just as amusing.

Saturday, August 11, at 8.15 A. M., with two buckboards our party started for camp. The scene was an animated one; the single street of the village was full of parties and buckboards preparing for their final journey to their respective camps. Guides and drivers were hurrying hither and thither on various errands. A number of tourists were taking snap shots at their novel equipages and the parties on them, but as our camera was in the trunk we did not get any of the interesting pictures. I hope the other people's films were all right.

The sun was shining brightly, and the day was all that could be desired for the last section of our journey. They told us we had eighteen miles to go, but before we arrived it seemed like one hundred and eighteen. There were six in our party and it took two buckboards to hold us and the impedimenta. The first part of the journey was along the Dead River, which we finally forded. The land here is level, and buckboard riding not unpleasant. The country here had been burnt over some ten or twelve years ago by a very destructive forest fire, but was far from uninteresting, as the mountains in the distance always made a beautiful background to the landscape. The gentlemen of the party walked nearly all the distance and enjoyed it, as the glorious weather and ever-changing scene and objects of interest along the road (I use the word with an apology) were an antidote to weariness. We soon left the river-bottom country and began to ascend, and reached a very rugged and wild country with surrounding mountains and hills and many lakes, as this part of Maine is both mountainous and full of small lakes. Blueberries were in the greatest profusion, and were very large, and we enjoyed them hugely. We ran across a number of coveys of pheasants, which were quite tame, and in several instances we watched them for quite a time. We passed one place on the way, a single cabin known as Camp Jack, where one could remain over night if he wished to divide the journey. About one o'clock we arrived at the Deer Pond Camps, which are very prettily situated on a lake of that name. We took dinner here and a good appetite made up for any deficiencies in the food or cooking.

We had traveled over some exceedingly rough and stony road and some corduroy, but the road, most of the way from Deer Pond on, was something appalling. This so-called road consisted of rocks and boulders ranging in size from a baseball to a barrel, and the buckboard riding was a series of thumps and bumps for miles; one minute up in the air and the next sliding off a rock. Every now and then we would strike swamp land from springs, and that meant from twenty feet to a quarter of a mile of corduroy—logs laid lengthwise in a swamp—and the thumping over this meant a shaking up sufficient to churn butter. I think a good name for this road would be Purgatory, but the terminus was not Hades, and we never regretted having commenced the journey. We soon arrived within a short distance of the camp, passing through a beautiful patch of green wood, in which we quenched our thirst at several limpid and cold springs. Red squirrels were chattering everywhere, and birds and butterflies were to be seen. It was nearly six o'clock in the evening when we arrived at King and Bartlett, and thus it will be seen that it took us all day to make this journey of fifteen miles. This will give you a better idea of the roughness of the road than any words of mine. If one is able to walk it is a very enjoyable tramp, but for ladies, who stick to the wagon, or for invalids, it is a rough trip, but it can be divided by remaining at Deer Pond to rest as long as one pleases. A very pleasant way to go into camp is on horseback. It was an agreeable sight to see the cabins stretched along the lake front as we emerged from the woods in their rear. This was to be our home for a month, and we did not know whether it would be home, sweet home or the contrary. We were met by the genial proprietor, Mr. Harry M. Pierce, who, with his sombrero decorated with trout flies, made quite an imposing appearance. The buckboards rattled over the stones to the front of the three cabins assigned to us. The trunks were dumped off and we entered our habitations. The old-fashioned Franklin stoves were filled with chips and birch logs, ready for lighting. Soon the blast of a horn was heard, and the echoes rebounded from old King and Bartlett mountain back of us, and we were told that the sound meant that supper was served. The guests of the camp took their meals in a cabin known as the dining room, where we found everything served in a way to please any one who was not captious.

This is not a tale of adventure or travel, only a homely description of an outing, and as the subject of food in such places is one of interest to most people seeking a desirable place, I will give you an idea of an average evening in the woods. Broiled lake or brook trout, cold lamb, delicious hot biscuit, baked and fried potatoes, Boston baked beans, coffee, milk, chocolate or tea, various kinds of cake, mountain blueberries and pickles, etc., always on the table. After supper we usually adjourned to a cabin called The Casino, which was decorated by fine mounted specimens of trophies of the chase. Beside the roaring log fire the experiences of the day were exchanged, or letters written. The day being devoted to tramping, hunting and fishing, the evening was also the time for social calls, and a knock on a cabin door was always answered by a cheery call to come in and take a chair next the fire, and a good cigar or a pipe was always at one's disposal. There were a number of ladies in the camp, and they enjoyed the life fully as much as the men, and went boating and fishing frequently, and one lady was quite a Diana, and succeeded in killing a deer.

There were numerous outlying places of interest where one could go on trips and remain as long as desired, as at most of these places comfortable cabins had been built and were supplied with everything necessary for camping. All that was necessary was to state how long you intended to remain away and what provisions you desired, or if you employed a guide he would attend to all this for you and carry everything and do all the cooking. The objective point was usually some pretty lake or a fine trout stream, and would be from a half hour to four hours' walk. It was always safer to ask how long it was to such and such a place, as the distance in miles never seemed to agree with our own ideas, and the miles were quite elastic. The woods are dense, and there is little or nothing to be seen in traveling over a blazed trail except the natural beauties of the woodland itself. The woods are very still, and there is a scarcity of life of all kinds, even beetles are seldom seen, and the only sounds at this time of year are the tap of an occasional woodpecker, the whir of a covery of pheasants, or the crashing made by a startled deer as it goes through the underbrush. It was always safest to arrive at camp before nightfall, as it is quite easy to step out of a trail after dark. One afternoon our jack-lantern was accidentally left behind, and we had to make camp where we were, but with the aid of a hurriedly constructed "lean to" and a good fire we spent a comfortable night, but the ground is not as comfortable as a bed to those not accustomed to the former. The day we started on our first trip it was raining, and we wore rubber coats and walked briskly over the trail, and soon found that rubber coats were an abomination. They are so heating and prevent evaporation to such an extent, that one is soon drenched far more and in a more uncomfortable way than any rain could accomplish, and such a coat is only of use in riding, or fishing from a boat, where one is not compelled to make any exertion. After a tramp of some hours through the woods it is exceedingly pleasant to see through the trees the silver glimmer of the lake you are seeking, and to find the comfortable log-cabin prettily situated on its shore. After your arrival you are very busy, although the guide, if you have one, does the greater part of the work. Wood must be chopped, water dipped from the spring near by, the fire made, and if the party, who has been there last, has played a mean trick on you, it will be necessary to clean up the pots and pans. While the guide is frying the trout and potatoes and cutting up the jerked venison, you will be busily engaged jointing your rod and picking out your favorite flies, or preparing your trolling hooks for lake trout. Soon the coffee is boiling and everything is ready for dinner. After eating with an appetite that pure air and exercise give, your canoe is shoved into the lake and you are off for trout. Later in the day you take a row around the lake and enjoy the beauties of the scene, the mountains are reflected in the clear water and the setting sun casts its effulgent rays over lake and hill. Now is the time when the wary deer come to the water to feed, and you may probably see several of these graceful creatures, sometimes standing statue-like on the shore gazing at you with their big eyes.

There are many things to do and so much of interest that one always feels that only about half the work has been accomplished. All the places of interest have not been visited, there are more hills to climb, you have neglected some pretty bit of scenery you intended to visit with your camera. It also takes many words to tell what little you have done and seen, and even then it cannot be adequately described. You return to the city with many interesting mementoes of your outing, including some fine pictures which serve at all times to remind you and your friends of a delightful outing in the woods, and renewed health and vigor teach the real meaning of the word recreation. Natural History.

MARINE BIRDS OF THE GULF.

ST. PETERSBURG, Fla.—After our Christmas dinner we took a walk to the seaward end of the long dock. We had filled our pockets with hard bread to feed the sea gulls, which have become our special friends. It was a lovely winter day. The sky was a clear deep blue. A slight zephyr came from the northeast, tempering the rays of the sun down to a degree delightfully cool. The water covering the broad sandy beach was a bright yellow, while just beyond, with a well defined line, it was a dark greenish blue. A swell, the remnant of a late gale, was rolling in from the southwest. Way off twenty miles to the eastward we could see dimly the opposite shore, looking in the distant, hazy horizon like a long bank of misty clouds. Here and there were the white sails of many fishing and pleasure boats, while far to the southwest rose the smoke of a "tramp" steamboat on her way to Port Tampa, the only deep sea port on this incomparably beautiful bay.

It was a capital day to study the sea birds. We found a convenient and easy seat and proceeded to break off small pieces of hard bread, which we tossed overboard, where a swift ebb tide bore the food out towards the gulf. After waiting a while we saw a gull picking up the bread. Very soon other gulls joined the first, until we had a flock of hungry, greedy, screaming birds. They came up so close that we could clearly see their keen black eyes. They were extremely graceful and beautiful in every phase of their eccentric flights. They did not pounce upon a floating crumb without first sailing over and around it several times. When they made the final swoop, they lightly dip their web-footed toes in the sea, and bending down the head, daintily and deftly pick up the bread without touching a feather to the water. They nest on isolated sandy keys, and leave the eggs to be hatched out by the solar heat. They are about the size of a "broiler" spring chicken. It is about twenty inches from tip to tip of their spread wings. The body is white, the wings are brown, blended into a decided black at the tips. The margin of the wing is white. The tail is fan-shaped, and serves as a rudder in guiding them in their eccentric flights. When flying leisurely, they have the peeping cry of a tame chicken, but when excited and fighting over a school of minnows, they can scream like a small steam whistle. They are—like the Lord's poor—ever with us, for go where we may on the great Gulf, we always find the gull. On our late trip across the Gulf a sailor tied a small piece of salt pork to each end of a short line and threw it overboard. A gull swallowed one of the pieces of meat, flew away with the string and meat dangling in the air. Another gull swallowed the pendant pork, and a battle was fought high in the air. They screamed and fought with tooth and nail, and getting their wings tangled with the line, they fell to the water, where they fought until the pork was torn from the line.

We broke up the rest of the bread and threw it over by the handfuls. On they came, screaming and fighting. At times two or three gulls seized the same piece of bread, and then they made the water foam in their struggles for the food. The pandemonium attracted the pelicans, which are always on hand when a free lunch is in sight. The pelicans would not eat the bread, but they lit among

the floating pieces of "hard tack" and drove the gulls away, for the large bird—like the large man—wants a large part of the earth, whether he can use the same or not.

The sea gulls devour and digest an enormous quantity of fish daily. They prefer live fish, but will, when hungry, eat decomposed fish.

We saw a few saw-bill ducks hunting for minnows in a bayou. They are expert swimmers on or under the water, using both wings and web feet in either case. When they find a school of minnows they dart here and there under the water, moving with great rapidity. Though under the water, the course of the duck could distinctly be traced by the fish jumping out of the water, in their frantic efforts to escape the dread saw-bill. The saw-bill tastes too fishy for the average white man, but the darkies and "crackers" cook them with onions, a mode said to disguise the fishy taste.

The cormorants are very numerous. They look much like the northern black loon. They are "lightning" on the wing, and keep up the flapping motion to the end of their flight. They rest on isolated sand keys, and leave their eggs to the fostering care of the sun. They will eat any fish, however much decomposed, that may be stranded on the shore, and like other scavenger birds, seem always hungry.

The buzzards are tame and fearless. They visit the back door yards and clean up every scrap of food, of whatever kind that may be thrown out. A few days ago a drayman lost a horse, which he skinned and hauled to the beach just beyond the city limits. Complaint was made within a day or two, but when the health officer visited the place he only found the clean picked bones, for the buzzards had cleaned up the carcass in a scavenger like manner.

The most interesting birds that win their "daily bread" from the Gulf are the pelicans. They are so numerous on both sides of the peninsula that Florida is called the Pelican State. There are two species, the white and the brown. The white pelicans are rarely seen on the Gulf; they seem to thrive best on the inland lakes and bayous. The brown pelicans are the most numerous, for go where you may on the Gulf of Mexico, you will find these scavenger birds plying their daily vocation. They have long legs, neck and beak; the head seems to have been formed by bending the upper part of the neck into a "bight"; the bill is longer than the neck, and when the bird is at rest on the sea, with head and neck standing back over the body, the end of the bill is slightly under the water. The upper jaw is longer than the lower, and has a downward crook at the point. Under the lower jaw, reaching from the tip back to the neck, a flexible bag is attached, which is perforated near the throat to drain the sack; this sack serves as net and game bag to this incomparable fishing bird. They have powerful wings, which measure eight feet from tip to tip. They fly and sail alternately in flying, as do the prairie chickens of the West.

We recently saw a pelican flying swiftly, sixty feet above the water. He discovered a school of gars, and turning half around with spread wings, dove as swift and straight as an arrow, and came up with a gar fully fifteen inches long. The bird had much difficulty in swallowing the long, sharp billed fish; we could see the tail of the gar sticking out of the "pellie's" mouth. He threw his head back and forth rapidly, but the gar would not down. Then he opened his enormous mouth and disgorged the fish, and again taking the gar by the tail, he succeeded in getting the live and kicking fish into his enormous stomach, where the powerful gastric juice soon reduced it to a pulp.

The pelican, unlike the turkey or hen, has no gizzard, but has an enormous stomach, capable of digesting great quantities of fish daily. When the pelican dives, the concussion stuns the minnows for several feet around the diver, who proceeds to fill his "sack" and come to the surface. After straining the water from the sack, he raises his bill skyward, and with short, quick jerks of the head, manages to get the catch into his stomach.

As a heavy fine is collected from the person who kills a pelican, they have become very tame; they occasionally take in the fishermen's bait and have thus been hooked and captured. They often dove for minnows within three or four feet of the fishermen, making us think that a man had fallen overboard. The amount of fish a pelican can eat and digest in one day is simply marvelous. They are like "Oliver Twist," always hungry and "calling for more." Their fishing grounds are generally from twenty to thirty miles from their rookeries or homes. Mornings, when going to their daily fishing haunts, they fly high in the air, but at night on their way home with sack full of minnows for their young, they fly very low, just skimming the water. The white pelicans are larger than the brown, but have the sack under the jaw and fish in the same manner as do their brown relatives.

One day when the wind blew a "living gale" we saw a flock of white pelicans fly across the bay against the wing. They formed a V, with the point ahead, and made tacks across the bay as would a schooner making the same course.

Many bald-headed eagles feed upon the fish that are thrown ashore by the surf. They build their nests in the loftiest trees, using coarse sticks, which they weave and interlace around the forked limbs. The nest when done looks like a large bowl, say three or four feet in diameter. This home is so well constructed that one nest will last during the lifetime of the builders. They continue to use the same nest year after year, and the young birds pair off and set up house keeping on their own account. The king of all birds of the Gulf is the man of war bird, so called because he will not work or fish, but sails majestically above all other birds, watching for a chance to rob them of their hard earned food. They are as black as jet, except a strip about one inch wide, commencing at the throat and running down under the breast. This strip is a bright, fiery red, giving the bird a ferocious and blood-thirsty appearance. The body is about the size of a prairie hen, mounted with a well-proportioned neck and head. Their eyes are small, black, keen and far sighted. The body seems to be out of all proportion to the great spread of the wings, which measure nine feet from tip to tip. They are generally seen high in the air, sailing in great circles, easily keeping their altitude without a flapping motion of their long, sweeping pinions. This dreaded pirate is constantly hunting for other birds of prey. When he sees an eagle or hawk with fish in beak or claw, down he silently swoops, as swift and straight as a spent arrow in its fall, and when within a few feet of his victim, he screeches like a calliope; the frightened bird drops the fish, which the robber easily secures before it reaches the water; and with a half dozen flaps of his powerful wings, he is again high in the air, and with set wings grandly sails off to a distant and lonely sand key, to enjoy his booty with his young men of war.

Lying on the sand with a good field glass, we have studied these free-booters for hours.

They ever sail in great cycles, passing and repassing each other without the least flapping of their wings, which seemed as rigid as if made from thin sheets of steel; and they increase their altitude at their own sweet wills. We read an article from Forest and Stream, wherein a writer endeavored to prove that "no bird could maintain a given altitude without using the flapping motion of its wings; for, as soon as the bird sailed, it was at the expense of altitude." This theory may be true when the bird is sailing on a tangent, but the man of war bird can attain a great altitude by simply sailing with stiff, rigid wings in cycles. This bird has a small sack under the lower jaw, in which he can carry a limited amount of food in his long journeys across great oceans. Mr. G. E. Eady, an intelligent sailor, hunter and fisherman of this city, informs me that the man-of-war bird can fly one hundred miles per hour, and keep it up for days together.

The pelicans, cormorants, buzzards, eagles and sea gulls are protected by the law in Florida. Whoever shoots one of these birds must pay a fine of five dollars for each bird killed. As a result of this wise law, we have a pure, clean and healthy beach from Pensacola to Key West.

If our Western States would pass and enforce stringent laws protecting the buzzards, crows and gulls, the shores of all the inland lakes would be sweet and healthy. "The Great Architect" seems to have made these natural scavengers to keep the air and water sweet and pure. The young "nimrods" seem to think that the scavenger birds were made expressly for their wanton pleasure. They have killed and driven these birds away from our western inland lakes until dead fish fester and decay, poisoning the air and water around these beautiful summer resorts.

R. P. BELL.

Foreign Birds in America.

CONCORDVILLE, April 18.—*Editor Forest and Stream:* I have been reading of the importation of European birds with regret. Of the skylark and nightingale I have little fear, but am inclined to think we should go more slowly about bringing into the country a bird that multiplies fast, travels in flocks and thrives in confinement, like the starlings. It could not perhaps equal the house sparrow as a nuisance, nevertheless we might wish it gone when too late. Of all the faults of the English sparrow (and they are many), none are worse than its antagonism to our own birds of like habit of building. We have a remnant only of the martins, barn swallows and wrens of twenty years ago. Why venture to adopt the starling? Can we be sure they will not interfere with other birds? The English birds have less grace than ours, usually multiply faster and are sturdier generally. Given a firm foothold here, and the chances are that our birds of similar habits will give way to them.

Even if perfectly sure that the foreign birds are adapted to our plant and insect life I would still exclude the strangers. Our bird life is the most varied and fascinating of any country, and we should be justly proud of it and seek to protect and foster it rather than try to supplant it with that of other lands. Americans do not as a rule "see well what they're standing on," but are forever yearning for some new pasture. I for one would be sorry indeed to miss from our meadows on the starling's account one sweet sturnella, and no flock of the former could make sweeter music to my ears than our own red-wings. The crowning trial would be to see it aid the sparrow in driving our remaining blue-birds and martins from their boxes. If the energies of those who are importing birds were directed towards the enforcement of our laws for bird protection and education of country children more of our own starlings would greet our eyes and ears and we would need no others. I write this in the hope of bringing out some one more able than I to argue this question pro or con in your excellent paper.

KATE R. STYER.

Food for Young Starlings.

NEW YORK.—Mr. James M. Norris' letter about starlings I was delighted with, and I think I can tell him how his friend may be able to save this year's broods. Of course, as he does not say what the young starlings were fed on, he may have used the very thing I am going to suggest, but I hardly think so, as I have successfully reared a great many much less hardy birds on it, and I fancy that it would prove entirely successful with his starlings.

Starlings are to a great extent insectivorous, and although the grown birds will feed largely also on such things as cherries, grapes, etc, their principal food is insects, caterpillars, snails, etc., and their young are exclusively reared on insects. Now, although the fully developed bird can, when in captivity, be made to subsist entirely on artificial food, so to speak, such as stale bread soaked in water and mixed with grated carrots and the like, the young must have animal food, and the very best thing and most easily obtainable are the socalled ants' eggs, properly speaking, the white larva of the common ant. It is the most delicate morsel that can be given to songsters (not granivorous) in a cage; they are all exceedingly fond of, and thrive remarkably well on them. Add to these occasionally a few meal worms, and you have a food on which you can raise the most delicate of insectivorous songsters. As the young grow older and begin to feed by themselves, you can add a little of the white of a hard boiled egg chopped into tiny particles, and later on change gradually on the above named artificial food, well interspersed with such fruit and berries as the birds will feed on in their wild state. If Mr. Norris' friend will follow out these suggestions, I feel confident that he will have better success with his young starlings this year.

C. B.

The article on "Starlings in Confinement," in the last FOREST AND STREAM, has been most interesting to me, as I never have seen any wild starlings in this country during my twelve years' stay. As a boy I always hailed the first birds with delight, as in my father's garden on lime and pear trees were (and are to this day) about a dozen of nest boxes. My home is in the mountain part of Silesia, Prussia, and I received notice two weeks ago, that the starlings arrived this year on the 10th of March, instead of on the 22d of February last year. I remember that once during a heavy thunderstorm a limb of a lime tree with box nest came down, and as the young birds then were not quite full grown, I managed to catch one, and kept it for about eight weeks indoors. We fed him on earth-worms and house flies at first, and only by opening his beak and pushing the food down his throat. As he got quite tame he would sit on my shoulder or arm and stay there until taken off. He would sit in the open window and watch the old birds up in the tree, but never offered to fly away. When taken out in the garden or grass, he would watch me while digging for worms and dart in front of the knife, catching beetles and aunts before I was aware of it. We also gave him raw beef cut in worm-like pieces. Sometimes he would pick in boiled white potatoes or carrots. I don't remember that he ever refused to eat a living insect, from a wood-louse to a thousand legs.

He would often sit in our shop on the gas-pipe, over the bench (jeweler shop), and watch us work till he fell asleep. One day we found him almost dead. He had swallowed a long piece of melted shellac, perhaps in mistake for a worm, and before we could help him in any way he died, much to our sorrow.

I would put plenty of sod in one unroofed part of the cage, and let it grow in rich soil and plenty of water, it might furnish some food, but otherwise could not ease the pain he had. We had entrances to nests turned to the east, so that the morning sun could strike them. We observed that only those boxes were suitable.

HERMANN HOENIG.

The Michigan Spring.

CENTRAL LAKE, Mich., April 19.—Crows appeared March 5. Robins reported April 3, not common till April 9. Crow blackbirds first heard April 19. The season here has been backward, but promises well for fruit and crops in general. Torch Lake was full of ice last Sunday, but there is now little in sight, and the Intermediate lakes appear to be clear, or nearly so.

April 20.—About forty wild geese passed northward this morning at a high elevation—the first seen this spring.

KELPIE.

Game Bag and Gun.

THE BLUE GROUSE.

After a hunting experience of three years in Montana, I suggest the blue grouse as king of Montana game birds, and I am inclined to the belief that the majority of sportsmen whose experience would justify an opinion upon the subject, will agree with me.

Judging the question from the standpoint of pleasureable pastime, I acknowledge my greater indebtedness to the pinnated grouse, whose lowland home, greater numbers, and general characteristics rarely fail to give the hunter the finest wing practice, at the expense of a moderate amount of muscular exertion, but the blue grouse is a more royal bird in his place of abode, his personal appearance, and his habits and peculiarities.

Far up on the summit of the highest mountain nature has placed him, and he rarely ventures far below, confident in his ability to cope with the lightning and storm clouds of summer and the dreadful rigor of winter, he looks down with scorn upon his cackling cousins whose altitude is bounded by the foot hills. I never saw but one blue grouse far below the mountain tops. This one I flushed last fall while working the foot-hills, among scattering young pine, for chickens. The locality was at least three miles from its native range, and within a short distance of the ground over which I had worked a few mornings before, with a result of thirteen pinnated and three ruffed grouse in a little more than three hours. It is a common occurrence for the latter two to be found within a few rods of each other, the ruffed in the dense brush by the side of the little stream, that traverse the bottom of the coulees, while the pinnated enjoy the open country along the benches and slopes.

Speaking of strays, I once saw a more remarkable instance than the one just mentioned. Galloping along the plain one day in October, I came upon a ruffed grouse, seemingly contenting itself by standing still and scanning the monotonous landscape, or probably debating the question as to whether or not it should ever again reach its native roosting place.

I dismounted to make a closer investigation, when he put up his ruff, spread out his tail feathers, took a few proud steps, accompanied by spasmodic jerks of the tail, and away he went like the wind, and disappeared behind a hill. This grouse was at least eight miles from the nearest point inhabited by any of his kind.

But to return to the blue grouse. I had long desired to secure a specimen, as I had never seen one. Being in the vicinity of mountains inhabited by deer, I arranged with two friends to take a deer hunt. We took different directions, with an understanding in regard to coming together at a certain point. In the hope of jumping a deer out of the brush, I followed a narrow valley that led up into a deep ravine, and before I was aware of the fact, I was hemmed in on both sides by immense mountains, whose precipitous sides looked discouraging at least. But, as I did not care to retrace my steps, I climbed the mountain, whose summit I found to be bare rock. The other side was not steep, but gradually receded, forming gradual inclines and diversified plateaus, covered with grass and occasionally a thicket of brush. It was quite early in the morning, and a fog was resting over the mountains, shutting out the landscape.

After resting and getting my bearings, I started down the slope, but had not taken a dozen steps before I found myself almost in the midst of a large covey of birds. They were busily engaged in catching insects, and did not seem to be frightened at my approach. Here at last I had stumbled upon the long desired opportunity. While I was positive that the birds were blue grouse, yet they were somewhat different from my concept of them. I had pictured them as covered with plumage of a bright blue like the blue bird, but as they appeared on the hillside, their color was several shades darker than that of any blue bird that I had ever seen.

I had a large calibre rifle but could not let the opportunity pass even if I scared all the deer out of the mountains, so I opened fire, and in a few minutes killed five. The nearer ones were shot through the neck, and at those urther away I held well back on the body, making a side shot that avoided mutilating the large pectoral muscles which constitute the choice portion of the grouse. I examined the dead birds with the greatest satisfaction. I could not escape a feeling of regret that I had so rudely interrupted their morning meal in such a murderous manner, that gave them no chance for their lives. In fairness to myself, however, I will add that after killing five, I laid aside my rifle, although a dozen birds were sitting on the rocks and trees within easy range. With pieces of rock I soon had them on the wing and carefully watched their manner of flight and places of cover, for I intended to come back in the afternoon and try them with the shotgun.

All grouse frequent water during the middle of the hot summer days, and I was confident of finding them along the little stream of ice cold water that trickled down from a tiny spring near the summit of the mountain. Wending my way down the stream, as it starts on its long journey to the Missouri, I reached the main canon and following it, arrived at the ranch where I was stopping.

After dinner I saddled my horse, and with shotgun and an assortment of shells, I started to renew my acquaintance with the grouse.

I rode up the stream until within a short distance of the place where I had encountered them in the morning and tied my horse. I proceeded up the stream on foot, expecting to flush the covey at any moment from the scattering brush. On nearing the source of the stream, the brush disappeared and the only cover left was a little shrub, resembling willow, that grew in bunches near the water's edge. I was becoming somewhat discouraged, when I was startled by the rush of wings as the covey broke from under one of these bunches near the water.

Now, the conceited wing-shot who has never tried a side snap at a frightened blue grouse as he twists off down the side of a mountain, has something yet to learn concerning the profession. I killed a bird with each barrel, but immediately resigned my honor by missing the next two. They were further off, and I failed to make the necessary allowance for speed, but only succeeded in sending the contents of a couple of choke bores across their wake.

The covey was scattered among the trees and brush, every bird stowing himself away out of sight as effectually as a badly scared quail. I looked for them in the trees where they had perched in the morning, but not a bird was in sight; they had taken to the brush, which grew higher than a man's head, making it almost impossible to shoot with any assurance of success. I tramped around through the brush and kicked them out in all directions and managed to get one more. I now had three beauties that I had killed in a perfectly legitimate manner, and I was satisfied.

Their average weight was about two pounds and a quarter; their color was blue, but not of a uniform shade, the upper part was a dark tint merging off into a beautiful rich coloring underneath. The wings were long; the pectoral muscles extended farther back, and were more highly developed than in other grouse, giving greater power to sustain flight in the rare atmosphere of high altitudes.

Whether or not they are always so easily approached, and as slow to take wing while feeding in the morning, as they were when I first encountered them, is a question that I am, as yet, unable to answer. It is possible that the fog had some bearing upon the case, at any rate; they were as game a lot of birds in the afternoon as the most fastidious hunter could desire. That was my last visit to the blue grouse, and it certainly was one of the most interesting experiences of my summer's sport, and I look forward with plesasure to the time when I can again call upon them in their mountain home. F. J. M.

TEXAS AND THE SOUTHWEST.

A GREAT CIVET CAT.

Probably one of the most curious episodes which will form a part of the sportsman's annals in the future occurred on the night of the 31st of March—the eve of April Fool's day.

Mr. A. B. Critzer, of this city, enjoys quite a reputation as a game and gun crank, and has surrounded himself with numerous trophies of the chase, which he has placed in one of his show windows. The collection was a very pretty one, consisting of hawks, ducks of all kinds, snipe and several specimens of the long-legged stilt birds of the coast.

Last Saturday a pair of Mexican Indians came shuffling up Commerce street, one of them tenderly bearing in his arms a pretty civet cat. As they passed Critzer's store they stopped and inquired if anyone therein desired to invest come coin of the realm in the cat.

"How much," queried Critzer.

"Quinze pesos, signor," sang the greaser.

"Fifteen dollars! Pshaw! I'll give you four bits."

Quickly the Mexican handed over the animal and received the half dollar. The civet cat was duly placed in the back part of the store where a leather strap separated him from liberty. Now, if there is one thing above another that a civet cat loves, it is leather. In fact, it is condiment, appetizer and cocktail to a civet cat, and the specimen at hand, being a full grown kit, was no exception to the rule, and when the shades of night had enveloped the city and the turmoil of the metropolis of the southwest had subsided into silence, the night watchman started on his nocturnal tramp, and as he passed the jewelry store he saw something dart in and out of the show window containing the stuffed birds. He quickly and quietly slipped around to the back way, where he awoke Ernest Critzer and Chris. Stafford, whose sleeping apartments are upstairs, by throwing small pebbles against their windows.

Ernest awoke, located the noise of the pebbles, stepped to the window, silently raised it and whispered: "What's up?"

"Burglars!" hissed the officer.

Quickly slipping into some clothes, the pair of sleepers silently crept down stairs into the store below, with a big six-shooter in each hand, looking for the burglar.

"I hear him!" said Chris. "He's trying to get in the front show window. Let's get him."

So they crept and crept until the front of the store was reached, and were startled nearly out of their wits as the officer beat on the window with the end of his club.

"What's the matter?" asked Ernest.

"It's the cat. He's eating up your birds," yelled the officer.

Sure enough, the civet cat had cocktailed on the leather strap, taken a bite out of the buckle, and repaired to the stuffed birds, when the banquet began in earnest. First he tackled a succulent spoonbill drake, ate the head and chewed the stuffing out of him, then devoted his attention to the heads of the stilts.

He tackled the larger portion of the fat green wing teal, followed by juicy bites at the counterfeit widgeon. He took a few slices of the bluebills and prairie chickens winding up by demolishing a jack-snipe, leaving nothing of this bird but the legs dangling from the string on which it had been hung, and the panel.

When the armed posse discovered Kitty he was in the act of picking his teeth, but upon finding that he was discovered he quickly disappeared. They ransacked the entire house from cellar to garret, but no civet cat could be found. As the stuffed birds had all been heavily poisoned with arsenic, the only thing to do was to wait.

But to the astonishment of everyone, the beast was discovered hiding in the moss of the show window, alive and well, and evidently anxious to have another "go" at the stuffed birds. He was heavily collared this time and fastened by an aluminum chain, but alas, he made a meal of the chain, and the civet cat is gone.

TEXAS FIELD.

CHICAGO AND THE WEST.

New Laws for Wisconsin.

CHICAGO, Ill., April 18.—Earlier mention was made of a bill before the legislature of Wisconsin which bids fair to become a law. To-day I have copies of the law as actually passed and approved April 15. There is much in this measure of interest to the sportsmen of this vicinity especially, as there are few sections more visited by those in search of sport than the great and beautiful State of Wisconsin. The game laws of Wisconsin are of more actual importance to Chicago sportsmen than those of Illinois, for the markets of Chicago have practically cleaned out the best of the Illinois game, and no State is less visited by the shooters and fishers of Illinois than Illinois itself.

The new Wisconsin law retains the former clauses on spring shooting of wildfowl, namely, forbidding the killing of mallard, teal and woodduck in the spring, but permitting other ducks to be killed in the spring up to May 1. The regular season on such latter ducks opens Sept. 1.

Plover and snipe are protected in spring under the new law, the open date on plover, snipe, woodcock, quail, ruffed grouse, prairie chicken, mallard, teal or woodduck being Aug. 20, the closing date Dec. 1. The provision in regard to hunting with dogs seems to have been changed. I do not now find any prohibition of using dogs in hunting chickens, but cannot state this positively, for this new law carries no general repeal clause, and the old section may stand. The use of dogs for hunting rabbits was once forbidden all over the State, but exceptions of certain counties will be noted in the clause on deer hunting, which is given in full below.

Wisconsin Deer Law.

It is unlawful and prohibited—

1. To kill, capture or take by any kind of device or contrivance whatever, or to pursue with intent to kill, or to take or worry any deer, buck, doe or fawn between the twenty-first day of November in each year and the succeeding first day in November in the year following; all the months of the year except the first twenty days of the month of November being hereby declared the close season for the animals above named in this section; provided, however, that the killing, taking or worrying of any deer, buck, doe or fawn is hereby prohibited in the county of Sheboygan for the period of five years.

2. To hunt deer, buck or doe in the night time; or at any time with dogs.

3. To use a dog or dogs to hunt rabbits during the time the law permits the hunting of deer; provided that this subdivision shall not apply to the counties of Green, Dane, Rock, Walworth, Kenosha, Racine, Milwaukee, Waukesha, Jefferson, Ozaukee, Fond du Lac, Columbia, Winnebago, Calumet, Dodge, Washington, Iowa, Crawford, Grant, Manitowoc, Kewaunee and that portion of Door lying south of Sturgeon Bay and Lafayette.

Mongolian pheasants are very properly protected for five years. The salary of the Fish and Game Warden is set at $1,800 per year, but he also has clerical duties with the Fish Commission.

Good Fish Provisions.

The anglers are in luck with the new Wisconsin law, which is a stringent one in many ways. Trout can be taken from April 15 to Aug. 20. Bass are protected from March 1 to June 1—a good many Chicago anglers want to remember this, too. Also, they must bear in mind the new clause by which muscallunge are protected up till June 1. This same provision extends to wall-eyed pike. Fishing through the ice with more than one hook and line is prohibited. Other items of interest are to be seen under the head "Public Nuisances."

Wisconsin Fishways.

An excellent provision was added to the Wisconsin law a day later than the above-mentioned sections, namely, an enactment compelling all dam owners to put in fishways. Wisconsin is very deficient in fishways, and this new wrinkle will help the fishing on many a lake and stream over a wide section of country.

Following are the provisions as to public nuisances:

PUBLIC NUISANCES.

Section 19. The following are declared to be public nuisances:

1. Any net of any kind prohibited by law, while set or found in any waters where such net is prohibited by law from being set or used.

2. All seines or other devices or contrivances set or found in any waters for catching fish in a manner prohibited by the laws relating to such waters.

3. All set lines, trout poles, ropes or cables, having more than one hook attached thereto, directly or indirectly, set in any waters contrary to law.

4. Any net set for the ensnaring, entrapping or drowning of ducks, wild geese, or other water-fowl.

5 Any traps, snares, spring guns, or other devices or contrivances set for the purpose of trapping, ensnaring or killing any animals, birds or water fowl, the trapping, ensnaring or killing of which is prohibited by law.

6. Any boats, deer lamps, or lights, while in use in the unlawful pursuit or hunting of deer

7. Any pivot or swivel gun or other firearms not held habitually at arm's length and discharged from the shoulder, while in use for the unlawful shooting of any animal, water fowl, or birds.

8. Any screens set in public waters to prevent the free passage of fish in trout streams which have been stocked by the State Commissioners of Fisheries.

9. All boats, floating rafts or boxes, or blinds set in open water outside of the natural growth of grasses or rushes, in use for the unlawful, pursuit, hunting or shooting of any duck, geese or brant, and all decoys set for the unlawful decoying of such water-fowl during the close season therefor.

10. The illegal use of any of the articles mentioned in this section contrary to the provisions of this act shall forfeit the same to the State; and in any prosecution for such illegal use of the same the court may, upon conviction, adjudge in addition to the fines and forfeitures by this act imposed the forfeitures of such articles and issue a warrant commanding that such articles forfeited be destroyed.

A Still More Important Feature.

The above will give an outline idea of a very good game law, and it is the wish of all sportsmen to have strict game laws passed. There is still another feature, however, of perhaps more vital importance to some few Chicago sportsmen than any of those mentioned above, and this one can hardly classify as a game law at all, but only as a freak of unconstitutional legislation—if indeed it has gone so far as actually to become legislation. To-day I have a rumor that a determined attempt was made to open all the preserves of the State of Wisconsin to the public, and I am told that last night an act was passed to this effect. This, of course, would mean heavy litigation, for no club of any standing would for a moment look on the provision as anything but an unconstitutional act, which would be knocked to pieces by the Supreme Court of the State at once on a case being brought. This attempt was backed by some disgruntled persons, no doubt, who do not like to see fine shooting belong to men who are willing to pay to keep it fine, and who therefore do the entire public a benefit by keeping up a breeding ground.

I do not yet have particulars of this last important feature of this interesting new law, but have wired for details and hope to add the full facts in time for this issue of FOREST AND STREAM. I think it will be some time before the legislature of any State does away with the ancient law of trespass. Our jewels will certainly not be safe when that happens.

All About Fish.

Mr. L. A. Corey, now stopping in Chicago, is a Big Horn Basin man from Montana, and a neighbor of Col. Pickett on the Gray Bull. The other day Mr. Corey came into this office with the head of a big muscallunge which he had mummified by a process of his own, and he told me a fish story which of course is true. He said that the 'lunge was caught by Mr. Chas. Nixon, of the Chicago *Inter-Ocean*, and that when it was landed it was observed to have cut into its nose the figures "82." The fish was taken in 1894, and as it was a rule of those waters to return fish under 6lbs. weight, and as the 'lunge when taken weighed 18lbs., Mr. Nixon thought that he had a good line on the rate of growth of the muscallunge, which he figured to be in this case about a pound a year. If the man who turned this fish loose will now tell what it weighed when he did so, we shall have a very interesting little bit of knowledge, for no fish is more mysterious than the muscallunge in regard to habits.

The work on the great Chicago Drainage Canal, by which Lake Michigan will soon be turned into the Gulf of Mexico, has left near Summit a long strip of the river bed of the Des Plaines River, in which are a great many fish. The Fish Commission has determined to seine these out and put them back into the flowing water, and the work was to have been done this week.

Over $2,500 of illegal nets were seized and destroyed on Lake Winnebago, Wis., last week.

Mr. F. M. Fish, of Chicago, who has been spending the winter in the South, has just returned to his home in the North. Mr. Fish was at Rockport, Texas, at the time of the big blizzard. He says the inhabitants did not know what to do when the snow came. He also visited Atlanta and other Georgia cities, and was much pleased with the trip, barring the extremely cold and most unusual weather attendant upon the great southern storm.

Mr. Eddie Bingham and Mr. W. P. Mussey went up last week to the home of the former on Lake Koshkonog, Wis., and came back with 52 ducks, mostly bluebills. Eddie Bingham owns up to killing all but six of them, but the other man is not yet heard from.

Mr. C. A. Young, of Columbus, Ohio, a well-known shooter in tournament affairs, is in Chicago on business this week.

About Laws.

Writing about the vagaries of game legislation, and thinking more especially about the occasional freaks such as that proposed in Wisconsin, of abolishing the law of trespass in the case of game preserves, I am reminded of a reverse case of wisdom by which the court displayed the remarkable action, and not the legislature. It is one of the stories of the Hon. Geo. Fulton, the genial ranchman who did so much to entertain some of us down in his State this past winter, and it is a story which Mr. Fulton tells with great glee. It seems that the State Legislature of Texas took the singular action of passing a law prohibiting the traffic in liquor—a most extraordinary thing to do, one would think, for the State of Texas. At any rate, in a certain town was a certain printer who was also a justice of the peace—his sign reading "C. M. Barnes, printer & Justice of the Peace"—and before this dignitary came the first case under the new enactment. The argument was long and learned, and the deliberations of the justice sufficiently profound and long to be in keeping with the gravity of the occasion. In the midst of the deepest silence he at length delivered his decision:

"It is the verdict of this cote," said he, "that the defendant is dicharged, an' that the prosecushun kaint git no action agin him. The stoppin' o' the sale o' licker is clar'ly agin public polercy, an' I hyerby declar' this law unconstitooshenel on the face of it."

History goes on to tell that the "verdict" was accepted as good law in that community, and was never after called into question.

It used to be one of our pleasures to get Mr. Fulton telling stories, and apropos of nothing much I am tempted to repeat one or two of his Spanish stories. You know Spanish is half the language of Texas, and all residents are supposed to understand it, though the conversation does not always show that, as witness that of the friend of Mr. Fulton's who was visiting him, and who had lost his horse one morning. To a greaser by the wayside he spoke as follows in query:

"*No lo visto uno* bob-tailed *caballo* come vamoosing down the road here with a lariat round his *cabesa?*" ("Have you seen, etc., a horse with a lariat round his neck?")

"*No intiende, Senor*," the greaser replied, politely.

"Ten days nothing!" said the other, "I only lost him yesterday!"

The Irish Spaniard.

Still more serious was the difficulty offered by the language to a section boss on the Aransas Pass Railroad, who had Mexican laborers under him, although the difficulty was one of which he was unconscious. The section boss was Irish, of course, as all section bosses are, but he prided himself on the fluency of his Spanish. Mr. Fulton one day heard him giving orders to his men.

"Underly" (*andale*—hurry up), he called out, "Underly, ye dom *hombres* (men). Fetch along thot han'-car-r-r, an' unload about t'irteen ov thim rotten ties. Fetch along one *parlor* (*pala*—spade), an' git a move on yez. It's sorry I am I iver learned to spake the dom langwidge!"

Texas is a great State. If Wisconsin passes her no-trespass law I think she should send to Texas for the justice of the peace who declared the State law unconstitutional. Or else, perhaps, the gentlemen who favored this unconstitutional law in the Wisconsin Legislature might move to Texas and become justices of the peace. The public need not despair while there is such abundance of wisdom lying around loose, even in so widely separated sections of the Union.

Wisconsin Laws.

Later—April 20.—The Wisconsin Legislature adjourned to-day. The closing hours were, as usual, full of confusion. A dozen game bills, local or otherwise, were killed.

Meandered Lakes Called Public.

In regard to the "non-trespass" law mentioned earlier as probably passed, my informant at Madison, the Wisconsin State capital, says:

"The Senate in afternoon session concurred in the Assembly bill declaring meandered lakes public waters."

This will affect to greater or less extent the Diana, Horicon, Nee-pee-nauk and other Chicago clubs having holdings in Wisconsin. This is the same measure which Chicago sportsmen have fought and beaten in Indiana. It means nothing more than temporary litigation and will not disturb the value of club holdings.

The Wisconsin Fishways.

Senator Burke opposed the Sloan measure for fishways on all streams, and moved that it be indefinitely postponed. Senator McMullen suggested that the bill be amended to regard Rock River as not in the State in this case. Senator Spensley was in favor of the bill. He thought a great majority of people, not dam owners, are in favor of the bill. He said the State has gone to great expense in stocking streams and should provide for the free running of the fish. The motion to indefinitely postpone was defeated by a vote of 8 to 20. The bill was then ordered to a third reading. The bill was then passed under suspension of the rules. E. HOUGH.

909 SECURITY BUILDING, Chicago.

New York Game Law.

Up to the time of going to press the only amendment so far made in the New York game law was in the wild fowl open season, which extends to May 1 throughout the entire State.

Sea and River Fishing.

NEW ENGLAND WATERS.

BOSTON, April 20.—A Massachusetts man just returned from Alaska, where he has been located for three years in the Government employ, has stories to tell of trout and salmon fishing in that country which are calculated to fill the breasts of many of our home anglers with a wild envy. He pronounces trout fishing in the rivers and streams simply superb, and says they run to very large size. There is the usual reckless waste where fish are plentiful, many being taken and simply weighed and thrown away. After the salmon begin to run up the streams, he states that nearly all fly fishing stops, the custom being to use the spawn taken from salmon as bait. Another gentleman lately returned from Alaska tells me the same story of wonderful fishing in that country, but agrees with me that too much fishing, or rather too many fish, pall on the taste, and he would rather have fewer fish and a little more work for them to add zest to the sport.

Mr. G. W. Pitcher, of Providence, R. I., has just returned from Florida, where he has been nearly all winter enjoying the fishing. He reports great sport with black bass, squeteague, and channel bass fishing. With the exception of the cold weather during the February storm, he was able to enjoy the sport uninterruptedly, and thinks the reports of severe weather sent north quite exaggerated. Mr. Pitcher is also a devoted salmon fisherman, and spends many summers in the maritime provinces angling for salmon.

The heavy rain of last week throughout the New England States has greatly changed the hopes of many people in regard to the condition of the ice in the several New England lakes. Two weeks ago it seemed to all that the icy fetters which tightly bound the waters of the Rangeleys and Moosehead in Maine and Newfound and Winnepasaukee in New Hampshire could not be loosened till long after the usual time. Now everything is changed. The heavy rain, together with a strong wind which has prevailed quite steadily for some time in this district has played sad havoc with the ice king, and it now looks as though clear water would be seen quite as early as usual in the more northern lakes. Sebago Lake, near Portland, Maine, a celebrated place for landlocked salmon, is reported to be entirely free of ice. As the close season extends to May 1, except to natives of the State, many Boston parties are feeling bad that they cannot avail themselves of the early season. Quite a few will go down to look over the ground, and get their camps in order, and perchance to assist the natives in getting in their fish. One party who goes every year left last Saturday night, intending to stay about one week. They are all persistent fishermen, and generally bring out all the law allows to prove their prowess. Frank Holden, Dr. E. M. Holden, Dr. A. S. Knight, all of Boston, and Frank Heslor, of Worcester, are the four men who make up the party, and "Crocketts" is where they stop. Portland is always strongly represented at Sebago in the early fishing, and no one is more promptly at work than Herbert A. Clay, of that city. This gentleman lets no time elapse before getting a line overboard, and always has a strong party of Boston and Portland men with him.

A note just received from a friend at Oakland, Maine, dated April 16, states that the ice is just breaking up in Meskalonskee and the other lakes connected with it. These are the waters recently mentioned in FOREST AND STREAM as being expected to furnish some exceptionally good salmon fishing this season.

Mr. Harry Pierce and wife, of the King and Bartlett preserve, Maine, have gone into the camps to make ready for the coming of sportsmen who like to patronize this popular resort.

In the issue of FOREST AND STREAM for April 13, mention is made of the large painting of a trout by "Brackett," shown in Dame, Stoddard & Kendall's window. The impression given is that Mr. W. M. Brackett was the artist, while in reality to Arthur L. Brackett, the son of W. M., belongs all the praise, as he painted it. This gentleman is already noted for his splendid work on game birds, and bids fair to rival the celebrated work of his father on game fish.

In connection with the subject of early fishing in the Maine lakes, it will, no doubt, be interesting to many anglers to read the following dates as to when the ice left the Rangeley lakes in the past. The list is complete from 1882 to the present time, with the exception of the year 1893, which by some oversight is left out.

1882	May 12	1888	May 21
1883	May 14	1889	April 30
1884	May 13	1890	May 9
1885	May 15	1891	May 10
1886	May 3	1892	May 4
1887	May 16	1894	May 3

HACKLE.

SPRING FISHING IN CANADA.

A Late Season Expected.

Editor Forest and Stream:

Though sleighs have at last given place to wheels upon the city streets, runners are still employed on some of the country roads north of Quebec, and on this Easter Tuesday afternoon I look out from my library window upon banks of snow under the trees upon the lawn, at least three feet in depth; and on the Plains of Abraham, just across the road, at the opening of the lane leading to the monument which marks the spot where "died Wolfe victorious," is a cutting through a drift that is still from eight to ten feet high. No wonder that local sportsmen, as they meet, remark upon the lateness of the season. It was only yesterday that a strong northeast gale succeeded in breaking up the then rotten ice bridge over the north channel of the St. Lawrence, between the Isle of Orleans and the mainland, and the river opposite the city is still full of floating ice. Not before next week is the first steamer expected here from Montreal.

The temperature remains so low and the ice on inland lakes is still so firm, that unless a great change sets in within the next few days, it will be the first or even the second week of May before the ice breaks up on lakes Beaufort, St. Charles and St. Joseph. In the latter lake, which is reached by rail in little more than an hour from Quebec, the best trout fishing of the year is had during the week or ten days following the disappearance of the ice. The fishing continues good very much longer in Lake Beauport, and the fish from its waters are the most beautifully marked and the most toothsome when cooked of any Canadian trout. Lake St. Charles is one of the few lakes in this vicinity where the *namaycush*, or forked-tail lake trout, occasionally rise in the spring of the year to the angler's fly, though in Lake St. Joseph they are taken up to a very large size by bottom-fishing. Anglers going up to Lake Edward and Lake St. John for spring fishing, may find it an agreeable change to stay over for a day or two on the way at Lake St. Joseph.

At present writing, I would not advise anglers to visit Lake Edward this spring before the middle of May. The heavy trout, for which this beautiful body of water is so widely noted, are most readily taken between the 15th or 18th of May and the 10th of June. But in the Riviere aux Rats, its principal tributary, the fly-fishing is abundant all the summer, and so, unfortunately, are the flies, especially after the first few days of June.

Lake St. John will scarcely be clear of ice this year much before the 10th of May, from present appearances, and I would not recommend anybody to cross to the Grande Décharge for fly-fishing before the 15th of June, unless the summer comes on with much more of a rush than now seems probable. There is little doubt, however, that the spring fishing for ouananiche in the lake itself will remain good from the time the ice breaks up until the 8th or 10th of June, especially for bait-fishing and trolling. Fly-fishing will have to be sought in the early part of the season, in or near the mouths of the Ouiatchouan or Metabetchouan rivers or opposite the village of Roberval. I hear that the old Hudson Bay Company's fort on the point of land overlooking the mouth of the Metabetchouan is to be kept as a boarding house this year, and if so it will prove a convenience as a temporary shelter for anglers fishing there, who have little enough time to travel daily between the hotel at Roberval and the Metabetchouan.

It may interest some of your readers to know that immense specimens of the great catfish (*Amiurus nigricans*) have been taken out of Lake St. John through the ice by some of the inhabitants of the locality during the past winter. The pike is, therefore, not the only pirate of cannibalistic tastes against whom the ouananiche of Lake St. John have to be upon their guard. Ouananiche of a good size have been found in the stomachs of those night scavengers. Do ouananiche sleep at night? If not, how are they outwitted and captured by miserable, lumbering catfish? E. T. D. CHAMBERS.

QUEBEC, April 16.

Moosehead Lake Ice.

The ice will probably leave Moosehead Lake some time between the first and sixth of May, so landlord Dennin has just written to a friend of mine. F. S. BUNKER.

CAN A FISH FEEL PAIN?

That fish experience fright in various degrees its beyond question. They are often "quickened with touches of transporting fear."

But that they feel the sensation of pain is to me an unsettled question, and from my own rather intimate acquaintance with them, in the course of which I have given them an opportunity constantly of experiencing acute anguish if they are capable of it, I am strongly inclined to the belief that pain nerves have been left out of their organization. To be convinced of this could be a vast relief to every fisherman. I propose to give a few notes from my own experience, which seem to me to side with the negative of this question, and hope that others may be interested enough to contribute from their own recollections, pro or con. I may as well assume that the failure to emit cries or groans when the fish is lacerated, as warm blooded animals would do if in pain, is not to be regarded, as fish are not constructed for making noises to express fright, fear or anguish, I do not forget that the drum and some other varieties emit sounds when captured, but that can be ascribed to the sense of suffocation in the hostile element, and the cries are not occasioned or increased in any way by the removal of the hook or spear and the accompanying laceration of the flesh. But my contention is that, like men, beasts and birds, the fish, if recently wounded, would not attempt to take food if it were suffering.

1. My daughter and I were returning from a delightful day among the lagoons of Sanibel, at Charlotte Harbor, last March. We were crossing the bay on our way to St. James City, and my daughter was trolling for trout (the Southern weak fish) and lady fish. Her troll, which was 150 feet from the boat, was seized by a fish, which she reeled up to within a few feet of the boat. The hook tore out, making a long gash in the mouth of the fish (a trout) and plainly visible. The spinner was given a jerk, when the fish, which lay motionless at the surface of the water, seized it like a flash, was well hooked and was taken into the boat.

2. About five years ago, while at St. James City, my companion in fishing, North P. Norris, and myself, who had been kept in the hotel two days by a cold "norther," in desperation started out for an afternoon's trolling up Matlacha Pass,. We were in pursuit of channel bass. Very few fish would take the bait, so as we rounded Wood Key, where the fishing was usually most abundant, I made the remark to Norris that I bet him that I would take the first fish. We were sitting side by side, and his troll was about twenty feet further than mine. We were trolling with tarpon tackle, and never troubled ourselves to play anything under fifteen pounds weight. Norris hooked a fish and reeled in rapidly. Almost instantly, I, too, had a strike, and there was active work. But one fish was taken—a ten-pound bass—both of our hooks firmly fastened in either side of the mouth. While being pulled past my troll he had seen it, turned aside and snatched it.

3. Fishing in Estero Creek, where now are located the Koreshan Colony, which, like the disciples, profess to "have all things in common," but which was then running through a wilderness, it was a still noon time, and the sunbeams sifted through the pine trees to the narrow, black and deep stream against the steep bank of which our skiff was moored. The prospect of taking one of the big tarpon which had been lazily rolling by all the morning was very slight. I cast my tarpon bait across the stream, and close to the opposite bank and had a strike. I knew it must be a jew fish, and having very strong tackle, I kept him from running under the bank and drew him to the middle of the stream, when the hook tore out. I let the bait sink, and he immediately seized it again, and I drew him nearly to the boat; again he was free, and the third time I hooked him and brought him to gaff. He was a jew fish and weighed eighty pounds.

4. Another winter, Norris and I were on the grouper ground near the pass into Estero Lagoon, below Charlotte Harbor. We were using up our condemned and worn tarpon snells, of which we had a large and various collection; plumber's and brass chains, piano wire and cord. The grouper, if he can get into a hole in the rocks, will often break the line. Norris, using a snell of plumber's links, had a strike, and after a struggle his line broke. Next, he used a piano wire snell, and this at once met the fate of the former. "Dode," our boatman, and an excellent guide, and familiar with all the fish in those waters, and their haunts, remarked: "Them's big jew fish; they use here. You done sure lose a heap of lines on them big fish!" In five minutes I had taken the fish which had the first snell, and immediately Norris took the second. The snells were hanging from their mouths, each a black grouper weighing fifteen pounds.

5. On another occasion, the same year, I believe, we were coming down Surveyor's Creek from tarpon fishing, in our skiff, and were nearing our sailboat and camp. There was a tremendous stir in a school of silver mullet, showing that a saw fish was striking among them. When we approached we could see plainly the big yellow sawfish in shoal water. We had no grains in the boat, and Dode jabbed him with a pole, drawing blood, and pursued him into deep water, where he escaped. Resuming our journey to camp, which was near by, I put out a troll, which was immediately seized by a five-pound cavally, which I pulled into the boat, and found that he had been punctured clear through the body by at least four of the teeth of the saw, and from the holes in the fish blood was oozing. F. S. J. C.

That "Invention for Anglers."

CHARLESTOWN, N. H.—*Editor Forest and Stream:* I do not like to carp or criticise, but I must ask, "What manner of man" is your correspondent Aberdeen, who in the FOREST AND STREAM of April 20 describes a diabolical instrument in the shape of a fish spear, having the spread of a 10-bore gun at thirty yards? What "angler" can be interested in such an implement? Or who professing to be an angler ever uses such a spear?

I never owned such an implement, nor do I remember ever using one but once, and that was forty years ago, when I speared a brace of suckers for a scientific purpose. That is the only time I ever speared a fish, and I am surprised that any reader of FOREST AND STREAM should refer to such an implement as the one mentioned as of interest to anglers. I trust I may be forgiven for taking up the matter, but such a communication is quite a contrast to the usual tone and teachings of "our paper." VON W.

ANGLING NOTES.

SPRING FISHING.

Trout fishing in Western New York will be late this year, if one accepts the statements of fishermen as they meet one another on the street, or congregate to talk over the prospects of the fishing season, which seems near at hand when the 1st of April has arrived, and it will be later than last year—which was exceptionally early, but if one consults his journal, provided he keeps one, it will be found that the prospects are about as they average on the borders of the Adirondacks.

The ice in Lake George has for many years been the index by which I have determined whether the season was early or late. I have also kept a record of the dates when the ice has disappeared from certain lakes in the Adirondacks, in New Hampshire and in Maine, but the Lake George record is the more complete, and extends over a greater number of years. Last year the ice entirely disappeared from Lake George on April 1, the earliest date known to any living man, but on March 25 the broad lake was open so that a man rowed a boat across the lake from Kattskill Bay to Bolton. This year I went to Lake George on March 26 on the State fish-car "Adirondack," which was loaded with 500,000 lake trout fry from the Caledonia hatchery, and on that date there was twenty inches of ice, where a year before there was open water. With last year in mind, fishermen speak of this season as pretty late. Doubtless the ice will be out of Lake George before the first day of May, when the lake trout season legally opens. In 1893 the ice went out on April 29. In 91, on the 18th; in 88, on the 9th; in '87, on the 30th; in '86, on the 16th; in '85, on the 24th; in '83, on the 28th of April. Because of the early season last year, the Legislature has been petitioned to open the lake trout fishing on April 15 in Lake George, and this is perhaps a fair example of the attempts constantly made to enact special laws that are productive of no especial good to the fishermen, and only make the code of game laws a piece of patch work which is confusing in the extreme.

If laws are to be passed for each changing season, and to suit the fancies of those who fish each particular lake on mill pond in the State, the code will fail in its purpose.

It is given as a reason for opening the fishing in this lake on April 15 that the trout come to the surface and go down again before the season legally opens on the 1st of May, but last year there was good surface fishing on the 1st of May and after. During the twelve years last past, the ice has gone out of the lake on or before April 15, only on four occasions, including last year.

The other years it disappeared as follows: In 1892, on April 7 (so remarkably early as to be subject for newspaper comment, and caused the oldest inhabitant to brush up his memory); in 1890, on April 14; and in 1889 on April 12. In '92 illness prevented me from fishing in May. In '90 I had good surface fishing on May 6, and afterward for a week; and in 1889 I did my May fishing in Saranac Lake, but knew that there was good surface trolling in Lake George each of these years on and after the day the season opened.

I mention this lake so specifically and its conditions for fishing in the spring as I imagine the details will apply to other waters for which special legislation is sought. Unless we have something like uniformity in our fish and game laws, without the seemingly endless exceptions for certain waters' fish or game a code of game laws becomes a mockery.

"CANADIAN SOLDIER."

A correspondent writes from Youngstown, Ohio, "There is a fly that puts in its appearance at Sandusky and Cleveland, and I do not know but all along the southern shore of Lake Erie, between May 20 and June 15, by the million and covers sidewalks and houses. They are locally called "Canadian soldiers." Can you tell me what the proper name of this fly is, how they breed, whether in the water or from a grub, or from the fly itself; whether they can be transported to other parts of the country and live, and if so how it is done?"

The fly is undoubtedly the May fly or day fly, and probably the largest one of the species, known to fishermen as the green drake. There is a soldier fly, a dipterous insect, but the swarming in millions mentioned by the correspondent answers to that of the May fly. I have written of the May fly so recently that I think the correspondent will find his question answered in Forest and Stream of March 10 in my notes, under the heading "May Fly Larvæ," and in Forest and Stream of Feb. 16 under the heading "Transporting May Flies."

The flies and their larvæ can both be transplanted, and will live and stock new waters and furnish an excellent fish food.

FISH CULTURE IN ITALY.

A lady residing in Rome sends me two clippings from a Roman newspaper and says: "I send you evidence that Italy is awakened to the importance of artificial fish culture, and is following in the footsteps of the United States in an effort to repopulate her waters with fish."

The clippings translated read: "During the last few days, by the care of the Minister of Agriculture, there have been new plantings in the public waters, with the view of repopulation. Twenty thousand trout fry were let loose in the Liri near Ceprano (between Rome and Naples). One hundred thousand carp in the Lake of Garda, and sixty-five thousand trout at Iseo.

"By order of the bureau of fish culture there has been let loose in the lake of Garda, opposite Isola Bella, fifty thousand white fish, which will be quickly followed by as many trout, with the end of repopulating the lake.

"We hear little, if anything, about artificial fish culture in Italy, in fact, until I read the clippings here given, I did not even think of Italy as a nation that practiced fish culture, and yet Italy stands second to Germany in the discovery or practice of artificial fish culture. The discovery of fish culture was made known by Jacobi in Germany in 1763, but as early as 1791 Joseph Bufalini, of Cesena, in Northern Italy, had succeeded in artificially fecundating the eggs of many species of fishes, apparently without any knowledge of Jacobi's discovery.

MARSTON'S TROUT.

Last December, my friend, Mr. E. T. D. Chambers, wrote me from Quebec, and mentioned in a postscript to his letter that he had a small trout which he wished to send me, but he wished first to freeze the fish before sending it. The fish came from Rimouski county, some twelve miles south of the St. Lawrence River, and had been given to Mr. Chambers by Mr. C. Panet Angers, Q. C. Mr. Chambers spoke of the fish as a "curious and very beautiful specimen of Canadian trout which answers very closely to the description already published in Forest and Stream, as Marston's species of the salmonidæ." I asked him to send the fish, not to me, but to Prof. Garman, at the Museum of Comparative Zoology, Cambridge, and Mr. Chambers now writes me enclosing the following letter from Prof. Garman:

"Museum of Comparative Zoology, Cambridge, Mass., March 13.—I was much pleased with your last. The trout arrived a day later than you expected; thawed out, but still good. The fish is S. Marstonii. From the traces of color retained, it is evidently the most beautiful of the genus. Its slenderness favors the idea that it is also the most swift. Your specimen decides that the species is more distinct than was at first supposed. In the system, its place is near S. Oquassa, but farther from its imported species S. Alpinus, of Lemapee Lake, New Hampshire. The latter, helped by fish planters, is gradually extending its range, so that it may soon be heard from in the St. Lawrence and its tributaries. After a day or two in alcohol the Marston trout loses its brilliant red and discloses the faint brownish vertical bands across the sides, much as in S. Oquassa, the blue-back trout of the Rangeley lakes. Some artist with his pencil will delight everybody interested in fishes if he will give the public a fair idea of the splendid colors, drawn from life, of the male of Marston's namesake.

Cordially yours, SAMUEL GARMAN."

This letter shows that the distribution of the Marston trout is much greater than at first, and proves the truth of a statement of a friend, who said that when the trout of the Canadian were examined, doubtless other new species would be found. The first specimens to be examined, in July, 1893, came from Lac de Marbre in Ottawa county. Next, I heard of the fish in a lake, still north of the St. Lawrence, and about a hundred miles east of where it was first found, and as I was informed, on a different water shed. I have seen specimens only in summer, and then declared it one of the most beautiful trout that I had seen. With the colors of the breeding season added, this char must be a marvel of beauty.

WALTONS ARE UP.

It is difficult for some people to understand how a little book issued for an English shilling should sell for $1,335, yet such is the price paid for the first edition of Walton at the Alexander sale in New York a few days ago. But the book was issued in 1653. The second edition, issued two years later, brought $210. The third, printed in 1661, sold for $150, and the fourth for $100. The four volume Bagsten, Walton and Cotton, sold for $404. This was printed in 1815. Pickering's edition, 1836, sold for $220. A life of Walton sold for $113 50. Goode's Fisheries of the United States, issued in 1879 for $50, sold for $220, but this work contained the reproductions in colors of Kilburne's paintings, and his trout, painted for the work, is perhaps the best painting of our brook trout that ever came from the brush of any artist. Certainly this trout has been copied far and wide, if that be a test of excellence. It is fitting that Walton's books should bring good prices just at this time, when a stained glass window is being unveiled in his memory and honor in St. Dunstan's Church, in London, where he worshiped in life. Although Walton sleeps at Winchester, where a screen was erected to his memory, he was a resident of London, in Fleet street, in which St. Dunstan's is also situated, and under its shadow the "Compleat Angler" was first sold. A. N. CHENEY.

The Sportsmen's Exposition.

Editor Forest and Stream:

The time for the opening of the great Sportsmen's Exposition is drawing near, and we congratulate the association that the fruits of their labor will soon be enjoyed by the sportsmen of this country. Reviewing the difficulties which have been encountered from time to time since the project was launched, it must be conceded that the sportsman's interests have received an impetus by the contemplated holding of the exhibition the effect of which is conspicuous, and certain to create a broader knowledge of the needs and requirements of the legion of shooters, fishermen and lovers of field sports and recreations that has not existed heretofore.

It is evident that the sportsmen of the country will assemble in New York during the week of the Exposition, and by their presence show that they are in sympathy with the efforts of the association to enlarge the spirit of field sports. The evidence of a liberal patronage is manifest on every side. The reduced railroad rates offered will insure a large attendance.

Extensive arrangements are being made to provide for the rush of the associations which have signified their intention of attending in a body on the various club dates. The incalculable advantages likely to accrue to the manufacturer and dealer is one reason why every dealer in sportmen's goods of the entire country should attend the exposition. No occasion has ever appealed to the sportsman in such a practical way as this, the first exposition. Every club should send a large contingent of its officers and members. Quite a large number of the leading sporting organizations of several States are already arranging to attend.

Among the many noted guides who will be at the exposition will be Mr. and Mrs. W. G. Wallihan, of Lay, Colorado. These persons have earned for themselves an enviable reputation as photographers of our wild game with the camera. There will be over two hundred different photographs of our large game exhibited by these enterprising and enthusiastic sportsmen. The sizes of the photographs are 20 by 40, 18 by 20 and smaller.

Another very interesting exhibit will be that of Messrs. C. G. Gunther's Sons. The exhibit of this firm will be an exact reproduction of their famous World's Fair display. It will occupy four spaces, and the display will be a typical and striking collection of their mounted specimens and heads of our North American game.

G. A. S.

Linnæan Society of New York.

At a regular meeting of the society, held at the American Museum of Natural History, a paper was presented: "Further remarks on the Salamanders found in the Vicinity of New York City," by Mr. William L. Sherwood. WALTER W. GRANGER, Secretary.

New Jersey Sea and Streams.

ASBURY PARK, N. J., April 16.—The continued cold weather has held fishing in this vicinity in check. I have received information that flounders are biting freely in Barnegat Bay, and perch are in evidence all about us. Dr. H. S. Kinmenth is the only man so far in this vicinity who has had a go at the trout. He reports the streams in bad condition and the fish unusually small. Out of a catch of eighteen but four were above the 6in. limit, and this from a stream where we have not infrequently taken good strings of pound fish. The close season on pickerel is of great advantage to us, as the season will not begin until May 1, by which time in these waters the majority of fish have spawned. It is a measure which should have been in force years ago. Thanks to the splendid energy of Commissioner Frothingham we have much to be grateful for, and anglers now feel that in him we have an auxiliary that in future will make protection protect. LEONARD HULIT.

Canadensis Trout.

NEW YORK, April 21.—I have just returned from Canadensis, N. Y. Trout fishing is good. I stopped at Price Bros.' Spruce Cabin, and so did Kit Clarke and Mr. Schroeder. Mr. Kit Clarke caught over 200 trout in a couple of days. Mr. W. H. Schroeder, of Elmira, caught 43 trout in a few hours on one day, of which the smallest measured 8in. and the largest 14½in. Mr. Schroeder had all large fish. He uses the minnow for bait. We had trout at every meal and plenty to take home besides. I brought home 61. Most fish caught with bait.—F. W. STOPENHAGEN.

The Kennel.

FIXTURES.

BENCH SHOWS.

May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.
Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at —— P. T. Madison, Sec'y, Indianapolis, Ind.
Sept. 10—Morris, Man.—Manitoba F. T. C., John Wootton, Sec'y, Manitou.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.
Nov. 25.—Continental Field Trials Club's quail trials at Newton, P. T. Madison, Sec'y, Indianapolis, Ind.
Nov. 28.—Trials A. U. S. F. T. Club.—W. B. Stafford, Sec'y, Trenton, Tenn.

THE BOSTON SHOW.

THE eleventh annual bench show of the New England Kennel Club, held in Mechanics' Hall, Boston, on April 16 to 19, inclusive, was of high quality taken in its entirety as a show. The catalogue indicated that there were 752 dogs entered, not counting the duplicate entries, which numbered about 50.

The show was attractively and pleasantly arranged. The hall is amply large, so that a good width for passageways was left between the lines of benching, and there was abundance of light from the generous spread of glass which was a part of two sides of the hall.

The benching was wooden, but of an entirely new pattern, differing from that of the ordinary rough wooden kind which is constructed with a view to temporary use and cheapness. It was nicely fitted and finished for permanent use.

Spratts Patent attended to the feeding in their usual satisfactory and painstaking manner. The show was a model of neatness.

The judging was finished with reasonable promptness, though the heavy floods in eastern New England delayed traffic so much that some of the dogs arrived late and were judged after their arrival. Mr. James Mortimer judged bloodhounds, mastiffs, St. Bernards, great Danes, Newfoundlands, Chesapeake Bay dogs, beagles, bulldogs and fox-terriers. Mr. Chas. H. Mason judged spaniels, bassets, dachshunds, poodles, collies, sheepdogs, terriers (except Boston and fox-terriers), pugs and miscellaneous. Mr. Harry W. Smith judged deerhounds, greyhounds and Russian wolfhounds. Mr. Arthur Mulvey judged Boston terriers, and Major J. M. Taylor judged foxhounds, pointers and setters. Dr. H. Clay Glover was the veterinarian. There was some dissatisfaction with some of the decisions.

Delightful weather prevailed during the last three days. Still, the show was not so well patronized as it merited. The last day, being a holiday, there was a large attendance, though it was the opening day of the baseball season, which attracted crowds to see the games.

There was a difference of opinion concerning the Club's cups. Mr. F. Lewis lodged a protest in respect to awarding the club pointer cup. In the special prize list the cups were offered "for the best dog or bitch bred and owned by exhibitor." Subsequently, through the press, the club announced that "the conditions under which our club cups were offered have been changed, and will now be offered for the best American-bred dog or bitch in the twenty breeds enumerated in our premium list." The club held that they had a right to correct the premium list, as the first announcement concerning the club cups was an error, and the announcement through the press was sufficient notice of the change. Mr. Lewis held that the premium list was what governed the contract between the exhibitor and the club, and that the notification through the press was immaterial. The club refused to pass on the protest and will refer it to the A. K. C.

The management gave a lunch to the judges, press and exhibitors, on Tuesday, which hospitable attention was appreciated in itself, and for the kindly interest manifested toward the dogmen.

The ring stewards worked hard, and were skillful in keeping the classes moving.

Foxhounds were in exceptionally strong numbers and of good quality. In the class for English hounds, dogs and bitches, Noel E. Money's Songster and Mermaid, both good hounds, were respectively first and second, winning easily in a class of four. John Gibney's Winsome won third. American foxhounds were out in force, there being 27 shown. In the challenge class first was won by Muskedunder Kennels' Bowsprit, Dr. C. A. Largest's Commodore vhc. reserve. There were eleven dogs in the open class. First went to W. A. Walker's Big Strive, somewhat plain in head, excellent in legs and feet, and foxhound character. White Oak Kennels' Clay and Dude were second and third. Clay is coarse in head, but a hound of good quality. G. W. Pierce's Driver got reserve. In bitches, W. S. Walker's Pearl Strive, a bit flat in ribs, excellent head, of true foxhound character, sound and shapely legs and feet, won first over White Oak Hill Kennels' Flirt, second, and Dr. A. C. Heffenger's Primrose. This class had nine entries. There were four puppies, only fair in quality. Pope's Striver

Pope's Samson, and Pope's Speedy, owned by the White Oak Kennels, were first and second and reserve respectively. The same kennels' Clay and Zack were first and second in the field trial class. This kennel made a strong entry and won the kennel prize.

Chesapeake Bay dogs were in numbers larger than common, though numbering but eight entries, of which Otter Girl was absent. There was but one entry in the challenge class, W. S. Bigelow's Bigelow's Rose. In open dogs, Richard Connor's Peter, light in bone, but good in coat and type, won first over Oak Grove Kennels' Curley, a fair average dog, and their Deacon, first at New York, took the reserve. In the bitch class there were but two competitors, W. S. Bigelow's Rose II. and Oak Grove Kennels' Biddy F., first and second in the order named.

Pointers numbered fifty all told. Glen Rock Kennels' Duke of Kent II. and Molton Banner were first and reserve in the challenge class for heavy-weight dogs. The former was high in flesh. The corresponding bitch class had no entry. In the open class for heavy-weights, Glen Rock Kennels' Twinkle took first. He was shown in hard flesh stands on excellent legs and feet, and has a good pointer head. G. Muss Arnolt's Lord Bracken, recently described in reports of other shows, won second. Robert Leslie's King of Lynn won third. He was not shown in the best of condition. N. L. Chaffin's Dan was the reserve. There were nine competitors in this class, and five in the class of bitches, of which first was won by Springside Kennels' Springside Nell, a symmetrical bitch, good in loin, legs, feet and body. Second went to E. M. Beale's Alice Leslie, long cast, too straight in stifles and only of average merit. C. H. Clark, Jr.'s, Emblem, was throaty and a little out of condition. Glen Rock Kennels' Pet, the reserve, was heavy in shoulders and gross in flesh. In the light-weight class, challenge dogs, Springfield Kennels' Duke of Hessen won over George J. Gould's Ridgeview Comet, F. A. Hodgman's Arthur and Ridgeview Tenny, reserve. In bitches George J. Gould's Lady Gay Spanker, a well-known bitch, won over Miss Rumor and Springside Kennels' Hempstead Pearl. The open dog class had eleven entries. George J. Gould's Ridgeview Chancellor, described in recent reports, won first. J. L. Adam's Lad of Rush won second. He is light in body, plain in head and his coat was not clean. Third went to E. W. Foote's Kentwood, lank and flat in body, tail coarse, ordinary in quality. H. W. Richards's Nick of Kent was the reserve; he is plain in head and out at the elbows. There were eight in the bitch class. C. D. Roberts's Devonshire Pearl, a winner at the New York show, won first in a not close competition. Second went to N. L. Chaffin's Daisy, plain in head, good body, forelegs not of the best, fair symmetry. G. A. Vickary's Belle, third, is out at elbows, plain in head, good quarters. The reserve, J. R. Schuyler's Vexation, is light in muzzle, straight in shoulders, yet a fairly good pointer. There were seven in the puppy class for dogs. F. S. Eaton's Shadway, first, is quite a superior puppy. His body is well-ribbed and well-shaped; clean, well-made neck well set on good shoulders, good legs and feet, plain head and superior symmetry. N. Clifford's N. B. Allison II., second, is a fairly good coarse puppy. The reserve went to F. E. Clark's Dustyway, a long-cast puppy. There were but two in the bitch puppy class, and of those, Tell Tale, a fair average puppy, won over Dame Fortune, both owned by John L. Heard. Of the five competitors in the field trial class, Duke of Hessen won the first prize, Duke Kent II., and Lad of Rush the reserve. George J. Gould won the kennel prize.

English setters were light in numbers, twenty-eight all told, of which three were absent and one was a duplicate. Cactus and Glendon were the only ones in the challenge class. The former won. Maid Marion had a walkover in the challenge bitch class. In open dogs, there were fourteen competitors. First was won by H. L. Keyes's Montell, a loosely built dog, round in muzzle, crooked in tail, too straight in stifles, and a little leggy, good body, legs and feet; he is not a superior specimen. Ed. A. Burdett's Cincinnatus's Pride is light in muzzle, somewhat leggy, and of fair symmetry. F. F. Bock's Dan o' Light, third, was thin in flesh and not in the best of condition. He has a good head and fair symmetry. C. E. Lewis's Harry L. was the reserve. He is not a good mover and stands badly in front. The Earl was awarded vhc. He is rather heavily flewed, is throaty, and his head is not properly shaped for a setter head, and he does not stand squarely in front. He has good symmetry and lots of setter character. There were six to face the judge in the bitch class. Oak Grove Kennels' Nellie F., a trim, symmetrical bitch, won first. She is light in head, it being of the light hitchy type. She is symmetrical, stands on good legs and feet, has a good body and quarters, neck lean and well set on shoulders. She is not, however, quite so full in muscular development as is desirable. She won the special for the best setter, dog or bitch, over Maid Marion—a very close contest. While Nellie has more symmetry, Maid has decidedly a better muscular development and quite as much setter character. Second went to A. Boote's Clara, narrow in head, nicely shaped body, good neck, sound legs and feet; a close second. Oakland Farm's Our Pet, third, plain in head, is a good bitch, and was a good third. The remainder of the class was ordinary. Jos. Lewis's Larkspur, a long-cast puppy, had no competition in the dog puppy class, nor had Our Pet any in the bitch puppy class.

The Irish setter classes were light in numbers and only of fair merit. Oak Grove Kennels' Kildare took premier honors in the challenge class, the reserve going to B. T. Bartleson's Bob, Jr. The remaining entries were Finglas and Kildare Glenmore. Oak Grove Kennels' Queen Vic had an easy win over their Norna in the challenge class for bitches. There were but four in the open dog class, Henmore Shamrock taking first prize, winning first over the New York winner, G. Shippen's Shamrock O'Moore, the latter long cast and a bit throaty, though a good dog. Third went to R. B. Fay's King Grew, coarse in head and a general tendency to coarseness. The reserve, F. A. Whitney's Ruffdan, is flat in ribs and ordinary. There were four in the bitch class. W. L. Washington's Ruby Glenmore II., thin in flesh, won first; second going to F. G. Goodridge's Coleraine, a good bitch not in good condition. Geo. E. Pierce's Princess, pale in color and plain in head, took third; she stands on good legs and feet, and has a good deal of merit. B. F. Lewis, Jr.'s, Toronto Biddy took the reserve. There was but one entry in the dog puppy class, H. G. Braethwaite's Kirstal, and two in the bitch class, of which N. McIntosh's Bostal Norna, first, was quite a good one. W. L. Washington's Kildare Annette, second, was thin in flesh and has a poor head. The kennel prize was won by the Oak Grove Kennels.

Gordon setters numbered eighteen. Noyes Billings's Ranger B. won easily over Leo B. in the challenge class, and Dr. S. G. Dixon's Princess Louise had no competitor in the corresponding bitch class. There were six dogs in the open class. First was won by H. A. Esterbrook's Wanoosnoc Prince, short in muzzle, head not clean cut, fair tan and symmetry. John Kennedy's Mount Royal Rush, second, is ordinary, poor head, light nose, smudgy tan. Geo. Shaffer's Wang Ivanhoe, third, was built on straight lines, and F. C. Cross's Argus B., reserve, has a coarse head, and has a general tendency to coarseness. This class was a poor one. There were four bitches. Dr. S. G. Dixon's Maid of Waverly was easily ahead of anything in her class. Her head is not clean cut, but she is well made and symmetrical. His Sante Marie is heavy in whelp. She has a wedgy head. His Daisy Ivanhoe, third, is light in body, tan smudgy, and her quality is ordinary. In dog puppies H. S. Robert's Count Noble's Boy was first, M. W. Murray's Duke Noble second, H. A. Esterbrook's Royal Rex reserve. There was but one entry in the field trial class, Ranger B. Dr. Dixon won the kennel prize.

Beagles were in good numbers and quality. Nearly all the winners were dogs of real merit. In the challenge class for dogs, Rockland Beagle Kennels' Roy K. won first. He is an excellent beagle. Their Forest Hunter took reserve. He is a bit heavy in shoulders, soft in coat, still he has good beagle character. In the challenge bitch class, their Lonely won first over Trimtwo and Topsy, the latter the reserve. In the open class for dogs, over 13 in., Joe Lewis's Ringleader won first. He is a good beagle, but his legs are not so clean turned as they might be. Second was won by the Rockland Beagle Kennels' Directum, a trifle heavy in head, good coat, legs and feet, well-shaped body, and good quarters. National Beagle Kennels' Diamond Forest, third, is soft in coat and shows throatiness. Loe III., the reserve, is pinched in muzzle and heavy in shoulders. There were five in the bitch class, over 13 in. S. Smith's Silverena, an excellent bitch all round, won first. Second went to H. B. Tallman's Trill's Baby, only of fair quality, third going to H. Hanson's Lady of Denmark, heavy in shoulders and out at elbows. Dogs under 13 in. had three entries. Glenrose Beagle Kennels' Clarion of Glenrose, an excellent beagle, won first. He was a bit too fat. G. Laick's Laick's Roy, also a good beagle, took second, and W. G. E. Hammersley's Rival third. The bitch class had nine competitors. First went to a good beagle, Glenrose Beagle Kennels' Trill, second to A. Parry's Primrose, not good in head, but otherwise quite well made; third went to J. Reardon's Maida, thin in flesh from the effects of recent illness. She showed a deal of quality. The reserve, H. Ramsdell's Pride of Cressbrook, is heavy in the shoulders. There were six dog puppies. First, A. D. Fiske's Phantom; second, C. Peabody's Comedy; reserve, S. Smith's Whang. Glenrose Beagle Kennels' Fury, first, and S. Smith's Schackne, second, were the two entries in bitches. There were six in the field trial class, of which the winners were: first, Rockland Beagle Kennels' Frank Forest; second, Forest Beagle Kennels' Gipsey Forest; reserve, H. Hanson's Olaf of Denmark.

B. WATERS.

Mastiffs showed a considerable falling off compared to last year's entry. Out of seventeen entries fifteen were from Dr. Longest's kennels. The Doctor seems as enthusiastic as ever, in spite of the Beaufort's Black Prince affair last year, and in making such a large entry he afforded the "Fallons" of the fancy ample opportunity to gain possession of other good dogs on equally easy terms. This time Ingleside Minting and Emperor William met in the challenge class, the former, not very well shown in regard to coat, repeated last year's victory. Then Dr. Longest bought him, and he scarcely cares which dog wins now. His Lady Diana, looking very well, won in the corresponding class. A capital headed dog in Hans Sachs from the same kennel had a walkover in open dogs, the grand-headed Ingleside Maximiliau being N. F. C. Bitches had but three present of the six entries, and the short-faced, wrinkly Lady Cameron, not in very good shape, was followed by the brindle Maggie Murphy, who has improved on her New York form; Eider's (third) type of head is a better one, and she beats in bone and depth of body. She afterwards won the special for best mover. These are all from Dr. Longest's kennels. Two very promising dog puppies were shown in Carlo and Kingman's Bow Bow, and a better pup still in Rose, beat Pearl in body, bone and skull in the bitch class; all from the Mount Vernon Kennel. Ingleside Minting won most of the specials, and the kennel prize of course went to Dr. Longest.

In St. Bernards the quality was rather mixed, and on the whole there is little headway being made. Take away the old winners, and there is little left to fill their places. Moore's Altoneer and Lady Livingston took the challenge prizes, the latter again beating Miss Anna, who scarcely looked in such good feather as at Pittsburg. Open dogs showed a falling off in entries, Booth's Duke of Lincoln standing literally head and shoulders over the others. This grand dog improves on acquaintance. An excellent headed dog in Gov. Russell (J. W. Comey's) gained second; a deeper body would improve him. Third went to the well-known Jim Blaine, a nice all-round dog, though rather low set and dips behind the shoulders. His son, Jim Blaine, Jr., took reserve; he lacks character, but has a well-shaped head, is light in body, but was well shown. The bitch class was scarcely so good, and a very fair bitch, P. J. Slane's Lady Vandyke, won first; she should be straighter in back and truer in front; Victoria II., from Mr. Moore's kennel, loses in muzzle and width of head; Melba (Galaxy Kennels), third, is too full in eye, and should be better ribbed. The puppies were not very promising. Alton, Jr., had no difficulty in beating another good dog, Melrose King, in the challenge dog class for smooths, and Col. Ruppert's Empress of Contocock's deeper muzzle and body sufficed to place her over Melrose Belle, whose general symmetry, however, is better. There was a large entry in open dogs this year, and a son of Melrose's, C. W. Bicktord's Rex Bute, was soon picked out for honors; barring a large ear, his head is a capital one, well marked and showing lots of quality of the Alton, Jr., type, stands on good legs, richly colored in coat, but should grow a bit yet; the well-known Counch, not improved much in body, was second; and Judith's Altoneer, a plain, washy-colored one, took third; she has a pretty fair head. G. W. Patterson's Eulalie II., filled out nicely, scored over Moore's Melrose Judith in body and hind parts. The puppy dog prize was withheld from one of those freaks in coloring we sometimes meet with even in the very best bred stock. The bitch puppy Guide's Belle shows lots of quality. The kennel prize went to Mr. Moore's grand smooth team, but the special for best in show was a tight thing between Alton, Jr., and Duke of Lincoln, the former just getting the verdict through expression, shape of head, and depth of muzzle; back of the head he is considerably excelled by the rough dog, and also in action, and no one could have cavilled at the decision had the other dog won as they stood that day.

Great Danes. There was little here to interest one. Challenge classes did not fill, and E. Knieriem's Major McKinley II., the well-known youngster, was the only decent one in open dogs, and the nice bodied Ella scored easily from Perkins's Owl's Nest Topsy, in bitches.

Deerhounds, with the exception of two entries, J. P. Barnard's Jane and Sandy McPherson, all came from the Hillside Kennels. They have been out before, and were above placed in their usual order. The greyhound classes were strong, but Mr. Smith was scarcely happy in his selections, though it must be admitted the dogs he turned down were not in condition.

With Southern Rhymes and Imperator in challenge dogs and Bestwood Daisy alone in bitches, we come to the open dogs, where J. H. Winslow's Jack of Clubs, very well shown, beat Bradbury's Dakota and J. F. Turner's Baltic; the winner drops away too much in loin and quarters, Dakota should have more rib, and this also applies to Baltic, who beat the others under the same judge at Philadelphia last year. Toon & Thomas's Southern Fury, though he did show a slight touch of lameness in hindleg, should have won and their Southern Charm been mentioned, at any rate. In bitches, the winner, White Oak Hill Kennels' Silk, a neat enough little thing, does not stand over enough ground and is beaten by Southern Belle, the second winner; Be of Stones, third, is best in quarters and loin, but should be better ribbed up; Wild Lily, the New York and Detroit winner, and Southern Gay Girl, first at Chicago, were unmentioned; the latter is one of the best in the class, but showed some redness on hind legs. A promising pup in Wild Imp was alone in its class. Toon & Thomas took the kennel prize.

The Russian Wolfhounds depended entirely upon Mr. Hanks's kennel. Col. Dietz and Vinga in challenge classes and Sorvanets, going to pieces, and Groubian II., unfurnished yet, the only open dogs. Lady Dietz, looking thin, won over Zmeika, unmentioned, who can beat the other to a standstill in everything but hocks, but the judge being a stickler for soundness one can understand why she was so neglected. In puppies a daughter of Leekhoi was given first; though why Graubian II., second in open dogs, should have been passed over without a mention is difficult to understand.

Both the Newfoundland entries were absent.

Spaniels. While the entry in most of the breeds was a good one, the quality especially in cockers showed a falling off. The well-known Midnight III., in better shape than usual, was the only challenge field spaniel. Open dogs was a hot class, and the peculiar headed Dark Despair made his debut with winning honors; a ridge of hair on muzzle and between the eyes detracts from an otherwise fair profile; his head has plenty of depth and is fairly well formed; he is a bit on the leg, but has good length and was well shown. The well-known Staley Baron was a good second, with Toby reserve; but Fashion, vhc., is better in head and front. In bitches, M. A. Viti's Scandal, nice pup though she is, was lucky to beat Endcliffe Myrtle, who scores in head length and body. The any other colors were a poor lot, first being withheld. In cockers, challenge dogs, Woodland Prince scored over the parti-colored Bim, who loses in head. The bitch class was empty. In open dogs, an old winner, Mepal Kennels' Commodore, whose change of quarters seems to have been beneficial, scored nicely over Edmond's Adonis, who is a little out at elbow. Beppo, third, is just a fair little sort not furnished yet. Prince Nebo, entered in this class, unfortunately hung himself over his stall just before the show opened. Mepal Kennels' well-known Baby Ruth scores only in head over Woodland Princess, while Fashion, third, is rather long in body. The any other color dog class proved a picnic for Mr. Fiske with Billy and Vernon, both commented on in Pittsburg report. His Muldoon also took reserve. The other four were marked absent. Mr. T. M. Robertson's entries were delayed by the floods, and on arrival the class was reopened and his Red Obo given an extra first. He is a nice headed one, but faulty in front. Tarr's Jimmie was overlooked, but was on the bench. In bitches there was nothing to beat the well-known St. Lawrence Beauty and Red Niobe. Robertson's Red Dolly that came late was given an extra first. Geo. Douglas's entries were absent in this class. The Clumbers made a brave showing in numbers but the quality was not what it should be; the general run of them is small, not long nor deep enough in body and too prone to snipiness in muzzle. In open dogs the white Friar Boss loses in length and shape of head to Endcliffe Buster, second, who is getting into better form. In bitches Newcastle Kennel's Reckless Friar scored well enough from her kennel mate, Meta, who loses considerably in muzzle, length and depth of body, but Endcliffe Fairy, vhc, to be consistent, should have been placed, better head and body than second. The Irish water spaniels were good. Musha arrived too late but was given an extra first. In the regular competition, Dennis scored well over Mike O'Donohue in head. In bitches, the clean faced Belva (Dr. Kent's) was placed over Miss Green's Venus, as at New York; Kitty of Cork getting reserve. Marguerite, being one of the delayed, was afterwards awarded an extra first. Wee Wah Kennel's good team of fields was correctly awarded the kennel prize for best of any one variety, and Baby Ruth was considered the best American-bred spaniel, and with Commodore, took the St. Lawrence Trophy for cockers, and Scandal walked off with the Saybrook Trophy for best American-bred field spaniels.

The exhibit of collies but for the presence of the Woodlawn Park Kennels would have been poor compared to former years. Highland Floss looking fairly well, was the only challenge entry. Woodlawn Park's Woodmansterne Trefoil being in better coat, scored over his kennel mate, Hadfield Don, who appeared for the first time. He has a nice long intelligent head, good ears, but his gait is rather mincing and not free enough, and he looked a bit light in body, being short of coat. When he gets his full coat he is bound to take some beating. Otterburn Chriss, third, has a very fair head but is small sized, and should be better ribbed—a good coated black, white and tan. Blarney Stone, reserve, is a nice headed one, but falls away behind. The others were a mixed lot and were more or less coarse in head. The bitch class was a better one all round, and Stannard's Lady Gay repeated her Chicago and Pittsburgh victories, and therefore Ormskirk Susie had to play second fiddle again, while the same kennel's Hempstead Dorothy, gone off in head, had to be content with third money; Crystal (J. McDonald's), a nice shaped one, short of coat, took reserve. A lot of mentioned ones followed, and among them I liked the vhc. F. Flannigan's Maud, a good coated one. The prize was withheld from the dog puppy, and in bitches a densely coated pretty headed one in McEwen and Gibson's Heroine won well. Woodlawn Park Kennels of course took the kennel prize, and Lady Gay the N. E. K. C. Cup for best American bred.

Old English sheepdogs were out in force, Mr. F. A. Watson making a bold bid for supremacy and he succeeded in upsetting the New York awards by winning with Sir Charles over Boxer III., who was not in good shape and is soft in coat. Coats have changed so in these dogs, but Sir Charles strikes me as being more like the old sort. In bitches Woodlawn Park's Mayoress of Newport beat the New York winner, Clarissa and Trilby, from F. A. Watson's kennel, the latter a red and white daughter of Sir Charles.

Poodles, always strong at Boston, were in no way inferior this year. And the meeting of Rajah, Diamond and Vivette gave rise to keen competition, the bigger coarser dog getting the verdict, with the Brown Diamond reserve. There were no corded poodles shown. In open black curlies, after getting rid of the ruck, competition narrowed down to three or four, Carnot eventually being tried out with Emperor, both from the Meadowmere Kennels, and succeeded in taking the blue. He is a larger dog with more substance than Emperor, but the latter is better in set on of stern, loin, and general symmetry. The Meadowmeres scored first, second and reserve in bitches, with the Morey Kennels vhc., with Cigarette and Selina. In browns the Hill Hurst Kennels had all the classes to themselves, the well known Poobah scoring well over Jocko in open dogs, but in bitches Hill Hurst Posey can beat the winner, H. H. Fluff, in head and curl; Bellone, mixed in color, getting reserve to the youngsters. This kennel showed a very pretty lot of puppies that should go like hot cakes.

Bulldogs, as usual, here made an interesting exhibition, and quality was even stronger than ever. His Lordship and Saleni were the challenge winners, White Venn coming in reserve to the latter. In open heavy dogs, King Orry, in much better shape than at New York, won easily enough, beating Reve Royal in layback, shoulder, length from eye to ear, break up between the eyes and ears. Dr. Rush is a rather coarse headed dog, not out enough at shoulder. Hucknall Gipsey had no difficulty in beating Holly, who is long-faced. The dark Heathen won in open light weight dogs and the judge was consistent in placing his son Heathen II. (H. E. Converse) second; barring his faulty hind parts and legginess I liked Nugget better; African Monarch, well out at shoulder, was a close reserve. Juno II. (Woodlawn Park Kennels) won easily in the bitch class and Lud's Boy was well to the front in puppies. The special between King Orry and His Lordship created much excitement, although those who have followed the shows expected the ultimate result; King Orry won. While King Orry excels in breadth of underjaw, is better broken up and has more length from eye to ear, in general finish I like the other dog, especially in true shape of body and action and height from

ground and the absence of the flapping sign board shoulders which are an exaggeration. There is no doubt King Orry has grand bulldog head qualities and is a dog that should do a great deal of good to the breed. This extreme "outness" at shoulders may be carried to excess, as it is merely a fancy point. Woodlawn Park Kennels took the kennel prize. Although there was only one entry in challenge bull-terriers this year against four last year, the winner was the same—Cordona. Competition was keener in bitches and Castle's Kit, though not in very good form, being just off puppies, scored in cleanness of head over Starlight, who begins to show her age. There were three absent in open heavy dogs and the Pittsburg winner, Dutch Bill, had an easy win over Yale Jim, who should be darker in eye and flatter in cheek. That grand bodied bitch, Queen Lily (F. F. Dole's) scored well in her class; H. F. Church's Newmarket Siren coming second, light in eye, body ticked but of good foundation; Edgewood Flossie was third. Light weight dogs was a good class of three and the well-known dogs Little Flyer, Tarquin and Little Billie were placed as named, the latter losing in body chiefly. An excellent eared bitch in H. F. Church's Sabatia won over his La Tosca in the next class, beating in cleanness of front and skull. F. F. Dole took the kennel prize.

The Boston terrier exhibit was a most interesting one, especially to those who have followed the fortunes of the breed with a jealous eye. These must admit, on looking through the benches, that the type is asserting itself in no uncertain manner, for where three years ago one could find here and there a terrier that would seem to conform more or less to the club standard, there were dozens on the bench this year, and the full round skull and uneven mouth and bully attributes of former years were few and far between. The competition was principally notable for the success of Hollander's Peter over Bayonne Kennel's Prince Walnut, though behind the head he cannot be called superior. Nankin and the trim little Nancy were also winners in their class. Spider, the New York winner, again took the ribbon for light weight dogs, followed by Bayonne Kennel's Tom and Phelps & Davis' Commissioner II., as at New York. The puppy Monte, owned by Alex. L. Goode, seems to be the acme of Boston terrier breeding so far, for he is certainly about the best I ever saw, with deep square muzzle, flat skull, good bony front, and has a particularly neat body, and is a well marked brindle and white. He had a field day among the specials.

Fox-terriers were a lively lot, and the best we can show were on hand. The competition was not exciting in the regular classes, as many of the winners have been placed by the same judge at several shows this season, but the downing of Blenton Victor II. by the wire Cribbage, who was shown exceedingly well, afforded a little excitement. Victor must needs pull himself together if he wishes to retain his laurels. He looked listless and distrait and fine drawn. He beat Warren Safeguard, however, in the challenge dog class, and Warren Captious was alone in the corresponding division. The open dog class was a hot one, not a bad one in it, and for quality was one of the best classes in the show; the puppy Warren Daybreak, however, held his own with Hillside Domino, second, an excellently fronted dog that should be flatter in skull; the well-known Blemton Stickler came next; he is a bit long cast. Beverwyck Royalist was reserve, and such dogs as Hillside Royal, Sentinel, Warren Romper, Beverly Rally, Seacroft King and Result were among the mentioned ones. The bitch class was not so good on the whole and the order as before was Warren Capture, Ewald's Cowthorpe Gem, and that capital puppy Warren Sentence; Raper's Richmond Pearl came in for reserve, and an old winner, Blemton Vindex, could do no better than V. H. C. this time. The Rutherfurd Kennel captured the money in the puppy classes with the usual team.

In wires the order of course was Cribbage and Oakleigh Bruiser in challenge dogs, and Surrey Janet alone in bitches. They all looked exceedingly well. Endcliffe Banker continued his winning career in open dogs, followed by a nice headed one in Rochelle Kennel's Brittle Boy, who had the undisguised pleasure of beating Mr. Richie's Mister Great Snap; Hill Hurst Trick, reserve, has not come on in body as one could wish. Toon and Thomas with Endcliffe Fidget and Endcliffe Witch were well into the money, Brittle Buzz, a rather nice headed one with big ears getting third. Brittle Boy scored nicely over the big eared H. H. Piquet, and Brittle Buzz took care of the Hill Hurst entries in puppy bitches, beating Bud in length and strength of muzzle.

The Rutherfurds took the smooth kennel prize and Hill Hurst Kennels that for wires.

Most of the Dandie Dinmonts were owned by Mr. Ed. Brooks, the president, and pursuing his usual commendable policy his dogs were N. F. C. Lothian Judy, that has been round the circuit was the only prize winner.

In Bedlingtons, C. Walter Lougest showed his new dogs Mount Vernon Wonder and Mount Vernon Rose, both superior to anything we have seen lately, though Rose's coat might have a little more "crisp" in it. Wonder nearly killed the well-known Professor before the show, so that the latter could not fulfill his engagement.

There was lots of fun around the Scottish terrier benches and Messrs. Brooks and Ames and the Newcastle Kennels made a brave showing. This time Tiree was put at the head of affairs in challenge dogs with Kilroy second, and in Culblean's absence Wankie Diana had a walkover. Newcastle Kennel's Bellingham Bailiff had revenge on the Wankies by defeating Wankie Tam in open dogs. In bitches the capital headed Janet, recovered from maternal duties, scored nicely over Radix, a very good fronted bitch with a nice coat; Wankie Cambria, third, is one of the old lot, and so are Vorda, Miss Ted, Wankie Daisy. Wankie Tam and Janet took care of the American breds and they are a hard pair of youngsters to beat. The winning pup Dunbarton is short of coat and elbows are not true.

Irish terriers were a smart lot, but some of the judging could not be followed. Jack Briggs won in challenge dogs, but although Merle Grady was broken in coat he is so superior to the coarse-headed, comparatively, Boxer IV. that he should have done better. Dunmurry was alone in his class. In open dogs the clean-headed youngster Brigg's Best turned the tables on Brian O'K., his former conqueror. His Honor claimed third for that good fancier W. J. Comstock. Milton Droleen, a bitch we spoke well of at New York, was first in bitches, easily beating the strong-headed Brick Dust and the moderate Gessela III., who was short of coat. The dog pup Shaun Rhue could be improved in front and ear, while Milton Droleen was the winning bitch, but "Shure, more power to yer jaw would plaze me betther, Droleen!"

Black and tan terriers were chiefly noticeable for the defeat of Broomfield Sultan by Glenwood, who is better in front though a trifle coarse compared to the other. One of the best in the open classes was Surrey Glen, a nicely marked neat little bitch. The Skye terriers were nearly all from C. A. Shinn's kennel, and with D. Kerr's Roderick Dhue are familiar to us all. The well-known Minnie Yorke and Pinky Yorke were the only two Yorkshires worth considering. Toy terriers were remarkable for the presence of one Nellie, that was without a suspicion of appleheadedness, though in other parts her tan was faulty. The pugs were a poor lot. Boby Ivy and Otterburn Treasure, winners respectively in challenge class and open dogs, were the best. Toy spaniels had few entries, Loris, with a curly coat, winning in King Charles dogs, and Bonnie Bess and Nada, the latter not short enough in face, winning in bitches. Princess Nevia was the winning Ruby Spaniel, Mrs. Tuck's Rena following in the same order as last year, losing in muzzle, skull and shortness of face. Two very fine Japs were shown in Mrs. Monroe's Oota and R. Russell's Princess Janet, too long in body, good skull, but muzzle should be shorter.

The Italian greyhounds were the old winners, Spring, Sprite and Tinnie II., from Jos. Lewis's kennel.

The Woodlawn Park Kennels' Welsh terrier Dewr won from a nondescript called a "Jaegersprits breed" in heavy miscellaneous, and Ben Lewis's terrier Frank took the prize in the other division. Both seconds were rather harshly withheld in the smaller class, at any rate.

In this class was also entered the French toy bulldog J' Fros, who was exhibited to demonstrate the fact that the Boston terrier is not a French bulldog—anyhow, the *fin de siècle* B. T. is not like J' Fros. H. W. LACY.

Brunswick Fur Club.

A SPECIAL meeting of the Brunswick Fur Club was held in Mechanic's Building, Boston, Mass., on April 16. President Heffenger presided. Twenty-four members were present.

The report of the committee on the revision of the constitution and running rules was accepted.

The proposition to allow the shooting of foxes at the field trials was defeated after an animated discussion, those in favor being unable to secure the necessary two-thirds vote.

Mr. Nathan W. Pratt, North Middleboro, Mass., and Mr. J. Wm. Jones, Needham, Mass., were elected members of the club.

BRADFORD S. TURPIN, Sec'y.

Meeting of the N. E. F. C.

ON April 18 the New England Field Trial Club held a meeting in Mechanic's Hall. Following is a list of officers elected: President, J. W. Hayward; Vice-Presidents, D. A. Goodwin, Jr., Geo. W. Lovell, Ed Brooks and H. Dutton; Secretary, A. R. Sharp; Treasurer, Walter C. Baylies; Board of Governors, E. Knight Sperry, J. L. Wells, Chas. P. Curtis, Jr., Geo W. Amory, Hobart Ames, Herbert Merriam and H. W. Smith. It was voted to open a sweepstakes to be run commencing Oct. 29, $100 added. Messrs. Sharp, Baylies and Ames were appointed a field trial committee of three to have charge of all matters concerning the trials. The trials will be run on the club's grounds at Assonet. Mr. N. Wallace was elected an honorary member and was tendered a vote of thanks for past services.

The Death of Sir Bedivere.

AT the Boston dog show on Friday a telegram pinned on the bulletin board told the story of the passing away of one of the greatest St. Bernards. It was dated April 19, and addressed to Mr. D. E. Loveland. It read as follows: "Sir Bedivere died last night of gastritis." Sir Bedivere is so well known to our readers that no extended mention of his history or record is necessary. He was one of the greatest stars of the American St. Bernard world since his importation in 1890, and he added greatly to the fame of the breed in this country.

DOG CHAT.

AT the Boston show, Mr. D. W. Glazier sold the mastiff Ingleside Minting to Dr. Lougest, and the latter sold Maggie Murphy, winner of second in the mastiff bitch class, to Mr. Glazier. The Seacroft Kennels sold the collie Sefton Snow to Mr. Geo. P. Runton. Mr. Nelson McIntosh sold the Irish setter bitch puppy Borstal Norna to Joe Lewis. Prof. Edm. H. Osthaus bought the pointer dog Shadyway of Mr. Frank S. Eaton.

In our report of the Pittsburgh show there were some errors in regard to the awards in the English setter bitch class. Dr. John A. Hartman's Rita H. won second, his Count Howard's Pride was third, and his Roderigo's Queen was reserve.

The Kennel Club's trials at Levington Heath (England) resulted as follows: Derby, first, Bonny Bell of Cold Hill; second, Venus of Thyrimont; third, Squire of Kippen; fourth, Whist; fifth, Sandford Reveller; sixth, Sarah Pedro. All-Aged Stakes: first, Ben Sullivan; second, Jessie Wind'em; third, Rose Wind'em; fourth, Polly Pedro. There were 22 starters in the Derby, 16 in All-Age Stake. Setters and pointers ran together in the Derby instead of separately, as heretofore.

In our business columns is the advertisement of the Eastern Field Trials Club's Derby, giving all the conditions, etc., of that stake. The judges so far selected are Messrs. W. S. Bell, N. Wallace and S. C. Bradley.

Yachting.

THE change of rule just made by the New York Yacht Racing Association by which one-third instead of one-half of the total overhang is measured, is a step in advance, it is true, but it still leaves the Association just about twenty years astern of modern yachting, a rate of progress that will bring it really up to date some time within the first half of the next century. In our opinion, the more the question of taxing overhangs is considered by yachtsmen, the less ground will be found for it, and the fewer will favor it; but, even if we should be proved wrong in this, and in the future it should be determined to place some tax on the long ends, the method followed by the New York Y. R. A. is wrong in principle and thoroughly bad in practice.

With the waterline once measured, as it should be, with crew and all racing weights aboard, the opportunities for the unlawful gain of length largely disappear. If it still be desired to attempt to measure the waterline when under way as distinguished from the waterline when at rest in smooth water, then two ways are open, the measurement originated by the Atlantic Y. C., of a line parallel to the water and some fixed distance above it, or the imposition of some penalty for an angle of say not less than 15 degrees between the water and the line of stem and counter.

As far as new boats are concerned, built to a waterline measurement, if this measurement be taken with crew aboard, the opportunities for gain through unmeasured immersion when under way are free to all, and certainly none can complain. It is only in the case of old boats against new, as in the New York Y. R. A., that any fair excuse can be made for the taxation of overhang, and for this a remedy may be found that will be fair to the old boats and yet will not prohibit all improvement of the fleet.

This may be done by the measurement of the waterline of all boats with the crew on board and in racing trim, the true measurement of all new boats with long fore and after overhangs to be taken as their racing length, either alone or in conjunction with the sail area. In the case of old boats with both ends plumb, a certain deduction from the measured waterline will be made, and in the case of boats of the older Cape type, with slightly overhanging stems and short but effective counters, a smaller deduction will be made.

Taking, for example, three boats of 20ft. l. w. l., a modern craft with 30ft. length over all, an ordinary "Caper," with slightly rounding stem and short counter, say 24ft. over all, and a New York open boat with plumb stem and stern, their "mean lengths" by the New York Y. R. A. rule would be respectively 25, 22 and 20 ft. By the proposed method the measurement of the first would be 20ft., her true waterline; of the second, 17ft., and of the third, 15ft. These figures would, of course, give too great an advantage to the older boat, as would the measurement of ⅓ instead of ½ the total overhang; but there would be no great difficulty in arriving at fairly equitable figures, which would still give a fighting chance to the older boats.

Under the present system, the rules are made for the old boats and a prohibitive tax is placed on the new ones. Under this proposed system, the new ones would be freely admitted to their proper classes, while the old ones would still receive certain concessions for their recognized inferiority. Such concessions should, of course, not be sufficiently high to induce men to build square-ended boats for the sake of the reduction, but only high enough to give a give a fighting chance to boats which must certainly disappear in a few years through inferiority of build alone, apart from model.

If the New York Y. R. A. desires to uphold and encourage the old type of square-ended boat against all modern types, then it is perfectly consistent and reasonable in adhering as long as possible to the crudest form of "mean length" measurement, and only abandoning it in favor of a slightly better form when forced to do so. If, on the other hand, the Association is desirous of recognizing and encouraging improvements in design, while at the same time seeking to give fair and reasonable protection to vested interests, as represented in the older boatf that still race, then it cannot abandon too quickly the rule that it has upheld for so long, replacing it by some such measure as we have roughly outlined. As long as it continues in its present policy it must recognize in every new boat built an additional proof that it is wrong.

THE Corinthian Mosquito Fleet, established in New York in 1889, has just made a very important change in the abandonment of the one distinctive word in its title. The club was started in the interests of the smaller boats, which at the time had no recognition from the yacht clubs on the one hand or the canoe clubs on the other. While many changes have since occurred both in the local yachting and within the Fleet, its main strength throughout all these years has been in the fact that it did not compete actively with older and larger clubs, but that it catered almost exclusively to small craft. Now that these latter have suddenly come into general favor, the Mosquito Fleet, has decided to abandon its distinctive policy and special field, and to enter into competition with the many established yacht clubs within a gunshot of Execution Light. The reason for this course, as we understand it, is that the word Mosquito is felt to be derogatory to a yacht club, and to imply that its members can boast only of some sort of insignificant small boats.

In this we feel that the club is entirely wrong, and we doubt whether it is any nearer right in voluntarily entering into what may prove a struggle for existence among the too numerous clubs of the locality where it has at last permanently settled.

As the Corinthian Mosquito Fleet, with a clear field of its own to work in through the encouragement of a type of boat that is likely to become generally popular, it was secure from all danger of competition on the part of the established yacht clubs; while at the same time it was free to extend its influence and enlarge its fleet by enrolling and admitting to its races any sizes of yacht. As The Corinthian Fleet, devoted openly to what may be classed as yachts, and repudiating the "mosquito" boats, it must make its way in active competion with a number of rival clubs, with the possibility that all may not succeed, and that it may be among those that fail.

We look confidently for a most prosperous future for the clubs of Long Island Sound: not merely through the new Union, but because yachting has of late been made more popular and more easily possible on the Sound by the growth of such places as Larchmont, New Rochelle, and Greenwich, and the improvement of transportation facilities. At the same time it is most essential that the establishment of too many clubs and the inauguration of a close and unhealthy competition should be avoided. From its first organization, we have taken a special interest in the Corinthian Musquito Fleet, and we regard with regret the ambitious but venturesome step which it has just taken.

THE YACHTSMAN, in its issue of April 11th, says: "We have a bone to pick with the FOREST AND STREAM in that in giving an excellent illustration of Ailsa, it has failed, whilst acknowledging its immediate source *Le Yacht*, to point out that the French journal copied it from *The Yachtsman*. *Le Yacht*, to be sure, may claim exemption from the charge of piracy by pointing out that in their excellent illustration, a marvel of pen-and-ink copying, there exists an up-to-date one rater in the foreground and an impossible schooner mercifully far away."

In reproducing the picture, with credit from *Le Yacht*, we only recognized the excellent handiwork of its artist, Mr. A. Brun, with no thought of the original source of the picture save as a photo common to all. Had we known that part of the credit was due to our English contemporary, we certainly should have mentioned it.

Robert Center.

THE New York morning papers of April 18 brought a shock to yachtsmen in the news which they told with a business-like abruptness and frankness that seemed almost brutal, of the sudden and violent death of one who has long ranked as the ideal American sportsman, Robert Center, of New York. The transactions of the special meeting of the Seawanhaka Corinthian Yacht Club, which follow, leave little to be said by way of memorial or tribute; but, loving him, as did all who knew him intimately, it is but fitting that we should speak from our personal knowledge. As a gentleman sportsman, the character in which he was most widely known, he stood alone in his thorough and enthusiastic devotion to all manly sports for sport's sake; the gambling side had no charm for him, nor was he even willing to take the passive part of an interested on-looker, but his enjoyment of sport was purely personal; he loved it and desired to excel in all branches, and above all, he desired that others should love it and enjoy it as he did. The letter below, a voluntary tribute from a comparative stranger, tells of but one instance in hundreds in which his aid was freely given. The young Corinthian who wanted to buy a boat, or who, having one, wanted to learn to sail her, found him always ready to give aid, at whatever personal inconvenience. In the same way his time was always at the service of yachtsmen and yacht clubs, even those little known to him; he was ready with a talk or a lecture, or substantial aid of some kind.

On the turf his influence was of the very best; he had no conception himself of anything but the fairest of fair play, and he was an uncompromising enemy of all underhand practices. In yachting he was one of the first to brush away prejudices and old ideas, and to strive for a higher standard both in technical matters and in the methods of the sport. His advocacy of those features of design and construction which are now universally accepted by American yachtsmen began at a time when it made for him many enemies among the owners of the existing boats; but his bold crusade 25 years ago—a young man and almost single-handed—laid the foundation for the progress since made in this country.

His kindness of heart, his courtesy, his graceful and easy hospitality, charmed all who came in contact with him, but not the least, in our estimation, was the fact that no one had to ask twice where Robert Center stood on any question. He had opinions, and when the necessity arose he was always ready to declare and stand by them, regardless of the result. While sometimes wrong, these opinions were always based on that principle of fair play which was an integral part of his nature, and on a thorough technical knowledge and a range of experience that few could equal. If a thing appealed to him as good,

he commended it; if it was bad, he condemned it in no doubtful nor uncertain terms; and, whether right or wrong, he was always honest, as even his opponents recognized. It was this characteristic, perhaps, more than any other which has made him such a power for good in American sport for one generation, and has left an influence which will be felt for still another.

Mr. Center's death was due to a collision with a team while riding on his wheel, on the afternoon of Wednesday of last week. He had been up the Boulevard, and was returning about 6 o'clock, riding down on the western side, in the rear of a horse car, in chance company with several wheelmen though a stranger to them When at Seventy-second street, just opposite the Colonial Club, the group turned out to pass the car, which was going slowly, and when clear of it they were confronted by a coal cart, which had been coming up the avenue on the wrong side of the street, and on meeting the car had turned out for it. The others went clear, but Mr. Center was struck by the horse or shaft and thrown from his wheel, the cart passing over his head and chest. He was picked up unconscious and taken to the Roosevelt Hospital, and as soon as his name was ascertained, from an engraved plate on his wheel, word was sent to his apartments at Thirty-fourth street, and to some of his most intimate friends, who at once repaired to the hospital. He never recovered consciousness, and died just before 9 p. m., having been mercifully spared all suffering. Though life lingered for several hours, he knew nothing after the first blow, and his death was practically instantaneous and painless. A special meeting of the Seawanhaka Corinthian Yacht Club was called for Monday night, at which a very large number of yachtsmen were present, the senior Captain, Mr. Gerard Beekman, presiding in the absence of the flag officers, Com. Benedict and Vice Com. Rouse being both absent in their yachts. After the reading of the notice of the meeting, a resolution was passed authorizing the chairman to appoint a special committee, and the following gentlemen were named: J. Frederic Tams, A. Cary Smith, Oliver E. Cromwell, Charles A. Post and Leon F. d'Oremieulx.

The committee retired for consultation and returned with the following resolutions, which were adopted by a standing vote:—Whereas through the sudden and tragic death on April 17 of ex-Commodore Robert Center the Seawanhaka Corinthian Yacht Club has lost not only one of its oldest members, but one who, by every quality as a yachtsmen and as a true and warm hearted friend, peculiarly endeared himself to his fellow members; and whereas by his attainments as a yachtsman and his lifelong connection with other varieties of sport, he occupied a position not only in this club, but in America, only equalled by his sterling qualities as an honest gentleman and a faithful friend, his chivalrous nature and a perfect rectitude of character in his dealings with all men.

Resolved, That the club make this inadequate record of its deep sense of sorrow at the loss of their beloved friend and comrade.

Resolved, That the members of the club as a body attend his funeral.

Resolved, That a copy of these resolutions be sent to his mother.

Mr. J. F. Tams, one of the oldest and most intimate of Mr. Center's friends, then read the following memorial of his life, prepared by the committee, all of whom were old-time associates.

Robert Center was born in 1840, and at an early age became prominently identified with every variety of sport, his interest in which continued until the moment of his death; and while his tragic and untimely end cannot be sufficiently deplored, it seems in a measure not unfitting that he should have met death while engaged in one of the sports in which he has been so closely engaged.

To give the details of his connection with this club would be but to recount its history; hardly a page of the minutes but contains his name. He was one of our oldest members, No. 12 on the roll, and joined on May 15, 1884; but his prominent connection with yachts and yachting in this country, and his notable and far-reaching influence in every direction which tended to elevate and popularize the sport, extends back nearly thirty-five years. There has been hardly any prominent yachting event during that time with which he has not been identified in some way. He was rear-commodore for the years 1876-7, vice-commodore from 1887-1890, and commodore in 1891, and again from 1893-4. He served on numberless standing and special committees, and at the time of his death was chairman of the Committee on Lectures.

In early days he owned the sloops Ariel and Bonita, and in 1871 built the cutter Vindex, famous as being the first iron yacht constructed in this country, and the first built from drafted lines. In many details of rig and construction, this vessel foreshadowed and had a marked influence on modern yachts. His last yacht was the cutter Medusa, which he owned at the time of his death. As a racing yachtsman he was a prominent figure, but it was more particularly as a Corinthian and as a sailor that it pleased him best to be known. He was in addition a designer and a naval architect of no mean ability; his technical knowledge of the subject was wide and thorough, and as a draftsman he had hardly an equal. His influence on rig, type and construction was most marked. While never owning a strictly racing yacht, his true love of the sea leading him to prefer cruising in small vessels and the discomfort and hardship incident thereto, he was, above all others the most persistent advocate of Corinthian racing as well as cruising, and no one more faithfully practiced what he preached.

In the early days of the club at Oyster Bay, and in catboats as well as in schooners, he was ever present and equally useful and enthusiastic, whether trimming a sheet or at the helm. To the advancement and encouragement of his beloved sport, not only was he always ready with wise counsel, hearty interest and indefatigable personal effort, but he further freely gave the most liberal support to serve the same end. In 1876 he presented the "Center Cup," for a Corinthian race in October to Cape May Lightship and return. He was also instrumental in 1886 in arranging the thousand dollar S. C. Y. C. cup for first class sloops, which was won by Puritan. Of his intimate connection with and loyal interest in every step this club has taken from the time he became a member we cannot now too gratefully speak. His death has robbed us of our most beloved member, whose sterling qualities as a yachtsman, as a friend and as a gentleman, made his name an honor to the club, and his acquaintance and esteem a privilege to its members. He was our sole active link with the early days of yachting, and the club is the better for having known and having had among its members the genial, wholesouled and warm-hearted friend we shall see no more.

He joined the New York Yacht Club on May 15, 1862, was number 26 on the roll at the time of his death, and fourth in seniority on the list of yacht owners. He was Rear Commodore for the year 1876, was a member of the Committee on Admissions from 1877-80, and again from 1893 to the time of his death. He crossed the Atlantic in the schooner Fleetwing in the great ocean race in Dec., 1866. He served on many special committees, and notably was a member of the committee which framed the second Deed of Gift of the America's Cup. His intimate connection with and interest in this club for 34 years is well known to its members. In the annual cruise his yacht was always notable not for size but for smartness of appearance and absolute perfection of appointment to the smallest detail.

Second only to his unwavering affection for the sea was his inherited love of horses, and in nearly every branch of sport with which the horse is identified he achieved distinction and founded a well-deserved and wide reputation. His name was a synonym for spotless integrity and the most high-minded and absolute fairness. As he sailed straight so also he rode straight and was straight.

In 1866 he was one of the founders of the American Jockey Club, was one of its governors, and continued as a prominent and interested member until its dissolution. In the best days of this club, between 1870-80, he rode many races at Jerome Park and elsewhere, and as a gentleman rider his reputation was second to no other. His interest in racing continued until his death, at which time he was a member and governor of the Coney Island Jockey Club, and one of its executive committee. To the many duties of this position he gave his time and his best thought as freely and as conscientiously as it was given to his other manifold sporting interests.

In hunting, as in racing, he was also most prominently identified, being indeed one of its first patrons and enthusiastic supporters in this part of the country. He was one of the founders, in 1877, of the first hunting club here, the Queens County Hounds, and was one of the first subscribers to bring a pack to this country in that year. It is a matter of record that in 1880 had it not been for the persistent and continuous support given to the pack by two gentlemen, of whom he was one, hunting, which was still in its infancy, would probably have failed. He continued as a member of the Queens County Hounds as long as that club lasted, and at the time of his death was a member of the Genesee Valley Hunt. For many years he was a well-known figure in the hunting field as a fearless and a skillful rider, and in this sport his name was, like that of his uncle, David Dunham Withers, on the turf, synonymous with unblemished honor, rectitude and fairness.

Of the old New York Rowing Club he was also a prominent member for many years and sometime officer. By many of the older members of that club he will be well remembered as the coxswain of many winning crews, and his single shell was for many years well known on the Harlem River. When the New York Rowing Club became a dining club, his genial personality as a presiding officer cheered the members, and in their ranks as in ours his loss will be deeply mourned.

In the sport in which he met his death, his long interest and influence are indeed remarkable. As far back as 1860 he rode the two-wheeled velocipede in Paris, and it seems a well-established fact that in 1863 the first bicycle was brought to America by him. It has been asserted that he met his death by riding improperly; but of this there is not the slightest direct evidence; and it is impossible to believe that a rider whose special pride was that he was academic and orthodox should be guilty of a fault that he continuously criticised and condemned in others. We can but say that his lamentable and untimely death was the decree of an inscrutable Providence.

In social club life he was also prominent. Of the Union Club he was a member since May, 1862, and at one time was one of its governors. He was one of the founders of the Knickerbocker Club in 1871, and was a member at the time of his death. He was also a member of the Downtown and Country clubs.

His eminent, and indeed unique position as a sportsman was but one of the many sides of the attractive personality of our fellow member. He was a man of the world in the broadest and most liberal sense of the term. A thorough education, wide travel, the perfect command of several languages, a close student of men and things, made of him a most attractive companion. A strongly developed natural bent, combined with the necessary leisure, enabled him to freely cultivate his varied tastes, and he easily assumed and held to the end of his life that position in the best social life of New York to which his name as well as his accomplishments entitled him. The quaint, old-fashioned and punctilious courtesy which with him was but the natural expression of his feelings, will long be remembered by those who knew and loved him best.

While he had well-defined fondness for literature and for art, it was more particularly as a true lover and devoted patron of music that he was identified. He was one of the founders and principal supporters of the Orpheus Glee Club, and gave this society much of his time and attention. A cultivated musician himself, he was in music as he was in everything else which claimed his interest, absolutely thorough—and but few other amateurs in New York possessed his deeply studied technical knowledge of the art.

He was a man of marked individuality, and impressed all those who came in contact with him by his strong peculiarity Loyal to a degree and the very soul of honor, he was a stern opponent of and impatient at all that was sordid and unworthy. The simple chivalry of his nature was almost touching. With the highest and keenest sense of duty, he was persistently faithful and conscientious in all that he undertook. His scrupulous integrity and his impartiality were marked traits of his character.

Unostentatious in his givings, and of a charity that let not his left hand know what his right hand did, he had the confidence and love of his friends and the respect of his opponents. In everything he did, whether in his public or private life, or in his relations as man to man,

ROBERT CENTER.

his every act was characterized by the highest and most chivalrous sense of honor and rectitude; and we and the world are the better for his having lived in it.

Secretary Hayden then read the following, written by a member of the club:

"If the suppressed emotions lying beneath the calm exterior of the friends and comrades of Robert Center could be laid bare and find free expression, a feeling of grief and bereavement would be disclosed, so poignant, so profound, so universal, that even those who best know him would be filled with amazement.

It is not the purpose of the writer of these words to go into details regarding his manliness, his courage, his decided, clear-cut ideas of honorable sport, his thoroughness in every variety of manly exercise in which he took an interest. All these are well known not only to his friends and the community in which he lived, but his reputation in these things was as well national and almost world wide. These admirable qualities were possessed by him in an unusual degree; but it is to the personal characteristics and lovable qualities of mind and heart, his geniality, his unswerving loyalty to his principles, to his standard of honor, to his friends and to his sense of right, which were characteristics of him in so marked a degree—it is to these finer and higher qualities which in these poor words I would pay tribute.

A manly, brave, honorable, true and loyal man was Robert Center, and I am sure I echo the sentiments and express the feelings of those who knew him when I say that, although it may not be permitted to all of us to lay a flower on his grave in token of our grief, we feel it a privilege to offer this poor tribute of words to his worth and memory.

Nevermore shall we have him with us in our councils, nevermore with us in contests of skill in seamanship, nevermore in any of the varied sports into which he so enthusiastically entered.

A sense of loss irreparable, personal to each one of us, lies heavily on our hearts and we have no words to express what we feel.

All that is left for us is to conform as best we may to the inscrutable decree of a Higher Power. He has gone but he has left in the hearts of each one of us the sweet and fragrant memory of a life and character all worthy of imitation, for he was worthy, in its highest, best and fullest significance of the "grand old name of gentleman."

Mr. d' Oremieulx and Secty Hayden, each spoke of their personal knowledge of Mr. Center, after which a motion was made by Mr. S. Nicholson Kane that the proceedings be spread in full on the minutes and also printed in pamphlet form for distribution among the members of the club, after which the meeting adjourned.

The funeral will take place on Friday, April 26, at 10 A. M. from St. Mark's Church, 10th Street and Second Avenue.

Editor, Forest and Stream:

The deplorable accident which occasioned the death of Commodore Robert Center on April 17th, has pained me deeply.

Having met the genial commodore occasionally while yachting, and also in the rooms of the Philadelphia Yacht Club. I desire to express my feelings, and I know I express those of brother yachtsmen, in regard to his distressing and sudden death.

A gentleman of exceptional qualities and whose yachting attainments were *par excellence*—a master of navigation and seamanship; genial and companionable—willing to help a brother yachtsman whose necessities often required it, not only in New York waters, but also in southern seas It is a loss that yachtsmen generally will lament.

The coming trials and also the international races have no doubt occupied his thoughts, and he and his favorite cutter Medusa will be missed during those exciting times

Among his attainments he displayed special ability as a lecturer on yachting, as the various yacht clubs before whom he has lectured can amply testify, and his blackboard and individual demonstrations were thoroughly understood and readily digested by his eager hearers.

I shall never forget the last lecture he gave in Philadelphia before the Philadelphia Yacht Club at their rooms, which was not only entertaining, witty, and practical, but sank deep in the minds of his attentive hearers.

The lecture was given in January, 1894, and was on the subject of "The Care and Fitting Out of Yachts," and he spoke from his individual experience, which he said covered a space of thirty-two years.

His fluent talk, diversified by personal reminicences and droll sayings, at times, convulsed his hearers with laughter and brought forth loud applause. At the commencement of his lecture he intimated that perchance, at times, his remarks might be considered heretical, and continuing said, "But a rope was still a rope, no matter what foreign word be used to designate it," and then he took everyone through all the intricate ways of caring for and fitting out a yacht.

His rapid talk and generous illustrations were listened to with eagerness and wrapt attention. He dwelt on the importance of selecting a skipper, and said, "He is the most important man you must have, while it is difficult to find one with the qualities of honesty, sobriety, and competency, yet it is absolutely necessary that he should possess two of these qualifications at least—the first and last. Sobriety he will acquire possibly through the force of example."

He went on and dwelt upon the crew, saying among other things, "Give the skipper the privilege of selecting the crew—do not make the mistake of selecting the crew yourself, and if they are not up to the standard you will know who is to blame."

After rigging and painting her, (and he dwelt on this at length) he touched on the steward, cruising, boat service, discipline and all that goes to make up a yacht in a masterly manner. And during the lecture he spoke of those very things which are so absolutely necessary at sea—lights and the right of way. He laid stress on the subject of having good lights, and used the old maritime maxim "When both side lights you see ahead, port your helm and show your red." "Good clear lights," he said, "the larger the better, on a small yacht; an expensive light is always good evidence in court."

Poor Commodore, his lights were dashed out, and that through no fault of his own. He was on the right course, and let us all think and believe that he cast anchor in that harbor where there is perpetual anchorage and good holding ground for all true yachtsmen.

WM. S. HOFFMAN,
Ex-Secy. Quaker City Yacht Club,
Now Philadelphia Yacht Club.

A Centerboard Knockabout.

IN the FOREST AND STREAM of Feb. 23 we gave the lines of one of the best of the keel "knockabouts." The yacht here illustrated, through the courtesy of her owner, Mr. F. L. Dunne, of Boston, is for the same class, but draws about 16in. less water, being a centerboard craft. She is now under construction at the shops of Ambrose Martin, East Boston, and will be ready by the opening of the season. Her dimensions are:—Length over all, 33ft. 6in., length l. w. l., 20ft. 10in.; overhang bow, 5ft. 6in.; overhang stern, 7ft. 2in.; beam extreme. 8ft. 6in.; beam l. w. l., 7ft. 9in.; draft, 3ft. 2in.; freeboard, least, 1ft. 8in.; sheer, bow, 1ft. 4in.; sheer, stern, 7in.; mast, from stem at l. w. l., 5ft. 1in.; mast, deck at hounds, 28ft.; boom, 24ft.; gaff, 13ft. 2in.: mainsail, sq. ft., 395ft.; jib, 117ft.; total, 512ft.; lead keel, lbs., 3,200ft.

The boat is intended for general sailing about Boston harbor, and for racing within the limits of the new knockabout class, and the interior is largely given up to a cockpit, a snug cuddy being fitted up forward. She was designed by Messrs. Waterhouse & Chesebrough, of Boston, designers of the original knockabout Carl. While there is no attempt at elaborate and expensive racing construction, the scantling has been carefully considered, and there is very little unnecessary weight. The keel is of oak, sided 11in., moulded 6in.; the stem, counter-timber and deadwoods also of oak; the frames of oak, single-bent, sided and moulded, each 1¾in. The chainplate frames are doubled and side-fastened with inside chain plates The frames are spaced 12in. The floors are of oak plank, sided 1½ to 1¼in., and moulded 7½in through the middle third of the boat, being lightened in the throat at the ends. The bed pieces are of oak, 2¼in., with the heels of the frames dovetailed in, and one ⅝in. lag screw into the keel through each frame. The clamps are of yellow pine, 4×2in., tapering to 2¼×1½in.; the bilge clamps, 2½×2in., also tapering at the ends. The deck beams are of oak, main beams 2×1⅝in., half beams and beams at ends, 2×1in. Floor beams. yellow pine, 2½×1in. Three hacmatac hanging knees abreast of mast, one at each end of cockpit and one in centre of cockpit, six in all on each side.

The sides of trunk, 1⅛ in white pine, matched and edge-bolted; centerboard of 1⅜in. white oak, bolted with 7-16in. galvanized steel rod. Plankshеer oak, 4½×¾in.; rail oak, 1½×⅞in. planking; hard pine, ¾in.; deck white pine, 3×⅛in., caulked and payed with Jeffrey's Marine Glue. Plank fastenings, copper nails clinched over burrs, frame fastenings, copper or yellow metal, keel bolts, ¾in. bronze, deadwood bolts, ⅝in. steel rod. The boat has been turned out in excellent shape by the builder The sails were made by Wilson & Silsby, Boston. The sail plan first proposed included a balance jib with a club on the foot, but this has been changed for the lug jib set on the jibstay, without a club. The main shrouds run to the upper peak halyard block, and at the height of the hounds in the ordinary rig are two masthead runners, with eyes around the mast and supported by small cleats. The throat halyard block is hung by a wire pendant from the masthead, thus giving free play to the blocks with no drift to the halyards. The rudder stock is of 1½in. steel pipe, the lower end split and opened to take the oak backing. The rudder trunk is of heavy 3in. lead pipe, flanged at the top and bottom to the angles of deck and keel. The boat promises to be exceedingly handy and fast as well.

Isolde and Niagara.

THE new 20-rater Isolde, built for Prince Leopold of Hohenzollern left the Herreshoff works, at Bristol, on April 18, in tow of the steamer Archer, on which were her fin, bulb, spars and sails. A small and roughly-made rudder of iron was fitted temporarily to steer by while in tow. On board the yacht were Captain Parker and Mate Diaper, the latter, by the way, no relative of Captain Tommy Diaper, though both hail from the Itchen. The tow reached New York on Friday morning, passing the Battery at about 7.30, and a little after the yacht was alongside the steamer Russia, of the Hamburg Line, at her pier in Hoboken. The chocks were soon arranged on the after deck of the steamer, and two stout rope slings were passed under the yacht, and the light hull swung in air and dropped on to them after being safely landed, she was lashed fast to ring-bolts in the deck. The lead half-bulbs and fin were hoisted into the hold, and the spars were lashed on deck beside the hull.

The yacht is merely a big canoe, 15ft. over all, 45 to 46ft. lwl. the total overhang being divided into about 8ft. forward and 12ft aft, beam 12ft., depth of hold about 5ft.; total draft, 11ft. The sweep of the keel is naturally quite flat, bringing the lower part of the stem and the horn timber close to the water, but the end of the stem is snubbed in rather shortly into a blunt nose. The transom is curved, giving a better appearance than when sawed off straight, as in El Chico, Wenonah and Dacotah. The outer skin is of mahogany, with the usual oak gunwale of the Bristol boats; the plankshеer is also of oak, the transom of mahogany, and the deck of a single thickness of white pine. The fin is built of Tobin bronze plates, and is double, each side made of several plates separated by liners; the sides come together at the lower edge, but at the top they are about 18in. apart, the upper ends of the plates being flanged to give a wide bearing on the hull. The Herreshoff form of balance rudder is used, of course with a tiller.

The space below, with about 5ft. of headroom, is divided by two light bulkheads, there being a very long forecastle, a main saloon about 7ft. long, and a long after cabin, including the whole run of the boat out to the transom. The forward part of this after cabin, just abreast of the companion ladder, is fitted with two low sofas, back of of which are folding canvas berths, similar sofas and berths being fitted in the main cabin. There are also, just abaft the ladder and under the deck, two wooden bunks. In the forecastle are four hammock cots. The w. c. occupies one corner of the forecastle, and opposite there is a pantry and naphtha stove.

On her trial trip, on April 7, as she came to her moorings off the works, she struck on a ledge of rocks, injuring one side of the lead bulb. She was hauled out on the new railway of the Hereshoff Company and the damage repaired.

The Gould 20-rater Niagara, almost a duplicate of Isolde, was launched on April 16, no one being present beside those employed in the shops. She was quickly rigged and ready for a trial trip on April 18, Mr. N. G. Herreshoff having the tiller and Captain Barr being with him. The trial was made in a strong breeze, showing the yacht to good advantage, as she carried her sail and handled well in the puffs. When coming in the wire drew from the sockets in the main shrouds probably through some defect in the soldering, and the mainsail wa at once taken in.

New York Y. R. A.

A special meeting of the Y. R. A. was held on April 16, Admiral Prime presiding. The following amendment to the sailing rules, offered at the previous meeting was adopted: "The measurement for allowance for time shall be the length of the lead water line measured when in sailing trim, to which shall be added one-third of the overhang fore and aft, which shall be the sailing length." The question of the Labor Day regatta was discussed, and the following clubs agreed to subscribe $25 in tickets for the club steamer to insure the expenses:—Columbia, Hudson River, Jersey City, Newark, New Jersey, Pavonia, Tappan Zee, Yonkers Corinthian, Bayonne City, Audubon, Tower Ridge, New Jersey A. C., Ossining, Kill von Kull and Newark Bay. It was decided to charter a steamer for the race, and Admiral Prime was authorized to appoint a regatta committee, which he did as follows: E. Langerfeld, Hudson River Y. C.; Edwin Moore, Jr., Yonkers Cor. Y. C., and A. F. Adams, Newark Y. C. The next meeting will be on June 7.

SAIL PLAN OF KNOCKABOUT.

Defender.

The Yankee crew of the new Defender reached New York on April 18, and at once made their way to Tebo's, where Colonia has been lying for two years. The interior of the yacht has been refitted and gives better accommodation for the crew, and she is now nearly ready for use, her spars and bright work receiving the first attention of the new hands. Captain Haff and Mate Berry are in charge.

There has been some delay at Bristol through the non-arrival of the brass sternpost from the Providence foundry, due, it is said, to a defective casting. In the meanwhile the stem has been set up and the fore and middle body of the boat is framed out, while the frames are ready for the after portion, and will go up as soon as the sternpost is in place. The garboard plates, of manganese bronze, with rivets of the same material, have been set, projecting two feet below the brass keel plate and covering the upper portion of the lead keel. The outline of the stem is reported as being shorter than in Vigilant, while there is less round to the frames, the result being a bow more like Valkyrie and Britannia.

The sails are now well under way in the new loft, the men being at work now on the mainsail. Beside the suit which the builders will furnish, the owners will have another, and, after negotiation with several sailmakers, a contract was made last week with Wilson & Silsby, of Boston. The areas of the sails, as given, will be:

	Sq. ft.
Mainsail	6,500
Topsail and jib	2,300
Working topsail	1,325
Total	10,125
Club topsail	1,848

Two sets of spars have also been ordered, one from the Boston Spar Company and one from Piepgrass at City Island. The dimensions given for the Boston spars are:

	Ft.
Mast—heel to head	102
Topmast	61
Boom	102
Gaff	64
Bowsprit	44
Spinaker boom	72
Topsail yards	57 and 51

These spars show a larger sail plan than Vigilant, with a proportionately larger mainsail and smaller headsails, the mast being further forward and the distance from mast to bowsprit end being less. The Piepgrass spars are given as mast 104ft. and boom 103ft. Of course all of these measurements are in the rough, and the lengths may be reduced in use. The housing of the mast is given as 9ft.

The following is from the *Boston Globe* of April 21:

Here are some of the yarns which yachtsmen are spinning around town. Some of them are true. The truth or untruth of the others will be shown in due time. They say:

That a yachtsman who has had a look at the Defender saw no signs of an auxiliary centreboard forward *a la* Jubilee.

That the Defender would not need such a board anyway, as she is less cut away forward than the Jubilee.

That although General Paine always had the Jubilee's forward board down in going to windward with the jibtopsail set, skipper John Barr was never quite sure whether or not it was doing any good.

That Defender is about as commonplace and non-distinctive a name as could be selected, and that it looks as though the syndicate, in selecting it, took the easiest way to avoid an avalanche of coupon suggestions.

That as long as the Defender is the only new boat, and is likely to defend the cup, there is not so much assurance in taking a generic for a specific title as there would be with another new boat building.

That sailm ker Wilson has been given carte blanche on the syndicate suit of sails for the Defender, and will show yachtsmen a new wrinkle or two in specially woven duck of extra fine quality.

That the yachting writer or correspondent who figures the beam of the Defender so close as 23ft. and one-quarter of an inch, had better watch closely or a thirty-second of that quarter may escape in the final burnishing of the plates.

That Herman Duryea, who is soon to marry the widow of the late ex-Commodore Wm. F. Weld, and who has taken a house at Cowes for the summer, has ordered a 1 rater of the Herreshoffs for the racing in Southampton water.

That another order of the Hereshoffs is for a ½-rater, to meet Spruce IV., the boat which J. Arthur Brand, of London, will bring to this country, and for the racing of which the Seawanhaka Corinthians will offer a fine international challenge cup.

That the yachtsman who has a piece of the duck from which the mainsail of Defender is being made at Bristol considers it not of extra good quality, and rather coarse and common in weave.

That the first sternpost sent the Herreshoffs for the Defender had a flaw in it, and that the delay at Bristol is the wait for a new one to be cast and delivered.

That the syndicate will not demand the contract forfeit if the Herreshoffs deliver the Defender within a reasonable time after June 1.

That the syndicate did not choose manganese bronze plates for the Defender instead of Tobin bronze because they cost more, but simply because the rolls for working the former were new and hence likely to produce a smoother plate than the somewhat worn rolls of the older company.

That the writer who descends to wilful misrepresentation and silly personal abuse of another simply shows the state of his own mind, and moves the assailed one to merriment. W. E. Robinson.

The steamer Paris brought over the spare spars and gear of Vigilant, and they have been stored in the Erie Basin.

YACHTING NEWS NOTES.

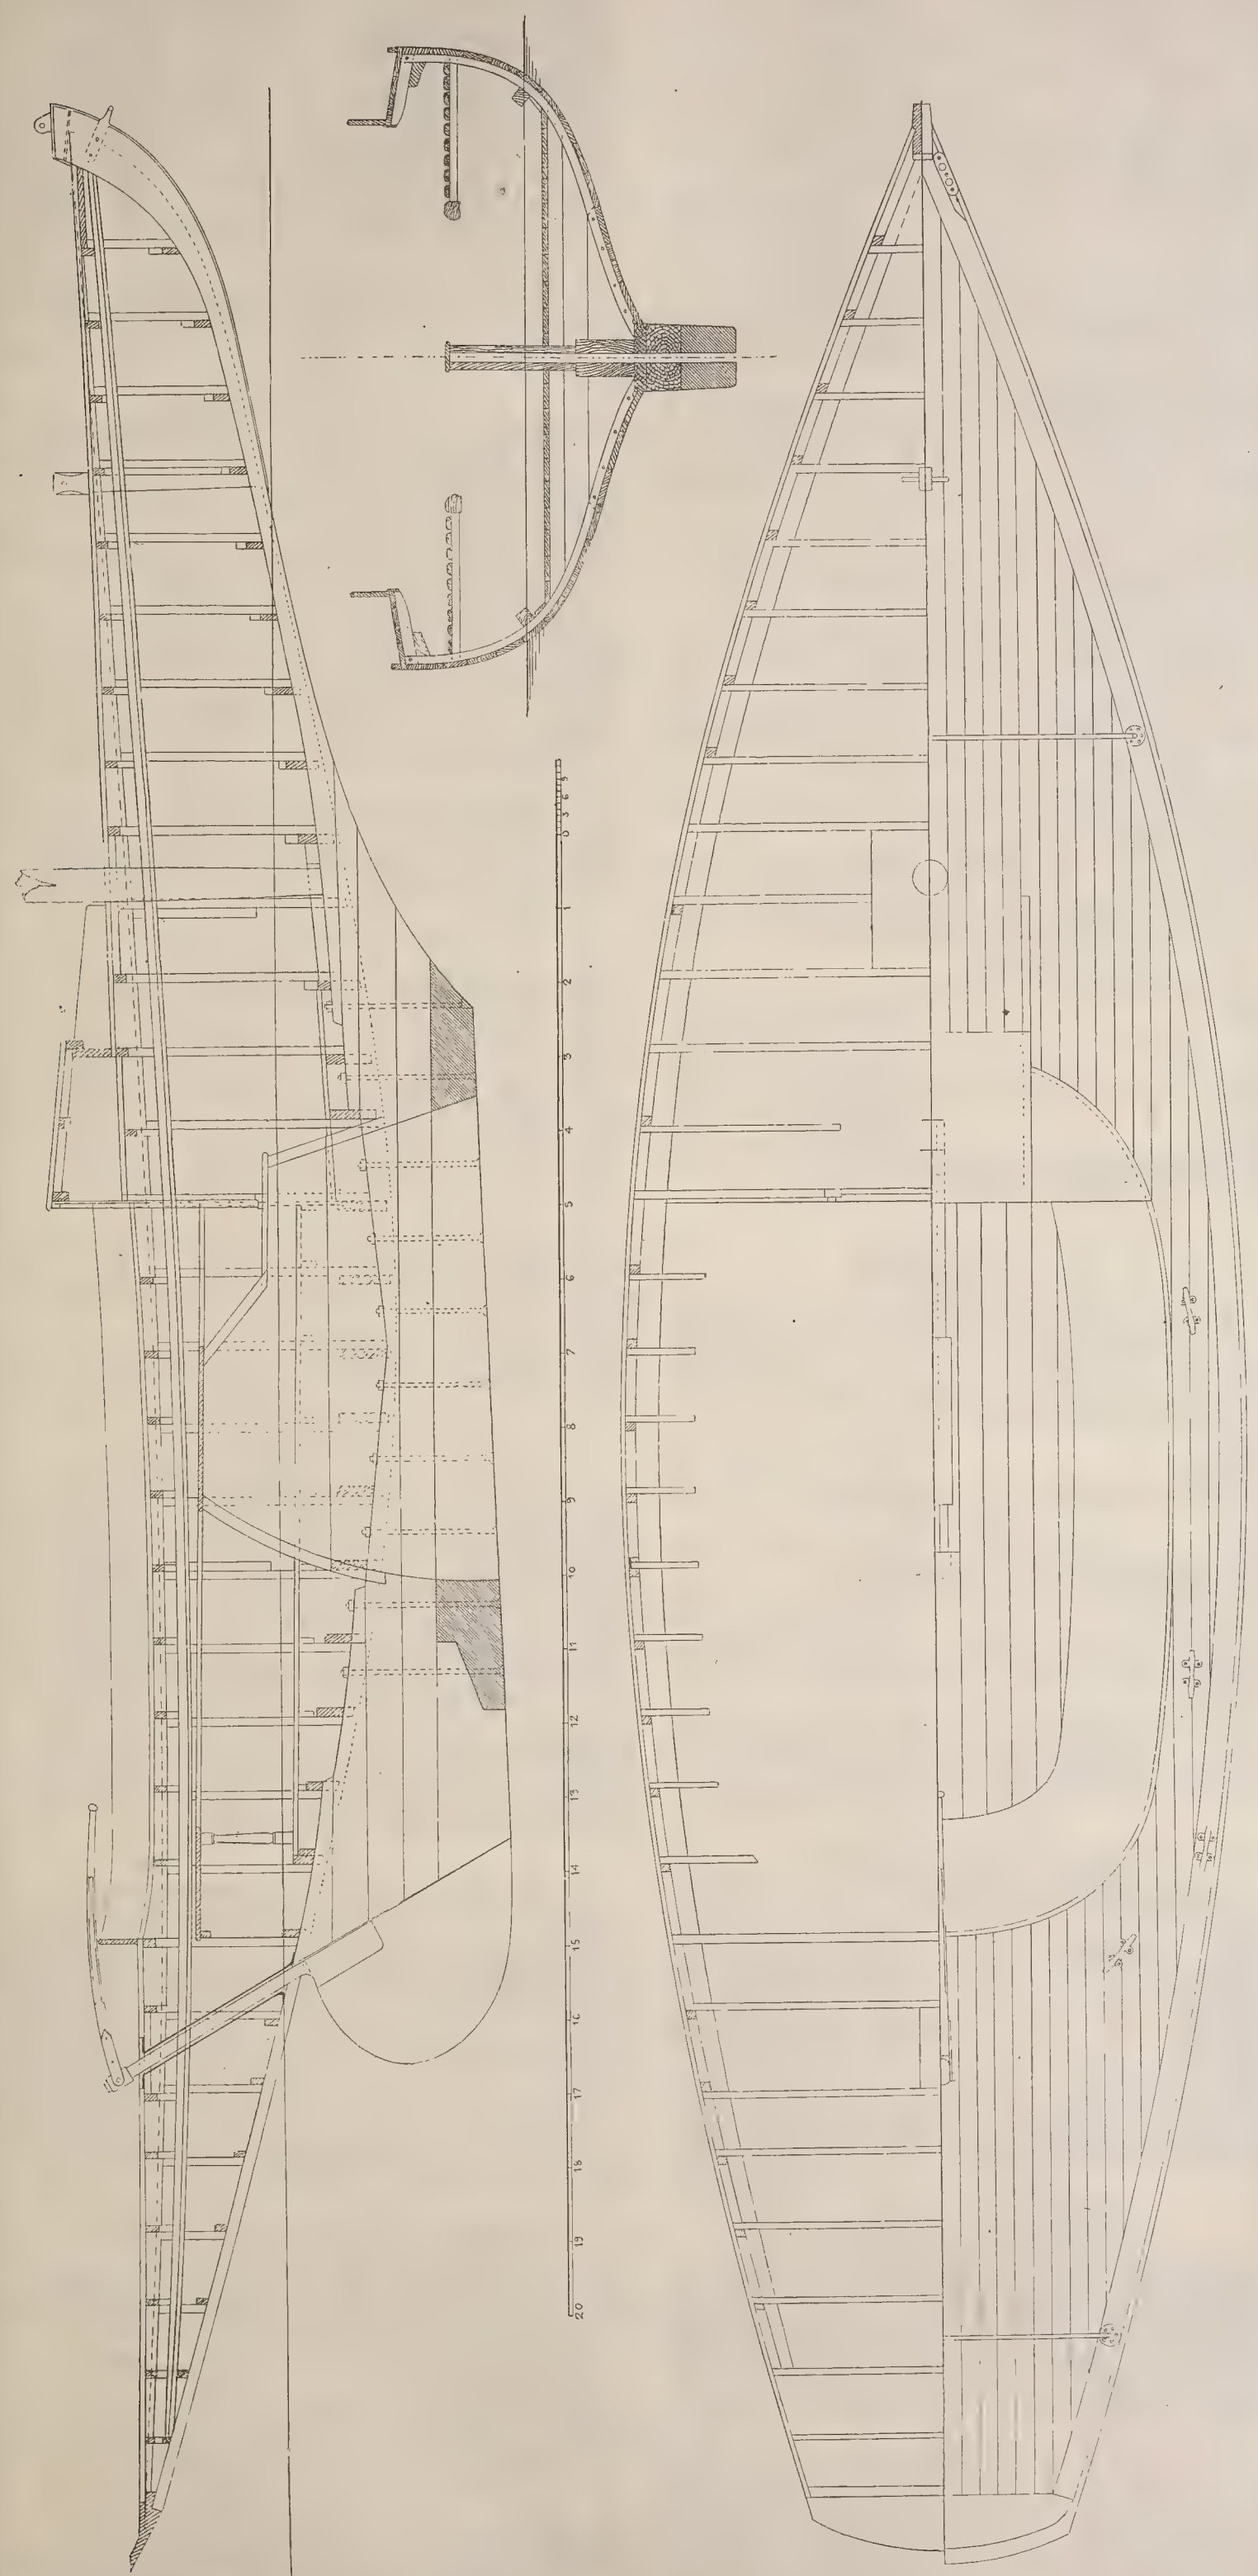
The 30 ft. yawl building at Abramson's yard, South Brooklyn, is not intended, as has been announced, for racing, but was designed last fall by Mr. H. J. Gielow for Mr. J. F. Ackerman as a handy knockabout boat for the Sound. As Mr. Ackerman then owned several yachts, her construction was deferred until he had sold some of them, and has just been commenced. She will be 45 ft. over all, 30 ft. lwl., 12ft. beam and 5 ft. 5 in. draft, with a straight keel from which the stem rises in a straight line at a moderate angle, making quite a long forward overhang with considerable sheer forward. The counter will be similar to Saona and other of Mr. Gielow's boats. The midship section is of the form common to the modern compromise centerboard boat, the centerboard being of steel plate. The keel will be of iron, and the coustruction will be strong and durable, with no special effort at lightness, the boat being intended for merely all-around service. She will have a good-sized cabin under the usual cabin house, with a large cockpit. The sailplan shows boom and gaff mainsail and mizzen, and forestaysail. The boat was designed without reference to the new Larchmont special class, in fact before the class was in any way outlined.

There seems to be no good foundation for the rumored 34 footer for Mr. Maxwell from Mr. Wintringham's design, and for the 34 from Mr. Smith's designs, thus far no such boats have been ordered.

Heedless, cutter, has been sold by Le Grand Clark to Louis Wunder Brooklyn Y. C., who has sold the sloop Vixen.

A contract has been given out by the Huntington Y. C. for a new house 40×25ft., to be built on the steamboat dock recently leased by the club. The work, which will include a float 30×12ft., and will cost $1,400, will be completed early in the season.

Sentinel, steam yacht, formerly owned by Rev. John Aspinwall, has just been sold to L. C. Wachsmuth, of Chicago, and will sail for the Lakes soon.



Com. Gould has appointed Gen. Thos. L. Watson as Fleet Captain and Dr. Ramon Guiteras as Fleet Surgeon of the Atlantic Y. C.

The new Vanderbilt 21 footer was originally designed to be 32ft. over all, while the Larchmont 21ft. class is limited to 31ft. To bring her into the class, it has been necessary to shorten the counter by a foot.

A meeting of the Harlem Y. C. was held on April 17 at which the club voted to join the new Sound Union. The vacancy caused by the resignation of Com. W. A. Brady was filled by the election of Mr. John Wimmer.

Ituna, steam yacht, has arrived at New York after a long and pleasant cruise in the West Indies: all on board speaking in the highest praise of the yacht. Capt. John Crawford, formerly skipper of Liris in her first two seasons, and afterward of Bedouin, has been in command since Mr. Armour purchased the yacht.

On Saturday morning at 10:45 a violent explosion of naphtha took place on board the steam yacht Reva, G. L. Ronalds, in winter quar

CENTERBOARD KNOCKABOUT—DESIGNED FOR F. L. DUNNE, ESQ., BY WATERHOUSE & CHESEBROUGH.—1895.

ters at the wharves of the Gas Engine and Power Co. The two men in charge of the yacht. Mate Nicholas Holland and Christopher Johnson, were thrown into the air, the latter falling overboard, and Capt. Whittier, of the steam yacht Neaira, moored alongside, was thrown to the deck and injured. The explosion was followed by fire, which was finally extinguished. The two men Holland and Johnson were taken to the hospital, being badly injured. The whole after portion of the yacht was blown out, the damage amounting to $5,000, and the Neaira was damaged to the extent of several hundred dollars. The cause of the explosion, so far as known, was naphtha used by the men in cleaning the cabin.

The Corinthian Mosquito Fleet.

A GENERAL meeting of the Corinthian Mosquito Fleet was held at the Murray Hill Hotel on April 14.

The question of changing the name of the club from "Corinthian Mosquito Fleet" to "The Corinthian Fleet" was the important business of the meeting, and in view of the fact that the old name had become, to an extent, a misnomer, and that by simply dropping the word "Mosquito" the identity of the Club would be preserved, it was voted to make the change, and in the future the Club will be known as "The Corinthian Fleet," of New Rochelle.

Resolutions were also offered to the effect that the Club join and support the new Sound Racing Association; and a new cap device showing a blue and white enameled disk on fouled anchors, was adopted.

Mr. E. A. Bourne was elected measurer to succeed Mr. John Hyslop, who has been the Club's measure for several years.

The new clubhouse on Harrison's Island is about ready for occupancy, and will be formally opened some time in May.

One of the first events of the season will be a race for the Center Trophy, which was presented by the late Robert Center to the Club some time ago, but owing to certain requirements in the deed of gift the prize was never raced for. Late last season, however, Mr. Center made the necessary modifications, and the prize will now be put up and raced for by the ½-raters.

Yankee Yacht Sailors.

We have received a letter asking the addresses of yacht captains in behalf of sailor men from Little Deer Island who are anxious to secure berths on yachts. These men have been brought up to the sea and are sober and of good character. We will be pleased to furnish the address of our correspondent to any who may desire to secure American sailor men.

CANOE NEWS NOTES.

The Red Dragon C. C. has announced the following events for the season: June 15, annual regatta, open to all members of the A. C. A.; Sept. 14, fall regatta and camp fire.

A. C. A. Membership.

Eastern Division: Louis A. Hall, Newton, Mass.; John N. Stetson, Lewiston, Me.

Trap-Shooting.

FIXTURES.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 8-10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

DRIVERS AND TWISTERS.

In regard to the great tournament at Knoxville, Tenn., next month, R. Van Gilder writes me that he wants FOREST AND STREAM to "state to the boys at large that if they are coming to kindly send in their names at once, without any further delay. If they do not come, they will certainly miss the best meeting and highest amount of added money ever given in this country. To raise $3,000 for added money during such times means *arduous* work, and deserves the support of all." Mr. Van Gilder adds that the club has $2,800 of the $3,000 cash on hand; that means that 80 shooters have put up the ten spots and will be on hand to shoot. Knoxville is going to have a great tournament, at any rate.

The Forest Gun Club, of Savannah, Ga., has elected the following officers for the ensuing year: President, E. J. Kieffer; vice-president, Wm. M. Davidson; secretary, C. A. La Motte; treasurer, Wm. M. Davidson; executive committee, Henry Woeltzin, John Reiderman, John F. Ulmer.

A Kansas City, Mo., paper credits Elliott with saying that "the challenges of Captain Brewer are nothing but advertising fakes, and that Brewer cannot get backing for a match with him." It is hardly likely that Jim Elliott said any such thing, because he knows that such is not the case. The only trouble in the way of making a match was that Jim wouldn't tie himself down to shoot Brewer in New York or any other Eastern State, wanting two matches to take place at Kansas City, whereas Brewer said that so long a trip wouldn't pay for so small an amount. Jim never made any such statement as the above; he knows better.

The fourth tournament of the New Jersey Trap Shooters' League will be held next week, on May 2, at Elizabeth, N. J. The league shoot commences at 2 P. M. As Elizabeth is easy of access, has commodious grounds and club house, sets a good lunch, and keeps the ball rolling in capital shape, there ought to be a big attendance if the weather is fine.

Event No. 8, in the Pittsburg, Pa., Interstate shoot on the second day, April 17, had 51 entries. A brief synopsis of the scores shows that 33 shooters took part in the 100-target handicap race on April 16, and that about 6,000 targets were thrown during the day. On April 17, 55 shooters took part in the programmed events, 47 putting in an appearance on April 18. The Grand American week at Willard Park and the Pittsburg Gun Club's tournament have proved good starters for Interstate Association's series of tournaments for '95. Shaner should be happy.

Mr. A. A. Mackert, secretary of the Wilmerding, Pa., Gun Club, writes that the Decoration Day shoot of his club has been postponed. It will be held on June 15, at the club's grounds in Wilmerding. The shoot will be an all-day one at blue rock targets, four moneys. The club will also hold semi-monthly shoots during the season which commences April 20. All shooters in the vicinity have a cordial invitation to attend extended to them.

A special meeting of the Eureka Gun Club, of Chicago, Ill., was held on Saturday, April 20, for the discussion of important business.

The Dupont tournament to-morrow at Cincinnati, O., is set down for May 7-10. Cincinnati is centrally located; Ohio is a State of trap shooters; the inducements held out by the Dupont Powder Company are very great, and the management is bound to be of the best. The tournament will be a good beginner for the Southern tour that starts on May 7 at Cincinnati and ends on June 13 at Memphis, Tenn. Dayton, O., Lynchburg, Va., Knoxville, Tenn., and Little Rock, Ark., complete the circuit.

It is a little unfortunate that the Interstate's tournament at Wilmington, N. C., is to be held on May 9, 10, two of the dates of the Dupont tournament. FOREST AND STREAM's representative cannot be in two places at once, therefore the misfortune is mine.

The answer mailed to T. A. Divine, Chairman of the committee, and President of the Memphis Club, in response to the following invitation, can be readily imagined: "The second annual tournament of the Memphis Gun Club will be held June 11-13, and we, on behalf of the club, extend to your staff correspondent an invitation to visit our city, as our guest, during the above week. It will give us pleasure to entertain him and make his stay agreeable."

Mr. Oscar C. Guessaz ("Texas Field") is booming the Texas Sportsmen's Association shoot on May 15-19 in a very efficient manner. The association is an old one, the coming tournament being its nineteenth annual shoot. Five hundred dollars in cash and the same amount in merchandise prizes will draw a large number of shooters to San Antonio on the above dates.

The scores of the Dunellen, N. J. Gun Club's opening tournament on April 19 did not reach this office until Monday morning of this week. As the shoot was worth more than passing notice and the

mere publication of scores, the same have been held over until next week.

The following from Mr. Arthur Hyndman, 32 Pine street, New York city, is worth the attention of all who intend to take part in the DuPont tournament: "It may be of interest to some of your readers intending to take part in the DuPont tournament, to be held at Cincinnati May 7 to 10, to know that the Railroad Traffic Associations have authorized all lines to make a special rate of 1½ fare for round trip on the certificate plan. Sportsmen will at the time of purchasing tickets call for a DuPont Tournament Certificate and it will be furnished by the ticket agent. This certificate will be indorsed at Cincinnati, entitling the holder to purchase a return ticket by same route at one-third fare. Programmes are now ready for distribution and can be obtained from me on application."

The Baker Gun Company, of Batavia, N. Y., *Quarterly* for this month contains the second prize article "About Gun Safeties." The article is written by C. E. Whidden, of Charleston, S. C., and is of considerable interest. There is always a great deal that is worth noting by shooters in these quarterly publications by the Batavia gun firm, and the present series of prize articles adds greatly to the quality of the reading matter.

The Palmetto Gun Club, of Charleston, S. C., opened its season on Thursday of this week. The programme contained events at targets and live birds, and also had a note to the effect that "Dropping for place will not be tolerated." Mr. G. A. Steck is secretary of the Palmetto Club.

The programme for the Texas State Sportsmen's Association tournament, May 15-19, and the Interstate Association's tournament at Lynchburg, Va., May 17 and 18, are both to hand and will be noticed next week. The illustrations in the Texas programme are very interesting, and the programme itself gives evidence of the amount of work done by Mr. Guessaz. EDWARD BANKS.

Climax Monthly Club Shoot.

PLAINFIELD, N. J., April 22.—When the secretary, Dan Terry, sends around his postal cards announcing that the monthly shoot of the Climax Gun Club will be held on such and such a date, the members of that club are not in the habit of paying scant attention to such notice. The date is remembered, and, rain or shine, there is always a good attendance at Benner's Fanwood Road House at the hour appointed. To-day was no exception. The weather was threatening all the morning and the chilly east wind was not inviting. Still less inviting was the early part of the afternoon, rain commencing to fall heavily about 1:30 and continuing until about 4. So slight a matter as a shower of rain did not stop the shooters from gathering at the club house, sixteen members putting in an appearance.

The first event was a 10-target race, expert rules, one man up, 50 cents entrance. The scores made were as follows: Smith 10, D Darby 10, Apgar 9, Brantingham 9, Manning 9, W. Squire 9, Edwards 8, G. Squire 8, Major 7, Keller 7, Williams 6, Singer 4.

Next came the club race, which resulted in some good shooting, five of the members scoring the maximum number of points—6, and only three out of the sixteen shooters failing to add to the totals already credited to them in the secretary's book. Points are scored for each break over 19—one for each additional break up to 25, which entitles the party scoring that number to 6 points. All breaks over 25 count nothing. To-day's scores give points to shooters as follows: Apgar, Manning, P. Jay, J. Darby and Edwards 6 each, Brantingham 5, Williams and Singer 4, Keller, D. Terry and D. Darby 3, Smith 2 and Major 1. Full score below:

Apgar (0)	1111111111111111111111111	—25
Brantingham (0)	1111111111111111111011111	—24
Keller (0)	1110111111111011111011111	—22
Smith (0)	1000111111011111111111111	—21
Major (0)	0011111111001111111111101	—20
D Terry (1)	1010111111111011101111111	—22
Manning (2)	1111111111111111111011111111	—26
W Squires (2)	1101101010101000110110101O1	—15
W Terry (4)	0111111110001000110110111O100	—17
P Jay (5)	1111111111111101111111111011	—28
Edwards (5)	1011110101111111111111101111111	—27
Williams (5)	0111100010111111010111111111	—23
D Darby (5)	1011111110101101101111100011	—22
J Goodman (6)	0110110111110111111100100001000	—18
J Darby (7)	1101111101101111101111101111111	—27
Singer (10)	1001010110110101110010011011111111	—23

A 10-target event, at unknown angles, followed the club shoot. It resulted as follows: Manning 10, G. Squires 10, Apgar 9, Keller 9, Smith 9, D. Darby 9, D. Terry 9, Williams 9, P Jay 9, Edwards 8, Brantingham 8, Singer 7, W. Squires 7, Hisnibbs 5.

Rochester Rod and Gun Club.

THE Rochester Rod and Gun Club offers to its members a list of 14 prizes, all of them worth winning, and also five special prizes, for competition during the present season. The first score in these prize shoots was given in our issue of April 20. The rules governing the prize shoots are as follows: "Shooting for above prizes will begin on Wednesday, April 3, and continue each week to and including Saturday, Sept. 28, Wednesday and Saturday of each week constituting one shoot. Members in arrears may shoot up any number of back scores. Before shooting a string for the prizes members must so announce it to the scorer. American Association rules; rapid fire; known traps, unknown angles. Highest number of targets broken wins first prize, etc. The handicap is taken on a percentage basis, counting all shots fired during past six months, and should a member fail to make his average on any string he will be given enough more targets on the next string to correct the difference, percentage figured at 25 targets. The committee will meet once each month (after the shooting on April 27, May 25, June 29, etc.), to correct the handicap if found necessary, but otherwise the handicap cannot be changed."

The handicap above referred to is the following, Glover and Kelsey being scratch men: Glover and Kelsey, 28; Stewart and Pope, 30; Byer, Hadley, Tassell, Lane, Babcock and Ed. Andrews, 31; Meyer, Nichols, Weller, Hunt and Norton, 32; Hicks, Hill, Crouch, Koch, F. L. Smith and C. Woolcott, 33; C. Rissinger, Borst, Rickman, Lowden and Hooker, 34; Mann, J. Rissinger, Redmond, Rugg, Brad. Palmer, Putnam, Schmitt and C. S. Smith, 35; Fulton and Kay, 36; Macomber, Foley, Truesdale, Judson and L. B. Smith, 37; McCarthy, Sumner, Griffith, Maguire, J. H. Brown, Quirk, Hutchinson, Van Austrand, J. L. Bruff, Gardner, Mullan, G. H. Squires and A. R. Squires, 38; Backus, McVean, Wride, Bradstreet, S. B. Stuart, James S. Watson, Cleveland, Haggerty, Moore, W. S. Smith, Jr., Selden, Tripp, Wilson and Wilbur, 41; I. H. Andrews, George W. Brown and E. P. Bishop, 45; Schleyer, Kleinhans, Bauer, Williard, Houck, Catchpole, Barhite, Clark, Buckley, Hess, Hale, Nolan and Widener, 50; Gordon, Brinsmaid, Roth, Fraine, Ryckman, C. A. Bruff, James McCulloch, Joseph W. Palmer, S. B. Williams, C. F. Walters, Bausch, Davy, Eaton and Durand, 55.

Rockaway Point R. and G. Club.

AT the April shoot of the Rockaway Point Rod and Gun Club, held on April 15, the following scores were made:

No. 1, 10 targets, known angles: Wash 10, Schort 9, Woods 8, Heyer 7, Smythe 5, McKenna 2

No. 2, star sweep, re-entry up to the sixth round, then miss-and-out: Schort 6, Woods 6, Smythe 5, Wash 4. Schort won first money.

No. 3, same: Schort 10, Woods 10 (divided first), Wash 8, Smythe 4.

No. 4, same: Schort 9, Wash 8 (divided), Smythe 9, Woods 7, Tiernan 4.

No. 5, same: Wash 7 and Woods 3 (divided), Spott 5, Schort 4, Smythe 4, Tiernan 3.

No. 6, 25 targets, expert rules: Schort 17, Woods 16, Smythe 15, Wash 14, Tiernan 14, Spott 11, McKenna 7, Scott 11.

No. 7, handicap allowed, 25 targets, known angles: Wash 22, Smythe 20, Tiernan 19, Schort 17, Spott (3) 23, McKenna 14, Lyons (3) 21, J. H. Voss (3) 24, H. W. Voss (3) 24, Loeble (3) 20.

No. 11, 10 pairs: Crawford 17, Schort 15, Wash 15, Loeble 11, McKenna 11. SHAD ROE.

Will Use Rose's System of Dividing Purses.

MOUNTVILLE, Pa., April 18.—We had a very pleasant tournament on Easter Monday, given by the Columbia (Pa.) Gun Club on their East Columbia club grounds, at targets, with a division of three moneys, but all in equal parts, or 33⅓ per cent. each, which enables all to get something back. The best part of the shoot was the small entrance fee—50 cents for 10 birds. If you did not get in the divy, the price did not hurt you. It is the pleasure of shooting the boys are after. The boys entered the same squads every time, so that the shoot was easily managed. The shoot kept up until everybody had shot away all their ammunition. The club made double the money they would have had they made the entries at $1 or $1.50. The wind was blowing a gale and the targets seemed to have wings. No straight scores. Messrs. Fieles, of Christiana, and Burnham, of York, were present. The next tournament will be held at Mountville, with same entrance, and straight-out or anti-drop system of dividing. TELL.

Forest Gun Club.

PHILADELPHIA, Pa., April 15.—Inclosed please find scores of the Forest Gun Club's tournament, held to-day on its grounds, Twenty-seventh street and Lehigh avenue. The following clubs were represented: Keystone Shooting League, Germantown, Wingohocking, Wilmington, Del., Silver Lake, Lansdowne, Ashbourne, Phœnixville, John F. Weiler Gun Club, of Allentown, and the Reading Shooting Association. About 3,000 targets were thrown. Scores:

No. 1, 7 targets, known angles, 50 cents: Morison 5, W. Hallowell 4, Treadway 6, Shaaber 7, H. Thurman 6, Martin 2, Lane 5, Schmeck 4, Irvin 3, Hansell 5, Bell 3.

No. 2, 7 targets, unknown angles, 50 cents: Morison 6, W. Hallowell 3, H. Thurman 4, Treadway 6, Shaaber 6, Martin 4, Lane 6, Whitney 4, Schmeck 4, Bell 4, Hansell 5, Henry 5, Park 3, Irvin 5.

No. 3, 10 targets, known angles, $1: Morison 4, W. Hallowell 7, H. Thurman 0, Treadway 7, Shaaber 8, Martin 3, Lane 9, Schmeck 7, Whitney 1, Bell 2, Henry 8, Hansell 8, Park 5.

No. 4, 15 targets, unknown angles, $1.50: Morison 9, W. Hallowell 8, H. Thurman 7, Schmeck 12, Treadway 9, Shaaber 12, Martin 10, Lane 11, Henry 9, Bell 10, Hansell 8, Irvin 8, Evans 11, Bilderbach 7, Hartlove 5, Cleaver 10.

No. 5, 7 targets, known angles, 50 cents: Morison 3, W. Hallowell 5, H. Thurman 4, Schmeck 4, Cleaver 5, Lane 5, Shaaber 6, Park 3, Whitney 4, Treadway 5, Evans 6, Henry 5, Martin 0, Hancock 3, Hartlove 6, Bilderbach 5, Wood 3, Hansell 6, Bell 2, Irvin 4, Bender 3.

No. 6, 10 targets, unknown angles, $1: Morison 6, W. Hallowell 5, H. Thurman 7, Schmeck 9, Cleaver 9, Shaaber 8, Treadway 6, Lane 9, Evans 6, Henry 4, Whitney 5, Martin 6, Hancock 2, Bilderbach 2, Hansell 10, Hartlove 3, Bell 6, Irvin 6, Park 4.

No 7, 20 targets, known angles, $2:

Eureka Gun Club.

CHICAGO, Ill., April 13.—The second shoot of the Eureka Gun Club took place to-day. The wind was high and came in fitful gusts, making the shooting hard. The trophy shoot was the main event, Stannard making the good score of 23 out of 25. In No. 6, Skinner and DeWolf tied for second place and agreed to shoot off at 15 targets, adding $2.50 a side to make it interesting; DeWolf won by the score 13—12. Scores:

No. 1, 25 targets, unknown angles:

F P Stannard	11110111111111111111011111—23
W F DeWolf	10111111110111111111111110—22
W E Philips	11010111111101011111111111—21
W H Skinner	11101101101101011101111111—19

No. 2, 10 targets, unknown angles: Philips 9, DeWolf 9, Skinner 6, Glover 5.

No. 3, 25 targets, unknown angles: Stannard 20, Glover 18, Skinner DeWolf 12.

No. 4, trophy shoot, 25 targets, unknown angles:

F P Stannard (A)	11111111111111110111011111—23
C E Willard (A)	11011111011111111111111100—21
J T Glover (B)	11110111001111111111011110—20

W E Philips (B)	11001110111011001011001—16

No. 5, same conditions as No. 4: Stannard 21, Glover 18, Skinner 15, Alabaster 11.

No. 6, same as No. 4: Glover 18, Skinner 17, DeWolf 17, Alabaster 17.

No. 7, Skinner vs. DeWolf, 15 targets, unknown angles, $2 50 a side:
DeWolf.....111101111011111—13 Skinner.....111011011011111—12

No. 8, same as No. 4: Willard 19, Glover 15, Arnold 15, Sylvester 9.

No. 9, same: Willard 21, Arnold 15, Sylvester 11.

No. 10, same: Willard 21, Stannard 20, Arnold 15. W. F. D., Sec'y.

Keystone Gun Club of Buffalo.

BUFFALO, N. Y., April 15.—The Keystone Gun Club held its medal shoot to-day, the scores being as follows:

J Parker	11111101010011101011110110—17
F Kinney	11001111111101010111110100—18
S Duley	11110111011101111111110111—21
F Esmond	11011101111111111111111111—23
W Sully	01010100111111011111111111—19
E Inderbitzen	01111111010010111101111011—18
G Simpson	00111000001011100101110000—11
M Duggan	11100011100001101111111111—17
J Duggan	00011000110101001000110000— 9
F Fahey	00110010011111011010000100—11

A sweep at 10 bluerocks was also decided with the following result: Esmond 9, Sully 9, Duley 8, Parker 8, Kinney 7, Inderbitzen 7, Fahey 4. Duley and Parker shot off their tie for second money at 5 targets, Duley winning by 5—1; Kinney and Inderbitzen also shot off the tie for third money at a similar number of targets, Kinney winning by 5—4. F. D. KINNEY, Sec'y.

Lockwood Won the Match.

LARCHMONT, N. Y., April 17.—A number of spectators came together at the Larchmont Hotel shooting grounds to-day to witness the three-cornered match at 15 live birds between B. Lockwood, Fred. Knof, superintendent of the Larchmont Yacht Club's shooting grounds, and L. B. Tompkins. The match was for $15 a corner, Lockwood winning by 13 kills, to Knof's 12 and Tompkins's 10; the latter attributed his comparatively poor score to inferior loading of his shells. J. H. Mills acted as referee. Score:

L Tompkins (28)	11200222202020—10
B Lockwood (28)	21200222222222—12
F Knof (28)	00122122120122—12

J. H. M.

West Newburgh G. and R. Association.

NEWBURGH, N. Y., April 18.—In the prize shoot of the West Newburgh Gun and Rifle Association, held to-day, Likely won a heat for first prize, Stansborough and Wood tieing for second place. The shoot is a handicap allowance of misses as breaks, and is shot at 15 known angles and 10 unknown angles. Score:

E C Likely (3)	11111111101011101011111111—24
Stansborough (3)	01101111110110111111111101—23

The Climax Team Meets a Second Defeat.

PHILADELPHIA, Pa., April 16.—The Climax Gun Club, of Plainfield, N. J., shot a return match to-day with the Keystone Shooting League of this city. The first match took place March 25 on the Climax grounds, at Plainfield, N. J., the Keystones winning by 159-152. To-day's match was shot on the Keystone Shooting League's grounds, at Holmesburg Junction, Pa., and resulted in another defeat for the Climax team, the score standing: Keystones 158, Climax 156. Scores:

	158		156

* An optional sweep of $5 was shot in connection with the team race, all entering the sweep with the exception of Febryer. In addition to those named above the following also shot in the sweep: G. Giberson 14, W. H. Pack 14, "Tampa" 11.

Brewer's Money is Up.

ON Friday, April 19, John L. Brewer came into FOREST AND STREAM'S office and posted $250 in the hands of the editor of the trap department to bind a match with C. Cockburn, of Toronto, Can., upon the terms proposed by Cockburn in his letter published a few weeks ago in FOREST AND STREAM. Brewer stated that he had seen the note in our issue of April 20, which referred to the fact that Cockburn had put up his $250 in the hands of the editor of the *Canadian Sporting News*, as Brewer had requested him to do. Such being the case, he said he was ready to bind the match, and posted $250 to do so. The following telegram was then sent to make sure that the terms proposed by Cockburn were thoroughly understood at this end of the line:

"H. P. GOOD, *Editor Canadian Sporting News*, Toronto, Can., April 19.—Brewer has placed in my hands two hundred and fifty dollars to bind match with Cockburn on terms proposed by Cockburn, which were as follows: 100 live birds, 26 yards rise, 80 yards boundary, use of one barrel, 1⅛oz. of shot, gun below elbow till bird on wing, $250 a side, Old Dominion rules to govern except in matter of rise, Cockburn to guarantee Brewer's expenses. Brewer wants all birds trapped from one lot. If terms are satisfactory, wire me immediately and money will be forwarded to you, to be handed over to winner. Shoot to take place any date from May 7 to 14 inclusive.—EDWARD BANKS."

To the above the following answer was received on Monday morning: "Cockburn accepts, money deposited. (Signed) H. J. P. Good." The money put up by Brewer has accordingly been forwarded to Mr. Good, who now holds the $500, the ultimate ownership of which depends upon who wins the match. No exact date has been fixed, but it will take place between May 7 to 14 inclusive, as Cockburn evidently does not object to those dates.

Traps at San Antonio.

SAN ANTONIO, Texas, April 19.—Some good shooting was witnessed by the fortunate spectators who were sightseeing in West End on the 15th at a meeting of the Powder Hill Gun Club, as the scores will attest:

No. 1, 10 targets, unknown traps: Wallace Miller 10, A. B. Critzer 9, H. Shaw 9, A. W. Adams 9, Miles Miller 10, Ohnesorge 8, Dyer 8, Burkett 8.

No. 2, regular club shoot, 30 singles and 5 pairs: Wallace Miller 36, A. B. Critzer 36, M. P. Miller 33, H. Shaw 34, A. W. Adams 35, Ohnesorge 32, Dyer 32, Lieut. Foster 31, Burkett 30

No. 3, 25 targets: Wallace Miller 23, Critzer 23, Miles Miller 22, Dyer 21, Shaw 22, Adams 22, Burkett 20, Ohnesorge 19, Lieut. Foster 18.

No. 4, 25 targets: Adams 24, Wallace Miller 25, Miles Miller 21, Lieut. Foster 19, Shaw 21, Critzer 23, Burkett 21, Ohnesorge 20, Chabot 22.

AT LAKEVIEW.

The regular shoot of the San Antonio Gun Club was held at Lakeview recently. Scores as follows:

No. 1, 15 targets: Vollbrecht 11, Grossman 9, W. J. Smith 11, Samuels 10, Chabot 11, France 10, Thiele 9, Eppstein 9, Tendick 9, Griesenback 7, Veith 8.

The second event was the regular medal shoot with 16 entries. The following is the score: Chabot 18, Learn 20, Carpenter 13, Grossman 20, Epp 23, Thiele 17, Tendick 22, Samuels 13, Smith 18, Eppstein 18, France 23, Vernor 22, Shields 19, Vollbrecht 13, Veith 16.

TEXAS FIELD.

Fulton County Gun Club.

GLOVERSVILLE, N. Y., April 12.—At a meeting held in Johnstown, N. Y., April 8, for the purpose of organizing a county gun club, the clubs of both that village and Gloversville were well represented, and an organization was formed which will hereafter be known as the Fulton County Gun Club and Game Protective Association. Edward Judson, of Gloversville, was elected President; Edward Banta, of Johnstown; N. J. Harris, of Gloversville, were elected Vice-Presidents; F. W. Parliss, of Johnstown, Secretary; Frank Thrall, Gloversville, Assistant Secretary; Charles Riemensnyder, Gloversville, Treasurer; James Pearson, Johnstown, Assistant Treasurer; Edward Banta, F. W. Partiss, William Smith, W. J. Harris, Executive Committee; F. W. Partiss and W. J. Harris were elected Captain and Assistant Captain. Twenty-five names of new members were signed, and with fifty from the old ranks makes a charter membership of seventy-five. Grounds have been secured adjoining the west side of Ried's Valley View Park in the south end, convenient to the electric railroad and therefore easily available for both places. The secretary was instructed to correspond with the New York State and Eastern League Trap-Shooters' associations with regard to membership in above associations. The season will open May 3, and all interested in shotgun or rifle practice are invited to send in their names for membership. For the riflemen the regulation ranges and targets will be used.

The Wilmington, N. C., Tournament.

THE Interstate Association will, on May 9 and 10, give a tournament at Wilmington, N. C., for the Eastern Dog and Game Protective Association. Advance copies of the programme for that event have been received. As at the Pittsburg shoot, so in all the Interstate shoots this year, the handicap system announced to the Pittsburg programme will prevail. It is well to note the following: "Any shooter who intentionally misses a target in order to obtain a certain place, shall forfeit all his interest in the purse, and will be debarred from taking part in any tournament given under the auspices of the Interstate Association." Headquarters for sportsmen during the tournament will be at The Orton, on Front Street. The programme scheduled for each day contains 10 events, all 15-target sweeps of $1.50 entrance, $5 being added to every purse by the home association, $100 in all. All events are uniform, as stated before, this being a necessity where the graduating handicap is used. For any further information apply to L. L. Pritchard, Secretary, Eastern Dog and Game Protective Association, Wilmington, N. C.

Missoula Rod and Gun Club.

MISSOULA, Mont., April 14.—The club was not fully represented at to-day's shoot, probably because of a chilling wind, which made shooting disagreeable. C. A. Searles captured the gold medal on a score of 17, and F. P. Kern secured the B. class medal on an identical score:

A Class.

W H Mase	11000111000011111101—12	R Rogers	01111101010011011111—14

RAVELRIGG.

THE INTERSTATE AT PITTSBURG.

Pittsburg, Pa., April 19.—The crack shots of the country had a royal time at the Exposition grounds last Tuesday, Wednesday and Thursday, when the tournament of the Interstate Association took place. The affair was ably managed by Elmer Shaner, who was indefatigable in his efforts to make the tourney a success. That he succeeded in pleasing everybody, contestants and spectators cannot be doubted. The tournament was not as largely attended as the one held last year, but it was more enjoyable, Manager Shaner taking care that interest never flagged. He had two sets of traps, which kept the shooters pretty busy, none having time to leave the park to "see a man" between squads, as was the case last year. The arrangements at the park were first-class. A stout railing separated the shooting grounds from the seats erected for spectators and contestants. The tents were pitched in the background, and there was plenty room for a promenade or a quiet chat in some corner. Everything was in tip-top shape, and the tournament passed off smoothly, without a single jar.

The experts did not take kindly to the system introduced for the first time by the association. But they were the only growlers. The amateurs thought the system the proper caper, and were charmed to find themselves within hailing distance of prizes that were hitherto beyond their reach when competing against the top-notchers. The system will have the effect of encouraging shooting among the poorer class of shots. The effort this week was a mere experiment, but the happy results obtained may induce the association to adopt the system permanently As will be seen by the scores, the amateurs won most of the money.

On account of gusts of wind which occasionally swept over the grounds, and a heavy fog which surrounded the park, the scores were not as good as the quality of the shooters promised.

Among the visitors who took part in the tournament were many top-notchers. Rolla Heikes, of Dayton, O., who is known as the "daddy of them all," was here, and so was B. A. Bartlett, of Buffalo. The latter did not miss a chance to sing the praises of the gun he is shooting; a gun, by the way, that he handles with great dexterity.

N. Pruitt, of Washington, D C., won the handicap race on the first day. He beat W. B. McKelden by one target. Pruitt was so elated over his victory that by reckless shooting he lost several chances of winning subsequent events.

J. A. Flick, of Ravenna, O., a one-armed shooter, made a splendid record. He wore large spectacles and broke targets at a rapid rate. Messrs. Rike and Raymond, both from Dayton O., were in the shoot with both feet and left with more money than they brought here. Rike is a big man who snugly wrapped himself in an immense red sweater. Raymond's appearance put one in mind of a robber baron of ye olden times. His fierce "pull" bore out the illusion. But there was probably no better-natured man among all the shooters.

A big shoot in Pittsburg would not be complete without the presence of W. R. Fieles, of Christiana, Pa. He carried the same image of a dog on the back of his coat with the regulation inscription, "This is my business." Whether the legend meant that Fieles is in the dog business or whether it was a hint not to ask questions, is hard to tell, as the shooter is always too busy cracking jokes or breaking targets to be disturbed. J. Von Longerke, of New York, who won the handicap last year, did not shoot last Tuesday. He showed up, however, on the last two days and shot well.

A. H. Donnally, of Fairmount, W. Va., was conspicuous for always being late when his squad was called. Manager Shaner was forced to almost split his throat in an endeavor to waken Ace, who was generally in a trance at the other set of traps, watching the shooters. The King Bros., of this city, are inveterate shooters, and never miss an opportunity to hear the crack of their guns. There is, however, much difference between the two men. Aleck keeps cool, and appears perfectly indifferent whether he misses or cracks a target. He never cracks a smile, and is deliberate in all his movements. Will, on the contrary, is fidgety. When he misses a target he watches the thing until it hits the ground, and then begins to worry himself red in the face. J. H. Shaffer likes nothing better than to make a good score. He can shoot well at the start, but after bringing down four or five in succession he collapses and misses the easiest chances. He pulled off his coat on Thursday and went at it with a determined face. He shook all over when he shouted "pull," and it was a pleasure to watch his face light up when he sent the pieces flying. Joe Glesenkamp, under the name of Black, took part in several events on the last day, with indifferent success. He was in his Sunday clothes. In fact Joe is always in his Sunday clothes. Nobody can remember seeing him otherwise than togged out in the height of fashion. Bessemer (J. E. England) did not take part in the handicap, but he was on hand in the other events. He is one of the best and most popular shooters in this section. He is a quiet, unassuming gentleman, one of the kind who never wore a stiff hat, but has clung loyally to the slouch. He takes his stand at the trap and when his time comes he raises his gun up to his ear, then drops it below his arm-pit and shouts "pull" as if he meant it. As the scores will show he was very much in the game on the second and third day. J. G. Messner, winner of the Grand American handicap, who shot under the name of J. George, appeared on the first day only. He broke 79 out of a possible 115 target and then disappeared. W. M. C. Jones, good natured in proportion to his size, was among the leaders on the second and third days. J. G. Huffman, who shot in hard luck, looked like the villain in "Der Freischutz." All he needed to complete the semblance was a cock's feather in his hat.

The surrounding towns sent their best representatives to the shoot. There was Dr. Cundall, from Little Washington; Tom Brown, Skilman and D. S. Shaw (Boyd), from Wilmerding; Scott, from Braddock; Cutler, from Kensington; Titlow, from Uniontown; Wayman, from Staunton, W. Va.; J. R. Miller, from Morgantown, W. Va.; Penn, from Wheeling; Sawyer, from East Liverpool; John Donnelly (Fritz), from Sharpsburg; Williams, from Hemstead; Ace Donnally, from Fairmount, W. Va., and many others.

The first day was taken up in shooting off the handicap target race. Thanks to the two sets of traps, it was finished in time enough to allow several extra events being shot. As will be seen from the score N. Pruitt won the handicap by breaking 96 targets. Smoke Stack.

First Day's Scores.

The following are the scores made in the handicap race, the number of targets shot at being given in parentheses after the shooter's name. Arden did not shoot off his string, retiring at the end of his 100 targets:

```

In addition to the above event, six extra sweeps were shot off, four of them 20-target races and two 15-target races. All were at unknown angles, no handicap, and the entrance fee in each was at the uniform rate of 10 cents per target in event. Rike did the best shooting in these events, breaking 81 out of 90.

Second Day's Scores.

The Pittsburg Gun Club added $100 to the purses on each of the last two days of the tournament. The money was added to the last eight events of the programme, $10 being added to each 15-target event and $15 to each 20-target event. The entrance fees in all programme events were at the usual rate of 10 cents per target. The scores were as follows, those made in the expert classes being kept distinct from those made in the amateur classes:

Experts, expert rule:

Third Day's Score.

On this day the programme was precisely the same as that on the previous day, the $100 added by the Pittsburg Gun Club being divided in the same manner. The entrance fees were also similar. In addition to the 10-target events, 3 extras, at unknown angles, were shot as follows:

Extra No. 1, 15 targets, $1.50: Heikes 15, Bessemer 14, Close 14, Bartlett 13, Flick 13, Fieles 13, Raymond 13, Colt 13, U. M. C. Thomas 12, Armstrong 12, Rike 12, Howard 11, Foy 11, Goldstrom 11, W. M. C. Jones 10, W. S. King 10, Weakland 10, Shaffer 10, B. Jones 9, A. H. King 9, Old Hoss 9, McPherson 8.

No. 2, same: A. H. King 15, Flick 15, Bessemer 14, Bartlett 14, Rike 14, Fieles 13, Raymond 13, Heikes 12, U. M. C. Thomas 12, Close 12. W. S. King 11, Colt 11, W. M. C. Jones 11, B. Jones 10, John Shaffer 9, J. J. Sims 3.

No. 3, same: Heikes 14, Rike 13, Bartlett 13, Raymond 13, Flick 13, Fieles 13, A. H. King 12, Bessemer 12, Shaffer 11, W. M. C. Jones 11, W. S. King 11, B. Jones 10, Once 9, Mell 8, McPherson 8.

The scores made in the programme events, both under expert rules and by the amateurs, were as follows:

Experts, expert rule:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	*15*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	*20*	*15*

Daniel S. Wadsworth.

Emerald Gun Club.

DEXTER PARK, L. I., April 16.—The Emerald Gun Club, of New York, held its regular monthly live bird shoot at this place to-day. Thirty members put in an appearance, but so good were the birds that only two out of the thirty, Dr. Hudson and P. "Mulcahey," killed straight; six others killed 9 and seven killed 8. The following is the score in detail:

Dr G V Hudson, 28 ..... 1 2 1 2 2 1 1 1 2 1—10
P Mulcahey, 28 ..... 2 1 1 1 1 2 1 1 2 2—10

The Peekskill–New Utrecht Team Race.

THE defeat of the New Utrecht team by 12 men from "up the Hudson" was an unpleasing surprise to the many stanch supporters of the Long Island Club. The surprise was all the greater owing to the fact that the match was shot at Woodlawn, the New Utrecht's own grounds. Add to this the following: A banquet at Peekskill on the night previous; an early start from home by some of the members of that team; a train 50 minutes late, so that connections were missed; and last of all, a two-mile walk down a railroad track with gun over the shoulder and shells in the hands! It looked a cinch for the New Utrechts, particularly when 50 per cent of the Peekskill men missed their birds in the first round. At the end of that round the score stood 8-6 in favor of the New Utrechts. The second round made things even up, three misses being recorded to the home team, while but one of the Peekskillians dropped a bird. Score, 17 all. In the third round the Hudson River contingent went ahead, scoring 11 to the Long Islanders' 10. Score, 28-27 in favor of the Peekskill. The fourth round saw three ciphers go down on the Peekskill score, four being recorded for the New Utrechts. Score, 37-35, and Peekskill two ahead. In the fifth round, six of the Long Island men missed, as against four misses for their opponents, making the score 45-41 in favor of Peekskill. Eleven to ten in favor of Peekskill was the score of kills in the sixth round, and 8 to 7 for the same parties in the seventh round, the total score showing 64-58, Peekskill being 6 in the lead. In the eighth round no change was made in the position of the teams, each side registering three misses, but in the ninth round Peekskill drew still further ahead by scoring 10 to their opponents' 7, the score standing 83 to 74 in favor of Peekskill, a difference of 9 with only 12 birds for each team to shoot at. In the tenth round the New Utrechts killed 10 to their antagonist's 9, the score at the end of the match being: Peekskill 92, New Utrecht 84, the latter being 8 behind. An interesting feature of the shoot was the fact that in only two rounds, the first and last, did the New Utrechts kill more than their opponents; in the eighth both killed 9, while in each of the other seven rounds the Peekskill men came out ahead.

The birds were a good lot, with only here and there a poor flyer; sitters were a great rarity. "Dead out of bounds," *i. e.*, birds which fell inside the inclosure, but outside the boundary, were 10 in number in the New Utrecht score, while but four of the Peekskill birds were similarly recorded. In the matter of trap-pulling, the apparatus being automatic and the puller not being aware of what trap he was pulling, the score shows that No. 3 was pulled away below the average; Nos. 2 and 4 were pulled an equal number of times, but were five below the average; the outside traps, Nos. 1 and 5, occurred most frequently. The following summary shows how the traps fell:

	1	*2*	*3*	*4*	*5*
Peekskill	27	16	24	22	31
New Utrecht	30	27	13	21	29
Total	57	43	37	43	60

Halsted and Higginson, both members of the Peekskill team, were the only ones to kill straight, but Jas. Taylor, Dr. Horton and M. Perry, ably seconded their efforts by killing 27 out of their 30 birds. Capt. Money and "Dick" Phister, with 9 apiece, were top scorers for the home team. In extenuation of the moderate showing made by the New Utrecht team, it is only fair to add that four of their number stood at 30yds., seven at 28yds., and one, Conney Furgueson, 11 years of age, shooting a featherweight 16-gauge Francotte, at 26yds. All the Peekskill team, save one, was at 28yds., Loder being put in at 26. The score in detail follows:

Peekskill.

E Kissam, 28 ..... 2 1 0 2 2 1 0 1 2 1— 8
H Livingston, 28 ..... 0 2 2 2 2 0 2 0 2 2 0— 6
J B Halsted, 28 ..... 1 2 1 1 1 1 1 1 2 1—10
Jas Taylor, 28 ..... 0 2 1 2 2 2 2 1 2 2 2— 9
Dr Horton, 28 ..... 2 2 1 2 1 2 5 2 2 2— 9
H C Higginson, 28 ..... 2 2 1 2 1 2 2 2 2 2—10
H P Dain, 28 ..... 1 0 1 2 2 1 2 1 0 2— 8
E C Likely, 28 ..... 0 2 1 0 0 * 1 2 1 2 — 6
Frank Southard, 28 ..... 2 2 1 0 1 2 2 * 1 *— 7

MacDonnell			20 —1	11121—5
F L Train			0	0
E Lohman				0
D Lohman				10 —1

No. 1 was 5 birds, $3, class shooting; No. 2, 3 birds, $2, three high guns; Nos. 3 and 4 were $1 miss and outs. EDWARD BANKS.

New Jersey Trap-Shooters' League.

THE third tournament of the 1895 series arranged the New Jersey Trap-Shooters' League took place at Maplewood on Thursday, April 18. The date originally set for the tournament was April 11, just one week earlier; for certain reasons the date was changed to the one just above mentioned, and it was well that it was so, because a more perfect, springlike day it would be hard to have made to order. The result was that the attendance was capital, nine clubs entering five-men teams in the League shoot. The nine clubs were: Maplewood, Elizabeth, Climax, of Plainfield; Union, of Springfield; South Side, of Newark; Boiling Springs, of Rutherford; Endeavor, of Jersey City; Riverside, of Red Bank, and Union Hill, of Hoboken. In the League race the clubs finished in the above order. In regard to this League shoot, the fact that that contest is shot at known traps, unknown angles, caused a slight unpleasantness owing to a belief that certain shooters were favored by the trapper boys. Personally, I cannot say anything about it, as at the time when the shooters in question were at the score, I was hunting up the scores of the sweepstakes shot previously and repairing errors in the manifolding of the same. Still, I look upon the kick as one that is likely to arise at nearly every State League shoot this season, simply because the race is shot at unknown angles. In my report of the State League tournament held at Rutherford, Feb. 16, under the auspices of the Boiling Springs Gun Club, I wrote as follows in regard to the League shoot:

"This latter event up to this year has been shot at known traps and known angles. At the annual meeting of the league, held recently, a motion was made and carried, to change the conditions of the event to unknown angles. There was a good deal of dissatisfaction expressed by the members of several clubs at the action of the meeting, it being claimed that the change made the test too severe for the younger and less experienced clubs. This is undoubtedly so to a certain extent, but the case of unknown angles also introduces a measure of luck into the contest. It is argued, therefore, by the adherents of the new system that by making it unknown angles the poorer shots run a chance of drawing a series of comparatively easy angles, while the better and more expert shots may draw angles of a more acute nature. Therefore, it is claimed, the more inexperienced shots have more chance to make a race of it at unknown angles than if these were shot at everything known, the latter condition placing all shooters on an equal footing and eliminating the elements of chance. As this contest, however, is intended to prove the superiority of one club over another, it would seem better to cut off as far as possible any element of luck, making the game purely one of skill. Another argument that has been used in favor of unknown angles is, that under that system the conditions far more nearly approach field shooting than do those where everything is known; also that unknown angles is the favorite system now, and that 'everything known' is monotonous and artificial. These arguments would have far more weight if the question set for decision were not one purely of skill. To rightly determine degrees of skill, the element of chance must be eliminated as far as possible from the contests which are to settle those degrees. At the Boiling Springs Club's ground on Feb. 16, a good illustration of the luck in the matter of angles was given time and again. This was due in no sense to the club or its management; it was due entirely to the whims, occasional activity and impulsiveness of the boys who set the traps. The absolute need of the 'stops,' now placed on all the best traps for the purpose of preventing the boys from throwing the targets at extraordinary angles, was conclusively proved time and again that afternoon."

After a lapse of two months, I see no reason to change my opinion; on the contrary, I am convinced that my position is a correct one. An addition might be made, also, to the above that there is always liable to be a kick in any team race where the conditions are known traps, unknown angles, unless the teams are split up. Where they shoot in squads, there is often a chance of unpleasantness—angles always look easy when one hasn't got a gun to one's shoulder! Under the circumstances, it seems as if it would be good policy for the management of the State League either to split up the teams, or else to hold a meeting and go back to known traps and angles in the League shoot. The State organization was formed for the purpose of bringing New Jersey's trap-shooters together every month. That object has been successfully accomplished; 45 shooters took part in the main event on Thursday last! It would be a pity, therefore, that anything that can be easily remedied should be permitted to remain as a menace to the League's continued success.

Returning to the tournament of April 18, some capital shooting was done all through the day, while some excellent scores were rolled up in the main event. Messrs. Drake, Warren Smith, Tillou and others, members of the Maplewood Gun Club, kept things running in good shape. The following are the scores in the team race:

Maplewood.

Van Dyke ..... 1111111111111111111111111—25
W. Smith ..... 1111111101111111111111111—24

EDWARD BANKS.

Standard Gun Club,

BALTIMORE, Md., April 15.—Below are the scores made in the team race, the main event in the programme of to-day's tournament of the Standard Gun Club at Point Breeze. The conditions of the team race were teams of 5 men, all members of each team to be *bona fide* all-the-year-round residents of the county they represented. The prize was $25, presented by the Standard Gun Club; entrance free. The Frederick county team won, Baltimore county's team No. 1 being second. Scores:

Frederick County (Frederick G. C.).

Uncle Lisha's Shop. ROBINSON	1.00

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

Notice to Rod-Makers.

PRICES FOR 1895.

It will pay you to buy your Mountings in Brooklyn

American Big Game Hunting

The Book of the Boone and Crockett Club.

EDITORS: THEODORE ROOSEVELT, GEORGE BIRD GRINNELL.

Price $2.50.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

With Fly-Rod and Camera.

A magnificently illustrated volume descriptive of fly-fishing for trout and salmon. By Edward A. Samuels. Cloth. Price, $5.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 4, 1895.

VOL. XLIV.—No. 18
No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE NEW YORK AQUARIUM.

THE Board of Park Commissioners of New York city have appointed Dr. Tarleton H. Bean, of the U. S. Fish Commission, Superintendent of the New York Aquarium. This appointment was made after a competitive civil service examination, in which the successful candidate answered 99½ per cent. of the questions asked.

New York is to be congratulated on having thus secured as superintendent of its aquarium the man of all men best fitted for this especial work. It is a rare and remarkable thing in this city of New York that we should secure for a public office of this importance not an individual who has always made his living by politics, and who secures his position through a political pull, but an admirably equipped scientific man, who for many years has devoted himself to the subject he is to handle, and who, by his training, experience and investigation, is in all respects its master. If the Park Commissioners had searched this whole country over they could not have found a man better fitted for this position than Dr. Bean.

It is unfortunate that the officer in charge of the aquarium should be called its superintendent. Under the direction of Dr. Bean the institution will not be merely a show—a place to which the public can go and gape at the specimens on exhibition; it will be also a center of scientific investigation, and the officer who has charge of it and who directs its work should be called the director. This title will lend dignity to the institution and to its work, while the title of superintendent is inadequate.

The first work to be undertaken by its new head is to complete the aquarium and to put it in working order, repairing as speedily as possible the blunders due to the ignorance and incapacity of the past. Much time has been lost and much money wasted, and the task of getting the aquarium into such shape that it will, in any respect, serve the purposes for which it was intended, is not a light one. This will be done, however, and we shall then have an aquarium which will be a credit to the city.

After this has been accomplished, Dr. Bean will, no doubt, establish at the aquarium a biological station for the investigation of marine and fresh-water life, a most desirable adjunct to the exhibition features of the place, and one which in time is likely to reflect great credit on the government of this city. The possibilities of such a station, under the direction of such a man, are far-reaching.

If the New York Aquarium should become merely a free show for the populace, it would fall far short of accomplishing its proper mission. Under the past regimes, when politics and pull were everything and merit nothing, this would have been expected; but under present conditions very different results are looked for. The era of wastefulness and ignorance has closed, that of intelligence and economy is about to begin. No fear need be felt that the popular side of the institution will be neglected. As soon as the errors and crimes of the past shall have been remedied, the exhibition of water life will be the first thing to receive attention; the people will have something to show for their money, an exhibition which shall be not merely a few fish and invertebrates and plants without order or arrangement, but an exhibition carefully planned. It will not only be beautiful to the eye, but systematic, orderly, and so arranged and labeled that it will tell its own story. Thus, to any one who will undertake the light and pleasing labor of studying, it will be of the highest educational value. After all this has been done, we look to see the development of the less popular and more strictly educational side of the aquarium. Exhibitions of the practical culture of different species of fish will be given, laboratory work will be encouraged, and opportunities afforded for New Yorkers to pursue special lines of investigation, which have hitherto been impossible for them.

All this will not be accomplished at once, but those who are familiar with Dr. Bean's past achievements feel safe in predicting that it will be done, and that there is now every prospect that before long there will be in operation in this city not an aquarium alone, but also a school of biology of which the whole country as well as its metropolis may well feel proud.

THE NEW YORK FISH COMMISSION.

THE bill to consolidate the Forest and Fishery and Game commissions was signed by Governor Morton on Thursday of last week; on the same day the new board was named, and held its first meeting. The commissioners are Barnett Davis of Palmyra, who was designated to be the president; Henry H. Lyman of Oswego, William R. Weed of Potsdam, Charles N. Babcock of Rochester, and Edward Thompson of Northport, Long Island, shellfish commissioner. Edward P. Doyle was reappointed secretary, with Maj. J. W. Pond as Chief Protector. Of the old force of protectors the following were reappointed protectors and foresters: Robert Brown, Jr., of Port Richmond, Dr. Willet Kidd of Newburgh, Matthew Kennedy of Hudson, Charles H. Barber of Greenwich, Henry C. Carr of Union Springs, Joseph Northrup of Alexandria Bay, George M. Schwartz of Rochester, and A. R. Potter of Sandy Creek. There are to be appointed a fishculturist and an assistant fishculturist; with the complement of protectors, making a force of thirty-six in all.

The president of the Commission has a salary of $5,000, the others of $1,000 each; all are allowed expenses.

We learn that Mr. A. N. Cheney, of Glens Falls, will have the office of fishculturist. This will be a most admirable appointment.

We have no wish to prejudge the Commission or any member of it, but two of the appointments must be regarded with grave distrust, those of Mr. Davis and Mr. Weed. Mr. Davis was named at the instance of Lieut.-Gov. Saxton and for purely political considerations. The place was in effect made for him; and he has been heard to relate with considerable glee how in the beginning Mr. Saxton resorted to a cunning ruse to insure his appointment by the Governor. We cannot learn that Mr. Davis has any other qualification for the place than the political influence he has shown in the past and may show in the future in Mr. Saxton's behalf. It is disheartening that with so many available candidates who would have given dignity and ability to the Commission, and would have commanded public respect for it, this politician should have been foisted on the Commission and its character thus determined in advance. Commissioner Weed, who is a lumber dealer and is reputed to be interested in wood pulp, was a member of the old Forestry Commission, who in the closing days of last year betrayed their trust by handing over State lands to the Adirondack Railway. By this action Mr. Weed and his associates forfeited public confidence; no one of them should ever again have been intrusted with power to prove a second time untrue; and any commission of which one of them may be a member will bear close watching.

THE bill chartering the New York Zoölogical Society has been signed by Governor Morton and is thus a law. The founding of this society is one of the encouraging evidences of increasing interest in the education of the masses, which are a feature of the urban civilization of the day. Taken in connection with the appointment of Dr. Bean to care for the aquarium, it affords reason for hoping that New York will not always be the last of the great cities of this country to care for the needs of its population.

SNAP SHOTS.

Now here is a good notion, and there should be decided benefit in it. A new Maine law reads: "That any person acting as guide for any person or party who shall assist or aid such person or party in killing any game or fish in violation of law, shall be held equally responsible for such violation of the law, and subject to the same penalties." For one thing, such a law will put a stop to the midsummer butcheries perpetrated by a well-known Brooklyn man, who has in years past taken regiments of Maine guides into the woods with him and defied laws and decency.

Here is an amendment of the Maine game law, and it is just about as clumsy and bungling and ungrammatical as they make them. As changed by the last Legislature, Sec. 21 reads, respecting partridges: Whoever kills any "partridges between the first days of December and September twentieth" forfeits not less than five dollars, etc. When, then, does the season close on partridges? How far into the month do the "first days of December" extend?

Another bungle: Whoever hunts cow moose "forfeits not less than one hundred dollars and be imprisoned thirty days." Probably, "shall be imprisoned thirty days" was intended, but it does not say so; and under the rule that a penal statute must be constructed literally, there appears to be some question whether the penalty of imprisonment, here manifestly intended, might not be evaded. We have not examined the new Maine statute, which requires fathers to provide for their offspring, but let us trust that when the welfare of children is concerned the Maine Solons are more grammatical than when the subject of their solicitude is only a partridge or a cow moose.

Years ago the capture of shad with rod and reel under the Holyoke, Mass., dam was something of regular occurrence each spring and summer, and was practiced by many ardent anglers of Massachusetts. For several years past, however, there has been none of this fishing there, probably for the reason that the waters are poisoned by refuse thrown out from the mills and the shad no longer come up to the dam. If any of our shad anglers elsewhere have luck with the fish this season, we would like to have reports from them.

The interesting letter from "Will Scribbler," published in our columns this week, presents the fact that seeking for birds is but one part of the capabilities of pointers and setters in the pursuit of game. In other words, bird dogs are not seekers of birds to the exclusion of all other game.

An individual sailing under the name of C. E. Wellborn, and hailing from Birmingham, Ala., has been writing to various parties and seeking to secure goods without cash down, on the strength of a reference to the Forest and Stream Pub. Co. Wellborn has no authority to refer to us; our experience with him teaches us that he is irresponsible. If he was well born he appears to have degenerated.

Is there such a thing as a "true sportsman" in Japan?

We suggested last week that, whether or not fish feel pain, tender-hearted fishermen show by their treatment of a hooked fish that they have no realizing sense of its capacity for suffering. A correspondent cites in rebuttal, for our consideration, the fact that "when the tender-hearted fisherman, fishing in salt water, finds on his hook a toadfish or catfish or sea robin or shark, he assails the creature and maltreats it with a spirit and in a manner which indicate his belief that it can feel the punishment he inflicts." But do the manner and spirit indicate anything of the sort? The child which hurts itself against the table strikes the table in revenge, but does the child think that the table can suffer pain? Even a grown person will sometimes involuntarily resent in the same way injury received from an inanimate body; we once heard a leading light in the scientific world angrily anathematize a sleeping car berth against which he had stupidly bumped his head; but we never dreamed that the professor thought the berth could hear what he said to it.

The Sportsman Tourist.

PORTAGE LAKE.

SEEKING new fields for sport, we had sent our Jackman, Maine, guides over the Canadian boundary to locate a camp near the head waters of the west branch of the Penobscot. They explored the region and settled on Portage Lake, in the Province of Quebec, close to the Maine boundary, for our camping place, and a fortunate location it proved to be. We went in there in September, 1890, my friend and I, with our two Jackman guides and one local guide. Here on a beautiful point of the shore, near where Portage brook joins the lake, we pitched our tent and passed lazy, happy days. Daily we saw deer feeding and playing along the shores. Two goodly Caribou bucks fell to our rifles. The waters of the lake and stream were full of trout, fine vigorous fellows, averaging a pound each in weight. What more could we ask?

These were then practically virgin waters. The woodsmen had been accustomed to fish here, with their coarse tackle, but few and far between had been the sportsmen to visit this secluded resort. Our third and Canadian guide was Bob Elliott. This was almost his first experience as a guide, but he had above any man I have ever met the qualities that make a satisfactory guide, and he has since built a camp on Portage Lake and taken a few parties there and elsewhere. He is very quiet and gentle in his ways, temperate and in every way reliable, with a thorough knowledge of woodcraft, and an intimate acquaintance with that region. Since the autumn days of 1890 I have not seen Portage Lake; for I seek large game and that is more a fishing than a hunting country, but with Bob I have sought game along the boundary mountains and in the more remote St. John region, and would count a trip despoiled of half its pleasure were he not my guide. Bob Elliott lives at Armstrong, County Beauce, Quebec, 25 miles from Jackman, Me., and 9 miles from Portage Lake. He will never make much money as a guide, for most of the pay he receives is devoted to camps and outfit for the comfort of his parties.

A few of the readers of FOREST AND STREAM have been to Portage and they will, I feel sure, indorse all I have said, and each has in his mind a vivid picture of blue waters sparkling in the clear mountain air, circled with unbroken forests. Thirty miles from any railroad, and nine miles from any highway, no sound from the outer world disturbs the camper on Portage's beautiful shores.

FRED. TALCOTT.

PROVIDENCE, R. I.

SPORT IN IRELAND.

III.—Hunting.

AN Irish way of doing business! In asking the attention of the gentle reader to reminiscences of sport in Ireland, to introduce him to what is well marked in history—the time being now far distant and the place remote. Time, the spring of 1865; place, the banks of the Potomac. A young British officer, desirous of improvement in the knowledge and practice of his profession by the best of all means—experience in actual warfare—armed with letters of introduction to the chief officials at Washington, proceeded to that place in March, 1865, and applied to the War Department for authority to visit the army, then in front of Richmond and Petersburg, with headquarters at City Point.

This application was at first refused, as strict orders had been issued that no civilians should be allowed with the army at this critical moment, when business was the order of the day.

On presenting a letter of introduction, however, to Mr. Sumner, a statesman and one of nature's noblemen, he at once telegraphed to General Grant and President Lincoln, then at City Point, strongly presenting the case as one not of a civilian, but of a British soldier.

The desired authority was not only granted, but free transport was everywhere given; and on arrival at headquarters the young officer was placed, honorarily, on the headquarters staff, and all privileges accruing to a distinguished personage were granted to him, being a guest of the President and General Grant. Such an honor was as unexpected as it was appreciated, this being the most instructive period of the gigantic campaign.

Commencing with the assault on Fort Steadman, March 25, 1865, until the surrender of General Lee, April 9, there was a continuous roar of artillery fire. Then the great rebellion was ended, and Lee's army of splendid men were scattered to the winds.

The writer of these notes is the fortunate, then young, man referred to; and I could fill many pages with accounts of courtesies received on all sides, from all sorts and conditions of men, from President Lincoln downward, as I could tell of valuable lessons learned and experiences gained such as fall to the lot of but few men.

How intensely interesting the morning visit to General Grant, the study of his calm face, as unmoved he received telegrams from different parts of the long line of front; some containing accounts of success, others of failure. His instructions, in reply to each telegram, were sent in the same cool manner, President Lincoln carefully watching every move, as if engaged in a game of chess.

Here, side by side, were the ideal and practical statesman, and the ideal and practical soldier, working together at a most important stage of the world's history; such men as Generals Sherman, Sheridan and Meade, with other lesser lights, forming the background of the picture.

It is, however, of a still lesser light—though not so in her own eyes—that I must now speak.

I have already said that no civilian was allowed with the army. There was, I believe, but one exception to this rule in the person of the female cook of the headquarter mess. Having a moment to spare, amid the "pomp and circumstance of war," I paid a visit to this lady. Yes, there she was, amid the pots and pans of this troublesome world, the only civilian with the army; and she had only to open her mouth to inform her listeners that she came from "the sod." She had the most delicious Irish brogue. I soon found that she had been one of the large peasant family of bare-footed children then living near my old home, that delighted to put "one stone more" on the wall over which I practised my gray pony in boyhood days before the hunting morning "preliminary canter;" and as she now took delight in being in the thick of the fight with the Army of the Potomac, so she then, in girlhood days, took chief delight in running with the hounds and watching the pony jump.

Yes, on that pony I had my first lesson across country with the hounds; and now at this distance of time I can find no greater pleasure than to follow harriers or foxhounds over a sporting country.

Oh, for the easy flowing pen of Charles Kingsley to describe the music of the hounds! Or that of Whyte-Melville to point out the pleasures of the chase.

What music! "If you must have four parts, then there they are. Deep-mouthed bass, rolling along the ground; rich, joyful tenor; wild, wistful alto; and leaping up here and there above the throng of sounds, delicate treble shrieks and trills of trembling joy. I know not whether you can fit it into your laws of music, any more than you can the song of that Ariel sprite who dwells in the Æolian harp, or the roar of the waves on the rock, or

> 'Myriads of rivulets hurrying through the lawn,
> And murmur of innumerable bees.'

"Ay, with all the fictitious excitement produced by the emulation of hunting, and the insatiable desire to be nearer and nearer still to that fleeting vision which, like happiness, is always just another stride beyond our reach; though the hounds are streaming silently away a field in front of us; though the good horse between our legs is fresh, ardent and experienced; though we have already disposed of our dearest friend on his best hunter, at that last 'double,' and are sanguine in our hopes of getting well over yonder strong rail, for which we are even now 'hardening our heart' and shortening our stride; though we hope and trust we shall go triumphantly on from fence to fence, rejoicing, and at last see the good fox run into the middle of a 50-acre grass field—yet for all this we cannot but feel that when we have traversed two or three miles of this style of country, without prostration or mishap, we have effected no contemptible feat of equitation; we have earned for the nonce a consciousness of thorough self-satisfaction intensely gratifying to the vanity of the human heart." And, if you are a student of human nature, a lover of the picturesque, where can your aspirations and desires better be satisfied than at "the meet?"

Then come with me to the meet.

That old gentleman of ninety years, sitting bolt upright in his saddle, is my father's nearest and dearest friend. That giant on the weight-carrier spread terror into the Russian ranks as he jumped into the Redan, armed only with a blackthorn stick, and received the Legion of Honor. That heavy-weight in frieze coat, on the game-looking cob, will lead the field to-day, for he knows every inch of country, and he knows what his cob can do. Yes, that semi-clerical looking man, with iron gray hair, is the parson. Stick to his coat tails in the fastest run, and you'll not be "out of it;" an efficient pilot, for he can preach a good sermon on Sunday and show the way with hounds on Monday.

Here I come on my gray pony. The huntsman takes off his hat with a "Good morning, Master ——;" the whip gives me a friendly nod; the master asks whether poney is fit after that long run on Tuesday; I ride in and out among the throng of hunting men—and hunting women not a few—with a friendly greeting from each and all.

Time's up! We move on at that peculiar "jog trot to covert." It's a typical hunting morning. "A southerly wind and cloudy sky," with just a dash of rain to keep the record of "moist weather."

Old Jack, the huntsman, well knows the point of wind, and where to "throw" the hounds into the gorse covert. Hardly time to tighten the girths before there's a "view—halloo," followed by a madrigal of music. An old dog-fox slips out of the cover at the side opposite to that we have thrown in the hounds. There he goes, beside that bank, and across that field; there go the hounds after him. There's Jack, the huntsman, well over that first bank, and now he leads the hounds with horn and hand. And for us, it's "every man for himself." Even the women and children—am I among the latter?—are lost sight of at this critical moment. The banks and ditches are high and wide, but "funk" is an unknown quantity, and we're soon out of "this hole."

The hounds settle down to their work; there is no looking out for "gaps;" you must "ride straight" if you mean to be "in it." There goes the parson, I'll keep his coat tails in view and follow him. Those tactics won't work; I find my eyes bunged with mud from his horse. I take my own line. We are now in a stone wall bit of country, having left banks and ditches behind. Over one of these I go, and into a drain at the landing goes pony; we have a roll, but no greater harm is done than a broken stirrup-leather and a muddy coat. I have learned to fall and not to quit hold of the reins; now I have to put in practice another bit of training, viz., to balance the body and grip with both knees.

On we go again; happily there's a check. A friendly farmer supplies a stirrup-leather and pony has time to breathe. A cast with the hounds is made, and we're off again.

Another change of country. Now we're in low meadow land, and the boy on the pony has a pull over the heavyweights; they sink in the deep land, while I gallop on as if on land with good footing. But here's more than a mere ditch—a chasm wide enough for a brook, deep enough for a ravine. The advice of my friendly instructor, the parish horse-trainer, "Go hard at it, Master ——," is in my mind, and so I do. Pony drops his hindlegs at the further bank; I there jump off and lead him up; with joy at finding that one well-mounted man at least is floundering in the brook, with mud enough to "improve the color" of his new scarlet coat.

Again we're on the move; we're having "the run of the season;" we've gone ten Irish miles and now we're climbing the hillside to a well-known cover; some dismount and urge the tired nags up-hill as quickly as possible. The hounds are well on the fox, and as we reach the hill-top he is run into in the open before he can gain the friendly cover.

There is a series of "who—whoops!" The whole scene is of such peculiar picturesqueness that no landscape painter has yet been able to do justice to it.

The field, large at the meet, is reduced to six or seven good and true men at the death, besides one plucky girl (who gets the brush) and the boy on the pony, who has won fresh laurels on this red-letter day. Among those in at the death are our pilot, the parson, the man in gray, and the master of hounds; the pace was too good for the giant.

My chief instructor, at this time, in the noble art of "throwing a lep" on horseback, over stone wall, bank or water jump, was the parish horse-trainer. His instructions were brief: "Clinch the reins, bend the back, grip with the knees;" no reference to hands or balance.

My bosom friend, in the hour of need, when pony or horse suffered from "the ills that horseflesh is heir to," was the village blacksmith. It is needless to say that he had no certificate of qualification in *veterinaria medicina*. His advice, on consultation as to what was best to be done, given with the most serious face, was: "Treat him as you would a Christian."

I have ridden many horses in many lands, from the buck-jumping bronco of the West to the wild Irish flyer of the East, from the yowl-necked barb of southern Spain to the well-trained hunter of "the Shires," and from none did I derive so much pleasure as from the gray pony, with my county hounds in Ireland.

The gray pony's utility, however, was short-lived; he was hardly up to my weight; my purse, too, was slender. Happily an exchange ("swap") was arranged with a great admirer of the gray, by which I became possessed of a rough, uncared-for, uneducated plow-horse, and he the owner of the well-trained pony.

I made many enemies by this exchange; my next of kin would scarcely speak to me; the blacksmith and horse-trainer would never more give me kindly instruction; all were loth to lose the gray pony.

The newly acquired horse proved a marvel in leaping powers; the clipping scissors did wonders in the improvement of his appearance, so that when I appeared in the hunting field even the horse-trainer wished me "good luck."

On one memorable day he "beat the record" in a long jump. It came about as follows: The foxhounds met in a part of the country but little known to the members of the hunt. The Land Improvement Act had been in force in this locality with the result: wide drains and new stiff banks. These we looked at in despair. Inwardly we hoped that the fox would not take us through that bit of country. We "found" in a small gorse covert, and straight through this country went the fox. It was a question, "Take this big bank or go home." Uncertain at the time of the prowess of my unknown treasure, with fear and trembling (that peculiar trembling at the knee-joint), I tried to carry out the instructions, "Grip with your knees and go at it." At it I went; and, oh joy! on and off went my trained hunter, as if "to the manner born;" and henceforth he went by the name "Banker." After that on we sailed pleasantly, he with perfect confidence in his rider, I in perfect bliss at my "safe conveyance."

There were many empty saddles in that run; I was well to the front. The few forward men were in line, going at an apparently safe bank—all were going fast. I took the bank in my direct front, when, oh horror! there was a newly opened quarry at the opposite side of the bank. No time for reflection; but one course open—besides the open-mouthed quarry—with spur and voice not idle to "go." Could I but so nearly reach the edge of the quarry that I could escape without a broken collar bone?

Poor "Banker's" newly developed life of usefulness must be suddenly cut short; when, joy of joys! voice and spur had done their work; "Banker's" jumping powers did the rest. He cleared the quarry with half an inch to spare, with space enough to change his feet and not drop in his hindlegs. My record in the country as a quarry jumper has not since been beat.

My education in the knowledge of "the horse and his rider" had at that time to be replaced by the training for my military profession. "Banker" went to the hammer; my pocket was filled with pound notes; but his services can never be forgotten.

The "Great Duke" has well pointed out how battles are lost and won in the hunting-field, the best field of training for the soldier; I therefore soon found myself again in the saddle, as a young soldier, with a trained hunter. A sudden call to active service, however, required the speedy parting company with the trained hunter. I was at home on short leave of absence from my regiment, and during my walks abroad I met the village postmaster, an oddity of oddities, in his little ill-kept office. "The hounds are to meet to-morrow, and again this week, and you without a horse," said he, "this is a terrible catastrophe." After deep thought he brings forth the suggestion: "There's a herd of gypsies in a lane close by, they have a likely looking cob; give me £5, and I will buy him for you; you mind the shop." To all this I agreed, giving the postmaster's well-known answer to all inquiries for letters: "Not a word to-day," or if to a pretty girl: "He has not written to-day."

The postmaster returned, leading a wretched specimen of the cob tribe; I had made my bed, I must lie on it. I led the animal home—not in triumph. Again I had "lost caste" among my kinsfolk and friends for dealing in horse flesh of the worst kind. Again the clippers were applied, and on the following morning I appeared at the meet, mounted, as of old, on "not a bad thing." Suffice it to say, that I had two good days' hunting on my £5 worth, and a day to spare for "one more jump," before my ship sailed. It was not a case of "my ship coming home" on that day; my gypsy cob landed on a rock at the off side of the fence; he was lame for life, and I sailed next day with my arm in a sling, having learned the lesson—avoid that "one more jump."

Let us land for a while at Gibraltar, that I may introduce you to "Johnny," the huntsman of the Calpe hounds, who had hunted a pack of harriers for a relative of mine in the county of Cork, and in consequence takes pleasure and pride in being my pilot through the Cork woods and over the "rocks" at Algeziras.

Johnny's boast is that his stentorian voice can be heard, as he cheers on the hounds, from the Cork woods to the Rock—a matter of 12 miles! And this was before the days of telephone. In and out, among the palmettoes, the prickly pears and aloes, he leads, while I, an unbeliever in this sport, follow.

Certainly there is "the music of the hounds," but there's too much of Mr. Jorrocks's sort of hard riding.

"Are you a hard rider?" asked an inquiring lady of Mr. Jorrocks.

"The hardest in England!" answered that facetious worthy, adding to himself, "I may say that, for I never goes off the 'ard road, if I can 'elp it!"

About this time there was a sad downfall of pride on

the part of Johnny. I was in command of one of the many Gibraltar guards; and when inspecting the prisoners in the guard room, there was poor Johnny a prisoner for being "drunk in the streets on the previous evening." How great the fall! From the exalted position of huntsman of the Calpe hounds to being a prisoner in the guard room.

The whirligig of time again brought me to old Ireland. Now I had a gunner brother at my elbow to share my joys and sorrows. I cannot easily forget a sad downfall to his pride. We had been in full gallop in a certain park; he on a battery horse, I on a wild thoroughbred. He came to a sudden stop, to try and open a strong wooden gate, when his horse tried to clear it and stuck on the gate, beautifully balanced on the top, both hind and forelegs being well off the ground. How to extricate him we failed to perceive. Unhappily, my brother's commanding officer appeared on the scene, and his words of censure at a Government horse being thus treated were strong and to the point. It was not until we had acted on the advice of a country farmer—"Take the gate off its hinges"—that we were able to remove the horse from his pedestal and continue the chase, wiser but sadder men.

We had another memorable mishap; being out with harriers, we had several long runs and continued hunting until late in the evening. We were far from a road, the banks were new and high, the horses tired. We dismounted to lead over a bank, particularly high and with deep ditches. My brother was the first to lead to the top of the bank, when his horse swerved, knocked my brother into the ditch and fell on him. The man lay so completely under the horse that he could not be seen or heard; some time elapsed before neighboring farmers could be assembled to pull the horse out of the ditch. When this was accomplished, to our complete surprise and joy, we found that the brother was unhurt, being untouched by the horse, who lay against the clearly cut sides of the new and dry ditch, instead of resting upon the man beneath him.

Another lesson was here taught, "Never lead your horse if you can ride him."

This lesson is life-long: "Stick to the ship while it remains afloat."

MIC MAC.

NOTES FROM CAMP NESSMUK.

I.—Mincke.*

I HAD been camping alone in the Ozarks, not from choice, but because my comrade had been called home by the illness of his child, and there was nothing left me but to go it alone. So I wandered from hill to hollow seeking a more bountiful crop of mast, and meeting with only tolerable success. There were no deer, even the squirrels had nearly all migrated to the richer bottoms of the Gasconade, and turkeys were so scarce or so vigilant that I got but few. At the end of a week I longed for a good hotel dinner and a quiet chat with the folks in the town. Then I could take the early morning train for some other hunting ground.

And Saturday night I was loafing in front of the little tavern, gossiping with young and old, feeling that country society, at least, was not half bad. The villagers were affable and nice in their quaint, slow way. Everything was drowsily good-natured. The sounds were mellow, the air soothing. I turned in early, and slept like a child.

But alas for the dream of rural peace and innocence! That night there occurred, just outside my window, what was afterward described as "a case of tar and feathers that turned into a shootin' match." I have no heart to tell that story. My nerves are fairly reliable, but they were tried by the sights and sounds of that dreadful night; nor was it soothing to have an actor in the tragedy, with eyes bleared by drink and excitement, draw a diagram of the situation with the point of his bowie upon the breast of my thin flannel shirt. I submit that such a procedure, at two o'clock of a cold, dark morning, is not strictly according to Hoyle.

Bye and bye I sat in the train, staring out into the pitchy night, and wondering if day would never break.

It broke at last, and as the black curtain slowly rose from the hills I came to myself and realized that a plan must soon be formed as to where the fortnight should be spent. One place after another suggested itself, some for deer, others for turkeys, some with a chance for both. But I no longer cared to kill. Let me get away from men and the thought of them, and be alone with the trees, and birds, and the autumn wind—in the fragrant woods, where all is clean, where even the little tragedies are fairly fought, and no scars of infamy are left upon the innocent.

The train sped down the pretty valley of the Meramec. Before me were the well-remembered hills of Mincke. Why not camp there? Every stone and bush and tree for miles around would welcome me, for we were old friends. It was quickly arranged, and soon I was left with my traps before the old limekiln, which, with a few cabins or shacks, make all there is of Mincke station.

A colored man stood at the other end of the platform, and I hailed him: "Hello, Billy. I'm going to camp at the upper fork of the sugar-tree hollow, just this side of the spring that runs out from the roots of a young elm—you know where it is. Help me over with my things, and here's a large, elegant piece of silver."

The negro stared, as though not comprehending me. Finally he stuttered: "You—you's not gwine ter camp ober in dat hollah?"

"Certainly. Why not?"

His voice sank to a whisper: "Oh, boss! I wouldn't do dat."

"Why; what's the matter with that hollow?"

He mumbled something that escaped me, and shuffled off.

"Here! Won't you carry my pack?"

"No, sah. I won't go into that hollah."

What ailed the fellow? I soon found another darky loafing about the kiln, and offered him the same inducement, but again met with a flat refusal.

"Why, Sam, what is the matter with that hollow?"

He poked his toe into the ground uneasily, and replied, after a long pause; "Well, I reckon it's jis' kinder juberous."

Nothing further could be got out of him; but his son, a lank youngster in tattered burlaps, volunteered the information; "That hollah's da-a-ange'us!"

* Local pronunciation, *Minky*.

His father shut him up rather curtly, and they moved off. Not a negro about the place could be hired to tote my outfit. At last I sought out Frank, the white man of Mincke, a tall and bony quarryman who lived in a board shanty near the kiln.

"Say, Frank, why is it that none of these darkies will go into the sugar-tree hollow in broad daylight?"

He ruminated a while, and then answered seriously: "I dunno as I'd do it myself."

"But what the mischief is wrong about that hollow? I've been there twenty times and never saw anything bigger than a fox."

He was reluctant to say more, and only muttered something about a catamount, which I knew was an evasion.

"Pshaw; you an old hunter, and afraid of catamounts!"

"Well, I'll tell you. The niggers say that the devil lives in that hollah, an' I jis' kinder believe it myself."

That settled it. I was all forenoon getting my outfit into Spook Hollow, for the way was rough, and a hot, tiresome job it was; but once my belongings were there, I knew that they were safe from molestation. It is to one's advantage sometimes to have the Old Boy around.

HORACE KEPHART.

COLCHOOLOOLOO.

BAIRD, Shasta County, Cal.—*Editor Forest and Stream:* I send you a portrait made by my son, Edmund C. Stone, of the old Indian chief Colchoolooloo. During Colchoolooloo's youth the habits and customs of his tribe were literally those of the stone age of man. They had never seen a white man or a horse. They used no implements of any description made of iron or other metal. Their knives were constructed of obsidian, and their axes were simply heavy pieces of slaty rock cleft so as to leave a sharp edge and used without any handle. When the Indians wanted to cut down a large tree for a canoe or other purpose, ten or twenty sat around the tree and hacked at it with their sharp-edged rocks till it fell. In

COLCHOOLOOLOO—A WINTUN CHIEF.

the series of axes in the National Museum illustrating the evolution of the modern axe of white men, the first of the series representing the most primitive form of axe is one of these sharp-edged rocks which Colchoolooloo gave me a few years ago.

In those early years of his life Colchoolooloo must have been quite a famous warrior among his people. He is a large man and robust, with a large head and feathers, and an indescribable something about him that always commands respect. He has shown us several scars where he has been struck by the arrows of the enemy in the encounters of his tribe with the Modocs and other hostile Indians. Although he has no crutch to shoulder, he enjoys as much as any white veteran going over the story of the battles he was engaged in, and showing how fields were won in Indian warfare. He tells with special pride of an encounter with the Stillwater Indians, in which he was struck in the side with an arrow, the obsidian point of which remained in his chest for several years.

Colchoolooloo was, in his day, the most skillful bow and arrow maker of his tribe. His bows were made, like Robin Hood's, of yew, and were backed with prepared salmon skins, which keeps them elastic for years. The bows of his making are among the finest specimens in the world for power and durability.

But Colchoolooloo now is an old man, feeble and infirm and broken-hearted. When he was a boy his people were numerous and happy, and roamed over this beautiful cañon of the McCloud in the enjoyment of undisturbed possession of the land. Since then he has seen white men come in and drive his people before them. He has seen the white men take possession of the fields and homes and even graveyards of his tribe; and, worst of all, he has seen his people dwindle away at the approach of white men till he is almost left alone of those who remember the happy and prosperous days of his tribe. He will probably not survive many more winters, and when he goes the earth will close over one of the last and best of his race.

LIVINGSTON STONE.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

A MARCH OUTING WITH FUR CATCHERS

Trapping Rats and Minks.

THE *honk* of northward-flying geese had been coming at intervals from the depths of the upper air for a fortnight, and the sharp *schweep* of ducks' wings had been heard in visions for a longer time than that; and the spring vacation was actually come. Before the geese began flying Holmes and I began dreaming about a vacation outing, and we were dreaming still. There seemed to be no place where our coming was awaited. Vacation began at midnight precisely, according to a resolution of the faculty duly entered and recorded in the faculty book, and the midnight train passed through the town at that identical hour, and it was the train we expected to take, go wherever we would. As the finishing touch was given to the last batch of examination papers, Holmes came in, smiling. "I have it," said he. "Let's go to the boys. I have just received a letter from Ora, who, with Al, is out trapping, and he writes they are having lots of fun with the ducks." And so it was then and there agreed that to the boys and the ducks we would go.

Dear me! How easy it is to go on an outing, and especially a March outing, in one's mind, and how very, very hard it is to go in the body. The dear ones, how they did exclaim, and warn, and protest! "At this season of the year!" exclaimed the miss. "And at your age!" said the madam. "And it will be certain to rain or snow!" affirmed the miss. "And with your back!" persisted the madam.

Ah, that back! Thereby hung a tale—t-a-l-e—mind you. That very morning I had clapped on that wretched back a porous plaster as big as my two hands, and the miss and the madam didn't know it. Nay more, at that very moment it was harder, very much harder, for me to get up when I was down than to get down when I was up; but they didn't know that, either. The truth is, I wanted to go, and when a man wants to go an-outing, what truth will he not conceal? What can stay him?

And so Holmes and I went, and in due time we came up with the boys in St. Jo county, Michigan. We found them trapping fur on a beautiful stream which takes its rise in a beautiful lake, and which discharges its waters into the beautiful and historical St. Joseph. Must I, can I, write the name of that beautiful stream that we are to descend in search of fur and feather? Hog Creek—hog with only one g. "God made the creek all right enough," said one of the boys, 'but somebody else must have named it."

All streams are crooked, and we found our pretty creek with the plebeian name no exception. Its general course was westerly, but its truly icy waters ran now this way and now that; now north and now south; now west, and it is not too much to say that sometimes the stream turned upon itself and sped along toward the rising sun as if bound on reëntering Hog Lake and running its merry round once again. The fleeting waters skirted uplands covered with oak thickets, leafless and dead-looking; wheat fields showing the faintest flush of green; through marsh lands, where downy catkins prophesied of the coming spring, and where weeds and grass, dead beyond the hope of resurrection, told the story of the spring that had been.

Books there are in the running brooks to those who can read them, but how different the reading in winter from what it is in summer. The summer *voyageur* floats idly down in ambush all the way. A cloak of green conceals him from sharp eyes, whether wild or tame. And the same green that cloaks him cloaks them. He hears the birds singing in tree top or bush thicket, and now and then sees one flit spark-like across some open space. He hears the pit-a-pat and scrimble-scramble of tiny feet, and knows that the little four-footed beasts are close at hand. He knows, too, there are nests, cunningly wrought and filled with speckled eggs or with hard-breathing and unsightly young birds, amid these thickets; but he sees them not. They are safely hidden from sharper eyes than his. But now, on this March day, the veil is rent and the secret places are laid bare. The curiously wrought nests, all frayed and torn, are everywhere to be seen flapping in the wind, but their builders and last summer's tenants are no longer here. In lieu of them the red-winged blackbird is seen, and if there be a gleam of sunshine the redwing will sing his sweet little three-noted song. Whether the day be sunshiny or cloudy, the chickadees and the titmice are sure to engage the outer's attention as they flit from stem to trunk in search of their "daily bread."

The waterways are the ways the world over for finding the living things. But it is not the birds alone that live along these ways, as some of us happen to know who have been there in mosquito time. And O, brother of the angle! let me whisper a word in thy ear. As I live, there are bass here! As we come plowing around this sharp bend I see the deep, somber pool next yonder bank, and I can imagine its potentialities. You can't fool me. At this very moment there lies asleep, close to the bottom at the deepest part of that pool, as lovable a family of the *micropteri* as ever pleased the fancy of a Henshall. And six weeks hence—m—m! O fisherman! Thou whom the gods did mercifully make to be half a vagabond, and who canst dream thy outing days away with no other thought than that the world will get along quite as well without thee, what possibilities are here in store for thee and me!

But it is not with fin we have to do on this outing, nor, for that matter, with feather. We came duck hunting, it is true, but the ducks are *non est*—not here, as they never are when I go. The boys had had all the fun there was, and so not unwillingly I give my attention to the fur bearers and to the fur catchers from this on.

The fur-bearing animals that came to our trappers' traps were such small deer as muskrats and minks. We make camp at noon of our first day back in the heart of an oak thicket, around which the March wind howled, and where we are to abide till the next day. After the dinner is over, the trappers skin the animals taken out of the traps in the morning, and after stretching the pelts over frames, hang them up to dry. This done, they take to their boats and go up and down the creek for a mile or more each way, setting their traps as they go for the nocturnal wanderers. Ora takes the left bank and Al the right, and as Ora's boat is the wider and therefore the less apt to tip over, I go with him. Each trapper has about fifty small steel traps to handle, to each of which is appended a light chain about 18in. long, with a ring in the end through which a small stake can be stuck down

into the clay or sand, thus preventing the trap from being carried off by its victim.

"I'll set a trap here," says Ora, "for the sign is good;" and he points to some bits of green grass strewn along the clay margin beneath an overhanging bank. The rat, he tells me, is a vegetarian. His daily food consists of grass, grass roots, flag roots and bark. The animal dotes on "garden truck," such as beets, turnips, carrots and parsnips, and many a farmer knows how very partial it is to corn. It is in general a clean feeder, and most trappers do not hesitate to make a fricassee of a tender youngster on occasion. A fat, tender, juicy, two-thirds grown one, cooked to a turn and smoking hot, was set before me on the box-lid table one snowy morning. Now, a muskrat is not a rat—not the ugly, dirty scavenger that burrows under our barns and thrives in our lumber piles. On the contrary, he is a mouse—a gigantic mouse, to be sure, but a mouse nevertheless. In spite of him being a clean feeder, he has a veritable mouse tail, and he sheds a musky odor that is strangely popular in quarters where we would least expect to find it so. I can eat muskrat, but I don't "hanker arter it." Not that there is anything disagreeable in the flavor of its flesh, or in the odor of it before cooking or while cooking or after cooked; not a bit of it. On the contrary, it is as toothsome as a rabbit and is cleaner than a woodchuck, and is a more dainty feeder than a chicken. But then a rat is a mouse, and has a hairless tail. Now, I'm not partial to rat. The muskrat is an inquisitive animal, and through this characteristic more often comes to grief than in any other way. The trapper, having noted his feeding ground, selects a favorable spot and throws up with his paddle a little mound of mud and turf and sets his trap close by, a couple of inches or so beneath the water. After Ora had thus set his first, "Mr. Rat," said he, "will see that something has been working here and will at once proceed to inspect, and while so doing he will stand ten chances to one of putting his foot in it."

The trapper seldom baits for rats, but for mink this is frequently done. The mink is carnivorous, and the carcass of a dead rat or bit of other meat tied to a stake in the water close by a trap, *putorius* finds hard to resist, and while tugging at the bait the chances are that he will put his foot in it likewise.

The boys set about eighty traps between them, and would have put out more but for the fact that some other trapper had preëmpted the stream by setting his own traps; and notwithstanding they roundly asserted that this trapper was a hog because he had strung his traps for three or four miles along the stream, I was struck with the care they took not to interfere with his traps. They passed them by without meddling, and were careful not to put theirs in the runways that he had set in. Before my outing was up, however, I learned that all trappers were not so honest. After we reached the St. Joseph River we fell among fur thieves, who filched from our traps the best part of a night's catch.

Thirty or forty pelts taken in one night our trappers accounted as first-rate success, and fifteen or twenty they thought very good. Rat and mink furs are not the most valuable of furs; but in these days of ours, when the pelt of as humble a beast as is the opossum has a market value in New York and London, it must be apparent that the fur of the muskrat, let alone that of the mink, is not to be despised. A first-grade rat pelt is worth this spring 17 cents, and a full-grown first-grade mink will sell at from $1 50 to $2. The first-grade furs are taken in the spring, the second in winter and the third in the fall, when the price runs down from 50 to 60 per cent. The time is past when trappers in northern Indiana or southern Michigan can count with any degree of certainty on making good wages trapping. Our trappers, who were by no means wanting in experience, said if they could sell $60 or $70 worth of fur taken during their four weeks' outing they would consider that they had done well. If minks were as plentiful as are the rats, it must be evident that trapping would still be very profitable; but the rats taken on our trip must have been as ten to one of minks.

As we floated down the creek I learned that it was not the rats and the minks alone that were entrapped by the wicked trappers. Raccoons, weasels, skunks, ducks and hawks the boys told of catching, and I saw myself an owl, a blackbird and a crow that were in durance vile. Mink bait, it was evident, had lured these poor creatures to their destruction.

The muskrat has a bad name among those of our Western farmers whose opportunities are best of knowing him, but notwithstanding he is a very interesting little animal. His worst fault, I believe, is his tendency to burrow. He burrows for a home and safety, but is not discreet about it. Instead of burrowing in places where he can do no harm, he selects dams, embankments and other of the very places with which the thrifty farmer wants no one to meddle, and there tunnels and lets in the water when the floods come. But it is only in comparatively dry ground that the muskrat makes his home underground. In swampy places he builds him a house, and a right comfortable and nice-looking house it is. Selecting a firm foundation, he builds a round haycock-looking affair with mud, grass, flags and flag roots, and I do not know what all else, in the center of which is a den nicely blanketed with dried grass and the like. In that den the young are reared and therein the family are housed during the wintry weather.

We were afloat and in camp with the trappers for a week, and did not leave them till after we had passed Constantine. Fortunately, it did not rain, but we had a flurry of snow. The farmers' hay and straw stacks furnished us the material for our beds, and wood for the camp-fire was everywhere to be had. We encountered cold and disagreeable winds on two days; the ground was frozen so hard that it was difficult to drive tent pins; ice formed every night, and there was much of last winter's ice and snow piled in ridges along the creek, yet we voyaged, ate and slept in great comfort, and returned home with the back all right and ready for our spring work.

D. D. Banta.

Indiana University.

Louisiana Game.

Opelousas, La., April 16.—The hunting season is about over here. The close season on quail is in effect, and the birds are now paired off and nesting. There is yet some shooting to be had on plover, ducks and snipe, but the weather is so warm that it makes that kind of sport more of a labor than a pleasure. T. A. J.

THE SUNNY SOUTH.—XI.

Classic Gum Hollow.

At Portland we chartered two fall down Mexican vehicles and made start for Gum Hollow as early in the day as we could get away from the car. It was an ideal duck day and we found Gum Hollow an ideal shooting place, all except one thing—the ducks were not there. They had been shot so persistently by a certain market shooter that they dared not come in there any longer. The spot could not be better adapted to duck shooting if built to order. A little stream of fresh water is dammed up about a half mile from its entrance into the salt water of the bay, a fresh pond being backed up about a mile in length. The dam is 15 or 20 feet high, and very finely built, with mason work for gates. All over the dam the wild cedars have grown heavily, and the cane on top and at the sides stands 10 or 12 feet high. The ravine down which the stream runs is deep and narrow, so that the dam is only about a couple of hundred yards wide. Every bird that comes into the water comes in from the sea, over a wide strip of open ground, so that it can be distinctly seen for a mile or so, and when it strikes the pond it is bound to come directly over that fatal dam. The shooter does not need any blind or any decoys. He simply stands up on the top of the dam, and has the prettiest practice in the world on incoming ducks. I never saw so deadly a trap for ducks in all my life, or one where the shooter could have so easy and comfortable a time. I could readily see, when told of the tremendous flight which often came in here, what bags could be made, and could pardon the enthusiasm of Guessaz and his running mate Max Luther over this favorite shooting spot.

But to-day Guessaz was very glum. The market hunter had been ordered out by Mr. Geo. Fulton, the owner of the grounds, but he had lingered until he had ruined the shooting, aided therein by some unwise parties who had shot there practically all night on several occasions. We sent two guns out into the market shooter's blind in the open water, and deployed the rest of our forces in line along the dam, and so awaited the flight. It would be wrong to say that we had no shooting, and still further wrong to say that we had no fun, for we had what would be fine sport in many localities, though not what our friends wished us to have. I do not know how many birds we bagged, but forty or fifty I should think would cover it. We killed our first canvasback here, getting about half a dozen in all. Quite often fine bags of canvas are made here. Certainly, it was a unique and sociable day at duck shooting. We would walk along and visit each other on the dam till some one called "mark;" then would go into hiding till the birds came over. What the guns on the dam did not get, those in the blind behind us would, so that often we had quite a lot of fun out of one flock. Old Count Foster, the corpulent but energetic pointer which Dick Merrill had brought with him from Milwaukee (the dog belongs to Mr. Howard Bosworth, I believe), was kept very busy retrieving birds in the icy water, which he was more anxious to do than we wished, as often he would be away out in the pond when wanted elsewhere, though it was difficult to coax him away from a bird he once had sighted. He would whine and swim, and swim and whine, until some one got near enough to take him in tow and try to get him dry and warm again.

As the day did not promise very well, Guessaz and I left the place at about two in the afternoon and walked along the beach about three or four miles, and set Mitchell at work cooking something to eat, which he had ready just in time to catch the others, who had pulled out and followed us in not long after we left.

A Baron of the Range.

At table we held council of war, and voted to go to still another locality, of which we had heard much, and to which Mr. Guessaz told us we were invited by Mr. Fulton, whom we were soon thereafter ready to call with Mr. Guessaz "the prince of the Southwest." This new spot was the tank known as the Mud Flats on Mr. Fulton's property, near the home ranch of the "T," or Rincon ranch, as it is usually called. At Portland Mr. Fulton removed all doubt or hesitancy by coming and seeing us at our car, and taking full and absolute possession of the entire party. There is indeed no peerage in America if it be not that of the great cattle barons of the range, and nowhere in America could we have had a welcome and an entertainment more fit to be called royal. Mr. Fulton is much imposed upon by shooters, who come into his tanks and keep the cattle away from water, who shoot for the market where he tells them not to, and who make him a great many kinds af trouble. Yet he seems to lay up no grudge against this *gens intractabile*, but rather likes them better the more they impose on him, and whenever a party of strangers blow down into that country, he just goes out after them and camps on their trail until he brings them to camp. Tall, genial, commanding but not assertive, Geo. Fulton would be a force in any company, and it is likely we shall hear of him yet higher in the councils of the State of which he is so prominent and esteemed a citizen. In case Mr. Fulton should ever get out of a job, I am sure he could make a living by singing bass solos of "Sweet Marie." We very soon discovered that he could sing "Sweet Marie" and at once drafted him into the opera troupe, which was now fast making a name for itself in the land.

It may be borne in mind that in all the various movements of our party after leaving Rockport we had kept close along the coast. Most of the time we were upon or near the property of the Fulton Pasture Co., which extends some forty miles along the coast, or nearly from Rockport to Corpus Christi. The Aransas Pass Railway seems to be built especially for the convenience of the shooters who wish to visit the best ducking grounds of that region. Mr. Fulton's home station is Gregory, about ten miles from the ranch house where his family live. It was therefore necessary to make another move with our car, which Mr. Peabody had taken over to Gregory, only a short distance from Portland, on the early morning train after our Gum Hollow trip. Mr. Fulton said that he didn't bother ducks very much himself, but he thought we could get "a little shooting" out on the Flats.

At the Rincon Home Ranch.

At Gregory station on the following morning, then, we were met by some of Mr. Fulton's men, and a vehicle he called his "rig." This was an ideal hunting wagon or ambulance, drawn by four horses, a vast concern with three seats, lockers under the seats, carryall box slung beneath for guns, and more room all around than one ever did see in any other wagon—a sort of Great Eastern of the plains, fit ship for a man of Mr. Fulton's tastes and habits. Into this we piled our shooting gear, and climbing aboard made off through the chaparral blithely singing "Sweet Marie," with never a care in all the world. Dickie Merrill's tenor voice, sweet but not very strong, sounded finely on the cool morning air, and Col. Bill Peabody let go another fold or two out of his voice, and Oscar Guessaz essayed additional curves and frills, the while Mr. Fulton trolled a bass which loosened the king pin on the wagon. Wilbur Dubois was silent, and therefore surely happy. As for Count Foster the corpulent, and Dame Bang, Col. Bill Peabody's pointer, hardly less corpulent or energetic, they were simply wild with the glee of animal life which pervaded all things and all creatures then and there present.

Our road took us near some live oaks and scattered chaparral, in which we found hundreds of doves and some quail also as we drove along, so nothing would do for that wild crowd but that the guns must come out, and very soon we had meat in the wagon, after some pretty sport at swift crossing birds in the chaparral, hard enough to hit, we soon found. I saw here a curious instance of the alertness of the birds of prey at making a living. A hawk had picked up a crippled quail, which had escaped one of the guns somewhere in the shooting, and I could see the quail held in its talons as it crossed an open space near me. Firing on the hawk, it dropped the bird and went on, though I could not find the bird in the grass.

A Hawk is your Best Retriever.

In due course we arrived in sight of the Rincon ranch buildings, but it being still early, we determined to go over to the tanks before lunch, so turned off from the trail and went to the water holes, passing en route great flocks of geese out on the prairies, and also more jack rabbits than I ever saw on the same extent of country. A more beautiful country for coursing never lay out of doors. Indeed, a prettier sporting region in many ways could not be found. All the air was full of moving fowl, and the ground was alive with hopping, running, flying and creeping things—rabbits, larks, doves, hawks, crows, birds of many sorts. It was surely a generous and comfortable land. In the North we never see such abundance of animal life under any circumstances.

Where the Wild Fowl were.

But the great surprise was reserved for us at the tanks. Here was a body of water three miles long perhaps, and too deep to wade, for the most part several hundred yards in width. Down to the water the shores dropped bluffly or sloped gradually, breaking into many coves and bays. In all these shallow places, where the feed grew, were thousands and thousands of ducks of all sorts, both of marsh and deep water varieties. It seemed as though all the fowl of the country had come in here, and we saw where the Gum Hollow marketman's ducks had taken refuge. It was a stirring sight for a Northern shooter, one may be sure, and there were hurrying fingers unfastening the gun cases before we had paused at the bank. As we drove up the birds rose in vast bodies, circling and hovering and working up and down along the water way, a sight to do one's eyes good.

Wilbur Dubois and Dick Merrill and myself started to a certain long neck of land to put out some decoys, I happening to have a few canvas decoys with me, the only ones we had. There was no cover whatever on the point, but before we could get out the decoys, or pull a little grass to spread over our legs, the birds began to come over us in strings. I had intended to leave as soon as Mr. Dubois was fixed up, but we forgot our intentions, and not stopping to build a blind, we sat there on the bare ground and did some of the fastest and wildest shooting I ever saw. The birds soon went over very high, almost out of shot, in fact, but they came so fast one could not resist the temptation. For half an hour, I think, I was in a sort of delirium, for I never wasted so many shells on impossibles in all my life in the same time. Of course not all the shots were so far, and we got together a nice little bunch of birds in spite of all. Of course, too, once in a while one of us would kill one of the long range shots, and to see the bird come down out of the sky was very gratifying as one looked at the pile of empty shells at his feet. Then Dick left us and went to shooting geese on a point back of us, and as the day brightened the birds went out below us and our fire slackened, so that we had time to wonder why we had been so far from conservative in our notions of burning powder at absurd shots.

Mr. Fulton armed himself at the wagon before long, and coming over to us knocked down his share of ducks behind us. Then Guessaz appeared on the wrong side of the water, but bearing a brace of geese he had slain, as well as a number of ducks. When we finally got that gentleman around to the wagon in time for the lunch round-up, we found that our shoot of a couple of hours had resulted in just about two bushels of ducks and geese.

Arrived at the ranch house we found that the ladies of the house had kept an elaborate luncheon waiting for us, and in all ways treated us better than a dirty and disreputable mob of shooters deserved. We could do no more than apologize, for there wasn't a suit of decent clothes in the lot of us. Mrs. Fulton and the other ladies of the household must have been shocked at our appearance and our appetites, but we told them we would sing "Sweet Marie" for them and that seemed to square all delinquencies, so we were soon very much at home in one of the best of Texas ranches and one of the most hospitable of homes. It was a pleasure to see Col. Bill Peabody pass his plate the fourth time for sweet potatoes, or to notice the celebrated dog man from Milwaukee keep the roast duck near by where he sat. Wilbur Dubois was silent, so he must have been either busy or happy, probably both. We were in all a very dirty, happy, hungry lot, and a luckier lot of barbarians than we never wandered southward; so we figured it all out when we compared notes on costumes after we had assembled out on the gallery. Certainly we had no more fortunate experience than when we fell into Mr. Fulton's hands.

A Model Ranch House.

The home ranch of the Fulton Pasture Co. is one of the model places of the kind. Abundant water assures abundance of trees and grass, and careful hands have made a fine garden of flowers, which look very bright and cheer-

ful away out in the middle of the great gray plains. In the trees a myriad of blackbirds and daws chattered sociably, and some portly ducks waddled about the pond in front of the barnyard. The ranch house proper is of the customary and proper style—wide, low and roomy, with broad halls running across it and with a most delightful big, wide gallery in front opening out on the flower beds and lawn. It is not at all ranches that you find lawns and roses and tender flowers and trees and climbing vines. More like the usual ranch quarters was the big plain building where the stores were kept and where the men were boarded. Mr. Fulton has a regular secretary and book-keeper, to say nothing of an army of cowboys, foremen, etc. I don't know, but I don't think he does any work himself, being always too busy entertaining shooters.

It seemed to our host that his duty was to get some more of his ducks killed, so before long the great ambulance was in front of the house door, and we were aboard and off for the afternoon shoot, first giving a rendition of our opera, "Sweet Marie," which we did but indifferently well, owing to the *tenore robusto*, Guessaz, having eaten too much duck. Duck isn't good for tenors.

Could not Conquer the Ducks.

This time we drove to the upper end of the water, where the great mason work dams have backed the stream up into a half-mile lake of nearly round shape. Here we were to see the greatest view of wildfowl we had at any time on the whole trip, and there are few places in this country which will ever display one to equal it. The lake was full of fowl, millions of them, apparently. As we stood up in the wagon one of our party involuntarily gave utterance to his wonder, "My God! just look at the ducks!" It was a fascinating sight even to sit and watch them feeding. There were all sorts of ducks, all the marsh ducks, with large bodies of redheads and bluebills, and a very goodly lot of canvas, whose white backs we could see in numbers as they worked at their feeding operations, diving, moving about, rising up and shaking themselves, etc.

We came and saw the ducks, but we did not conquer them by a large majority. Do the best we could, we could not overcome the wary habit of these shrewd birds of going out and coming in directly over the middle of the pool, so that we got small chance at them. Not having any boat, we could not put them up from the middle of the water, and when we sent a horseman around to scare them up they simply swam over to the other side. If we fired at them to put them up they would only rise enough to flutter out of the way into the middle waters of safety. So we sat about the banks in mournfulness and watched about three thousand canvasbacks feed and play and have fun with us.

Toward evening the flight improved, and some of our party had some fair shooting, notably Guessaz and Peabody, who found a little arm of water into which some birds came to feed. Dick Merrill, who is a very fine duck shot, got a stand on a narrow island mid-channel of the main water, and did some as pretty shooting as I ever saw on ducks, dropping them very regularly, much to the joy of the exuberant Count Foster, who was now much in evidence, trying to tend everybody's gun, and usually managing to be sitting up in plain sight beside one's blind every time a flock of ducks was coming in. Wilbur Dubois and I put in over an hour trying to build a blind of cactus and mesquite, and so wasted the only time when the ducks flew; for toward dusk the flight ceased at our point, and we got little sport.

"Sweet Marie" Attains Prominence.

As it was, we added about another bushel of fine fat ducks to our possessions, and went into the ranch house very happy. To our surprise, we found ourselves still able to eat as heartily as ever. After dinner we made general assembly, and sang glee songs till bedtime, the opera of "Sweet Marie" making the chief number of the programme. We sang it *forte* and *fortissimo*, and *scherzando* and *allegro* and *pianissimo*, but mostly we sang it *da capo*, because the ladies seemed to like to have us sing it that way best, and we didn't care, because we had plenty of time.

Of the shooting on the following morning I need not weary by making mention, though it was much the same as on the first morning. We remained till after luncheon, and then reluctantly said good-by. As we departed, after all had taken places in the wagon, we pulled up in front of the gallery, where all the ladies had assembled, and gave them one last version of our opera, going away singing, saluted by the waving of handkerchiefs. We sang "Sweet Marie" for a quarter of a mile, and the handkerchiefs then being no longer visible, we stopped, and felt so sort of sad at leaving that we didn't sing any more for a while. Any of our party will be willing to testify that if our friend Mr. Tod, of the Loreles ranch, used us unreasonably and discourteously—which I am not ready by any means to say he did—his brother ranchman at the Rincon ranch more than made it all up to us, and more than redeemed the reputation of the range.

After Quail and Doves.

Mr. Fulton, it seems, was not yet through with us, but decided to go with us on still another move of our car, still on his own ground, and this time after quail and doves, namely, at the station of Sinton, about 16 miles from where we then were. Thither the obliging Aransas Pass Road shifted us early one splendid winter morning, and here we met also Mr. James C. Fulton, of Rockport, brother of our host. We learned that on that day, Dec. 6, George Gould and party, of New York, were with their private car over at Dennis O'Connor's ranch, said to be a fine place for deer, turkey, etc., about 20 miles from Sinton. As we looked about us at our cosy quarters aboard our own car and reflected on the shooting we had had and intended having, we were unanimously of the opinion that George hadn't very much the best of us, while we didn't have to worry about money matters the way he did, and so had him quite at a disadvantage.

A Javelina Hunt and a "Leopard Cat."

I must not stop to try to describe all the details of our shooting at Sinton. Those who went out for quail had fine sport, and they reported that the dogs, Count Foster and Dame Bang especially, had done extremely well. Dick, Mr. Dubois's setter, a young puppy he had along from Cincinnati, was sick and did not do much asked of him. Guessaz and I wanted very much to get up a *javelina* hunt to write up for FOREST AND STREAM, and so Mr. Fulton obligingly got Tode Quinn, his ranch foreman, to bring over his two hounds and take us out horseback for a try in the chaparral after these fierce little hogs, which are said to be the gamest game that runs that country. This hunt we were obliged to make early in the morning, while the grass remained still damp with the dew. The first morning we hunted over at the long bayou known as Moore's Lake, once a famous place for turkeys, wild hogs and some animals of perhaps even greater size. We found signs of hogs, but not of peccaries (*javelinas*). There are some wild hogs in there which are of great size and which make good game, being wild, fierce and very shy of habit, so much so that they only come in to water at night time. We struck a trail or two of these, but the dogs could not run it, it was so dry and hot.

At length, just as we were about to leave for home, we were pleased to hear the baying of the dogs near by, and knew they had stood up something. We climbed down from our horses in a hurry and ran over to the baying, Quinn ahead calling out, "There it is, up a tree!" And, sure enough, as we came into a little open glade, we could see a dark object of some kind up a small tree and gazing down at the leaping dogs. Quinn had no rifle, and as he said he was one of the cattle men that "didn't pack a gun," he had no six-shooter either. Thinking I was close enough to count at 50 or 60 yards, I cut loose with the very good Winchester .38 I was carrying, and broke the creatures back, it falling down at full length, but still hanging on in the tree. An instant later Guessaz fired with his .44, and, as it transpired later, hit the animal in the front foot, though it still clung in the tree. Seeing its head show clear, I got a shot through its head the next time, and it fell out quite dead this time. Quinn picked it up and came carrying it out to us, Guessaz then reviling me for shooting instead of scaring the animal out for a fight.

"You've killed a mighty pretty thing," said Quinn, as he laid it down—for till then we had not been able to see it clearly enough to know what it was. It was indeed a pretty thing as it lay before us, with its beautifully mottled coat of orange, gray and black, a fine little cat about 3ft. long.

"Leopard cat," said Quinn, in his sententious way. Ocelot, say the natural history books, as nearly as I can find out, but very much a prize, as we all agreed, for these beautiful little animals are becoming quite scarce.

A Chance for Science.

We found that our leopard cat had been eating another animal, and that when the dogs ran on him had merely jumped up the nearest tree. We found the nose, two paws and the tail of this unfortunate beast lying where the banquet had been in progress. The tail was long and slender, bushy, and ringed with black and white, with a tawny cast, like that of skunk fur. The animal seemed to have been about the size of a rabbit in bigness of body, or perhaps less than that even.

"Siffy cat" (civet cat), said Quinn, as he poked over the remains. But what the natural history books would say to this latest contribution of the State of Texas to the ignorant Northern hunter I cannot say at this writing, for I am not familiar with all these foreign creatures, and do not find anything in the books which looks just the way I think this "siffy cat" would have looked if our other cat had not eaten him. Texas is a mysterious land.*

We skinned our leopard cat very carefully and lovingly, and to-day the pretty spotted hide is one of the attractions in the FOREST AND STREAM Western office, along with the tail of the "siffy cat," out of which any scientific caller is welcome to reconstruct the "siffy cat" as it was before taking by the other cat.

A Wonderful Game Country.

At Sinton we were on what was once a great turkey range, but we saw no turkeys but a few tame ones run wild, which at first we almost thought were wild ones, though they were close to the town. All the turkeys, deer, peccaries and other game which not long ago abounded in this dense chaparral country have within the last few years been much killed off at all points near the railway. The march of civilization progresses, and in time even the covers of the great empire of Texas will be depopulated. May it be many, many years from now, as indeed I think it must be, for it is all naturally a great game land and still very thinly settled even close to the railroad.

Of small life, such as that of birds of all kinds, it seems that the supply is fairly exhaustless. I never before had an idea that so many doves could be on any piece of country. They were in thousands, nothing less, and we had rare sport at these hard-flying birds, so much that we all quit shooting at them, as we did not wish to kill more than we could dispose of. I walked out alone from the car one hot afternoon, without any dog, and bagged thirty-one doves and quail in a short time, and one evening Burton, Guessaz and myself went out only a mile or so and put up over a dozen bevies of quail in less than an hour, fairly calling the dogs off and leaving the birds lying at last, for we had killed more already than we had intended.

A Mixed Bag.

That evening we got a mixed bag, about two or three dozen quail and doves, and two horses. The latter we pulled out of bog holes where they had mired down, the low water having made all the watering-places veritable death traps for the live stock. It was pitiful to watch the struggles of an animal in so sad a plight, and Guessaz went over a mile to a house to get a rope in order to haul out one filly we had just seen get mired down in a bad place. By the time he got back the filly had worked out, so tired and weak she could hardly stand; but we found another in still worse plight, which we roped and dragged out, only to perish, I suppose, for the poor creature could not stand and could barely move its head a little. It is one of the necessary inhumanities of the ranch business that nothing can be done to remedy this distressful situation of the stock on the range. Over so wide an extent of country the ranchman cannot have any control or care of his cattle and horses, and they perish unnoted.

"I am sorry for the particular animal you saw," said Mr. Fulton, "but it is something against which we make no attempt to guard. I suppose on our ranch at this minute there are dozens of horses dying in the mire in the same way these would. The water gets low and the mud is deep, and an animal is weak, and that is the end of it. I will give you all the horses you can haul out of the mud on this ranch. You couldn't get rich at it. Good cow horses only bring $25 to $40 a head and mares unbroken are not worth over $10 a head. They die in numbers and we take no note of it. There are some things in any business not pleasant to think about."

* Bassaris astuta.

The "Man from Corpus Christi."

The country around Sinton in a season not so dry as the past one is a great one for ducks and geese. This used to be the hunting ground of the man Priour, whom Dr. Pierce describes in his "Man from Corpus Christi." Quinn told us of Priour and his hunting horse, and Mr. Fulton told us of his stalking a white-fronted goose, which was in the middle of a big flock of geese, Priour going after that particular bird, which was wanted as a specimen. He did this by means of his old hunting horse, which edged and sidled along close up to the flock, Priour walking by its side till he got to where he liked, the birds not taking fright at the horse. This seems to be a favorite method of the Texas market shooters. "Priour used to kill 30 or 40 ducks at a shot," said Quinn. And we are advised that that is about the average of our friend the market hunter, who had burned Gum Hollow all to death this fall.

The Series will End before Long.

Very pleasant were our days at Sinton, and the only trouble was that we could not shoot very much, because the game was so abundant we soon got all we could care for, and we did not wish to classify ourselves with those who kill all they can, and trust to Providence to take care of it afterwards. Doves we soon stopped shooting altogether, for the residents of the town did not wish them, and we could not use very many. Quails we could give away more easily, and we could keep a few in our ice-box for use on the road. But we were none of us grieved at being limited in bag, for someway we did not have so keen a fever to kill as we had at the start of our trip. We were ready to stop at the car and argue over the proper bird to have cooked for dinner, and to sit in the shade and think, for the sun was very warm indeed, the thermometer about 80° above.

We resolved to go to Rockport once more, and have a try for some canvasback shooting, then to turn our faces toward the unwelcome North. Perhaps readers will bear with one more chapter of a story quite too long already, if we promise to make that the last one. I haven't told about one of our best shooting days yet, and it would be a pity to leave that out. And, moreover, there is Sadie. We will tell all about Sadie the next time.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

UP THE TOMBIGBEE.—II.

(For first paper see page 282, April 13.)

MOBILE, Alabama.—The Tombigbee is, and must ever remain, a great thoroughfare, for no railroad running north and south can come within fifteen or twenty miles of this stream, on account of its immense curves, bends and high bluffs. Not one acre in sixty is under cultivation. Cattle thrive on the canebrakes on the banks of the river, and come out in the spring in good condition. Hogs are turned out into the dense timber, where they become fat from eating acorns and beechnuts.

With a fine soil that will produce everything that can be grown in Iowa, with plenty of timber—both hard and soft—and good, soft spring water, with a climate so mild that stock can run out and get their living all winter, and with a great river to convey the produce to market, it might be concluded that the valley of the Tombigbee River would be a paradise for Northern farmers seeking a milder climate to "let themselves down easy" in the afternoon and evening of life; but there is one serious discrepancy to all the natural advantages, namely, "wild and woolly" society.

We will give you a few samples. Near Coffeeville, where a noted outlaw, Rube Burrows, was killed, stands a log house where a desperado named Bob Sims lived and flourished. He was one of those desperate guerillas that got a taste of human blood during the war and could not afterward be kept within the pale of the law. By turns he was a counterfeiter, timber thief and moonshiner. He was the boss of a desperate gang of men who always did his bidding. He was the head of a new religion and printed a paper called the *Rent Veil*. One of the doctrines of the religion was that no man could own land that he did not till and live upon, and that any man could squat on any unoccupied land, regardless of all laws or deeds of record. He tore up the deeds to his farm in the presence of the district judge, claiming that he held his farm simply by occupying it. He admitted that he was a moonshiner, and said he had a God-given right to make whisky from his own corn, and that he should take and use any timber that he wanted from any unoccupied land. He had made a large stockade house of logs, with portholes from which his people could shoot any one who approached, come as they might.

A warrant was sworn out, charging him with stealing timber. The sheriff went to his house and served the warrant. Sims grabbed the instrument, tore it in small pieces and spat tobacco juice in the face of the sheriff, who beat a hasty retreat. That was the last of the timber stealing case, for no man dared arrest the editor of the *Rent Veil*. The U. S. detectives arrested Sims for moonshining and took him to a house for safekeeping until the next boat should come down the river. Sims's boys and other men of his gang soon surrounded the house, killed one of the officers, wounded another and carried the old moonshiner back to his stockade home. Finding that one of his neighbors had given information to the U. S. officers regarding his illicit distillery, Sims and his gang surrounded the informer's house, set fire to it, and shot the whole family, men, women and children, as they came from the burning building.

The whole county armed and marched to the stockade of the desperado. They surrounded the fort, but, Indian like, kept well hid behind the trees, for the Simsites shot at every man who "showed up."

After holding a council, they decided to fire the Sims fort, but it was hard to find the volunteer to pour on the oil and touch the match. Finally, an old, gray-

headed man, who said that his days were nearly "played out" and that he could not die in a better cause, volunteered to fire the fort. The whole force made demonstrations as if an attack was to be made in front of the house, and under cover of this feint the old man set the house on fire and escaped to a tree in safety. One of Sims's daughters came out with a bucket of water and extinguished the fire. She returned without being hit, but her clothing was riddled with bullets.

For two days the seige was kept up, when a military company with a cannon was sent up the river from Mobile to the "seat of war." When Sims heard that the governor had sent troops, he agreed to surrender, with the understanding that he alone was to be taken to the county jail and await his trial by law. To this the vigilantes agreed, but after getting possession they changed their minds. When the troops arrived they found five men—old Bob, his two sons and two others—hanging on one tree.

The vigilantes spared Sims's wife and two daughters, bu hung all of the men found in the house. The hanging occurred on Christmas day, 1893. The vigilantes went home declaring that "it was the best Christmas tree they had ever seen decorated." Just before the old murderer was swung off he said, "Come up here and feel of my pulse if you think I am afraid to die." and turning to the leader of the vigilantes he said, "I shall return to this place and remain until I send you to ——." The wife and daughters insisted that Bob would come back in seven days, but as Bob failed to put in an appearance, they substituted seven weeks, and then seven months, and now they set the time seven years from Christmas, 1893.

The day we arrived at Coffeeville a white man and a negro got into a quarrel over a yellow girl. Both "drew" and fired several shots at short range. The white man was wounded and the negro was killed. The average Tombigbee man will shoot any man that calls him a liar or a vile name. They appeal to gunpowder to redress a wrong.

We saw twenty-one wild turkeys fly across the river; they were within gunshot distance, but as no gun was on hand we lost a shot at them. They seemed quite tame and, no doubt, we could have bagged two or three if we could have gotten ashore. We often saw turkeys, geese and mallard ducks, but could not get a shot from the boat.

One day the pilot saw a deer swimming across the river and steered the boat shoreward, cutting him off from the shore. The engineer shot several times and finally hit the buck in the neck. The yawl was lowered and the venison secured. We had deer meat for two days.

We arrived at Pickens—a small village consisting of eight houses, one of which is a store, in which the post-office is kept. While taking on cotton at this landing, a sprightly, well-preserved old man, on the shady side of seventy, came on board. He was over six feet in height, lank, lean, but muscular and active. He wore the inevitable "cowboy" hat and a suit of black, with a white shirt and turned-down collar, under which a black silk double bowknot was loosely suspended to a bone collar button. He was shaved smooth and clean, except a small, short, gray goatee. We looked him over and said, "A hard-shell Baptist preacher," and we were correct. We soon got into a conversation with the old preacher. He asked the usual questions, where we lived, where we were going and what was our vocation at home. He freely gave information regarding himself. He was born in Alabama, taught school in his younger days, later on married a planter's daughter, and after the death of his wife's father took possession of the plantation on which he had since lived.

He was at Montgomery at the formation of the Confederacy, and was so firmly convinced that slavery would be abolished by the defeat of the South that he went home and sold his niggers and put the money into a fine piece of land. He worked his plantation with nigger help, which he liked better than white help. He had lately hired a negro for one year, giving him a small advance. The darky worked two days and skipped. He hired two niggers to catch the delinquent, whom he tied on top of a pine log, and the ministerial hand laid on three dozen lashes. The culprit was released and promised three dozen more if he ever came on the plantation again. "Of course, he never came back again?" we said. "Yes, he did, and begged my pardon, and I haven't a better nigger on my plantation than he. The only way to get along with a nigger is to make them toe the mark." He was an ardent Populist and stumped his county, which went strong for Kolb.

The cotton buyer and the preacher had a political discussion, in which the preacher came out on top. The preacher drank moderately, chewed and smoked excessively, and talked politics as often as he could get an audience.

On Sunday the captain would have no poker playing, but the bar ran wide open, and many a "schooner" went down while passing over that bar. The hot stove was kept hissing by the saliva from the chewers, while they told stories that drove the hard-shell preacher and some of the passengers into the ladies' cabin.

At Demopolis we had a norther that formed ice an inch thick on still water. We steamed down the river and whistled for a railroad bridge. The bridge was opened, but before we passed the wind caught the bridge and blew it back with a crash, breaking the turning pinion. We were delayed all day and all night. The boat was tied up and all hands, from the captain down, played draw poker. The game proceeded all day, the players only stopping to eat dinner and supper, when out came the tables, cards and chips, and when we retired at eleven o'clock the game was under full blast.

We bribed a darky waiter, who procured extra blankets for our bunks, but we could not keep warm. In our catnaps we dreamed that we were in an Iowa blizzard. The next morning the railroad company sent a large force of men, who with ropes opened the bridge, and we at last passed through.

The rural Alabamans are quaint, convivial and hospitable. From time out of memory they have manufactured nothing, and have bought all of their wares from the North. Since the war they have been too poor to buy anything new. The pictures, furniture, carpets and tableware that we saw in hotels and steamboats are of obsolete patterns and much patched and worn. They take us back to our youthful days, when a picture of "Washington Crossing the Delaware" and pictures of the ex-presidents were in vogue.

A veneered settee and chairs covered with slippery horsehair cloth, much patched and worn, greet you in hotels, steamboats and boarding-houses. The dining table in the cabin of our steamer was set with casters and tea sets that were once plated with silver, but the darkness had long since scoured the silver off, leaving the ware black and untidy. The knives and forks were of an obsolete pattern, with bone handles riveted on the steel blades, leaving crevices that were filled with dirt and grease. The plates, cups and saucers were cracked and chipped. The tablecloths were red, a color best calculated to disguise the dirt, and the napkins were conspicuons by their absence. As we sat down to our first meal on this boat, St. Paul's words, "Ask no questions for conscience sake," seemed to fit the case. We tasted every dish that was brought on once, even to "gumble eye," a negro hash, and "gumbo soup," made from a little of everything, and then settled down to four or five kinds of food that the negro *chef* could not spoil by cooking, such as grits, boiled rice, sweet potatoes and eggs. The coffee was simply vile, and we could not tell the tea from the coffee. There was no conversation at meal time Everybody ate as if at a railroad lunch counter, with only ten minutes to spare. Some one has said, "The Lord sends us the food, but the devil sends us the cooks." The negro cooking of the South will upset the average Northern stomach. Everything they cook swims in grease and is smothered in onions.

We landed at Mobile, glad to get back to our boarding-house, kept by a Northern man, where we found a good table and a clean bed.

If any of the readers of FOREST AND STREAM are suffering from indigestion, insomnia, or, worse than either, ennui, we would advise them to take a "round trip" from Mobile to Pickens, on the Tombigbee River.

R. P. BELL.

Natural History.

WAS IT AN INDIAN DEVIL?

Editor Forest and Stream:

I had a very unexpected introduction to an Indian devil last fall, and while the result was not complimentary to me as a hunter, I would like space to relate my experience, in the hope that some one better acquainted with these prowlers will answer the question appended. In October last I camped with a party of friends at the outlet of Long Lake, 16 miles west of Fifield, Wis. To speak of the strings of black bass that came to our table out of this beautiful lake, and the juicy venison steaks that added their full share to the enjoyment of living in this wild region, would be a digression, so I will stick to my text. On the morning after our first night in camp I picked up my .38-40 Winchester and started out alone to look for deer. I had passed through a small chopping about a mile from camp, and stepped into an ungraded timber road, where my attention was attracted by a slight noise in the heavy forest beyond. While listening and watching I caught a glimpse over my right shoulder of some animal moving toward the road parallel with the way I had come and but a few paces distant. As I quartered around and brought my gun near my face, the animal walked into the road and stopped just as I had done, seemingly attracted by something directly ahead, and unconscious of my presence. It was an animal of the cat tribe, at least 20in. in height, of a dark brown color, and I saw no tail. I took it to be a lynx, though it was as large as a medium-sized panther, and I did not expect to find lynx so large in Wisconsin. In fact, I did not expect to find any at all, for I had not lost any, up to date.

As I brought my gun to my eye he caught the movement, and turned his big cat face toward me. When the ball struck his shoulder, making a rose in the fur, he bounded at least four feet in the air, turned over, and lit on his back. I thought I had him, but before I could think twice he was on his feet, whirled half round and sprung into the timber behind logs, and I had to be satisfied with momentary glimpses of him as he departed. I did not think it prudent to rush after him. I walked to where he had stood—only twenty-four steps—and gathered up some bunches of hair, with flesh attached; but the most careful search did not bring to view the animal, nor even a blood trail, and I concluded that he had climbed a large dead pine that stood near and hidden in the hollow top. I inclose a bit of hair. Notice that the tips are dark, making the animal look brown. I would like to know if this was a lynx, and how I should have shot him. Also something of the animal's fighting propensities when wounded. I have pursued a wounded black bear, but I gave this fellow the benefit of the doubt. G. W. C.

PORTLAND, Ind.

[The description and the hair which accompany it make it quite certain that the animal was a lynx, probably *L. rufus*, which, in the shadow of the forest, might appear very dark in color. The proper place to shoot, if the animal was broadside on, was either shoulder or heart; and if the ball struck where you thought it did, the animal probably went only a very short distance, for the lynx is easily killed. We should not care to tackle a wounded lynx with bare hands, for their claws are certainly long and sharp, and their movements quick; but a small club and a cool head would be likely to dispatch one of these animals in short order.]

Two Acres of Swimming Squirrels.

CLEVELAND, O.—*Editor Forest and Stream:* My recent note in the FOREST AND STREAM in regard to color variation of the gray squirrel, while it did not bring me as many responses as I had hoped, yet it did bring me one or two very interesting letters. One of these, from a gentleman now living in Illinois, gave an account of a very interesting experience of his which seems well worth recording. He says: "Forty-six years ago last September, I, with three other persons, was hunting on the west side of Seneca Lake, in Yates county, N. Y., near the spot called Long Point. We had started in the morning from Dresden, and had hunted all the forenoon without seeing a single squirrel. While we were seated under the shade of a large oak on the shore of the lake, Mr. R. called our attention to something black moving in the lake. We waited quietly and were well rewarded, for to our surprise we soon saw that the moving mass was made up of black and gray squirrels swimming from the opposite side of the lake, which is here five miles wide. To speak within bounds, there were two acres of squirrels in this lot, and others along the west bank of the lake as far as Watkins. We saw many more crossing the lake the same fall, and the next year the west side of the lake had plenty of squirrels and the east side had none." F. M. COMSTOCK.

THE VERMONT RATTLESNAKE BOUNTY.

Editor Forest and Stream:

You express a doubt concerning the wisdom of a Vermont law providing for the payment of a bounty on rattlesnakes. I as a voter who helped elect our Legislature to their office, consider it my duty to stand forth to defend in some sort an honorable body, most of whose members are too modest to defend themselves.

A chapter on the rattlesnakes of Vermont might almost equal in brevity that celebrated chapter on the snakes of Iceland, but that fact does not affect the question at all. If there are no rattlesnakes in the State the draft upon the treasury will be unfelt; if there are a few, the bounty will stimulate search and result in the extirpation of the pest, a consummation devoutly to be wished, for no good citizen of the commonwealth desires these reptiles to share it with him.

Furthermore, the offering of a bounty is a guaranty to the summer visitor, whom we greatly desire, of our wish to make his life secure and his ways pleasant during his sojourn within our borders; or if he is adventurous, to offer him an opportunity to adventure; or if he be of a thrifty turn, to give him a chance to earn a dollar. To gain honor and wealth at one s roke might easily lure to the mountains one who hesitated between them and the seashore.

There may be a few old fogies who do not quite relish being crowded out of their beloved, secluded haunts by strangers, and have a selfish idea that the birthright of the native is entitled to some consideration; but our legislators, the press and the people at large have a constant eye, with a seductive wink, to the summer visitor. They first legislate to make good roads for him, though they shall lead him to no pleasant places, for it does not matter how the forests are laid waste or the banks of the streams are denuded of their beauty. For him they protect the pike perch two months beyond its spawning time and for him jealously guard the bass, our gamiest, but in point of supply our least valuable food fish, while they almost ignore protection to our really most valuable food fish, the plebeian bull pout.

Perhaps, too, our prohibitory liquor laws are made for a seductive purpose, for they have a highly moral sound even if they accomplish nothing but perjury and hypocrisy. The press publishes without comment fabulous tales of game invading farms and gardens and running at large in village streets, and the people look and long for the weary summer visitor that they may take him in.

We elect our best and wisest men to our Legislature, the press is the palladium of our liberty, and, snakes or no snakes, our people are all virtuous if they are not all happy. AWAHSOOSE.

An Adirondack "Wolf."

GLOVERSVILLE, April 18.—*Editor Forest and Stream:* In the town of Bleecker, Fulton County, there have been found within the last two weeks the carcasses of 21 deer which have been killed by a pack of wolves which inhabit the mountains near what is called the Pinch Mountain. It would seem that the number of these wolves is not very large, as some of the deer found only had a small hole eaten out of their hind quarter, with hardly a scratch on their bodies beside. A number of hunters are in that locality hunting for the wolves, but find it difficult on account of the depth of snow, which is said to be about 3ft. in the woods. This is what makes it so easy for the wolves to catch the deer and pull them down, as some of the deer were scarcely four rods from their yard when killed. There were only five bucks killed out of the 21, which makes it worse for the game supply in that neighborhood, as most of the does were with fawn.

Edward Kobusky, of Bleecker, killed one of the wolves April 11, and it is hoped by all concerned that they will be exterminated soon. J. E. G.

[On receipt of this letter, we wrote our correspondent asking him to send on to us for examination the skin of the wolf referred to in his letter as having been killed in the town of Bleecker. This he very kindly did at once, with the further information that the wolf had been identified by the supervisors of the town and also by several residents of the town who have seen wolves there years ago. He mentioned also that the State bounty had been paid on the wolf. An examination of the skin, which, it must be said, is without skull or feet, and has only part of the tail attached, makes it evident that the animal was not a wolf at all, but a yellowish gray dog, apparently a sable colly. Traces of the white collar so often seen on sable collies are to be seen on the skin. In order to confirm our opinion in this matter, we submitted the skin to Dr. J. A. Allen, the eminent mammalogist of the American Museum of Natural History, in this city, whose verdict is the same as our own. We should be glad to take a contract to supply the county of Fulton with wolves of this sort until we had at least plumbed the depths of the county treasury.]

The Scarcity of Spring Birds.

FRAMINGHAM, Mass., April 21.—The paucity of spring arrivals of the birds in this section is something unprecedented. I certainly recall no such instance in an experience of forty years.

The conviction is forced upon us that the extreme severity of the winter at the South has proved fatal to a large percentage of the migrants, at least of the smaller and weaker species. This idea is confirmed by letters from South Carolina and Florida, mentioning the finding of large numbers of dead birds, especially swallows and bluebirds. In this vicinity, so far, it is quite a note to see one of these two species.

In fact, with the possible exception of the blackbirds and robins, no one of the species that usually enliven our woods and fields in April is to be found in any numbers.

We hope to hear through your columns from observer in other Northern locations in corroboration or (u be) the reverse. F. C. B.

Biological Society.

THE May meetings of the Biological Society of Washington will be held in Cosmos Club Hall at 8 o'clock P. M. as follows: 244th meeting, Saturday, May 4. Chas. T. Simpson, The Geographical Distribution of Fresh-water Mussels. C. Hart Merriam, Mammals of the Pribilof Islands. Edgar A. Mearns, The Hares (genus *Lepus*) of the Mexican Border. W. H. Dall, The Mollusks of the Mexican Boundary Survey.

The 245th meeting, Saturday, May 18. Ernest E. Thompson, The Means of Intercommunication Among Wolves. C. Hart Merriam, The Short-tailed Shrews of America. F. H. Knowlton, Notes on the Fossil Flora of the Yellowstone Park. The public is invited to attend the meetings.

F. A. LUCAS, Sec'y.

Game Bag and Gun.

GAME AND MARKET-HUNTING.

THE *Californian* prints the following account of Kern county, (Cal.) game condition, past, present and to come. It is from the pen of Mr. Charles E. Day. The statistics given bear directly upon the FOREST AND STREAM'S Platform Plank:

"As the *Californian* has requested me to give some of my ideas as to the reason of the present scarcity of game of all kinds in Kern county as compared with earlier years, I will draw on my own experience of nineteen years, and also on the information gained through other hunters. I have hunted for market over a stretch of country reaching from Napa to San Diego counties, commencing in the fall of 1876, at Newhall, where we found quail as thick as blackberries; and, had I known as much about handling quail as I do now, I could have filled a barley sack, or say twenty dozen, in an hour, shooting over the cactus lands in that valley. There were three of us shooting at that time, and in three months' time we shipped over one thousand four hundred dozen of quail.

"We then came to Bakersfield, where we found an abundance of quail and cotton-tail rabbits. The wing shooting at that time was the best I have ever seen, and the shooting continued good until about 1889. Since that time game has been scarcer and scarcer up to this time, not only in Kern county, but in the adjoining counties. In some of the other counties small game is still quite plentiful, owing to the protection given by county laws from the market-hunters, only a limited amount being allowed to be shipped per week to outside points. There are some places in the foothills where game is still plentiful, but generally in so rough places that the market-hunter can with difficulty make a good bag.

"In the valleys the lands have been cleared up so much that the quail have no protection either from the hunters or the hawks and 'varmints' which prey on them or destroy their nests. They are now found only in small bands, and, being constantly shot at, become so wild that at the first sign of a man they scatter and run or fly clear out of the country.

"While in Cuyama Valley last season, I would have my driver take me about five miles from camp, and perhaps have the finest of wing-shooting all the way. Some years since, when I first went into the Cuyama Valley, quail were very plenty, and I used to kill from 200 to 300 per day. That was in 1870-80. My father, W. Scarlett, and myself killed in one afternoon 1,047 quail; but things are different now. The country has been stocked to death, and the brush broken down or eaten up, so that the quail have no protection from their enemies. When there is a lack of shelter for quail while breeding, and they are constantly disturbed, they will not pair off at all, and will, therefore, soon become very scarce, as the country is pastured so much with sheep and cattle that they tramp out the nests.

"In former years the duck shooting on Kern and Buena Vista Lakes was very fine, but the last year's shooting was very poor, for several reasons. It being a dry season, the water of the Buena Vista Reservoir was mostly drained off and but little duck feed grew in the lake, and part of that was destroyed by the carp.

"Then there was a law in Tulare county against market-hunting, and the ducks on Tulare Lake not being disturbed, remained there in great numbers, preferring that to the waters of Kern, where a constant fusilade was kept up by market-hunters and others.

"Should the Buena Vista Reservoir fill up again the present season, the next winter's shooting will be much improved, but so long as the game laws of the two counties remain as they now are, the sportsmen of Kern will shoot under great disadvantages.

"The open season for ducks should not commence before October 15, for market-hunters at least, for the reason that the weather is liable to be too warm for game to keep until it reaches market.

"In former days the mallard and teal bred to a great extent in this valley about the lakes and ponds, but since the reclamation of most of the swamp lands, their breeding grounds are mostly broken up, and we must look for them only with the regular flights of game from the north.

"The cotton-tail rabbit has now almost disappeared from its own haunts on Kern Island, owing to the work of the farmer in clearing up the lands and leaving no thickets of brush and weeds to furnish protection from animals and hawks and the ubiquitous boy with the pea-rifle.

"When I first came here I could find thickets where I could stand and kill twenty-five or thirty without moving, and in some places have killed as high as 200 in a few hours.

"The jack rabbit is still quite plentiful, for the reason that the pot-hunter finds no profit in shipping them to market, but has been more interested in taking the scalp from the worst enemy Bre'r Rabbit had—the sneaking coyote.

"English, and jacksnipe, and many other waders, were more plentiful around the borders of the lakes and ponds, as I am informed by those who were here before my time, but since I commenced shooting here, I have never found any great quantity of this class of game, although there is enough at certain seasons to interest the amateur sportsman. This is owing to the drainage of the waters from the overflowed land, and the consequent lack of good feeding ground.

"Deer are now becoming scarce in most all portions of the country where they formerly were found in great numbers. The first to go were the deer of the brush lands in the valley, which had to give way to the settler with his ax and grub hoe. Then there remained the foothill country, especially the Coast Range, which was the favorite home of the deer, and which would now be fine shooting ground had it not been for the indiscriminate slaughter waged on them by the skin-hunters, most of whom came from the coast and other adjoining counties.

"The antelope used to run like sheep over the plain in this valley, but I know of but three small bands in the country now, one of which I saw last summer, but without disturbing them, as it seems a shame to shoot the few that are now left.

"Elk are very scarce now. I have never killed but one, and that is the only one I have ever seen here. It weighed about eight hundred pounds, and had seven points. The horns now hang in Pioneer Hall, and are said to be the largest ever sent from this county. There are about eight of these animals left, and they range down about the headquarters ranch of Miller & Lux, where orders are given to leave them undisturbed.

"As we have now seen that the game is so fast disappearing, and that unless some remedy is applied, we shall soon be deprived of any chance event to get a decent day's sport in the field, the next thing is to see what can be done to prevent the total annihilation of the game of the country.

"It is to be seen that so long as the market-hunters from other counties where the game laws are more stringent are allowed to flock in, as they have done, at the opening of the season and skim the cream of the flocks, staying until they have driven the bulk of the game out of the country, the resident population cannot hope for any increase of the game here. It would seem as though they should be debarred from shooting here altogether, or limited as to the amount of shipments per week.

"Both local and outside markets might be given only a portion of the open season to make shipments of game out of the county. Then the open season for some kinds of game should be shortened—the season for deer from the 15th of July to 1st of September; the duck season from say the 15th of October to March 1st, and the season for quail from the same date to February 1st.

"No elk or antelope should be shot at any time for five years, at least, and doves only from the 1st of July to 1st of January.

CHARLES E. DAY."

CHICAGO AND THE WEST.

Big Game and the Indians.

CHICAGO, Ill., April 27.—"Mountaineer" writes me from Cora, Wyo., as follows:

"While I am in the humor of writing to you I will just state that we have had the easiest winter, so far as weather is concerned, I have ever seen in this country (and have been here seven or eight years) on game. The largest portion of large game have wandered high up in the mountains. I have been on my old stamping ground this winter, above the big bend at Green River. I have alluded to this place in FOREST AND STREAM before. It is 8,000ft. above sea level at the lakes, and the most of the feeding ground is above that. The most elk I have seen wintering here before was probably 200, but there are from 1,000 to 1,500 that have wintered in here this winter. The winter now is practically over and they are in splendid condition, and if there was such a thing as keeping the confounded Indian big game destroyers out this coming season, any sportsman that can see straight can get his elk this fall.

"No one has any idea of the terrible destruction of big game by those Indian hide hunters unless he is here. If they get in here early, and there is every appearance of the snow getting off the passes in the mountains very early, they will catch the cows in the calving season, before they can get on the high mountains. Terrible will be the destruction, as it has been before. The antelope will soon be gone, killed by the Indians. The elk will soon follow. Then a lot of people will say, Why were the Indians not kept out?

"There is another death destroying institution on the big game that is dying a natural death: that is the elk catchers, running the poor elk to death by the hundreds with grain fed horses and dogs, catching them to supply the game preserves and private parties, but they have overdone it, for there is no sale for them at present and I am very glad of it. I hope and pray the market is supplied for all time to come. FOREST AND STREAM asked once to have the facts and statistics about this elk killing business. If they will just state what kind of proof they want I think I can obtain it. But the Indians are the worst of all, for we can make state laws to reach the whites, and they only have to be carried out, but it is hard to stop the Indians with this. It was tried on them last year, but that did not have much effect. It seemed that it only induced the Indian agents to turn the Indians loose worse than ever. The U. S. Government is the source of power for handling them, or for giving the state special power to do so."

Good References.

Speaking of mountain men—and it is astonishing how generally FOREST AND STREAM is read by all Rocky Mountain guides and hunters—Mr. George L. Smith, a Rocky Mountain man who takes out parties, writes me and says he can furnish good references, and cites among these the names of the Count de Castellane, of Paris (lately married into the Gould family in New York) Wm. Liddesdale, of the Bank of England, etc. Modern sporting matters have come to a high grade when a mountain guide has to give references on the Bank of England or the latest attaché on millionairedom. Still these ought to go, if only satisfactory references on the bear and elk can be given additionally.

Bearings of the Wisconsin Law.

Since the publication (exclusively in FOREST AND STREAM) of the new Wisconsin law, several gentlemen have called to speak of the bearing of the law on Chicago men's club preserves in Wisconsin. As near as can be learned, the law will not injure the sportsmen's clubs, and this was pointed out last week. Mr. Stone shows me that Horicon clubs will not be affected, because Horicon marsh has never been meandered. The meander line runs only to the town of Hubbard, one-half mile south of the Diana Club grounds. On the north end of the marsh the meander line stops at just about the north boundary of the club grounds.

Poygan Club will retain its marsh inside the meander line, the open water of the lake being open to the public. Puckaway Lake will retain its old position, the Caw-Caw and Neepee-nauk clubs holding their marshes inside the line, the rest of the lake beyond it being open.

The danger of this law to the sportsmen does not lie in the actual legal bearings of the law on club preserves. The clubs can win all their lawsuits under it, but what club is looking for suits? The great trouble lies in the widespread impression which got abroad during the discussion of this measure in the Legislature, that "All the club reserves were going to be thrown open." Now this is all nonsense, of course; but some folk believe nonsense very readily, especially when they see mallards lighting beyond an imaginary line. The meandered lands law is nothing new in Wisconsin, but Wisconsin poachers may have wrong notions over this and so attempt to go in and possess the lands they covet. The thing to do is to correct all such wrong impressions as rapidly and as publicly as possible. The shooting clubs will continue to hold their lands as rigidly preserved as ever, and let not poachers believe otherwise.

Nothing Else.

A temporary ray of hope passed over the sportsmen's horizon this week in the shape of a Springfield dispatch printed in the Chicago *Evening Journal*, which says: "Gov. Altgeld has appointed C. D. Crouse of Savannah for Carroll county, and Charles W. Babcock of Chicago for Cook county, as Game Wardens." This would mean that our great and good Warden Blow, author of the game-stealer's measure, the Blow bill, had been deposed; but as Altgeld and Blow are so much alike, the dispatch seemed very improbable, and telegrams from Springfield soon proved the news should have read "fish warden" instead of "game warden." For a little while, until Gov. Altgeld and his friend Blow have learned what the people of Illinois think of them in game law matters (such as vetoing Mongolian pheasant protective laws and making Blow bills to market all the remaining game of the West), they will continue their meteoric flight of glory across our firmament—Altgeld will continue to veto good laws and Blow will continue to lie out suffering all night under a haystack to make 683 arrests at the same old stand (perhaps I ought not to hint that his deputy, Fish Warden Leuk, does a few of this arresting himself). But soon this meteoric flight will end, and we will have a change. After the change it will be discovered by all, as it has already been suspected by several, that the condition then of this game-dealing warden can be fully covered by the old Latin phrase, "*Vox, et præterea nihil.*" He will not be a warden then, but he will be then, as now, *Vox, et præterea nihil*—which, being interpreted, means "Blow, and nothing else." I regret the *Journal* item was not true. In effect it will be, some day.

Snipe.

Jacksnipe have appeared pretty much all across upper Indiana and Illinois, and some very good bags have been made—30, 50, 61, etc. So far they are not in very good order, as the ground has not yet fully warmed up and the worms are not playing on the greensward.

Big Bear Foot from Bobo.

This morning I received by express from our Mississippi friend, Mr. R. E. Bobo, of Bobo station, a mysterious-looking package about as big as a ham. This I discover to be a bear's paw, and it is the biggest black bear front foot I ever saw, nor did I think they grew so large. It is proof enough that the Southern black bear is not always a small animal by any means (Mr. Bobo killed one weighing 700lbs.) This paw is nearly three times the size of that of the largest bear we killed on our hunt, and if it had the projecting claws would make a mighty respectable foot for a grizzly. It is 8in. long, 5¼in. wide and 2¾in. thick. The claws are 3in. long—or rather, the claw from tip to root of toe measures that. The claws easily spread 8in. From the outside claw to the opposite toe-pad is 7in., and from the tip of the same claw square across the foot is 6½in. The foot weighs 2lbs., dry as it is. If any one knows anything about bear he will see that this is a good deal of a foot for a black bear. I must find out how much this bear weighed. Mr. Bobo has sent me a bear story which soon the readers of FOREST AND STREAM shall have.

The North Waters.

Mr. V. E. Montague, of Traverse City, Mich., is in Chicago refitting the little yacht Why Not, the property of Mr. Bancroft, of this city. Mr. Montague says that the waters of Traverse Bay would make a great place for a canoe meet, as the winds are steady and the waters good. He tempts one talking of these north waters, especially when he tells of the Agawa River, on the Superior north shore, where he does his trout fishing. This, he tells me, is one of those streams where one can lay out a line at fly-fishing, and can moreover get good big trout—up to 4 and 5lbs.—on the fly. Yet the lake steamers from the Sault land one readily at the mouth of this river.

"Our Summer."

The season approaches when people begin to ask, "What are we going to do with our summer?" Fishers, boaters, loafers and air lovers all ask that, and they can all find the answer in a very tasteful and beautiful little book just put out by the Wisconsin Central Lines, called "Our Summer." This will tell everybody what to do and where to go, from Chicago to Lake Superior, and all through the lands of lakes and streams and evergreen trees, as far west as Minnesota and Minnetonka and Minnehaha. Railroad literature sometimes receives the criticism of being too buoyant and hopeful in its tone; but from what I know of many of the points mentioned I am disposed to think that General Passenger Agent Jas. C. Pond has spoken in moderation and has no need to sue forgiveness. One cannot exaggerate the beauty and the fruitfulness in sport and pleasure of this lovely summer country, and I hope this season will see more visitors than ever patronizing it and blessing it. The maps alone of this little book make it very valuable.

The Natchaug Silk Co.

April 27.—Dispatches of this morning announced that the Natchaug Silk Co., of Willimantic, Conn., the larg-

est manufacturers of silk fishing lines in the country, had gone into the hands of a receiver in consequence of the failure of the Hartford National Bank. As wrong impressions might go out from that, the facts should be stated. The Natchaug people finding themselves, through their dealings and relations with the bank, somewhat affected by the cashier's notions of *meum* and *tuum*, had the receiver appointed to give themselves a chance to stop a minute and look around to see where they were at, while the investigation went on to learn. There was no business failure at all, and meantime the mills will not stop a day, nor will any order be delayed. Mr. H. L. Stanton, Western manager of the company, tells me that the Natchaug Silk Co. will continue to manufacture nice silk dresses for the girls and nice silk fishing lines for the boys, as it always has. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Sea and River Fishing.

ANGLING NOTES.

Walton's Memorial.

IN one of my last notes I mentioned the unveiling of a memorial window to Walton in St. Dunstan's Church, in London. The last issue of *Fishing Gazette* contains a half-tone reproduction of the window, and a beautiful memorial it is. The window was presented by the Master of the Ironmonger's Company, of which Walton was a member.

Mr. R. B. Marston, through whom the funds were raised to procure the memorial, described the window in his address as follows: "The center light of this window contains a full-length figure of Walton, being a copy of the charming statue by Miss Mary Grant in Winchester Cathedral, and a smaller panel shows him seated at his library table surrounded by books and the trophies of his art. The side lights enshrine portraits of men whose lives he wrote. At the top of the left hand light is Sir Henry Walton, with his coat of arms and a view of Eton College, of which he was for some time Provost. Lower down is Bishop Ken and an elevation of Wells Cathedral. In the lowest panel is George Herbert, the poet, and his church at Bemerton is depicted on a shield. At the top of the right hand light is Dr. Donne, Dean of old St. Paul's, of which the west front is shown; beneath him is the 'judicious' Hooker and his delightful little church at Barham near Canterbury. The third panel depicts Bishop Sanderson and his cathedral at Lincoln.

"Angels in the tracery hold scrolls of the virtues. In the two side quatrefoils are blazoned the arms of St. Dunstan and the Ironmongers' Company. The center quatrefoil contains the intertwined monograms of Izaak Walton and Charles Colton." Mr. Marston's address might be quoted in its entirety with pleasure and profit, and I hope the editor of FOREST AND STREAM will in the near future give the readers of this journal the pleasure of looking upon a *facsimile* of the half-tone of the window, but I shall quote but one more paragraph from the address. He says: "I was fortunate enough to secure only last week a copy of the first edition of Walton's 'Life of Mr. Richard Hooker,' the author of the 'Laws of Ecclesiastical Polity,' published in 1665. I say fortunate, because this particular copy had been presented by Walton himself to Doctor Warmstrey, Dean of Worster; and what makes it more interesting is that the printed list of errata has been seen through by Walton in ink, and the whole of the errors have been most carefully corrected in ink by Walton himself.

"Last Sunday evening I was showing my wife Walton's own handwriting in this little book, now 230 years old. We carefully compared the handwriting with divers bits of Walton's writing which have been *facsimilied* by editors of his works; there could be no doubt about its genuineness, and when, in answer to a natural inquiry as to what I had given for this little shabby volume, I mentioned the price, my wife said: 'Well, I always thought you had Walton on the brain, but now I know it.'" If Westwood were only alive now to write a sonnet concerning Mr. Marston's recent purchase!

Lake Trout in Brook Trout Waters.

All sorts of items about fish and fishing cut from the newspapers are sent to me at one time or another by frinds, who know that I am interested in these subjects. I am grateful to the friends who thus have me in mind, and once in a while I get a clipping that is of interest. I have such an one now. It came by mail, pasted to a half sheet of paper, with nothing to indicate who sent it. The type looks as though it were cut from the *Troy Times*, and this must be my acknowledgment to my unknown friend for his courtesy.

The clipping states that "a United States fish car is expected at Manchester, Vermont, with a quantity of brook and lake trout, which will be distributed under the direction of a veteran fisherman. The most of the lake trout are to be placed in what is known as Bowen Pond. The brook trout will be put in the brooks around Manchester," etc., etc. I hope this information is no more accurate than that contained in another slip now on my desk, which says: "The *salmo fortinalis*, whether American or German, is concededly the practical joker of the day." As there is no German *salmo fortinalis*, perhaps there is no truth in the lake trout part of the first item; but, if it should prove to be true that Bowen Pond is to be stocked with lake trout, it may not be uncharitable to hope that the veteran fisherman will not reach the pond with his fish.

I have in my notes frequently mentioned Bowen Pond as being very like Wilmurt Lake in New York, which contains no other fish life than brook trout, and in this respect these two ponds stood out separate from other trout water. Both are situated high on the tops of mountains and both furnished the finest flavored trout that it was possible to imagine, until in the case of Bowen Pond thoughtless fishermen who visited it in winter turned a lot of bait fish into the water. My first visit to Bowen Pond, or "Bourn Pond," as it is locally called, was made after the advent of the minnows, and the flavor of the trout had deteriorated in consequence, my companion told me. So far as I examined the pond it was a shallow mountain pond, an ideal water for brook trout, but as unfit for lake trout as the basin of a city fountain, and to plant lake trout in it would be simply to waste the fish.

Tournament Casting.

During the past few months Mr. John Enright, maker of the famous Castle Connell rods in Ireland, has been making long casts with the fly in public and beating his own record until he is styled the "amateur champion fly-caster of the world." What the records may be is not pertinent to this note, but other fly-fishermen in Great Britain have objected to Mr. Enright's title as "champion of the world," and a number of letters have been written in the English papers about it. One writer says: "Tournament casting generally and the records of so-called champions have very little to do with angling. The whole business smacks somewhat of self-advertisement, and the performances are in no sense representative." Another correspondent claims that Mr. John James Hardy, and not Mr. Enright, should be styled the champion, and this causes Mr. Hardy to write a letter to the *Field* upon the subject. Mr. Hardy is a member of the firm of Hardy Brothers, of Aluwick, rod and tackle makers, as well known in England as Mr. Enright in Ireland, and it must be assumed that he writes understandingly when he makes this strange admission as a reason for not meeting Mr. Enright in a contest, each to use rods of their own manufacture: "I do not see that there is anything to decide; besides which, my business arrangements utterly preclude any possibility of finding time for such preparations as would be necessary. I may explain that special rods of enormous girths have to be made and tested to find their proper rig of line, etc. It must be apparent that no fishing rods will carry or lift these long lines. This will explain the difficulty of J. G. D. B., who no doubt uses an ordinary fishing rod. I may add that the line must not be allowed to sink, as in ordinary fishing, or it cannot be recovered."

Remember that this is the evidence of a rod maker and one for whom the title of champion is claimed, for in certain classes in a regular tournament he did beat Mr. Enright. It will be noticed that Mr. Hardy makes a distinction between a fishing rod and a tournament casting rod. Commenting upon this frank admission of Mr. Hardy's the *Fishing Gazette*, London, says: "The letter quoted will make it clear to others, as it does to us, how some, at any rate, of the 'champion' casts of the last year or two have been made. * * * Of course, then, the ordinary 'regular' rod has no chance at all. * * * It is clear that these special thick casting rods are not fishing rods at all, and no record made with them ought to count or be compared in any way with such a cast as that made by Major Traherne, made with an ordinary salmon rod, one of his own, which he used constantly in actual fishing." Several weeks have elapsed since Mr. Hardy's letter was printed, and I have seen no contradiction of this admission concerning the specially prepared rods for tournament casting. How this matter may be or may have been in this country I cannot say, only I do know that not all the rods used at the National Rod and Reel Tournaments have been specially made for the purpose, if, in fact, any were. I have handled rods used at these tournaments and they were, so far as I observed, ordinary fishing rods. I presume that some of our rod makers in this country will be glad to throw light upon the subject so far as their own rods are concerned.

Lake Trout in Lake Champlain.

Early in April a gentleman known to readers of FOREST AND STREAM by his pen name of "Dexter" wrote me from Plattsburgh, N. Y.:

"I saw a fifteen-pound salmon trout at Burlington, Vermont, Tuesday, that was caught in Shelburne Bay, Lake Champlain, by smelt fishers. Wonder if this is one of the lot put in the lake in '85 or '86. Some claim that the initials A. N. C. were discernable on the back of the fish." I never had anything to do with planting lake trout in Lake Champlain, but plants have been made, and it is gratifying to know of this evidence of the success of the plantings. A. N. CHENEY.

WHY DO HOOKED FISH LEAP?

Editor Forest and Stream:

In your issue of April 20 Dr. M. G. Ellzey writes: "When a hooked fish leaps into the air, it is caused by fright, as he thinks, and nothing more."

Minnows and small fry when pursued by a bass or other enemy no doubt leave the water from fright, from an urgent call to get a hustle on and escape their pursuer, but toss a stick or stone near a bass and he darts away to hide somewhere in his own element, without waiting to leap into the air to show that he is scared.

Why don't a catfish or a sucker leap into the air when hooked? Because, as I believe, they haven't got sense enough to know that it is easier to get rid of a hook in the air than in the water, and a bass has; he goes into the air, as I verily believe, to take advantage of a possibly slack line and shake out the hook, and not from fright.

At the wind-up he says: "I do not believe anybody ever saw a fish leap into the air with its mouth wide open and shake its head savagely to shake out the hook. Men believe they have so seen, but I suspect they are mistaken." I "suspect" from this that Brother Ellzey has caught vastly more eels and catfish than he has bass, else he would not make that kind of a statement.

A big maskinonje that I took some years ago in Bower's Lake, one of the Intermediate chain, in Antrim county, Mich., went straight up in the air at least twice his length—he was 4ft. 4½in. long—and shook himself violently, but whether "savagely" or not I didn't have time to inquire, and the reason he didn't shake out the hook was, as I suspect, because it was buried out o' sight four or five inches down his throat. And his mouth was wide open too, so wide that I am not sure to this day that he did not die of lockjaw.

At another time on Central Lake of the same chain I hooked a maskinonje of perhaps 25lbs., and after a fierce fight of a few minutes he too went into the air in the same fashion as the other, and shook himself vehemently, if not savagely, and threw the hook and frog from his mouth fully 15ft. away. I may aver without spraining my conscience, that his mouth, too, was wide open while the shaking was going on.

On both occasions I saw the performance distinctly, and I was perfectly cool, without a symptom of "buck ague" or any other disturbance of the nerves.

When my struck fish leaves the water, I am usually looking right in that direction, and when I see him shake out the hook, with open mouth, I can't well be "mistaken."

In about forty-eight years' experience as an angler for bass and other game fish, I have doubtless lost fifty fish, likely more, by their leaping into the air and shaking out the hook, and I believe many a silver-haired, observant old angler might vouch for a similar experience. I believe that a bass, maskinonje, trout, grayling, or any other fish that leaps into the air when hooked, does so with the deliberate purpose of trying to get rid of the hook, and I have noticed that the fish that casts the hook has always the mouth open.

I might ask, with due deference to closer observers, how is a fish going to shake out a hook with his mouth tightly closed over the line? How else could he rid himself of it, shake it out, only with open mouth?

And it matters little whether he shake himself savagely or in good humor, like a dog when he comes out of the water—just so he shakes.

These are only my individual notions and views, based on many years' experience in fishing for bass, maskinonje, trout and grayling—all leaping fish—and although they are "creatures of a low grade of intelligence," I believe that any brother of the rod who "pays close attention to his fishin'," and uses his eyes, will find that they are a good deal smarter and fuller of resources than they are given credit for, notably the small-mouthed bass. (I am an old-time friend of Mister Bass with the small mouth; he's the smartest and shiftiest of them all when fighting for his life at the end of a line.)

Brother Ellzey closes with, "In angling, when the fish leaps, I let him leap," which is about the most sensible way to do, for he couldn't prevent it if he'd try.

To quote him, "Before I finish, allow me just to touch upon one other matter," that is the lowering of the rod tip when a fish leaps into the air.

My notion about it is, don't lower it. I never lower the tip when a hooked fish jumps out of the water, because I don't believe there is any reason or good fishing sense in it.

I try to keep a taut line under all circumstances, but sometimes a fish will go out of the water unawares, "onbeknownst to ye," as it were, and that is just the time one is going to lose his fish if he loses him at all, for the line is loose and slack for a moment or two, and it gives him the very opportunity he is looking for—to shake the hook out while there is no pull on the line to keep the hook firm in its hold.

I take little stock in the notion that a fish tears out the hook by throwing himself across the line, a thing that don't happen, anyhow, once in a hundred times. If he does hit the line with his tail, it seems to me the jerk would be largely offset by the springy rod tip, and the pull on the hook exceedingly small, besides the slippery "after end" of a fish would hardly cut much of a figure on a wet line in the matter of tearing out the hook. My humble opinion is it is best to keep a taut line at all times, if you can, and you will lose fewer fish, whether they are in the water or out of it. KINGFISHER.

P. S.—I don't like to be turned upside down. In my screed in FOREST AND STREAM of April 13 about "buck fever," count down nine lines from the top and at the right hand end of the line read "fever" instead of "ague;" and right under it, line 10, read "ague" for "fever." K.

CINCINNATI, O.

NIGHT FISHING.

Editor Forest and Stream:

My experience differs from that of Dr. Ellzey, so I will relate it. Some years ago I was at Grand Lake, lying just west of Long's Peak, on the western scope of the main range. Trout were there in great abundance, but not one could we take all day.

A hunter and trapper, locally known as "Judge Wescott," told me that if I would go out with him during the night we could get all the fish we wanted. The invitation was accepted. I went to his cabin and waited until 1 o'clock, when we got into a boat and rowed across the lake and anchored in water 4 to 5ft. deep. The Judge had four very light pine rods with about 8ft. of common linen line and a bare hook at the end. He put a very small piece of sucker on each hook for bait and cast them all out. He was at one end of the boat, which was a big, flat board concern, and I was at the other end with a like outfit furnished by the Judge. We let the baited hooks sink nearly to the bottom and waited for some minutes without any response, he explaining that it was a little too early. We held the rods under our legs and across the edge of the boat; there was some starlight, but dark, not, however, pitch dark. Pretty soon I felt a peculiar trembling of one of my rods, about which I could not be mistaken. Without any playing or fuss I lifted into the boat a nice trout, probably weighing half a pound. For an hour we were kept busy, and took 153 trout. They stopped biting as suddenly as they commenced. The Judge commenced pulling up the stone by the rope which constituted our anchor, saying that it was useless to wait. I, however, kept at it some time longer, throwing out and trying to get another bite, but failed. I remember distinctly his telling me that the time of biting was about an hour later each night.

At the time I thought but little about it, except that it was one of the unusual things that so often come to the fisherman; but the present discussion in your paper brings it back to my mind, and so I give it for what it is worth.

H. M. ORAHOOD.

DENVER, Colo.

Editor Forest and Stream:

I read with some interest the article by M. G. Ellzey M. D., in FOREST AND STREAM of April 20, and I have been thinking since that he is a little "off" about some things he touches on, which moves me, as old Ben Renshaw used to say, "to make a few amphibious remarks thereunto appertaining."

I have little to say about fish biting at night, for I have never done much night fishing, except for "cats." I have taken only three or four bass after dark on bait, and "quite a few" pike perch. I don't take any stock in night fishing for game fish, for I always want to see my line, so I may know what I am doing; besides, it always seemed I could get about all the fishing I wanted in the daytime. When I was a youngster I used to think a good deal a

Brother Ellzey does about asafœtida as a dead sure thing on bass, but I got over it a good many years ago.

At the time I speak of, two or three of us who were in the secret made "bobs," as we called them, of two hooks lashed together, with the bowls standing apart and a small bunch of white hairs from a deer's tail wrapped on and projecting past the bowls of the hooks about an inch. Over the shanks of the hooks and well down into the bend was wrapped and sewed on a piece of white scarlet flannel, the whole finished with a brightened bullet for a "head," or a strip of tinsel from a sardine box was sometimes fastened on in place of the bullet. However, before wrapping on the flannel a piece of gum asafœtida was worked with the fingers into a thin strip or roll and fastened lengthwise the hook shanks. This was the most important part of the "persuader." This was what knocked 'em, in our minds. Sometimes a bob would be made with the asafœtida left out, and instead a drop or two of oil of anise would be put on the flannel from time to time, and this was considered quite as effective and "killin'" as the villainous smelling gum.

But other cranks using the same kind of a "buck tail" without asafœtida or anise, caught bass same as we did, yet we still held strong in the faith. But one spring day, fishing with one of the nondescript bugs guiltless of asafœtida or anise to help it out, I caught more bass than ever before or since in the same length of time—132—and that shattered my faith in the vile smelling drug, and I have never used it since that day. I have come to think there's "nothing in it."

Brother Ellzey, M. D., perhaps uses a superior article of the drug, but that I used was the plain asafœtida of commerce, stink and all. When fishing for catfish I wonder he did not tie a sprig of *catnip* on his hook. The result might have been quite astonishing to him.

KINGFISHER.

CINCINNATI, O.

BOSTON FISHERMEN.

BOSTON, April 27.—Weather remarkably warm for the season on April 24, 25 and 26, may change the time of the ice going out of the Maine trout lakes considerably. At this writing, April 26, the ice is announced to have gone out of Lakes Tacoma, Wilson and Cochnewagan, the celebrated ducking lakes in Monmouth and Winthrop in that State. No news has yet been received of the departure of the ice from Lake Cobbossecontee, in the same section of the State, though it is reported very weak. The ice is also out of the Smithfield ponds. Salmon have again appeared in the Penobscot, after quite an absence, doubtless the result of the recent remarkably high water. Some good ones have been taken in the weirs at Bucksport and have appeared in the Boston markets. The fishermen are again trying for them at Bangor, but without good results being reported up to this date. The ice is about ready to leave Lake Auburn, and the fishermen are ready.

The landlocked salmon fishermen have had good luck at Sebago. The fishing seems to have been good immediately after the going out of the ice on the 16th, though those who have participated in the sport do not like to say much about it on account of the law that allows only residents of the State to fish previous to May 1. But some good salmon were taken by Boston fishermen, at the rate of three or four good ones daily. There seems to have been no difficulty in procuring smelts for bait, and a great many salmon were struck—small ones in many cases—it generally being the rule to save nothing under 2lbs. Fishermen say that there are a great many small salmon in that lake this spring, evidently the results of the restocking efforts of the Fish Commission. It is well understood that a feeling of hostility or jealousy has existed in the minds of many of the residents of the vicinity of Sebago waters, a feeling that the Commission has been stripping the spawn from Sebago salmon and taking it away for stocking other waters. The unhappy people have failed to note the law that one-half of the spawn taken must be returned to the original waters when hatched and ready for distribution, and that really the salmon are rapidly increasing in Sebago. I have it from a gentleman who has fished those waters several years, and is also thoroughly acquainted with some of the best salmon sportsmen on the Sebago waters, that so many small salmon have never before been seen as at the present time. The gentleman also says that some of the jealous residents are beginning to be highly pleased with the fact that salmon are increasing there. It is now generally talked among Portland and Boston rod and line sportsmen that Sebago waters are soon to be of very great worth as sporting waters. Cottages are rapidly springing up on the shores of the Sebago proper and the ponds above. A good many "red-spot" trout, as they are termed there, in distinction from the "black-spot" or landlocked salmon, have been taken this spring. It is believed by fishermen the best posted, that the existence of the one species of *salmo* does not in the least interfere with the other. As for cottages, a great many are also to be built on the shores of the Readfield, Winthrop and Monmouth lakes this season. Fishing is the chief attraction.

Charlie Robinson, the South Windham manufacturer and successful landlocked salmon angler, was in Boston the other day. He is more pleased than ever with angling in Sebago Lake. His success has been good this spring. Mr. John G. Wright, of Boston, was his guest during the early fishing. Mr. Wright saw some fine salmon taken. As he was coming away from the lake, early in the week, he saw a boy not over 12 or 13 years of age, with a big salmon hooked. The fight was a good one, and the fish when landed weighed 10lbs. Such is fishing at Sebago during the run of landlocked salmon. By some means or other a big salmon from Sebago got into Boston the other day. It may be explained that it was brought here by the man who caught it, and he had a right to bring it. It weighed 14lbs., and was served up for dinner at one of the local clubs the day it arrived.

SPECIAL.

BOSTON, April 27.—As the season for fishing approaches the members of the Megantic Club are beginning to grow anxious, and many inquiries have been made in regard to a spring trip to the preserve. To further such a project, Mr. L. D. Chapman, the club treasurer, has perfected plans for taking a party via Eustis to the camp at Chain of Ponds. There will be a slight extra expense over regular rates, as a special car (not a Pullman) will be taken at Boston through to Farmington without change. For this additional expense, however, the party will have an extra day on the preserve. Leaving Boston at 7 P. M. on May 29, they will reach the camps in twenty-two hours. The number will be limited, and notice of the intention of members and friends to join the party must be sent in by May 18, with check for $5 to cover the extra expense of transportation. Any balance not used will be refunded. Tickets will be purchased, if desired, and further information furnished by the treasurer at Boston. The fare from Boston to Eustis and return is $13, and the extra expense will be $5 each if but ten are in the party, and but $2.50 if twenty-five go. This is outside of the charge for the buckboard, which is $5 for each team, taking four people. The members will return at their own convenience, the party only going down together. Camps will be in readiness for occupancy by members by May 15.

The warm wave which struck the Massachusetts coast last week brought the trout to the surface and a few days of fly fishing resulted therefrom. Mr. Mark Hollingsworth, of Boston, happening to be at Nickerson Bog at the time, was able to take advantage of the opportunity, and is reported to have had some good sport.

That all-important topic, the ice, is still the one subject of greatest interest to Boston fishermen. Advices from the Rangeley region state that it is fast giving way, or weakening. Much discussion exists as to when it will finally go, and many bets have been made as to the exact date. May 10 seems to be the special time agreed upon by most of the enthusiasts, and if it does not break up on or before that date, it will be pronounced decidedly ungrateful. I have just heard that the New Hampshire lakes, Ossipee, Newfound, Sunapee and Winisquam, are all open This report has not been verified, and I am inclined to doubt its correctness. If true, it seems quite probable that the Rangeleys will be clear at least five days earlier than the time set above.

Col. Hopkins and Rev. Mr. Slack, of Brookline, Mass., and Paul D. Chase, of Boston, left last Friday night for Meskalonskee Lake to try the salmon.

Mr. Henry W. Clark, of Boston, is an angler whose experience in the Rangeley region has been extended way beyond the average. He has been going down into that country each spring for twenty years, staying about six weeks each time. A part of that period is usually spent in the Dead River country at King and Bartlett or Flagstaff. At the last named place there is a pond in which are found some especially gamy pickerel, which Mr. Clark will try this year on his way out.

HACKLE.

AMERICAN ANGLERS FOR CANADA.

Editor Forest and Stream:

I learn from personal correspondence and through some of my angling friends that quite a number of fisheremn from the United States may be expected in Canada at the latter end of May. Numerous inquiries have been received both here and at Lake St. John as to the probable movement of the ice upon the lakes, and consequently as to the best time to arrive here. I hope next week to be in a better position to give reliable information upon this point than at present. Members of the Tourilli and Triton clubs have already arranged to be upon their preserves in the early port of June, but the third or fourth week of May will undoubtedly see several of those belonging to the Springfield and Metabetchouan clubs at their comfortable club houses. Messrs. Chamberlain, Read and Porter, of Bridgeport, are usually amongst the earliest arrivals here of members of the former mentioned club, and Messrs. Brewer and Coats, of Springfield, are mentioned amongst those coming for the spring fishing in the Metabetchouan. Messrs. Geo. E. Hart of Waterbury and Durand of New York will go up to Lake St. John in May, to try, as they have already successfully done in former years, the early spring fishing for ouananiche. Thence they will endeavor to make their way in canoes by various watercourses and portages to their own club waters at Nomantum, where the heaviest and gamest of red trout are found. The ouananiche pool in the mouth the Ouiatchouan River is now reserved by the owner of the riparian rights, Mr. Frank Ross, of Quebec, for his own private fishing, but equally good sport can be had in and near the mouth of the Metabetchouan, especially between the 20th May and 5th June, and up to nearly a week before the opening of the season in the Grande Décharge.

Though the snow has already all disappeared from the vicinity of the city, except in the case of a few sheltered nooks, where under the shadow of low bushes the hardy bloodroot (*Sanguinaria canadensis*) pushes its bloom through the soft snow that it rivals in whiteness, there is still a large quantity of it in the shades of our northern forests. Upon the time and manner of its disappearance depends the condition of most of our rivers in spring and early summer.

During the past winter there was an almost entire absence of rain to beat down and harden the snow in the woods and to make ice on the ground. Consequently the snow that still remains in the bush is soft and rapidly disappearing. Very high water may, therefore, be looked for with the disappearance of the ice, and spring floods will doubtless be reported from many localities. Then there will be wanting later the usual supply of water from gradually melting ice upon the ground in the northern woods, to feed the streams in late spring and early summer, and at that season nothing but plentiful rains can prevent unusually low water in Canadian streams. Perhaps these hints may be of some use to anglers in assisting them to arrange dates for visiting Canadian waters. At all events, the certainty of unusually high spring water will afford both salmon and trout the opportunity of ascending to the highest pools and river reaches frequented by them, and unless the summer is unusually dry the prospects are that the Canadian angling season will prove an exceedingly favorable one.

The warm weather of the last few days has had so much effect, that the breaking up of the ice looks, at present writing, as though it may occur earlier than was anticipated a week ago.

It may not be amiss to say to anglers who may visit Canada this year for the first time in the spring fishing season that warm clothing is needed here at the end of May and beginning of June, particularly when camping out at night, and that large-sized flies, such as are tied on No. 3 and No. 4 hooks, will be found useful for both trout and ouananiche until the weather grows hot and the water low and clear.

E. T. D. CHAMBERS.

P. S.—Since writing the above, I have direct information from Lake St. Joseph to the effect that the ice is becoming quite rotten there, and that the lake is expected to be clear of it by May 1 or very soon thereafter. Springtime is evidently making up now for its early backwardness.

Mr. J. W. Adams, of the American Net and Twine Company of New York, has just completed the purchase of Seal Island in the St. Lawrence, 50 miles below Quebec, the most famous game preserve in this vicinity, which is noted for its geese, ducks, snipe, plover, etc.

E. T. D. C.

QUEBEC, April 24.

THE MONARCH OF THE POOL.

WE are awakened by the warm rising sun early in the morning to be reminded that spring is near at hand.

We reverentially brush the dust off the fishing tackle, and get out the wax and the winding silk and get to work.

What a flock of reminiscences surround these sacred relics of our happiest days, and crowd one after another upon our minds.

Here is a tip that was broken at the beginning of the season on that old monster which all last season lurked in the shade of the big elm, opposite the mouth of old Ford's Brook.

He has broken many a tip, this wary old fellow. I can remember as distinctly as if it were yesterday just how it happened, just how the weather was—mild, with a soft breeze rippling the leaves for an instant, and then relapsing into dreamy, sunny quiet again.

The sun breaking through the clouds, and then a slight patter of rain on the calm surface of the pool; then the sun breaking through again and lighting up the dainty little quivering drops on the leaves. Beneath, the river glowing with all the rosy hues of the departing sun, and the long shadows dancing merrily upon the water, reflecting the little birches and alders along the bank. The resounding click, click, of the reel echoed back from the other side by the babbling murmur of the brook. Now the line is swung back and a squirming worm is taken from the little round ball of its companions and impaled on the sharp barb. It gives a long stretch from the trembling fingers and hangs for a moment suspended, then the cruel barb again runs through it, and still squirming it is dropped with a little plash into the shallow water next to the sloping shore. Suddenly there is a sharp, quick pull, which sends an electric thrill through the rod and sets an expectant heart thumping with all its energy, and the eager face bends over the edge. The line straightens and the bending tip is brought nearly to the surface. The strike is made! The hook sinks deep into the tough mouth, and with a sudden lunge the trout endeavors to regain his freedom. A shimmering surface of silver flashes a moment from the dark depths, and the breath comes quick with apprehension; then comes a series of sharp flashes from beneath the surface, and the rod springs from side to side as the struggling monster vainly tries to escape. He is coming to the surface now, and I can more plainly see the gleaming sides and rosy hues as he strains his supple form in the agony of resistance. Now with a flip of the tail he breaks the calm surface with many ripples.

He is a beauty, but there is no time to admire him. I hurriedly glance for a place to land him, but can see none, and with boyish eagerness attempt to lift him out of his element; flopping he comes and snap goes my tip, but not minding that I reach for the line and secure it and throw my rod back with a spasmodic movement; it snaps again, but with a quick jerk I throw him upon the bank. With a flop he disappears in a hole in the roots, and I hear a faint splash. I stick my head into the hole, nothing but darkness and a limp line which winds about my fingers with an affectionate persistency; I throw it from me, fling myself to the ground, and gaze absently, dazedly, on the foam covered waters.

The sun lingers a moment and goes down; I try to whistle, but it dries in my throat. I try to sing, but no sound comes. I turn to the woods for comfort, nothing answers me but the melancholy chirrup of the little brown thrush and the echoing tap, tap, of the woodpecker. Far away in the stillness comes the chatter of the kingfisher and the muffled drum of the grouse.

I slowly gather together the shattered remains of my pole and meditatively wander down the path toward home while I revolve in my mind all the incidents of the scene. I travel aimlessly along until the shades of darkness close around me, and in the dark hemlocks I pause and listen to the running waters as they joyfully play 'neath the dark shadows along the opposite shore. All is quiet and the love of nature reasserts itself, and whistling softly, reflectively, I go slowly down the road, resolving some day to return and revenge myself on "The Monarch of the Pool."

FRED. W. FASSETT.

WELLSVILLE, N. Y.

Killing Fish When Caught.

CLEVELAND, O.—*Editor Forest and Stream:* There is no question as to the humanity of killing our fish as soon as caught, neither, I imagine, is there any question that a fish so killed has a better flavor and will keep longer than one that is allowed to die a lingering death in the basket.

The method of killing by breaking the neck mentioned by "C. M." in last week's FOREST AND STREAM has the advantage of quickness and sureness, and is the method I am apt to use when in a great hurry. The disadvantages, however, and ones that I consider serious, are that the fish, if kept a day or two in hot weather, are very apt to spoil where the tissues are broken and torn at the neck, and also the heads are apt to come off when they are being cooked.

With small trout a sharp snap with the thumb and finger on the end of the head will kill them instantly, or a little stick which may be carried stuck through the hole in the basket cover will do the work with very little inconvenience. By all means kill them somehow as soon as taken from the water.

F. M. C.

Forest and Stream Fishing Postals.

LIVINGSTON MANOR, Sullivan County, N. Y., April 27.—On Thursday Custer Shuley took 16 trout, Friday 19 and to-day 18, running from 7 to 11in. On Monday Ben Searles caught 58 and to-day 49, running 7 to 12in. Prospects good. The old Davis House is now the Mott Hotel.

S.

An Angler's Invitation.

LYKENS, Pa.—Opening day in this locality, and I may say throughout this and adjacent counties, was cold and the waters too high for good fishing, although several fair catches were made. On the 18th a friend and myself spent a day on a favorite stream within twelve miles of here, and each captured a full creel of cleaned trout, numbering forty in all, running from 8 to 14in. long. A friend of mine on the 20th came home with twenty-six that would average 11in. long. Now, if there are a couple of brothers of the rod and gun who wish a day or so on a stream where they have hopes of occasionally getting a big one, they can do so by letting me know a few days in advance and I will cheerfully go with them, and as I have by years of experience on the stream become perfectly at home with every inch of water for fifteen miles, I will guarantee both a pleasant and successful trip. We can either camp in my tent or we can put up with a friend who lives near. It will be a four hours' drive over good roads, and we will be away from civilization almost as much as if in the woods of Maine. I am interested in no business that would profit by the advent of strangers, but simply offer this invitation for the sake of some brother sportsman who may be "chained to business" and can get a few days off. On or about May 1 would suit very well. Hope to hear from some of the readers of FOREST AND STREAM and be able to give them a good time.

W. V. BARRETT.

Washington Trout Fishing.

ROBE, Snohomish County, Wash., April 20.—As a specimen of the possibilities which await the angler in this country I herewith send you a photograph of a string of trout taken at Panther Lake by Mr. George Bakeman and Mr. A. D. Austin, of Snohomish, Wash., in six hours' fishing. Panther Lake is one of those small bodies of water which abound in the wilds of this State, is located about six miles and a half northeast of Snohomish, and can only be reached by a rough road through a dense forest. It was at first supposed to be too early for successful fly-fishing, but a small copper-colored spoon was used with such effect that the anglers decided to try the fly, and the brown palmer with yellow body, the Klamath and some other flies were taken by the fish with avidity.

The catch consisted of 97 cut-throat trout weighing 40lbs. The size of the fish and the length of the string may be determined by the length of the surveyor's pole from which they are suspended, each division of the pole representing 1ft.

The trout which inhabit these small inland lakes and the streams flowing from them are, so far as my observation goes, the cut-throat species, and I consider them the most desirable trout of the several kinds found in this locality.

SPLASHER.

Maine Fishing.

DIXFIELD, April 28.—The ice is now out of the most of our inland ponds and lakes, with the exception of the Rangeleys and Moosehead. The fishing at Auburn this last week has been very fine, and many large trout and salmon have been taken, also at Swan Lake and Wild Pond. The salmon are being caught in many ponds where they have never appeared before. The landlocked salmon fishing in this State is to be the coming feature and the taking one.

H. O. STANLY.

Salmon Fishing For Sale.

FREEHOLD, on the best fishing waters of the Southwest Mirimichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York City.—*Adv.*

THE Messrs. Heublein, of Hartford, will give away to every lady visitor at the Sportsmen's Exposition a small bottle of their celebrated Manhattan Cocktails. Sportsmen unprovided with friends among the fair sex will be at a disadvantage.—*Adv.*

Catalogues.

MESSRS. J. B. SHANNON & SONS, manufacturers and dealers in fine fishing tackle, guns, and sportsmen's supplies, at 1020 Market street, Philadelphia, issue a well gotten up catalogue of specialties, which is embellished with illustrations of "Rail Shooting" and "Bass Fishing."

REUBEN WOOD'S SON'S COMPANY, Syracuse, N. Y., are out with their 1895 catalogue of fishing tackle, etc. It appears in a handsomely lithographed cover, on the front of which is a portrait of the late Reuben Wood, "one of nature's noblemen. "An enterprising tackle house is always known by the specialties it produces, rather than by the standard line of goods," say the Messrs. Wood. They add, "We have brought out this season several new ideas. Every practical angler will use them."

Camp-Fire Flickerings.

"That reminds me."

IN early summer, one year, shortly after the close of the civil war, a friend who lived some twenty-five miles west of Chicago, and but a short distance from the Du Page River, sent me a very pressing invitation to come out and put in a day with him at fishing for pike. Arrived there in due time we began operations. The day was a glorious one, and many of the farmers in that vicinity had joined forces in having a big sheep washing but a short distance from where we were fishing, and near to a place called Gary's Mill. Of course, such an affair (some two thousand sheep were washed there that day) would naturally bring together quite a crowd of workmen and onlookers, among whom was a very slim, pompous-looking young gentleman, a student, as we afterward learned, who acted as if he knew everything and the price thereof. After viewing the proceedings for a while he leisurely strolled up the east bank of the stream until he came to a dugout that we had been using. Just then the idea came into his head that he would like to take a ride in it. Taking the paddle, a rough, one-bladed affair, and pulling up around him the lower end of his long linen duster, he carefully adjusted himself on the low seat in the craft, which was about as cranky a boat as could possibly be. By exercising a deal of caution he managed to keep the thing right side up and soon after paddled, or floated, down stream, where the crowd was. He was so awkward in his movements on the water that the people were not very complimentary in their remarks to him. After paddling around for a while and taking their sarcastic talk he concluded to go ashore, but in trying to get through a lot of lilypads his paddle got entangled and over went the dugout, pitching him head foremost into the mud and water quite a distance from shore. As he came up blowing and snorting he left the boat and struck out on foot for the bank, clawing hold of the lilypads at every step to help him along. As the mud and water there were only about up to his armpits he managed to get out without assistance. But what a figure he did cut, and didn't the crowd roar and yell then. The last that we saw of him he was going on a dog trot for Wheaten College, some five or six miles distant, with his long, bedraggled, linen duster twisting and flapping around his slim shanks at every step

Well, we two had a fairly successful day of it so far as the number of fish was concerned, having caught some twenty or more pike of different sizes; taking it all round, the fine weather, the fun and the fishing together made it a day long to be remembered.

A. L. L.

THE death of Mr. Wesley Cameron, recently chronicled in FOREST AND STREAM, recalls to mind many stories I have heard of him from his old companions while sitting around the camp-fires of the Kingfishers. I am minded to relate one of them as a specimen:

"Wes Cameron," as he was usually called when in camp, was a man somewhat careless of his personal appearance when out on a cruise.

I recollect that when, one cold morning, I boarded the steamer at the Sault Ste. Marie for a trip down the St. Mary's, I had covered myself with a particularly seedy old nor'west capote, and was saluted by the Colonel with the remark, "Now you look like old Wes Cameron."

Well, once upon a time, before the railroad crossed the Nipigon and when the steamer used to make all the ports along the North Shore, Wesley and a number of kindred spirits came down from Nipigon Lake to the mouth, and after waiting some days for the boat Mr. Cameron decided to start on in his canoe, thinking that the steamer must have foundered somewhere, and wouldn't come at all. The others concluded to wait, and within a few hours the welcome "blow" of the steamer was heard, and shortly they were comfortably established on her deck, while she steamed merrily away to the southward.

It was not long before they sighted a lone birch ahead, with a crew of what appeared to be three Indians, each a little dirtier and more bedraggled than the others.

It was recognized as the craft that carried Wesley and—some, at least, of his "fortunes;" and then it was that those bad men on the steamboat, not having before their eyes the fear of anything on earth, did put up a large and fragrant job on him of the seedy look.

The birch headed so as to enable her commander to speak the steamer, which he did as soon as opportunity served; not loudly, however, for the wind was fresh, there was a heavy sea on, and Cameron had paddled harder than was good for him to keep from being blown off shore. "Ship ahoy!"

"What the blank do you want?"

"Heave to (puff—puff—ahem). Wanter git aboard."

"Likely I'll take you on—ain't carryin' no such truck."

"Heave to, I tell you; that's my party there."

Captain turns to the gentlemen looking over the side. "Any o' you know that thing?"

"No." "Not I." "Not much." "What d'ye take us for?"

"You hear, you feller? You can't come any of your games on us—no, sir."

The precise nature of the conversation which ensued is not important, and some of it might not look well in print; but old Wes did at last manage to get on board, and the rest of the story may be imagined.

It is not related that he ever succeeded in getting even with that party.

WISE ANIMALS.

Editor Forest and Stream:

Poor, shaggy, old Jack! Though only of a common breed, yet was he in action of most uncommon intelligence.

The night before his kind mistress died, he would not leave the window near her room, but howled and moaned most piteously, as he had never before done, just as though fully conscious of the fatal illness and fast approaching death of his true friend, who had, in his early days, rescued him from peril and death, and had taken him to her home and taught him fidelity and wisdom.

His mistress was not then unmindful of his honest grief, for she said to the friends by her bedside: "Poor Jack knows that I must soon go hence and leave the dear ones and him to the care of others." Even at that time could her tender heart think of and pity all living things.

There was also a family of kittens, which had been taken from the streets, starved and shivering, and which had grown into a handsome family. Jack and Puss slept together at times in cold weather, and, after the death of their mistress, were often in friendly communion. Who can say that they had not a special language, understood by them?

After years, as poor old Jack lay in the tortures of death by slow poison, Puss would bring him part of her food, meat and chicken bones, and would look at him sorrowfully, remaining near by as though to watch over and protect him, for she would look into the faces of persons passing or coming to him most pitifully, as if to implore their help for poor Jack. Even after Jack was no longer conscious she still remained an honest mourner, and for days thereafter would neither eat nor act in any way like herself. Has ever a cat been known to express such honest sorrow? I fear that we do not begin to know the thoughts and feelings of what are termed "our dumb friends."

This cat was given away to a kind family and was gone for some months. She had been shut up in an old stable, yet she returned to us and plainly manifested her happiness at being again with us by caressing and licking our hands, lying down close to the feet of the family, purring, saying in cat language as plainly as possible, "I am very glad to be back in my dear old home again with you all."

So there must exist more than just the old love of habitation, a friendship true and lasting.

One strangely evil trick this cat was ever guilty of. Indeed one so peculiar we never heard of it before. She would get into the sleeping rooms, hide herself in the most unheard of places in order to get to bed with some of the family, for the sole purpose of sucking and getting into her mouth the curls or hair of the children, often lying on their heads, sometimes entangling her claws in the hair. This always seemed unintentional. Her kittens were guilty of the same trick, as well as trying to inhale the breath of the sleepers, whom both cat and kittens fondly loved.

The next comer was a little black and tan dog, to which many interesting tricks were taught, such as getting the shoes and slippers of the master and mistress of the house, picking up things that were dropped, bringing the brush or little sweeping broom, and many other things. When very anxious to go out walking, he would go to the hall stand and would try to coax the hat and cane of his master to come to him. He would sit up, sneeze, bark and jump to see if he could not persuade master as well as his belongings to come to him.

After the walk, when returning with muddy feet, he would look at his tracks on the steps as if ashamed of them, and if, after stepping on the mat, there were still the imprints of his little feet wet or muddy, he would run to the bath-room and beg to have them cleansed, whereafter he would expect to be praised for being so good.

There came to visit in this family a lady and her little daughter, two years of age. Beppo, the little boss, did not then like children, for he had been accustomed to have his own way in many things. He had his little bedstead, mattress, pillow and blanket, and had even his own silver-plated drinking cup and plate. These the little child, Viola, at once admired, and sometimes took possession of them. Then began the trouble for spoiled and selfish little dog Beppo, who had become so very bachelor-like and selfish in his habits of life, he not caring to share his possessions with this dear little pet, Viola, who so loved him in spite of his snarls and glowing eyes.

But Viola was fearless and enjoyed the freedom of the whole house, Beppo included—nor did his evident dislike make any difference to her show of affection for him. Often Beppo would not go to his master or mistress, but would go to the mother of Viola, sit up, sneeze, bark and speak as plainly as he could, saying: "Do make your child respect my rights. I am possessor." When they were restored he would often go to his bed and stay there longer than usual just to keep possession, no doubt even punishing himself thereby, just as some people do at times, for when the hated intruder was not there Beppo would not remain to guard his supposed exclusive rights, but would listen for her coming before taking possession.

After a time even Beppo became ashamed of his selfishness and began to be happier, even making friends with little Viola. He wanted to go out with her to walk; in fact, he became very fond of her and finally was sent to her home as his future dwelling-place, for his mistress went far away to distant lands, and no one was considered so kind and sympathetic as this once-hated intruder.

The memory of Beppo proved most excellent, for some of his old tricks, which had not been rehearsed for years, were again suddenly exhibited; even the playing of dead dog, which was to lie on his back, not hearing any call until certain numbers had been counted, and then, when the word was given, "The policeman is coming," he would jump up for a frolic.

Beppo also deemed it his honest duty to keep away all cats, knowing he could catch the rats that at times infested the yard and cellar, yet if a strange cat was brought and properly introduced, by telling him that such an one was to be well-treated thenceforth as a member of the household, he would make friends, if not spit at and scratched in the face; this he would not stand, nor was he bidden to do so. Viola would say, "If you two can not agree, why Puss must look for another place. Beppo shall not be so treated, for he does not deserve it."

Two things Beppo could not abide—first, an American Fourth of July, with its loud din, firecrackers and fighting boys; and the other was ugly faces, sometimes made at him by a member of the family. These fairly disturbed him, so that he would howl forth some of the most doleful notes.

Once he was very angry with a child, for which he was taken to task and scolded well for his evil behavior and loud snarls.

He and his little son Nig had been given some nice boiled meat for their dinners, but the child had taken it all away and stuffed it into the cuspidor. The dogs begged for more, which was put upon their plate, and again it was taken away, when, in sore desperation, poor Beppo barked, sneezed, and begged for his mistress to follow him. After a time she went, and, lo and behold! there was all the cause of the just anger and hunger of the poor dogs cleverly explained.

In his older years Beppo began to run away from home at times, perhaps in search of his first mistress, who had been on a visit, and whom he never forgot. This time there was no advertisement for his recovery, as there had been at previous times. He had been gone for some days and mourned as lost, this time for certain; but suddenly there was heard a loud breathing sound, which quite alarmed and startled all in the room.

One of the family said: "What is that sound?"

Another said, in hushed tones: "How strange! Perhaps it is the ghost of our dear, wise little Beppo, come back to tell us not to grieve for him; that he is gone to the best dog world there is after death."

"Hush!" said the first speaker. "I feel something warm near me. Oh, look! look! Why, here he is, poor little fellow!"

Upon investigation we indeed beheld our lost Beppo; but oh! so tired, dirty and humiliated, cowed and cringing, quite unlike our free little Beppo. About his neck there still hung a piece of hempen rope, which he had broken with heroic determination. How mute, yet eloquent, were his eyes as he seemed to tell his story of suffering and wrongs. And how happy was he to be once more washed, fed and put into his clean bed to rest and sleep. Surely, aristocratic little Beppo had learned a lesson not to be forgotten.

He had never admired any common-looking people, but now he seemed to shun them as one does a pest. After a day or two Beppo was himself again. He even began to watch the passing omnibuses, for once he rode in one with his mistress while being brought to this, his later home. Never did he fail to sit upon articles of clothing which had been worn by his beloved mistress, first dragging them, when he could do so, to his bed.

Beppo knew the time for the milkman to come to the back door, also the ring of the ever-welcome letter carrier —yes, even the very letter coming from his beloved mistress Beppo seemed to recognize. Surely he had a sense of her, for his fine little nose would smell them and he would evince a knowledge that would make him happy.

But the years went on toward more grief for poor Beppo, for his dear little mistress, a wise and beautiful maiden of about six happy summers, fell very ill. She could no longer take him in company with her family of little children, her adored dolls, to the front windows to speak of the busy passers-by, or to watch the coming and departure of the friends of the family, something so fondly enjoyed by all, even the silent dolls. It often seemed that they were somewhat conscious of the intelligent tone and tender care bestowed upon them, for little Viola was such a darling little mother to them, explaining everything so precisely to her dear dolls that even Beppo seemed to regard the little family as real beings. He took part in many of the plays of visiting and of having company.

He was also very fond of going to the bedside of Viola with friends that she loved; and he seemed to know the ones she seemed to love best. Sometimes he became nervous at their long stay, and was relieved to have them depart.

One day, when all was silent and the last doll that had been dressed by his little mistress had been put upon the stool near the bed, Viola opened her eyes suddenly as Beppo was seen licking the china face. This quite amused her, and she said, smilingly, "Oh, Beppo! my doll Lilly does not care to be kissed by you so often, but she likes you, Beppo. Now get down and mind. Beppo, don't beg me so to get up; you are too big."

After the death of his little mistress and friend Beppo was very unhappy, and when her picture was brought and set on the floor he went to it and lay down by its side.

This was spoken of, and by some of the observers it was thought to be mere chance; so the picture was taken to another part of the room, when he again followed, lay down by it, kissing or licking the glass which covered the dear, sweet face. He even seemed to look expectantly at all the little white hearses when they were passing the house, as though he looked for the return of his little mistress, whom he saw put into and taken away in one of them. In fact, he, upon the occasion of the funeral, was determined to ride with the little casket, and had to be taken away by main force, which seemed to cause him great sorrow.

Beppo lived to be old beyond his kind. He lost his eyesight, his teeth and some of his hair, yet to the last he did not forget to sit up, sneeze, beg and speak as taught in the early years of his life. I am sure he would often feel grief, as did poor old Jack, the faithful.

One trait, quite positive, Jack did inherit from his mother. She, alas! was not well fed, but went on market days to procure some meat, which she would hide away until needed. Jack sometimes would do the same, and often went to the very same places in spite of all efforts to teach him not to do so by feeding him plentifully.

The sagacity of this dog was almost beyond belief, giving impetus to the thought that men arrogate to themselves too much, that they do not accord enough of rights and proper respect to the animal kingdom, the "dumb friends" who must often be made to suffer deep wrongs.

Better be thoughtful of the feelings of all things, lest, by some just law of life, we be confronted by our acts. Even the ever-living ghosts or souls of these poor faithful creatures may compel us to see ourselves as once did they, our faithful, suffering friends. ALTO VENTURA.

CINCINNATI.

New England Beagle Club Meeting.

THE quarterly meeting of the N. E. B. C. was held in Mechanics Building, Boston, April 19, President Joslin in the chair. The following members were present: H. S. Joslin, F. W. Chapman, Geo. F. Reed, Henry Hanson, A. D. Fisk, B. S. Turpin, H. V. Jamieson and W. S. Clark.

The Treasurer's report was read and accepted. Mr. C. J. Prouty, of Scituate, Mass., and Harry Tallman, of Greene, R. I., were elected to membership. It was voted that a field trial be held this fall at Oxford, Mass., beginning Nov. 5, classes and prize money same as last year. Voted, that selection of judges be left with field trial committee. Messrs. Joslin, Fisk, Shallcross, Hanson and Clark were elected field trial committee. Voted, that the Club apply to the A. K. C. for admission. Voted, that specials be given same as last year, namely, for best All-Age and Derby entry respectively, bred by owner; best voice, greatest sustained speed, best trailing, most stylish worker, and best starter. Mr. W. B. Atherton, in behalf of the *American Stockkeeper*, presented the Club with a silver cup, to be known as the *American Stockkeeper* Cup, to be offered for the best beagle of the fall field trials. The cup was accepted, and a vote of thanks given to Mr. Atherton for his generosity.

A meeting of the executive committee was next held. It was voted to postpone the appointment of judges till the July meeting.

W. S. CLARK, Secretary-Treasurer.

Brighton Tobe, whose portrait we publish this week, made an excellent record last fall in the chicken trials at Manitoba. He is owned by the Eldred Kennels, Philadelphia. He displayed excellent bird sense in his work and exceptional judgment in finding and locating his birds, and he ranged well.

Brighton Tobe's Pedigree.

Editor Forest and Stream:

Having purchased the field trial winner Brighton Tobe from Mr. T. G. Davey at the New York show, I should like to correct some erroneous statements made in regard to his breeding. Under the above heading, in the Feb'y 16 issue of FOREST AND STREAM, was published a notice of Tobe's pedigree written by Mr. W. B. Wells, including a letter signed E. Tinsley, in which Mr. Tinsley claims that Hall's Lucy, dam of Lady Cypress, was by an imported English setter owned by a Captain Massie, out of an Irish setter the property of Mr. John Moughan, of Toronto. Again, in the March 30 issue, Mr. Wells writes an article in which he speaks of Tobe's Irish and native blood. I wrote Mr. Davey about this matter, who in turn wrote Mr. Tinsley and Mr. Moughan, the breeder of Hall's Lucy. The following letters were received in answer to Mr. Davey's correspondence:

"HAMILTON, March 30.—Dear Sir: I regret being the innocent cause of injuring the reputation of so good a dog as Brighton Tobe has proved himself to be. Mr. Wells wrote to a friend, here, requesting him to get the breeding of Hall's Lucy. Mr. Hall requested me to write to Mr. Wells, giving me the breeding of Lucy as he received it from the person from whom he received her. It was a surprise to me to learn that my letter to Mr. Wells had appeared in FOREST AND STREAM. I did not know when I wrote Mr. Wells that Lucy figured in Tobe's pedigree. Of course, if Mr. Moughan says that Lucy was bred from pure English setters, his statement must be correct, he being her breeder. My recollection of Lucy is that she was a handsome lemon and white, and one of the best that ever quartered a field. If Tobe with his grand form equals Lucy's field work, he is all that could be desired and a dog his owners have every reason to be proud of. You are at liberty to use this for the purpose of correcting any misunderstanding that may have occurred in consequence of my letter to Mr. Wells.—E. TINSLEY."

"TORONTO, April 11.—Dear Sir: I can say that I never bred my Irish setter bitch to an English setter dog of Captain Massie, and if necessary can take an affidavit to that effect. I have not kept the pedigrees of my English setters, it now being many years since I owned and shot over them. The pair I had were lemon and white, and good ones at that. It is only within the last seven or eight years that I have kept Irish setters. I trust that this will put the matter right.—JOHN MOUGHAN."

Mr. John Davidson writes me about Hall's Lucy as follows: "I shot over Lucy in Indiana, October, 1871. She was then about two years old. She was a sweet little lemon and white ticked bitch, and I never heard her called anything but an English setter. I have her pedigree as being by Captain Massie's Shot, imported from the kennels of the Hon. John Scott out of Mr. Moughan's Dina."

I think this will set at rest the Irish setter scandal. I will now take up the native, where the so-called native blood comes in Tobe's pedigree is on his dam's side. Douglas, sire of champion Liddesdale, was by Davidson's Dash II. out of Doll, she by Prince Dona. I give a pedigree of Dash II.: Davidson's Dash II., by Dash I. out of Fanny I., she by Ned (black imported dog out of a liver and white ticked bitch) out of Bessie (Rock—Rose). Dash I., by Rob out of Bessie, she by Rock out of Rose.

I wrote Mr. Davidson about his Dash II., and the following is his reply: "MONROE, Mich., March 31.—Dear Sir: I must say that the dogs you inquire about were used when people bred for work and appearance; pedigree was only a secondary consideration to performance in the field. I am now speaking of over thirty years ago. Rob was brought here by a sporting Englishman, and was a handsome red and white dog, with beautiful dark eyes, and a most sensible good performer in the field. We knew nothing of his pedigree, nor cared, but bred to him largely and with the best results. Bessie's superior in the field I have never seen. I had her from a pup to the time of her death. Ned was a very handsome jet black dog, got by a black dog imported by a Mr. Jewett, of Buffalo, out of a liver and white ticked bitch, and a most hardy, fearless breed of dogs they were. They were all English setters, though whelped here. In those days we had no blue bloods, except the dogs that made themselves such by their performance in the field. We judged them by their actions, not their ancestry. I know of no man living who has used setters in as rough a country or bagged as much game over them as I have done, or tested their hardihood and game-finding qualities more thoroughly. I have never found anything in the dog line to stand by me like old Bessie and her offspring.—JOHN DAVIDSON."

Outside of Hall's Lucy and Davidson's Dash II, Tobe's ancestors can be traced back as in the pedigrees of the straightbred Llewellins. Though Tobe has a very small percentage of the blood of Davidson's Dash II. in his viens, I attribute much of his level-headedness and staying powers to that source, and I only wish that he had more of it. I would be pleased to send an extended pedigree to any one interested in the matter. THEO. STURGES (for Eldred Kennel).

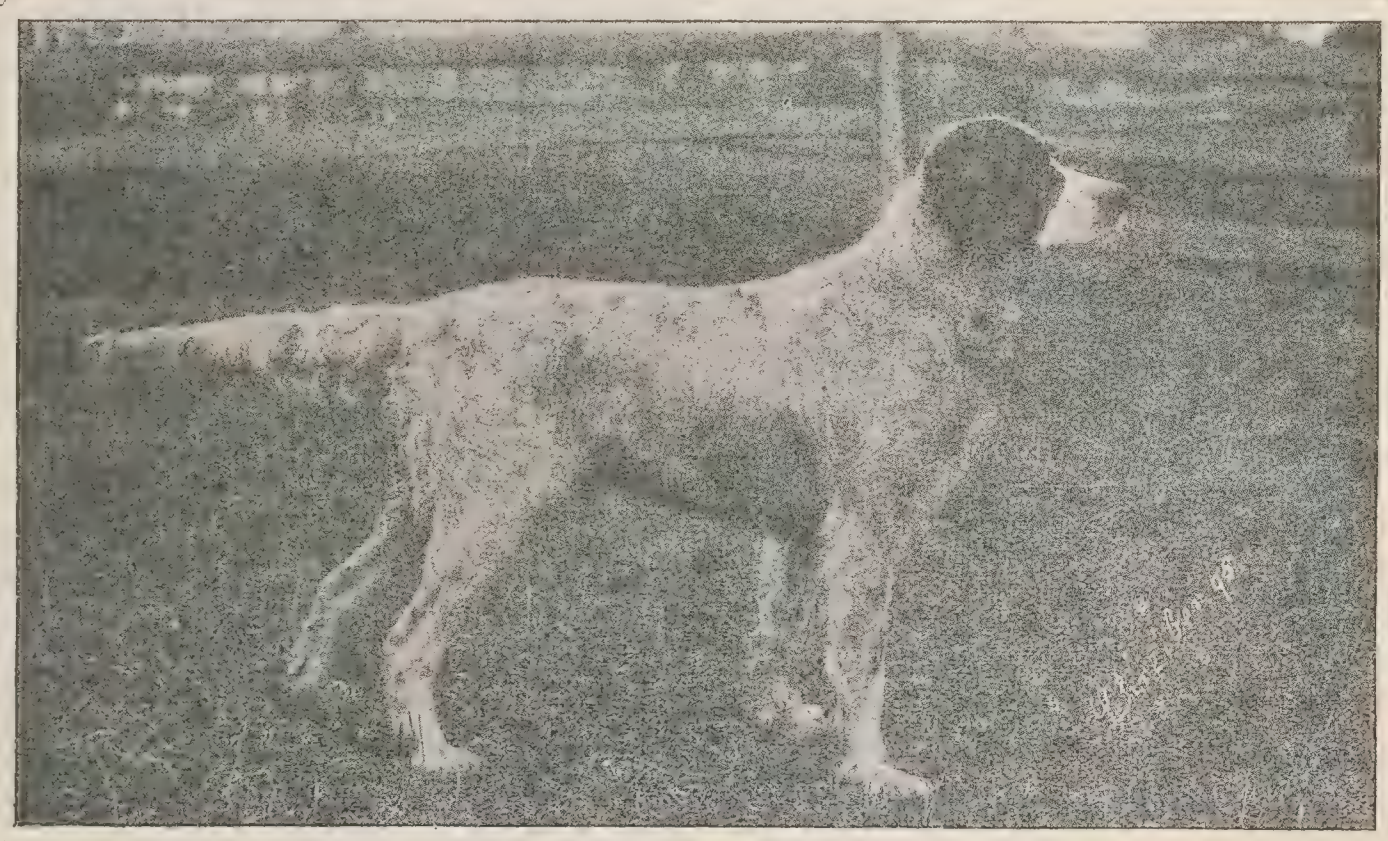
NEW YORK.

The Toronto Kennel Club's bench show, held last week, is reported as being a great success. Messrs. J. F. Kirk, Montague Smith, and R. Gibson were the judges. The entries numbered 402.

Pointers as Squirrel Dogs.

Editor Forest and Stream:

Your correspondent's desire for information concerning the use of pointers for hunting squirrels would have astonished me had I not met a gentleman from Missouri last fall who thought it wonderful when, in passing from one field to another through a strip of woodland, one of my dogs treed a squirrel.



My observation leads me to believe that most pointers "tree" as naturally as they point, and all could be trained to that end with but little trouble.

I have owned pointers almost since I can remember, and have never been without at least one that could be depended upon to furnish good sport in the woods after "varmints" of every kind.

Bird dogs, setters as well as their smooth-coated cousins, make the finest coon, possum and squirrel dogs we have, because of their great speed in the woods and the accuracy with which they locate the particular tree wherein the game has found refuge.

My experience with curs, hounds and mongrels, all of which are said to make fine coon dogs, has been limited, or, more properly speaking, circumscribed, as I have seldom been in the woods without a bird dog that gave his slower companions small chance at anything other than a voice in the racket at the death; but I have noticed that the pointer is rarely fooled by the tricks known in negro parlance as "tappin' trees," while the meaner breeds, with few exceptional individuals, invariably bay a number of times when some wise old coon is surprised in his nocturnal rambles.

The pointer that is trained to hunt in the woods understands his business as well and enjoys it as thoroughly as he does work in the fields. So soon as the command is given him to go, he bounds forward at the height of his speed, seldom comes in, and never utters a note until satisfied that the object of his search is ensconced in the branches directly above him.

BRIGHTON TOBE.

Copyright, 1895, by C. H. Phelps, Jr.

If there is a difference with regard to the instinct of the pointer in this particular in other sections and the South, I think it is attributable to the way in which dogs are handled.

The majority of our planters, upon coming into possession of a puppy, no matter how valuable, turn him over to the tender mercy of the cook and pay but little attention to him thereafter until he is old enough to break. In the interim he is allowed to run rabbits, chase the fowls, suck eggs, follow the darkies or his master at his own sweet will. The older dogs take him hunting every day during the summer, that all are not trotting over the country with their owner, who never thinks of confining his pets for a minute. The result is that, together with much mischief that must be painfully unlearned, they acquire, in many instances, knowledge of great value that dwellers in kennels may never hope to attain, and I wish to add, by the way of parenthesis, that when it comes to bird-finding for shooting purposes, I believe we have the best dogs on earth. I know of one pointer at any rate that trees squirrels, coons, possums; that runs rabbits for the boys, sucks eggs, kills chickens from pure cussedness, and would steal the last piece of meat in his master's house if the opportunity offered and he could find a corner in which to bury it until it was palatably mellow; that for the past two seasons has met and defeated in the hunting fields several field trial winners with their blushing honors fresh upon them, and that has been pronounced by two owners of winning dogs "the greatest bird-finder on earth."

Some day I will write up the attainments of a few pointers I have known. WILL SCRIBBLER.

GREENBRIER, Ala.

Omaha Dog Show.

OMAHA.—The Omaha Kennel Club's second annual dog show will be held Sept. 18 to 21 at Omaha. This show occurs at the time of the Nebraska State Fair at Omaha, and many attractions are being provided for the entertainment of visitors. The "Knights of Ak-sar-Ben" will give a "Mardi-Gras" parade and ball. The premium list will probably be about $2,500 and specials. Entries to close about Sept. 4. E. L. MARSTON, Sec.

Secretary W. D. Brereton (No. 66 Third avenue, Pittsburgh, Pa.) writes that the constitution and by-laws of the new Bull-Terrier Club of America may be had on application to him.

SOUTHERN NOTES.

Editor Forest and Stream:

Feeling the spirit moving me to-day to write you a few ines, I make the attempt to do so.

Messrs. Geo. Richards and John T. Mayfield broke camp and started recently for their respective homes in the North. Mr. Mayfield came down on Monday before his departure, and spent the few intervening days with me at my house. Mr. George Richards also came down and remained one night to tell all good-by.

On Wednesday I escorted John through to West Point by local freight, while George hauled his dogs through the country to West Point in a wagon. As the freight train slowly wended its way through the field trial grounds, we saw many familiar places where field trial dogs ran a tilt against each other last January.

"There is the hill," said I to John, "where you won first money with Rodfield against Blue Ridge Mark."

"And there," said he, "is where you ran Minnie T. against Auld Clootie."

The high hill that gave us such a splendid view of the Lady Mildred-Tory Dotlet race we passed next. Then a passing glimpse of the mill where we lunched, and in due time we rolled into the depot at West Point.

Getting a wagon, we quickly transferred Mr. Mayfield's dogs to the depot of the old reliable Mobile & Ohio R. R., the line they intended to patronize. After comfortably arranging the dogs in the shade of the sheds we went to the livery stable to talk awhile with its genial proprietor, Mr. A. P. Cottrell, who is a member of the U. S. F. T. C., and who takes great interest in field trials. He informed us that Mr. C. L. Jordan, mayor of the city, had joined the club, and later, meeting Mr. Jordan, he informed me that every one was much interested in the trials, and that at the next meeting the city would give some evidence of their appreciation of the honor done it by the U. S. Field Trials Club choosing it as permanent headquarters.

About noon George arrived in town with a wagon oaded to the hurricane deck with dog crates filled with barking canines. Putting his dogs where Mr. Mayfield had his, and waiting until Richards had let them all out for a brief period to stretch their legs a bit, they were watered and locked up in their crates, and we started for the Holt to get our dinner.

As we walked up the street we could not fail to comment on the difference in appearance of things generally from our last visit at the time of the trials. Then it was a gray sky with darkening clouds that deluged the streets with rain and snow. Now the sky was as blue as that which bends over fair Italy, while the breezes were redolent with the fragrance of flowers adorning every house yard. The nearness of early summer was proclaimed by the swelling buds of the magnolia trees, the sweet carol of the mockingbirds, the deepening green of the foliage—all gave warning that the handlers' season in the South has ended, and can only be renewed before next fall by migrating to the broad prairies of the Northwest.

As we walked up the street no sight of the familiar corduroy suit met our eyes. Ha! not one? I was mistaken. I caught the rear view of a pair of corduroy pants turning a corner of the street. They were held in place by an unusually frail-looking suspender of cotton cloth, a nail answering the place of the long-lost button. On the portion where they were the broadest was a large patch of yellowish brown cloth. I caught but a passing glance as the breeches, followed by the spider-shaped patch, disappeared around the corner; but, meeting the wearer of them later, I discovered he was a colored man who had made himself useful about the hotel during the trials, and took it for granted that those pants had once upon a time been the proud possession of some field trial man. The thought occurred to me, if the giver had not been sorry since that he had given them away.

"Lives of poor dog trainers oft remind us,
Honest toil won't stand a chance;
The more we work there grow behind us
Bigger patches on our pants.
Our corduroys, once new and glossy,
Now of stripes of different hue,
All because our patrons linger
And won't pay up what is due.
So we all must by self-denial
Save our wealth, however small,
And attend the chicken trial
If we have no pants at all."

Turning into the Holt, we found dinner ready, and passed into the dining-room, seating ourselves at the table where, at the banquet supper to the farmers, had sat the honorable secretary of the club, the representatives of the press and judges.

I glanced up and down the room, and the memory of the banquet night brightened. I imagined I could see Major Purcell as, with earnest face and uplifted glass, he gave the toast, "May our wives be our sweethearts, and our sweethearts be our wives."

Then a voice in uncertain tones exclaimed: "Gentlemen, this is an honor entirely unexpected, and I am therefore entirely unprepared to respond in the manner I could wish."

Here the voice of the waiter interrupted my reflections by inquiring if I would have soup, and I turned from the pleasant memory of a pleasant evening to the more important business at hand.

The time to say good-by came at last, and wishing the boys all the good luck I could think of, I made a rush for my train, then at the station, which has only been surpassed by the reporter of the FOREST AND STREAM when he made the same train, under like conditions, at the United States field trials. I made it as he did, and had the pleasure of waiting a half hour longer before it was ready to leave the depot.

When the train I was on pulled out, it crossed the tracks of the M. & O. R. R. just ahead of the train Richards and Mayfield were on, and they waved me a good-by from the baggage car door.

Mr. J. B. Stoddard recently left for the East by the way of Birmingham. Blankenbaker returned to Louisville March 15, and George Gray to his home at Appelton, Minn., the same date.

In a recent letter received from Nat Nesbitt he speaks of going up to the Continental trials on chickens. The law passed compelling visiting sportsmen to pay a license of $25 to shoot in the State is having some influence in deterring some from going. The expenses of the trip are heavy, and the addition of a $25 license is not well received.

I hope to go up if I can arrange business matters at home so I can leave. In event I am not able to go, I took the precaution to send Minnie T. and her daughter, Cora T. (by King Leo), and Sam T., a half brother of Minnie T., the former two for the All Age and the latter for the Derby, up by George Richards. So, if I fail to get there, Frank Richards will run them.

I suppose all the old trainers are like myself, and feel that migratory fever common to the wildfowl to go North in the spring. And if I go, it will be to gratify myself in this particular more than anything else; for, as a trip, it has no profits for a trainer other than the benefit his dogs derived from the open work on the prairies.

I saw Dr. Crump, the game warden of the West Point field trial grounds, while in town, and he reported that no birds had been killed on the grounds since the trials. Such being the case, there should be an abundance next fall.

W. W. TITUS.

WAVELY, Miss.

Continental Field Trial Club.

IN a letter of recent date Mr. Madison writes that the Continental Field Trial Club holds its trials on chickens in the Northwest on Sept. 2, and its quail trials at Newton, N. C., on Nov. 25. These matters being settled, he is busily engaged in getting out the club's printed matter. The chicken trials are located at Morris, Man. Mr. Madison states that: "I am now arranging with the different railroads, and will be able to get rates of one fare for the round trip, with free transportation for dogs. Parties desiring to avail themselves of the special rates will have to apply to me for their permit."

In regard to the grounds at Morris, there seems to be a matter of authority which is worthy of the consideration of the club, taking the following clipping from the Manitoba *Free Press* as an explanation of the situation:

"SIR—I note that at a meeting of the Manitoba Field Trials Club a resolution was carried granting to the Continental Field Trials Club the free use of their grounds at Morris, for which no charge would be made. I would like to ask Mr. Wootton, the Secretary of the Manitoba Field Trials Club, what grounds they have in the vicinity of Morris to grant the free use of? The only club that asked and obtained permission over any grounds in the vicinity of Morris was the Northwestern Field Trials Club. I think I can speak for a majority of the farmers who reside in the municipality of Morris when I say that they, the farmers, will cheerfully grant to the Continental Field Trials Club the privilege of running their trials over their farms, but I do think they will decidedly object to the Manitoba Field Trials Club granting a privilege they never possessed themselves, nor even had the courtesy to ask for. "M. LAWRIE."

"MORRIS, April 22."

DOG CHAT.

The English Setter Club's trials were run on the Cople and Cardington estates. The winners in the Setter Puppy Stakes, eleven entries, were: First, F. C. Lewis's Squire of Kippen; second, F. C. Lewis's Mabel of Kippen; third, T. Bishop's Belle of Salop, the latter winning the Setter Club cup. In the Pointer Puppy Stakes, ten entries, Elias Bishop's Jane Pedro won first; A. B. Walker's Whist second; A. P. Heywood-Lonsdale's Ightfield Mentor third. The All-Age Stake, for setters and pointers, had fifteen starters. G. Pilkington's Woolton Druid first; W. Arkwright's pointer dog Tap second; W. Arkwright's pointer Mistletoe third. The Brace Stakes were won by J. Bishop's Sweep the Green and Danger of Salop, the second prize by A. P. Heywood-Lonsdale's setters Durham Daisy and South Durham Di.

The following resolution was adopted at a recent meeting of the Industrial Exhibition Bench Show Committee: "That this committee, having been informed by Mr. Jos. Ditworth that the action of this committee in the appointment of Mr. W. P. Fraser to the position of secretary and superintendent has been rejected by the Industrial Exhibition Board, be it resolved that this motion be a resignation of the committee as a whole without further action."

Mr. Al. G. Eberhart, of Cincinnati, writes us that there will be a dog show held in Cincinnati May 20 to 24. Entries close May 14. It will be held in connection with the Ohio Humane Society's second grand bazaar. The profits will go toward establishing a dog farm near that city for the care of captured dogs. He states that $7,000 were cleared on the last bazaar. Mr. Eberhart will superintend the show.

The Pointer Club field trials, run on April 17 and 18, were held on the Chirk Castle estate. The winners in the Pointer Puppy Stakes were: First, Mr. Bishop's Jane Pedro; second, Mr. Humphrey's Bonnie Dan of Cold Hill; third, Col. Cote's Conrad: fourth, Mr. Heywood Lonsdale's Ightfield Mentor. The winners of the All-Age Stakes were: First, Mr. Mawson's Prior of Bromfield; second, Col. Cote's Dodo; third, Mr. E. Bishop's Senor Dan Pedro; fourth, Mr. B. T. Warwick's Nyssa.

Bulldog Club Produce Stakes.

THE first Produce Stakes of the Bulldog Club were decided during the afternoon of April 25. Although only three youngsters were entered for the stakes, the afternoon was well spent 'ere the decisions were rendered. This was Mr. Matthews's fault. He is the president of the Bulldog Club, and as the judging was to take place at his beautiful residence on Riverside Drive, New York city, he determined that the affair should be an enjoyable one for those who were interested in the event. The members of the executive committee, together with Messrs. Beadleston, Roby and Lacy, were therefore invited to luncheon at 2 P. M. Those whom Mr. Matthews so gracefully and elegantly entertained were Messrs. E. Willard Roby, R. L. Crawford, Jr., R. Dudley Winthrop, H. C. Beadleston and H. W. Lacy. Between the courses the bulldog was dissected figuratively, and chops and jowl, layabacks and roach backs, underjaws and rose ears, in their relation to the dogs of the day, were duly considered. The ups and downs of breeding, and the chances of American breeders ever producing that will-o'-the-whisp of "fancy," a real good 'un, were carefully diagnosed, and the conclusion reached, that while we have plenty of good dogs, the fancy is sadly in need of some good matrons.

With the coffee and cigars came Mr. Muss-Arnolt, and afterward Mr. Chas. F. MacLean and R. S. McCreery.

Adjourning to the stables, situated at the rear of the mansion, we found that Spratts Co. had set up a row of their benching, containing six stalls. In these were kennelled the Stake entries and visiting dogs.

Mr. Beadleston had brought his white dog Wrinkles (Bathos's best son), who has already been in the money at New York. At the same ime Mr. Matthews showed the sire, his old favorite Bathos, who seemed full of vigor and in good condition. Then Reeve Royal, fresh from winning honors at Boston show, had to submit his good points to the critical. Dolly Tester also swung into view and with Bowbells completed Mr. Matthews's string of matured ones. His two crack dachshunds, Polly Finders, who has just won the Manice cup again, and Pretzel, were also duly admired.

The Produce Stakes were next in order. In dogs there were two entries, Mr. E Willard Roby's brindle, Robin Reporter, by Leonidas out of Liberty, and Mr. John H. Matthews's Banshee, by Bathos (A Briton's Boast—Nimble Ninepence) out of Rose (Portswood Tiger—Peggy), white, with brindle spots.

The judges, Messrs. Winthrop, Muss-Arnolt and Lacy, by ballot vote, were unanimous in their decision that Robin Reporter was the best, in fact is a very likely sort, though a trifle long in body.

In the "ladies" division there was but one entry, E. Willard Roby's Robin Reception, a white bitch, by Leonidas out of Liberty, a litter sister of the winning dog, but a long way behind her brother in bulldog points.

The stakes were for puppies whelped in 1894, and by a strange coincidence all three entries were whelped on the same day, July 15, 1894. The total of the stakes aggregate nearly $60; one-fourth goes to the best dog and one-eighth to the second best; one-fourth to the best bitch and the balance reverts to the coffers of the club, as there were no claimants for third honors.

There were six bitches nominated last year for this Produce Stake, and to these only nine puppies were born, six of them survived, but only three were entered. The members present considered it advisable to offer a second Produce Stake for 1895, particulars of which will be announced later.

Mr. Matthews is quite a lover of horseflesh, too, and has half a dozen good "tits" in his stable, two gray cobs being especially handsome, taking fourth prize at the National Horse Show. At the back of his handsome stables Mr. Matthews has half a dozen very substantial kennels made of brick and ornamental iron work. In these are housed his best dogs. Each kennel opens into a large cemented yard, and happy are the city dogs which have such comfortable quarters.

H. W. L.

Aberdeen Meeting.

THE Aberdeen Coursing Club's inaugural meeting was finished Thursday afternoon, April 18, after two and one half days of splendid coursing.

The club advertised a sixteen-dog stake, but thirty-two entries appeared on the card. Mr. Stephenson's judging was perfect. Mr. Angell showed poor judgment in the second course, on Tuesday, the first day's running, when he slipped Lucian Swift at 20yds. on a weak jack.

Laplander and Lady Deadlock were unfortunate in being slipped on separate jacks, thus causing a run without a decision. Judge Burniby was also handicapped in his course with Ragnarock in taking to the weeds while Ragnarock went up the prairie. Burniby turned the jack out of the bad going right in front of Ragnarock, who was thus favored by the good going. Outside of these three slips, the work was very well done.

Owing to a scarcity of game, only twelve courses were finished the first day.

An early start was effected on Tuesday morning. At 10 o'clock, H. M. Larimer's Fleta and A. P. Slocum's Gold Coin were in slips and Gold Coin went up for the turn, did all the work in a long course, only letting Fleta in at finish, to hole the jack, in front of the crowd.

The second pair were W. B. Stern's Frank and N. P. Whiton's Lucian Swift. To a twenty-yard slip, Lucian was right on top of his game, running puss to death in a hundred yards.

J. B. Smith's Gilbert got first turn and got in some work, both dogs going wide; C. Shield's Fantasia got in for a little work, but Gilbert came again and won just as a third dog took up the chase.

L. Mills's Ansel got first turn and kept his place for a few half points. W. Meacrak's Cute got in for a few weak wrenches, but the jack straightened away and left both of them. Ansel got the flag.

F. E. Briggs's Dakota Zephyr got the turn from H. J. Lockington's Nig and only succeeded in getting a few weak wrenches before the jack straightened away, leaving Zephyr the winner.

Columbus Kennels' Ramona and Eastern Coursing Kennels' Royal Crest. To a stiff turn, Crest got the turn, neither dog was able to get in much work. The jack finally ran away, giving Crest the flag.

Woodhaven Kennels' Prince Fullerton went up for the turn, placed R. H. Woods's Raven, raced by, finally placing Raven, who led a long race without being able to get near enough to get in any work; jack went to earth, leaving Fullerton the winner.

C. M. Goods's Ino went up for the turn and kept possession. F. E. Briggs's Paddy could not get up a stiff jack that outran both dogs.

J. H. Davis's Good Leather got first turn and went on for a few points. J. Curtin's Lucy came at finish and worked out this score. Good Leather gave over and Lucy went on; jack got away, giving Lucy the verdict.

Columbus Kennels' No Mercy got first turn and went on for a rapid succession of points. C. F. Jenkin's Recollection only got in momentarily, but finally led to cover; a long course.

Melrose & Durbin's Gilkirk got first turn, and held her place for a long rapid course. Woodhaven Kennels' Prince Tonia got in at finish, but could only get part of the work—a grueling course in Gilkirk's favor.

J. R. McNickle's Laplander and Eastern Coursing Kennels' Lady Dedlock—a no course after following separate jacks.

Eastern Coursing Kennels' Judge Burnaby and H. Rews's Ragnaroc were badly slipped, Burnaby taking the path of the jack; while Ragnarock raced up the prairie, Burnaby turned to Rag, who ran a long, grueling course, Burniby only getting in for a turn. In this course Fantasia broke out of her crate, but could not get near enough to do any harm.

This finished the work for the day, leaving an undecided and three more courses to finish the first time through the card. Wednesday took us to a better locality, and game was more plentiful The first course of the day, but the fourteenth on the card, was H. G. Nichol's Jessie Green and S. H. Groshong's Yellow Dan. Dan did not show up, so Fantasia ran the bye with Jessie Green, Jessie showing superiority at all points.

W. H. Markham's Jumbo showed the most speed, but R. Wood's Hobo Mike outworked him in a long course, and got the verdict.

A. P. Slocum's Rendezvous led up and ran up a few points. L. B. Richter's Little Nell went by and looked as if she was going to be dangerous, but only succeeded in shifting puss once, when Rendezvous went by, got possession, and was an easy winner when they killed.

This finished the card, causing Lady Dedlock, Jessie Green, Hobo Mike and Rendezvous to run two courses on Wednesday, while the other winners got off with one.

Rendezvous and Hobo Mike came together the second time through, so they were on equal terms; but Lady Dedlock, who had won over Laplander in the undecided, and Jessie Green, each had a course the best of their respective antagonists.

The second time through the card brought Gold Coin and Lucian Swift to slips. Lucian was first up, and in a busy course of medium length showed his superiority at all points, puss going to ground.

Gilbert led up and got busy; both dogs then laid off, but Gilbert finally turned to Ansel, who killed. Flag for Gilbert.

Royal Crest had gotten into a dispute with his kennel companion, Burnaby, and was suffering from a nasty bite in his foot. He came to slips on three legs, and was first up; but Dakota Zephyr then took possession and never let the black dog up again, winning with some to spare.

Prince Fullerton was first up and got quite busy placing Ino, who went on with a stiff jack, and soon had Fullerton counted out. Ino ran till she fell exhausted, and Fullerton was close behind.

No Mercy raced up and was working fast, Lucy not being able to get in any work. She ran on, and being placed by Mercy could only be of little service, finally pulling up, leaving Mercy to go on with grueling course.

Gilkirk and Lady Dedlock went out together for 40yds. Gilkirk was forging in front when the jack favored her, she getting first turn. Both dogs straightened away after a stiff jack, with Gilkirk two lengths in front, but neither could get in working distance again.

Ragnaroc got everything, not letting his litter sister next the game. In a long course jack got away.

Rendezvous was up for the turn, a weak jack. Hobo Mike never got in at all.

This finished the second time through the card, and a short drive brought us to our respective hotels to talk over the victories and defeats of the day.

Thursday morning found us on the same grounds of the previous day. The weather was clear and cool in the morning, but toward mid-day it got too hot to be comfortable for the dogs.

Lucian Swift and Gilbert were the first in slips. As usual Lucian got the cool of the morning for his run, and I cannot help but comment on the peculiar luckiness favoring him in both the Oakes and Aberdeen meeting. It cannot be said that he met the best dogs in either the Oakes or Aberdeen meet, while his courses were mostly very short and in the cool of the day.

Rendezvous can be said to be very lucky in his drawing and getting weak jacks; although he ran two courses on Wednesday, neither was long enough to nicely open his pipes. On the other hand, Gilkirk, No Mercy and Ragnarock had each long gruelling courses, and it was unfortunate that Gilkirk and No Mercy should have come together in the third ties, thus causing one of the best dogs in the country to retire so early in the meeting. These two bitches are very evenly matched in coursing qualities, although Gilkirk is the larger. This

was their third meeting this year, twice at Oakes, in which the first was undecided, and Gilkirk getting the flag on the run-off. The third time together, No Mercy got the verdict in a long, well-worked course, leaving each one victory and one undecided to their credit.

Lucian had no trouble in disposing of Gilbert. They had a stiff jack that ran away from both of them.

Ino led up and in a short and busy course won easily from Dakota Zephyr.

Gilkirk got first turn. No Mercy was quick in, and a very busy course followed. No Mercy seemed to have the bottom and went on and outstayed Gilkirk, Gilkirk getting in at finish for the kill, but Mercy had too many points.

Ragnarock and Rendezvous ran an undecided, but Ragnarock showed the effects of his many gruelling courses, while Rendezvous showed quite fresh as he should do.

Commencing at the top of the card again brought Lucian Swift and Ino to the slips. As usual, Lucian got a weak jack and put Ino out with little trouble.

After lunch, No Mercy and Rendezvous were put in slip. A. P. Slocum, having charge of Ragnarock, drew him, leaving Rendezvous to fight it out with No Mercy. No Mercy showed up quite stiff after her course with Gilkirk, but, once warmed up, she commenced to make it very dangerous for Rendezvous, and working her game over a hill, they were lost from view for an instant, but they were soon back, with No Mercy working puss toward the crowd, which always gets crazy in the finishing courses. The bitch got thrown out among the buggies, and I will always believe it the cause of her defeat. Rendezvous seemed to have plenty of vim left in him, but the bitch was always with him and getting possession. He ran up a few rapid points, and finished with a kill that snuffed out all chances for No Mercy. This caused a division between Lucian Swift and Rendezvous. A. P. Slocum handled both dogs, also Ragnarock. Slocum was a popular winner, as we all know. He is made of the proper stuff, and takes defeat equally well.

The attendance was large and select. Nothing occurred to mar the harmony of the sport.

A little more discipline can be taught the onlookers, and the field marshals could have a little more instruction, but it all comes with experience.

Among those the most conspicuous for their merriment and capability for making known their appreciation of the grand sport was a turnout from Oakes, and at no time was the atmosphere free from their musical laughter, waving handkerchiefs and acknowledged mirth, unless Roundy was in the crate and not in slip.

The entrance fee was $5, with 32 entries] made $160; with $100 added by the club, giving N. P. Whiton's Lucian Swift and A. P. Slocum's Rendezvous $195 between them, and Columbus Kennels' No Mercy and C. M. Good's Ino $32.50 each.

Lucian Swift won at Oakes and divided at Aberdeen. Rendezvous divided at Aberdeen. He ran up to Royal Crest at Oakes at the spring meeting in '94, and ran up at the meet of the American C. C. at Huron Oct. 9, '94. This places him in the front ranks as a courser, and should, if bred on the right bitches, perpetuate his valuable qualities as stake winner.

GEO. IRWIN ROYCE.

Field Trial Matters.

INDIANAPOLIS, April 19.—*Editor Forest and Stream:* I have been deliberating whether it was advisable to notice Mr. Avent's communication published in the *American Field* of April 13 for several reasons, the first of which is that while he assumes to speak with authority for the United States Field Trials Club, there is no action of that club, so far as I know, which delegates such powers to him. Still, that club has not repudiated any of his writings, so I presume it may be accepted that the duties which naturally and officially devolve on the secretary and other officers in the club are conducted by Mr. Avent. I have concluded to notice Mr. Avent's article, first because some of the circumstances to which he alludes happened before the Continental Field Trials Club was formed, and second because much of his innuendo is of a personal character. I desire to have it understood that I reply in my personal capacity, and not in my capacity as secretary of the Continental Field Trials Club. It is unnecessary to do so, for while by inference Mr. Avent speaks for the U. S. Club, there is nothing offered to show that he speaks with authority. I think the policy of the Continental F. T. Club has made itself apparent. It is to go on attending to its own affairs and not meddle with those of others. Mr. Avent has very kindly and with some labor defined its standing and condescended to give some praise in a general way and some rebuke in a grave, serious way, all with proper decorum, which leads me to believe that he must have the interests of the Continental F. T. Club much a heart. Otherwise he would not be so superofficious.

I will take up Mr. Avent's points and reply once for all, so that no one may be misled by his misapprehensions. He says:

"As I know many of the members of the U. S. Club are not fully aware of all the steps that are taken against them, I will inform them briefly of the last moves. It will be remembered that the enthusiastics that formed the new club tried to give the impression at New Albany that they would take the U. S. Club's grounds and clash dates; in fact, they intended to burst up the U. S. Club regardless of sportsmanship or anything else."

What were the "last moves," and what steps have been taken against them? The Continental F. T. Club has done openly and above board all its business. What are these dark deeds implied in his words? He said he would tell what they were, but he did not do so. I know of no enthusiasts who said at New Albany that they would take their grounds and clash dates; and no such statements were ever made. The insincerity of this statement is shown by the fact that since that meeting the U. S. Club has announced two other grounds and dates. Newton, N. C., and grounds in Indiana were not at that time thought of.

"This quite a number of members of the club could and did see the motive of, and but two or three have or will resign, and thirty-five good members have joined; with quite a list that will join later. Some of them have joined the new club, the Continental; and so have some of the old members. They join the Continental because they are true sportsmen that want to encourage field trials. The Continental F. T. Club has many thorough gentlemen sportsmen in it, and the club has my best wishes for its success, but I am sure there are many members, and among them their president, who do not know the movement of a few of their members. In fact, many of them have told me and my friends that no one or two men could step in with a personal feeling to rule or ruin and clash dates with the United States or any other field trial club."

I am glad to know that so many members have joined the U. S. Club. In respect to the resignations, I beg to call Mr. Avent's attention to the fact that when a member resigned the club would not accept his resignation, so how could the member resign? Now, what is the movement of a few of the members which is unknown to the president and other members? Is not Mr. Avent assuming entirely too much when he speaks for the Continental and the U. S. Club?

Noting him further:

"It will be remembered that the dates with the United States Club were selected and published in January, and the last change the club made was on March 4, before the Continental Club was formed. At that time (March 4) the board of governors of the United States Club (not one selfish individual) decided to hold trials in North Carolina, commencing Nov. 28. This date was published in the *American Field* that week; also it was furnished Mr. P. T. Madison by the secretary of the United States Club March 5, before any Continental Club was formed."

As to the matter of dates, the U. S. Club announced that it had engaged grounds at Irvington, Ky., and that money was donated to stock the grounds; it was announced that field trials would be held at West Point, Miss., and that grounds were leased there for that purpose. It was announced that trials would be held at Carlisle, Ind., and next it was announced that trials would be run at Newton, N. C. It was announced that trials would be run on chickens, then it was announced that they would not. There were five trials all told. Out of the four quail trials announced by the U. S. Club some will have to be abandoned. Which is it to be? There is some one who is not dealt with in good faith. There are some grounds and dates which will have to be abandoned; which is it to be? Now in regard to the grounds at Newton, N. C., the U. S. Club had made no arrangements there for grounds. It had made no arrangements there for anything. It had merely in an off-hand way claimed its dates and the grounds without knowing whether it could secure grounds, just as it could claim all the dates in the calendar and all the grounds in America, if an empty claim would confer a title. The proposition of the Continental Club to run in conjunction with the Eastern was made on perfectly even terms with the proposition of the U. S Club and the Eastern accepted that of the Continental. Merely claiming things to which it had no title could hardly be considered ownership. He further says:

"On the day that the Continental Club was formed there was quite a crowd of sportsmen present, with quite a number of them that were in favor of the new club running trials in a sportsmanlike manner and not for the purpose of injuring the United States Club or any other club. But I was informed by Mr. J. L. Adams, who is a member of both clubs, as by others, that Mr. Madison at that meeting suggested a date in November that would conflict with the United States Club's date in Indiana, which he (Mr. Madison) had helped to make, and of course was fully aware of; but this date was at once done away with by the true sportsmen of the new club. The new club, however, let in a rule to have all business transacted by its officers, which, I believe, are president, first, second and third vice-presidents and a secretary-treasurer, who is Mr. Madison."

Here again there is an unnecessary solicitude about the club's officers and the club's affairs.

It seems to be going along quite pleasantly, nevertheless. In respect to what Mr. Adams said, as in many other things, Mr. Avent is mistaken.

In a letter to me, under date of April 13, Mr. Adams says:

"LOUISVILLE, Ky., April 13, 1895.

"*Mr. P. T. Madison, Indianapolis, Ind.:*

"DEAR SIR—I have been intending for some time to write you, but have not been well part of the time, the other part have been quite busy; but since Avent's article in the last *Field*, headed 'United States Field Trial Club Affairs,' I can wait no longer. If Avent wanted to tell the public what I told him, why did he not tell all? I told him at the meeting of the Continental Field Trial Club, held at Chicago, Ill. (or, at least, the organization of the club), you stated the Continental Club wanted to work in harmony with all other clubs, when there was a resolution to have a trial in Kentucky, Indiana or Illinois the first week in November, 1895. I then stated I was a member of the U. S. Club, also of the Continental Club, and that I knew the U. S. F. T. Club had arranged to hold a trial at Carlisle, Ind., commencing Nov. 4, 1895. The resolution was then referred back to the Executive Committee to arrange, so as not to conflict in dates. This was just what I told him and others—nothing more and nothing less; but from the way he puts it, some might think I was not in sympathy with the Continental Club or its officers, which would not be true. I think there is room for both clubs, but Avent's article will do the U. S. F. T. Club no good, but may do harm. Avent and some others think the U. S. Club ought to hold three trials. I am very much opposed to this. I can see no reason why both clubs cannot give good trials, and I hope they will. As soon as you get your printed matter out, please send me some. I am not pleased with the article of Avent. I don't think it ought to have been written, but will say no more in regard to it for the present. Yours very truly,

"J. L. ADAMS."

This ought to dispose of Mr. Avent's charge. Still, he may find other bugaboos which will serve to keep his name in print. He adds:

"The Continental Club has from Aug. 15 to Nov. 6, from about Nov. 25 to about Jan. 25, from Feb. 10 to April 1; just look at the time they have in which to hold trials that will not conflict with any other club."

For this, many thanks. But is not the same free to the U. S. Club? The Continental is tied to certain dates for the reason that it is pledged to run in conjunction with the Eastern. I would kindly call Mr. Avent's attention to the fact that it, therefore, has not the dates he so unselfishly commends. Again, I think the club is beholden to him. If it does not succeed, it will not be for a dearth of advice. He proceeds:

"Is it not a fact that from Nov. 25 to Jan. 20 are the very best two months in the fall for holding trials on quail in North Carolina? Is it not a fact that from Feb. 10 to April 1 is the very best time to hold spring trials? Every practical sportsman in America knows that. Then why is it that the Continental Club should come in with its first quail trials and take the very grounds that the U. S. Club expected to use, and conflict dates with the U. S. Club when the U. S. Club had claimed these dates and published them before any Continental Club was even formed? It is to be hoped that the many members are not responsible for movements to kill the U. S. Club, which has many of the best and most practical sportsmen in America in it, with others joining every day. I feel confident that this is the work of three individuals who showed the spirit, big as a mountain, in the U. S. Club to rule or ruin it."

As I said before, no one could possibly know what grounds the U. S. Club intend to use. The Continental Club did not take any grounds on which the U. S. Club had any claim whatever. It uses the grounds at Newton, N. C., by permission of the Eastern Club. There was no intention to kill any club by so doing. There is no reason to put any such construction on its acts. There is no one who will believe that the U. S. Club is seriously killed.

"Now for the good of field trials there is plenty of time to prevent any conflict of dates, and I hope the members of the Continental Club will see this bad spirit to ruin the U. S. Club cropping out, and will come to the front and work harmoniously with the U. S. Club and all other clubs. They and all other clubs will prosper by it. I have letters from such sportsmen from the East as Mr. F. R. Hitchcock and Edward Dexter, saying the U. S Club should come to North Carolina and they will do all in their power to make the club's trials a success."

I know of no reason why the U. S. Club should not go to North Carolina. It strikes me that Mr. Avent is blind to the fact that there are plenty of dates left, and not a few to choose from which the U. S. Club has already claimed. He says:

"The 28th day of November has been publicly announced (before the Continental Club was formed) for the U. S. Club to commence its trials at Newton, N. C., or near there, and the public can rest assured that Mr. Madison's letter will not bluff the U. S. Club out of commencing its trials on that date. The committee on grounds is now arranging for other grounds just as good as Newton and somewhere near Newton or at Lexington, N. C."

This is quoted simply so the public will know its own standing in the matter. He says:

"The governing committee of the U. S. Club is not trying to work against any club. It does and will manage its business on a fair and square, businesslike and sportsmanlike plan; with no one man to rule the club. If any such movement of any individual is discovered the public will see very quickly that the committee and governors will be put in to check all such movements, let the saddle fit whom it may."

Would it not be well to give the secretary of the U. S. Club a chance to say something? Also the board of governors? Also the other club members? I have nothing to say about the manner of that club's business methods. I wish it success. It can go on claiming all the dates and grounds it desires. Mr. Avent can hurl forth his innuendoes and vague charges and fulsome praises, keeping himself before the public as much as he can; but this is all the notice which will be taken of him by me.

The earnest desire of the U. S. Club to have no one individual run it is exemplified by Mr. Avent. Still, if all the members were equally as active in writing and talking, privately and publicly, what an active club it would be!

The committee on judges have from him their instructions as follows:

"The committee on judge will select the most competent and thorough gentleman-sportsman that can be had to judge the U. S. trials, and the public can rest assured that every dog entered will have a fair, square and thorough test."

This is good news, for otherwise the committee might not know just what to do. I am afraid Mr. Avent has been remiss in authority in not having assured this before. Inasmuch as Mr. Avent speaks authoritatively for the committee on judges, for the board of governers, for the officers, for the members, what is the use of the club? Why not have it the committee of J. M. Avent, the board of J. M. Avent, the members of J. M. Avent; in short, J. M. Avent?

P. T. MADISON.

ANSWERS TO CORRESPONDENTS.

B., St. Johnsbury, Vt.—My fox-terrier bitch is thin in flesh and seems to be losing vitality. Her appetite is good and at times voracious. She has every symptom of worms. She also has some form of skin disease which attacks her forefeet, nose and ear flap. The skin is red and rough. Ans. Treat for worms. Apply the following ointment to the affected parts twice daily: Precipitated sulphur, 4drs.; oil of cades, 2drs.; green soap, 2drs.; prepared chalk, 4drs.; lard, 2½oz. Mix together.

"Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Pub. Co., 318 Broadway, New York.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

31. San Francisco cruise to Benicia, San Francisco Bay.
31. Larchmont, 34ft. and 21ft. classes, Sound.
31. Huntington annual, Huntington, Sound.
America's Cup trial races, New York Bay.

The prize of $100 in the *Herald's* name competition has been paid to the person first suggesting the name selected by the syndicate, by the way, a six-year-old child. The comments we have heard on the selection are by no means favorable, and the opinion is freely expressed that the owners of the yacht have avoided the trouble of a critical examination of the list of suggested names by taking the first commonplace term that suggested itself. As the yacht will not be launched for six weeks or longer, there is still time to remedy the mistake, and to give her a name that is more definite and distinctive in connection with a yacht which, whether successful or otherwise, is certain to become historical. If no better name can be found, there is the one which we mentioned some time since—Gimcrack; that of a historical craft, intimately associated with the New York Y. C., whose first meeting took place in her cabin; and commemorative of those two good yachtsmen, Com. John C. Stevens and his brother, who brought to this country what has since been known as the America's Cup.

Among the "important, if true," news of the week is a rumor that the Prince of Wales proposes to visit the United States this fall to witness the international races, and another to the effect that Ailsa will accompany Valkyrie III. to this country, with a view to the chosing of the faster of the two as a challenger after trials here. Should the Prince decide to cross the Atlantic, which is, at the least, very doubtful, he could be sure of a hearty welcome, and of seeing some good racing. The idea of sending more than one boat over and of sailing trial races on this side was first suggested by the Forest and Stream some months back, and its merits are self evident. Whether the New York Y. C. would be willing to accord the privilege of substituting Ailsa for Valkyrie III. is yet uncertain; under any reasonable construction of the new deed the defending club has no right whatever to allow such a substitution, but as matters now stand, the New York Y. C. has decided that the new deed means only what the club deems proper at any given time, so this question need not be discussed.

Whether the club will vote, later on, to allow the selection of another yacht than that owned by Lord Dunraven and specifically named by him in the original challenge, is still a matter of doubt. If Cup racing is to be a test of actual superiority, then the challenger should be allowed the same privilege as the defender, of choosing the best of several yachts after trial; to make this a permanent feature of the Cup contests, however, some change of the conditions would be essential. As matters now stand, the club has virtually decided that it has the right to do as it pleases in all details of the racing, and the question is solely whether it is willing to accord the challenger two chances instead of one in the important matter of designing and building.

In any event, even though the challenger be limited to Valkyrie III., it would be a wise thing to send Ailsa over with her, for the purpose of tuning up, and as the home racing will be less keen than usual this year, Britannia and Ailsa being the only large yachts that will make the usual circuit, the Prince's yacht might well come also.

It would make keen work here, and it might not be a bad move for the Royal Yacht Squadron to send over Valkyrie III., Britannia and Ailsa in time for the New York Y. C. cruise in August, or for a series of trial races in the latter part of that month, for the selection of a challenger, or at least for the proper working up of Valkyrie III. after the ocean trip. The ocean ferry is now such a trifling obstacle that many British yachtsmen would gladly avail themselves of the opportunity of witnessing the triple series of British and American trial races and the final contest; a yachting carnival such as has never been attempted. We hope that the Prince will come, and that Britannia and Ailsa may accompany him.

While the idea of manning the defending yacht with an American-born crew is likely to have no practical result in leading to the general employment of American seamen in place of Scandinavians, the idea is one that appeals to Americans as particularly appropriate under the circumstances. At the same time we confess to a feeling of sympathy for the Neilsens, Jansens, Hansens, Petersens and Andersens, who are sitting idly on the stringpiece waiting for a berth afloat. These men, though some of them were, it is true, guilty of the crime of being beaten last year in Vigilant, have been the backbone of the yacht fleet for many years, and on the whole they have done their work well. As a class, they have proved themselves honest, temperate, capable and willing; they pulled and hauled on Mischief, Puritan, Mayflower, Volunteer, and above all, on Vigilant in 1893; and until the latter vessel was defeated in 1894, no complaint was made against them. That they should now feel that they have not been treated quite fairly, is most natural.

That petting and patting on the back which they once enjoyed at the hands of the press has been transferred to the men from Deer Island, and to an extent that is likely to make the experiment of Mr. Iselin of little value. From all appearances, the Maine fishermen are good representatives of the best class of American seamen; but they must be more than human if their heads are not enlarged by the undue attention paid them by some newspapers. If their work were done, and they had saved the Cup, there would be some excuse for the publication of their portraits and biographies; but as it has not yet begun, as they have yet to learn how to set a spinaker or muzzle a balloon jibtopsail, this newspaper notoriety is calculated only to defeat its own end.

As far as our observation goes, one element of strength in the British crews, such as those of Genesta, Thistle and Valkyrie II., lies in the fact that each crew is to a certain extent a clan or even a family, made up of men from the same locality, who have grown up together in fishing boats or yachts, the captain, such as Barr or Carter or Cranfield, being looked up to as the head of the clan. As the captain goes from one yacht to another, the mates and crew go with him as a matter of course, the organization being maintained and strengthened from year to year. With the Scandinavian crews of American yachts, whether skippered by men of their own nation or by Americans, the conditions are by no means the same; the leading yachts are manned by men who are well known as skillful and competent, the pick of them going into the Cup defenders when occasion arises. They are more or less acquainted with each other and used to working together and probably all are personally known to the captain, but at the same time there is not the same *esprit du corps* which exists among the Colne men of Genesta, Britannia and Valkyrie, the South Coast men of Galatea or the Clyde men of the Thistle. Judging from the experience abroad, a crew of American sailors picked from one locality and commanded by a skipper who was essentially one of them, could be made to do even better work than the usual Scandinavian crew; but to this end it is essential that the men shall have been drilled together for many successive seasons; and that the racing in the larger classes shall be permanent, rather than intermittent and irregular. In the meanwhile, we are not yet in a position to turn our backs entirely on the ruddy, blond-bearded sailormen of the North Sea and the Baltic.

The report is current that the first race of the new Cup defender will be that of the Larchmont Y. C. regatta of July 4, Mr. Iselin having promised to start her provided a course is laid out with a depth of at least 20ft. over all parts. The Larchmont Y. C. will offer a special prize of $500.

Vigilant and her captain, Charles Barr, have both distinguished themselves by a fast passage from Southampton, just under 18 days. Though four days longer than the eastward trip last year, it is a very good passage.

LONG ISLAND SOUND IN APRIL.

S. and I left New York on the night of April 5 on the Maine of the Stonington Line bound for the village of Noank, where we were to get a catboat, built there the past winter, and which we were to sail to Sewaren, N. J. We were up bright and early Saturday morning and were much disappointed to find no wind and every appearance of rain. We arrived in Noank about 7 o'clock and were surprised to find the Fury was not yet launched, and were much perturbed in spirit for fear we would spend a good part of our time on the trip home pumping her out, but the builder assured us his boats seldom leaked when new and we were pleased to find he told the truth this time.

The Fury is a cabin cat 24ft. over all, 20ft. w. l., with 10ft. beam, of a modified Cape Cod design. After we had satisfied ourselves that she was as true to her lines as it is possible to build, preparations were made for the launch. She was resting with ballast in and all rigged in a cradle on a plank way about 100ft. from the water and fully 10ft. above it. After the planks were smeared with hot grease we set her going by means of long levers, and the way she travelled when she struck the hot grease was a caution. I believe her momentum would have carried her pretty close to Ram Island if they had not provided a long rope to stop her. We had to wait until 11 o'clock before there was a sign of a breeze, but it finally came in from the east, which was what we wanted, though it was very light. We started with the best wishes of the builder and numerous small boys for a quick and speedy passage.

We were abreast of New London by 1 o'clock, and the Sound hereabouts was full of ducks of all kinds, which were very wild, though we managed to pick up one or two that passed us at long range. The wind increased a little, bringing with it the rain, so we got out our oilskins and prepared for wet weather. After disposing of a good supper at 5 o'clock, prepared under way on our little oil stove, and an extra ration of grog to keep off chills, we felt so well we decided to sail a part of the night, trying to make New Haven. The wind had increased materially, though we were still carrying full sail, as we were most anxious to get home; for the women will worry when the men are out in inclement weather, particularly so early in the season.

We were well up to Falkner's Island by 7 o'clock, and as it was going to be a thick night on account of the rain and the wind was now blowing fresh, we tucked in four reefs and got out our side lights and binnacle. The rain made it impossible to see lighthouses much over five miles, and as my companion S., though a handy man in a boat in the daytime, was unused to a compass course at night, I told him to turn in and I stood watch and did the sailing. By 11 o'clock we had picked up the lights off New Haven, and as we were making such good progress and our little boat behaving so nicely, I decided not to call S., but keep on. Every few minutes we started up bunches of ducks off the Thimble Islands, which would rise with the peculiar cackle they make when disturbed at night. Daybreak Sunday morning found us within five miles of the Norwalk Islands, and as my eyes were a bit played out I called S. to take a hand, while I turned in for a nap and a change of warm clothes. I had just dropped off when I was called by S., and on going on deck found the wind had increased with the daylight and was blowing very hard and a heavy sea running, so we decided to put in for a little rest and a hot breakfast. We were about a mile to the westward of Sheffield Island, so ran into a little cove made by the rocks on either side of Roton Point bathing beach. When anchored and our sail down, we found we headed up to the wind, but were rolled a good deal by a counter swell which came around the end of Sheffield Island about a mile dead to windward. As it was impossible to cook and sleeping was uncomfortable, we decided to try to beat our way up behind Sheffield Island and anchor inside a fleet of coasters and tows that were waiting there to go East.

From the way the wind whistled through the rigging we knew it would be a hard sail for such a small craft, and put in our last reef, the fifth. We were delighted to find our boat worked to windward beautifully with this reduced sail, and received some quite complimentary remarks from the coasters, as we weathered them, on the way she handled. When we arrived at the desired spot about 7 o'clock and had our anchor down and everything snug, we went below and had a good breakfast and turned in for a much needed nap on my part. We were up again by 11 o'clock, and after a hot dinner of soup, beans and pressed chicken, we decided to try our luck again outside if the Fury would stand it, for it was blowing just as hard and the sea heavier. After shortening in on our cable and putting our close-reefed sail on her we tried to pick up our anchor, and found a fluke was fast under one of the rocks, which are numerous hereabouts, and thought we were going to lose it, but finally succeeded in dislodging it. We were well under way by 1 o'clock, and stood out from the lee of Sheffield Island to see how our boat would act in the heavy sea and wind. She behaved so nicely and rode so easily over the white-capped waves we thought the best thing we could do would be to take the seas on the quarter and stand over to the Long Island shore, where we would have a little lee from the due easter. We found it necessary to top up our boom pretty well, and to trim it in so as to keep it out of the water when one of the larger waves would lift our counter.

It was the finest run of my life, and the boat did her work like a man, crossing the Sound in this rough water without taking aboard a drop. We started up several large flocks of geese near the middle of the Sound, but we were too busy watching our boat to try them with our gun, though we were within range of one flock when they rose with their mournful *honk*. Half-past two found us under the lee of Lloyd's Neck and glad to get there. I have since learned from Mr. Dunn that the wind was blowing then about twenty-eight miles an hour, and those that sail the Sound will know this was a creditable performance for a 20ft. water line cat in the heavy sea and hard winds that blow at this season of the year. The balance of the run was an easy matter keeping along the Long Island shore, and when we rounded Fort Schuyler about 7 o'clock we were surprised to find by actual count over 60 coal barges and tows anchored there waiting for the heavy sea to go down, which possibly accounted for the few vessels we saw outside. We were at Hell Gate by 8 o'clock with a lightening wind and high slack water. We shook out our reefs and prepared for the passage of this 8 miles of water, which is a terror to all small yachtsmen. Everything went smoothly and we were soon hurrying along on the first of the ebb, and thought for once we were to have a smooth passage, but as usual were sadly disappointed.

When just above Brooklyn Bridge the wind flattened out entirely and a fog settled down which set the ferry-boats tooting and the fog bells on slips ringing, and our own fog horn going as well as an oar to keep her head on. It was so thick we could not see the lights on the bridge until we were under it, and those who have tried their luck in these swinging eddies will realize how we felt. We kept close to the Brooklyn side and tried to get the assistance of one or two tugs we passed, but without avail. We passed through Buttermilk Channel without seeing Governor's Island, and when we heard the bell buoy ringing we knew where we were, so let go our anchor, which fortunately held.

A light wind sprang up again from the east about 12 o'clock and the fog lifted enough for us to make out the nearby shore lights. We got out our compass and weighed anchor and in a few minutes were able to see Miss Liberty's torch. We then bore away for Robbins Reef light, which we finally picked up, and rounded and were close to the mouth of the Kills. It did not take us very long from here, and by 4 o'clock Monday morning we were tied up at our dock in Sewaren, having made we think a quick passage of some 150 miles.

Yacht Owners' Limitation of Liability.

The question of the limitation of the liability of yacht owners, as affected by the recent decision of the Court of Appeals in the Valkyrie-Satanita case, is thus discussed at length by the *Field:*

Every British racing yachtsman has by this time probably "buried the hatchet" as to the maneuvering rights and wrongs of the great collision case between the Valkyrie and the Satanita. The questions of negligent navigation were never tried on the one side or the other. It was pleaded in defense by the Satanita that "she was hampered by the navigation of a small sailing boat as she approached the Valkyrie, and failed or was unable to keep clear of the Valkyrie; but this possible ground of defense and fair ground for counterclaim, in that the Valkyrie should have seen the hampering, if it took place, and should have anticipated its result upon the action of the Satanita, and should, therefore, in the special circumstances, have maneuvered to give way in time, even though on the starboard tack, was neither pleaded nor fought out; but the case came into the Admiralty Court solely as a claim by Satanita's owner for limitation of liability under the Merchant Shipping Act, which limits the amount recoverable to £8 per ton of the wrongdoer who, for the purposes of such limitation, admits liability.

The Valkyrie, on the other hand, opposed such limitation action, on the ground that rules 24 and 32 of the Y. R. A., under which the yachts were sailing, and rule 5, under which the respective owners entered for the race, created a contract between them, whereby they became liable for all damages, and that they had thereby contracted out of the Merchant Shipping Act.

The Court of Admiralty held that the contract, such as it was, did not contemplate putting the parties out of the provisions of the Merchant Shipping Act, and in that the owner of the Satanita was not personally in fault or privy to the negligence causing the collision, gave judgment limiting the damages to £8 per ton of the Satanita.

The Court of Appeal has now reversed that judgment, and has decided that yachts racing under the then existing Y. R. A. rules became liable for all damages resulting from a collision in such race. The Master of the Rolls, in giving the judgment of the Court of Appeal, made it perfectly clear that the unlimited liability was confined to those yachts which were racing at that regatta; that the liability did not extend to valuables taken on board—such, for instance, as the owner's wife's jewels—and that other yachts under the racing contract "would be bound by the ordinary rules of navigation," *i. e.*, the Merchant Shipping Act.

The Master of the Rolls went on to say that, "in his opinion, the limitation of liability under the Merchant Shipping Act was superseded by the rules of the committee (meaning the Y. R. A.). The yachts were to be steered and sailed by the owners or some amateur friends, and therefore the competing yacht owners would lose the security that they would have if the yachts were to be steered and sailed by a competent certificated master. In these circumstances it was only reasonable that a contract should be entered into between the yacht owners, that if any damage was caused by a breach of sailing rules the owner of the offending yacht should pay all damages. In this case the yacht that was sunk was a most valuable one, and was probably the best yacht in the kingdom, and it might have been sunk by one of the smallest yachts taking part in the regatta; and in that case, according to the contention of the owner of the Satanita, Lord Dunraven would only have been entitled to recover some very small damages. These were the reasons which, no doubt, led to the framing of these rules, and they formed a most reasonable protection to gentlemen who would have a little gamble in the form of yacht racing. He thought they were good and proper rules."

That, shortly, may be taken to be that the rules are "good and proper" if the conditions above given are correctly stated. But there are some points in the judgment above quoted relating to those conditions which are known to most racing yacht owners, but may not be obvious to the general public of yachtsmen. The rules of the committee (that is, the Mudhook Yacht Club) do not in any way affect the Y. R. A. rules; the contract, if any, is formed only by and under the Y. R. A. rules. The fact that an amateur was to steer is no part of, and has no effect upon, the Y. R. A. rules, which then formed the same contract in any and all races. There was no loss of security by the fact that the club rules of that particular club required an amateur to steer instead of a "competent certificated master," because under no existing rules—club, Y. R. A., or Board of Trade—is a certificated master required to be on board a yacht. Of the further allegations of the judgment, that the rules, as then standing, "were good and proper rules," "that the most valuable yacht might have been sunk by one of the smallest yachts taking part in the regatta, and that in that case Lord Dunraven would only have been entitled to recover, according to the contention of the defendants (by and under the statute law), some very small damages," the probability is that, in framing the rules, the Y. R. A. did not clearly see that there should be no opening left whereby their rules should be construed to say that "though the law is that where, say, a small tug sinks an Atlantic liner by negligent navigation, she may limit her liability to £8 per ton of her tonnage, you, a small yacht, sailing at your own election under the Yacht Racing Association rules, and doing damage to your Atlantic liner—that is, "the most valuable yacht"—ought not to be allowed the commercial man's benefit of the law of the land, nor may your underwriters enjoy their contemplated legal rights of the limits conferred by statute.

We will consider this unbalanceable point further presently. Here it, by the judgment, assumes that there are two distinct principles of law applicable to vessels afloat maneuvering, the sole question being, "Are they gambling for a little prize, or gambling for a little freight?"

Whether this judgment of the Court of Appeal is sound or not we do not here question, but if it is not challenged by a further appeal to the House of Lords, or is not reversed on such an appeal (final), a very serious question—indeed, a very complicated question—is placed before yachtsmen as to their liability in cases of damage in collision whilst racing.

As an instance of complication, and one which does not appear to have been brought to the notice of the courts, take the very case before us under the light of the judgment. Assume that the question of negligent navigation has been fought out, and that the small sailing yacht, which was not racing, had been joined as a defendant and been proved to have broken the rule of the road, and so caused Satanita, without negligence on her part, to sink the Valkyrie. The small yacht (say of 15 tons, for the purposes of this view of a public case) is under the act, and is entitled to claim limitation of liability at £8 per ton—viz., £120. If, however, both the small yacht and the Satanita had been found in fault, Valkyrie would get only £60 from the small yacht, but Satanita would have to pay half of the whole loss. Whereas, the Satanita's liability is unlimited. Or, on another view, Y. R. A. rule 32 makes the whole of the rules apply to "all yachts racing, whether in the same or different races." Could it be held that the owner of a 20-tonner, aware of the Satanita judgment, and therefore carefully insured up to, or contemplating no more liability than the top value of a yacht in the class he has elected to race in, viz., a 20-tonner; and who, at the time of entry, cannot know whether the uncertain chances of racing or the unknown or unalterable orderings of the Club Sailing Committee may not force him into close company with the "big cutters" of a different race; can it be held that he has voluntarily con-

tracted with any or all possible entrants in the other races to pay unlimited damages, should he come into collision and be found to blame? It may be said, on the other hand, that if the big craft sinks him he may get his loss completely paid up; but in like manner he, the 20, may sink a 0.5-rater and not feel much hurt on paying up £100, whereas if the 0.5 sank the 20 and was called upon to pay £2,000, in eight cases out of ten it would be ruin to the small owner.

Whether such obligations were ever seriously contemplated by those who framed the Y. R. A. rules is doubtful, but there they stand at present, under and confirmed by a judgment; and it is a serious question for racing yacht owners to consider whether it is a better policy to pay heavy insurance premiums and run the risk of further heavy claims where the amount insured does not cover, or, on the other hand, to so clearly alter the conditions of racing that all matters connected with the sport shall be under the ordinary laws applicable to collisions or losses at sea.

Without going back into dark ages to examine the code of Oleron—the chief source of English maritime law—or to the Roman and mediæval codes, it will be sufficient to point out that the Roman and mediæval codes required the wrongdoers in collisions to make full compensation for damage or loss. Limitation of liability came in by degrees, and for about two centuries the almost universal law of continental countries has been a limitation to extent of the value of the wrongdoing ship and her freight; but such limit was not, till George III.'s time, recognized by the English courts.

In about 1625 limitation of the liability of shipowners came in as to British ships on the ground of public policy, and as necessary for the encouragement of shipping; but not in any marked or effectual way until about 1734, and in the reign of George III. an act was passed "that it was expedient to encourage the owning of British ships," and for such end limited the owners' liability in collision to the value of the ship and freight. In 17 and 18 Victoria, 104, the same limit was carried on as to damages recoverable in respect of loss of life or injury, and placed the value at £15 per ton of the wrongdoing ship. Difficulties were found in working these enactments, and in the result the act (25 and 26 Victoria, c. 63, s. 54) was passed, and is continued by the act of last year, placing the limit at £15 where there was loss of life, and at £8 per ton otherwise. There is, of course, no longer in these days the same ground for passing acts of Parliament as in 1625; but the present state of shipping, the risks of the seas, and questions of freight earning and of insurance have not caused the Legislature to, as yet, find fault with the statutory limitation of liability.

There is a further question of great importance to all yacht owners, whether they race or cruise, and which was tried to a certain extent in the Valkyrie-Satanita case. The act which gives the limitation of liability does so upon a term which is extremely hard upon yacht owners and upon the large class of coaster owners who command their own vessels, and it is a subject which demands serious consideration and amendment by the Legislature. The objectionable term is in section 54: "The owner of any ship, whether British or foreign, shall not in cases where all or any of the following events *occur without their actual fault or privity*, that is to say * * *" etc. So that the benefit of limitation given by the act to the owner who remains ashore, or who is too ignorant of seamanship to be found in "fault or privy" to the collision, is denied to the expert owner who takes charge of his own craft, even though he be a Board of Trade certificated master mariner or a naval officer; and yet, so far as acts of Parliament at present go, an owner may place his gardener on board as captain, and if such gardener has told his master that he knows how to command the craft it would be difficult to satisfy a court that the owner was actually in fault by such appointment for a subsequent collision at sea.

The present certificate as master issued by the Board of Trade confers no benefit or exemption upon a yacht owner, but undoubtedly had Mr. Clark held such certificate of competency he, being on deck before and at the collision, could not have obtained the limitation of liability in any event, and the question of Y. R. A. rules forming a contract would have dropped. It would be a politic and practical amendment of the law that the certificate of competency as master granted by the Board of Trade should carry with it, in the case of owners, the benefit of limitation of liability—that is, exemption from the clause as to "fault or privity."

One further point of vital import to the owners of small yachts—whether steamer or sailer, in racing or in cruising, and which of course the present case did not touch, because the "small boat" was not brought in—is that, as yachts under 15 tons registered tonnage are not required to be registered and are not registered, it is highly probable that they cannot limit their liability under the act. It has been held that a new ship which had a collision while being launched, and at the time was of course not a registered ship, could not limit her liability by the act, and was held liable for the whole damage.

On the whole, the Satanita case may be taken to show that the old proverb, "ignorance is bliss," may, in ordinary yachting, be converted into "absence of nautical knowledge" in a yacht owner is profitable under the Merchant Shipping Act. But in racing it matters not; your liability is by "contract" unlimited.

The Yacht Racing Association had, before the appeal judgment above given, and while yet under the favorable decision of the Admiralty Court, considered that rules 24 and 32 were liable to raise grave difficulties in cases of heavy damage, and had amended the rules by altering the wording to "liable for such damages as are by law recoverable;" but it is a moot point whether or not the whole question does not require further consideration.

The Long Island Sound Yacht Racing Union.

AS ALREADY noted, the Yacht Racing Union of Long Island Sound was formally organized by the vote of the delegates present from the various Sound clubs at the meeting of April 15. As only a minority of the delegates had been formally authorized by their clubs to act for them, a number of the clubs having held no meetings since the matter had taken final shape, the organization was made in a very general way, it being decided to form a union, under the name given above, composed of those clubs whose delegates were empowered to sign for them, the remaining Sound clubs being at liberty to complete their connection with the Union at any time that they might be able to hold a meeting. Pursuant to a resolution, the temporary chairman, Mr. Cromwell, appointed to the council the following yachtsmen: John F. Lovejoy, Frederick E. Barnes, Oscar E. Chellbourg, Stuyvesant Wainwright, Le Grand L. Clark, F. B. Jones. Of these, Mr. Lovejoy declined to serve, on the ground that the Larchmont Y. C. had not yet decided to take representation in the Union, and Mr. E. Burton Hart, was appointed to fill the vacancy.

The first meeting of the council was held at the Seawanhaka-Cor. Y. C. house on April 23, all the members being present, together with Messrs C. T. Pierce, John Hyslop, A. Cass Canfield, J. Frederick Tams and W. P. Stephens, invited by the council. The first business was the election of permanent officers, Mr. Oliver E Cromwell, Seawanhaka-Cor. Y. C., being elected chairman and Mr. F. Bowne Jones, Indian Harbor Y. C., secretary. The question of classification was then taken up and very thoroughly discussed, the following being finally adopted:

Yachts shall be classified by racing length, as ascertained by measurement by the "Seawanhaka Rule." With the exception of Class I. of each division, the upper limit of each class shall be that indicated by the name of the class, as follows:

SCHOONERS.

Class 1, all over 95ft.: 95ft. class, 85ft. class, 75ft. class, 65ft. class.

ALL OTHER RIGS.

Class 1, all over 80ft.: 80ft. class, 70ft. class, 60ft. class, 50ft. class 43ft. class, 36ft. class, 30ft. class, 25ft. class, 20ft. class, 15ft. class.

In the matter of allowance of crew, the opinion was unanimous in favor of adopting that of the New York Y. C.; but it was considered best to make a definite allowance of a fixed number of men to each class, rather than to base the allowance on a certain number per unit of racing length. The following allowance was adopted, the figures being the total number of persons allowed on board, including the helmsman:

Schooners.—Class 1, one man to every two feet, or fraction thereof: 95ft. class, 32 men; 85ft. class, 29 men; 75ft. class, 19 men; 65ft. class, 13 men.

Yachts of all other rigs.—Class 1, three men to every five feet, or fraction thereof: 80ft. class, 40 men; 70ft. class, 18 men; 60ft. class, 15 men; 50ft. class, 10 men; 43ft. class, 9 men; 36ft. class, 8 men; 30ft. class, 6 men; 25ft. class, 5 men; 20ft. class, 3 men; 15ft. class, 2 men.

No limits were laid down for the open yachts with shifting ballast.

The matter of allowance was speedily settled by the adoption of the 60 per cent. table of the Larchmont Y. C., as preferable to the 50 per cent. tables used by many other clubs.

The question of starting signals was then discussed, and it was finally decided to adopt the blue peter for the preparatory, with a red ball for the starting signal, and the club burgee for the elapsed time signal; the red ball to be followed by a blue ball and a white ball if necessary to start the fleet in two or three divisions, the starting of the last division in all cases to be marked by the club burgee. The meeting adjourned subject to the call of the chair.

The Cup Defender.

THE latest news from Bristol is to the effect that a number of plates of aluminum bronze, an alloy composed very largely of aluminum, have been received, to be used on the topsides of the new cup defender. These sheets are about $\frac{5}{16}$in. thick, made by the Pittsburgh Reduction Co. The sternpost is at last in place and the frames are set up, but there has been some delay with the deck beams, which have not yet been received. The plating is now well advanced.

Huguenot Y. C. Opening Race.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, April 20.

WITH that commendable energy which has thus far characterized every move of those who have the welfare of the Huguenot Y. C. in hand, that active young organization opened the yacht racing season on the Sound last Saturday. Before the start was made the visitors were shown through the partly-finished house which the Huguenots are building on New Rochelle Harbor. The house is a cozy, sensible structure. It contains a pretty entry room for the ladies, a comfortable library and quite a large assembly room. In the second story room for storage and the janitor's apartments have found space. There are spacious verandas, a large workroom, sail loft and locker room. The plant, while not expensive, is as comfortable and practical as can be. The landing stage and float is very large.

The races were held off Whortleberry, or Huckleberry Island. E. Burton Hart, chairman of the regatta committee, and Messrs. Embury and Erwicker had the race in charge. The course was a four-sided one, nine miles long, and the start was made with one gun, after the English fashion.

From a starting line off the easterly end of Huckleberry Island, the boats went away to Gangway Bouy, then hugging the Long Island shore they fetched Old Hen Buoy, in Hempstead Harbor; from here they crossed the Sound to red buoy on the southwesterly end of Hen and Chickens Reef, off Larchmont. From here the boats sailed back to the starting line.

Outside of the fact that this was the first regatta of the season, the race was interesting owing to the experiment of trying four-sided courses and the one-gun start.

The result shows several advantages and some disadvantages. The course is all right, it tries the crews, keeps all hands busy and adds zest and interest. The one-gun start was trying, but no complaints were heard, and the maneuvering before the gun called for all the seamanlike qualities the skippers possessed.

The wind was brisk from the southwest and there was a good bit of a sea on when the cats lined up at the preparatory flag at 2:22 P. M. Promptly at 2:27 the starting signal was given, and away went the fleet to Gangway, a close haul. In this work the twenty-year-old Camilla did magnificently, and Burgess' Angora, a 20ft. cat, kept up to windward in wonderful shape.

The one-gun start was a success, and the club will stick to it, and the four-sided course is very well liked.

The result of the regatta was as follows:

CLASS A—CABIN CATS OVER 23FT.

	Start.	Finish.
Camilla, T. R Webber	2 27 45	3 42 00
Kittie, Hazen Morse	2 27 45	3 43 00
CLASS B—CABIN CATS OVER 20FT.		
Sadie, H. G. Dunham	2 27 45	3 55 30
Monson, T. B. Aldrich	2 27 45	4 04 00
OPEN CATS.		
Angora, C. M. Connolly	2 27 45	3 57 00
*Narriogh, Townsend and Badgely	2 27 45	. . . .

*Did not finish.

So the youngest club on the Sound had a very successful regatta, and opened the season in great shape. It will have another regatta on May 20.

Trilby's Big Feat.

Editor Forest and Stream:

The latest addition to the Southern Y. C. fleet is Trilby, a movable fin-keel of the Scarecrow type, built by Mr. I. W. Boone, Jr., of New Orleans, La., from designs by Mr. W. P. Stephens. The lines of Scarecrow as published in the FOREST AND STREAM of Jan. 27 and Feb. 3, 1894, have proved one of the most popular small-boat designs ever published, and probably fifty of these boats have been built throughout the country. Trilby is one of the handsomest boats ever seen in Southern waters, her jaunty up-to-date outline forming a perfect picture, her under-water surface speaks eloquently of speed, and her workmanship and finish inside and out are of a superior character seldom exceeded in a professionally built boat and rarely approached in an amateur effort. Mr. Boone deserves great credit for this his initial effort in the boat-building line; and his patience, skill and industry, one is glad to say, have met well-merited compliments from all sides. His was no ordinary task as regards a shipyard, as he had none, but went to work to institute a novelty in that line and built his boat on the third floor of a tall brick building. How the boat was to be gotten out of an ordinary-sized window and down to the ground passed the comprehension of the score of enthusiasts who tramped up to watch her development.

To-day Trilby posed suspended in the air high over the heads of an admiring crowd, was landed squarely on her feet on a big cotton float (and there was no Svengali there to hypnotize her, either), and was hauled out to the placid bosom of Lake Ponchartrain without a scratch. Her launching was all a problem of a sling, good blocks and tackle, and willing hands, and an additional purchase from a tall building across the street.

In Trilby Mr. Boone departed slightly from the original dimensions of the design, and has given his boat 4in. more beam, 1in. more freeboard, 6in. more bow sheer, 1in. more stern sheer, and round of deck 7in. instead of 5in. Her principal dimensions are: 18ft. l.w.l., 25ft. over all, extreme beam 5ft. 10in., l.w.l. beam 5ft. 6in., draft without fin 9in., draft with fin 3ft. 6in. The fin is steel, with lead bulb; weight 650lbs.

On the recommendation of Mr. Stephens, in consideration of the increased power of the boat and the generally prevailing light local breezes, Trilby has been given a larger sail spread, with bowsprit (4ft. outboard) and gaff and peak in place of a lug sail. Ex-Com. Thomas Sully designed the sail plan. The mainsail has a hoist of 14ft., the gaff is 13ft. long, boom 23ft., and jibboom 12ft. long. Trilby promises to emulate her famous namesake in being an "all-together" fast young lady.

L. D. S.

Corinthian Y. C.

RECORD RACE.

April 18.

ATLANTIC CITY, N. J. Waters, Absecom Inlet. Course: Start and finish from stakeboat off club house, 4⅛ miles to leeward and return. Flood tide necessitating beat to windward against tide. Distance, 8¼ miles. Weather, clear. Wind, E.N.E., blowing hard (17 miles). Tide flood (strong).

	Start.	Finish.	Elapsed.	Corrected.
Whiz, C. S. Reed	2 56 48	4 23 54	1 27 06	1 26 45
Georgie, Geo. Gale	2 57 27	4 25 23	1 27 56	1 27 16
Ivie, E. A. McGuire	2 58 15	4 26 10	1 27 55	1 27 40
Jenny, N. Sooy	2 56 23	4 24 50	1 28 27	1 28 27
Vim, F. Sprow	2 57 52	4 27 37	1 29 46	1 28 57
Vixen, L. Wootton	2 58 46	4 28 29	1 29 43	1 29 09
Douschka, J. T. Andrews	2 57 44	4 28 28	1 30 44	1 30 32
Wasp, Paul Wootton, Jr.	2 58 28	4 29 50	1 31 22	1 30 37
Little J. E. M., H. Wootton	2 59 27	Disabled.		
Corinth, Leonard Alger	3 05 34	Disabled		

Prize winners: Whiz first, Georgie second, Ivie third. All the boats contesting average on the l.w.l. 13ft.

Judges—Fred P. Currie, Paul Wootton, Sr., Chas. W. Gale. Regatta Committee—D. C. Andrews, Geo. Gale, Leonard Alger, Chester Adams and John T. Andrews.

Robert Center.

THE funeral of Mr. Center took place on Friday, April 26, from St. Mark's Church, Second Avenue and 10th St., New York, the services being conducted by the Rev. Richard Cobden, assisted by the Rev. James G. Lewis. The church quartette was present, as well as thirty-five members of the Orpheus Glee Club, of which Mr. Center was a member. A large number of yachtsmen were present, including the officers and standing committees of the New York Yacht Club, and many members of the Seawanhaka Corinthian Yacht Club.

Commodore Benedict arrived in port in the morning, and was present as one of the pall bearers, with Commodore Edward M. Brown, New York Yacht Club, Judge G. Monson, A. Cary Smith, Henry Steers, Wm. E. Iselin, J. Frederick Tams, Oliver E. Cromwell, Leon F. d'Oremieulx, Charles A. Post, Richard Morgan and J. Howard Wainright. The Genesee Valley Hunt Club was represented by Capt. J. W. Martin, U. S. A., and Mr. Herbert Wadsworth.

The inquest was held last week, resulting in the discharge of the driver of the coal cart, who was declared blameless for the accident.

Vigilant.

AT noon on April 29 it was reported in New York that a sailing yacht had been sighted off Fire Island in the morning, supposed to be either Vigilant or Fleur de Lys, and before the news was well over the city the former yacht was off Sandy Hook, passing in about 12:30 p. m.

She sailed from Southampton on April 11, passing the Needles at 5 p. m., her time to Sandy Hook Lightship being 17d. 18h. 25m. She will at once go to the Erie Basin for her new centerboard and racing rig.

Emerald, schr., J. R. Maxwell, has had her mainmast lifted out and recut where it straddles the trunk, there being a twist to it, which it had taken last season.

YACHTING NEWS NOTES.

Unless all signs fail, the establishment of a permanent yacht harbor off the coast of Lincoln Park, at Fullerton avenue, is a conclusion. The members of the Lincoln Park Yacht Club are disposed to furnish a portion of the money whereby their dream may become a reality, and expressed themselves to that effect through the chairman of their harbor committee, John McConnell, before the Lincoln Park Board recently. A delegation comprising this committee submitted plans for the proposed haven to the Lincoln Park Commissioners, and discussed the pros and cons regarding their execution. As the entire Lincoln Park Board was not present no action was taken upon the propositions advanced by the members of the committee. The sympathies of the commissioners present, however, were plainly with the delegation, and it was suggested that one manner of meeting the financial obstacles in the way would be for the club men to accept a concession for the steamboat landing, advance the money for its construction, and be repaid by the steamboat owners, who it is thought will be willing to pay a considerable revenue for the privilege of landing their passengers in a safe harbor at Lincoln Park. This arrangement was merely a suggestion. The plan offered by the yachtsmen was to build a pier eastward from the present breakwater, which extends north and south a short distance from the sanitarium to a distance of 200 feet. At this point the plan showed a southward slant at an angle of about 30 degrees, whence the pier was to proceed to a similar length. As this arrangement would afford an opening between the eastern end of the landing and the present pier of but seventy-five feet, President Crawford suggested an alteration in the original plan which seemed to meet the approval of the clubmen. This was to extend the pier due eastward for a distance of 300 feet and to terminate the structure with a "T" running north fifty feet. By this means an accretion of land north of Fullerton avenue would be accomplished, while under the original arrangement the acquired land would come south. The construction of the pier, exclusive of dredging, would cost at least $5,000 according to President Crawford. The work of deepening the water of the proposed harbor would increase that sum to at least $7,000. This the president said was a very conservative figure, and while it might be possible to accomplish the work within this limit, it was scarcely likely to be the case. The chairman of the harbor committee was not prepared to state what sum the club he represented would be willing to contribute, and President Crawford suggested that the matter be taken under consideration and that the committee return with the information at the next meeting of the Park Board three weeks hence.—*Chicago Inter-Ocean.*

The centerboard schooner built for Com. Francis Shunk Brown, Phila. Y. C., from designs by A. Cary Smith, was launched recently at Kirk's yard, Toms River, being christened Helene.

Ex Com. E. D. Morgan, of the New York Y. C., has just returned from England by steamer, having been abroad since he crossed in the steam yacht May early last summer. He will sail in the new Cup defender, of which he is one of the three owners.

Reva, steam yacht, was docked at Tebo's last week, where she will be repaired by Samuel Pine. The whole after part of the yacht was blown out by the explosion, the decks being torn up and the planking of the counter shattered.

Niagara, Mr. Howard Gould's new fin-keel 20-rater, arrived at New York from Bristol on April 28, and was shipped in the Wilson Line steamer Ontario for London on April 30.

The following additional dates are announced by the Yacht Racing Union: May 25, New Rochelle, special for cabin and open cats; June 1, Yale Cor. an., New Haven; July 25, Riverside special; Aug. 3, Corinthian Fleet of New Rochelle, an.; Aug. 21, Riverside special.

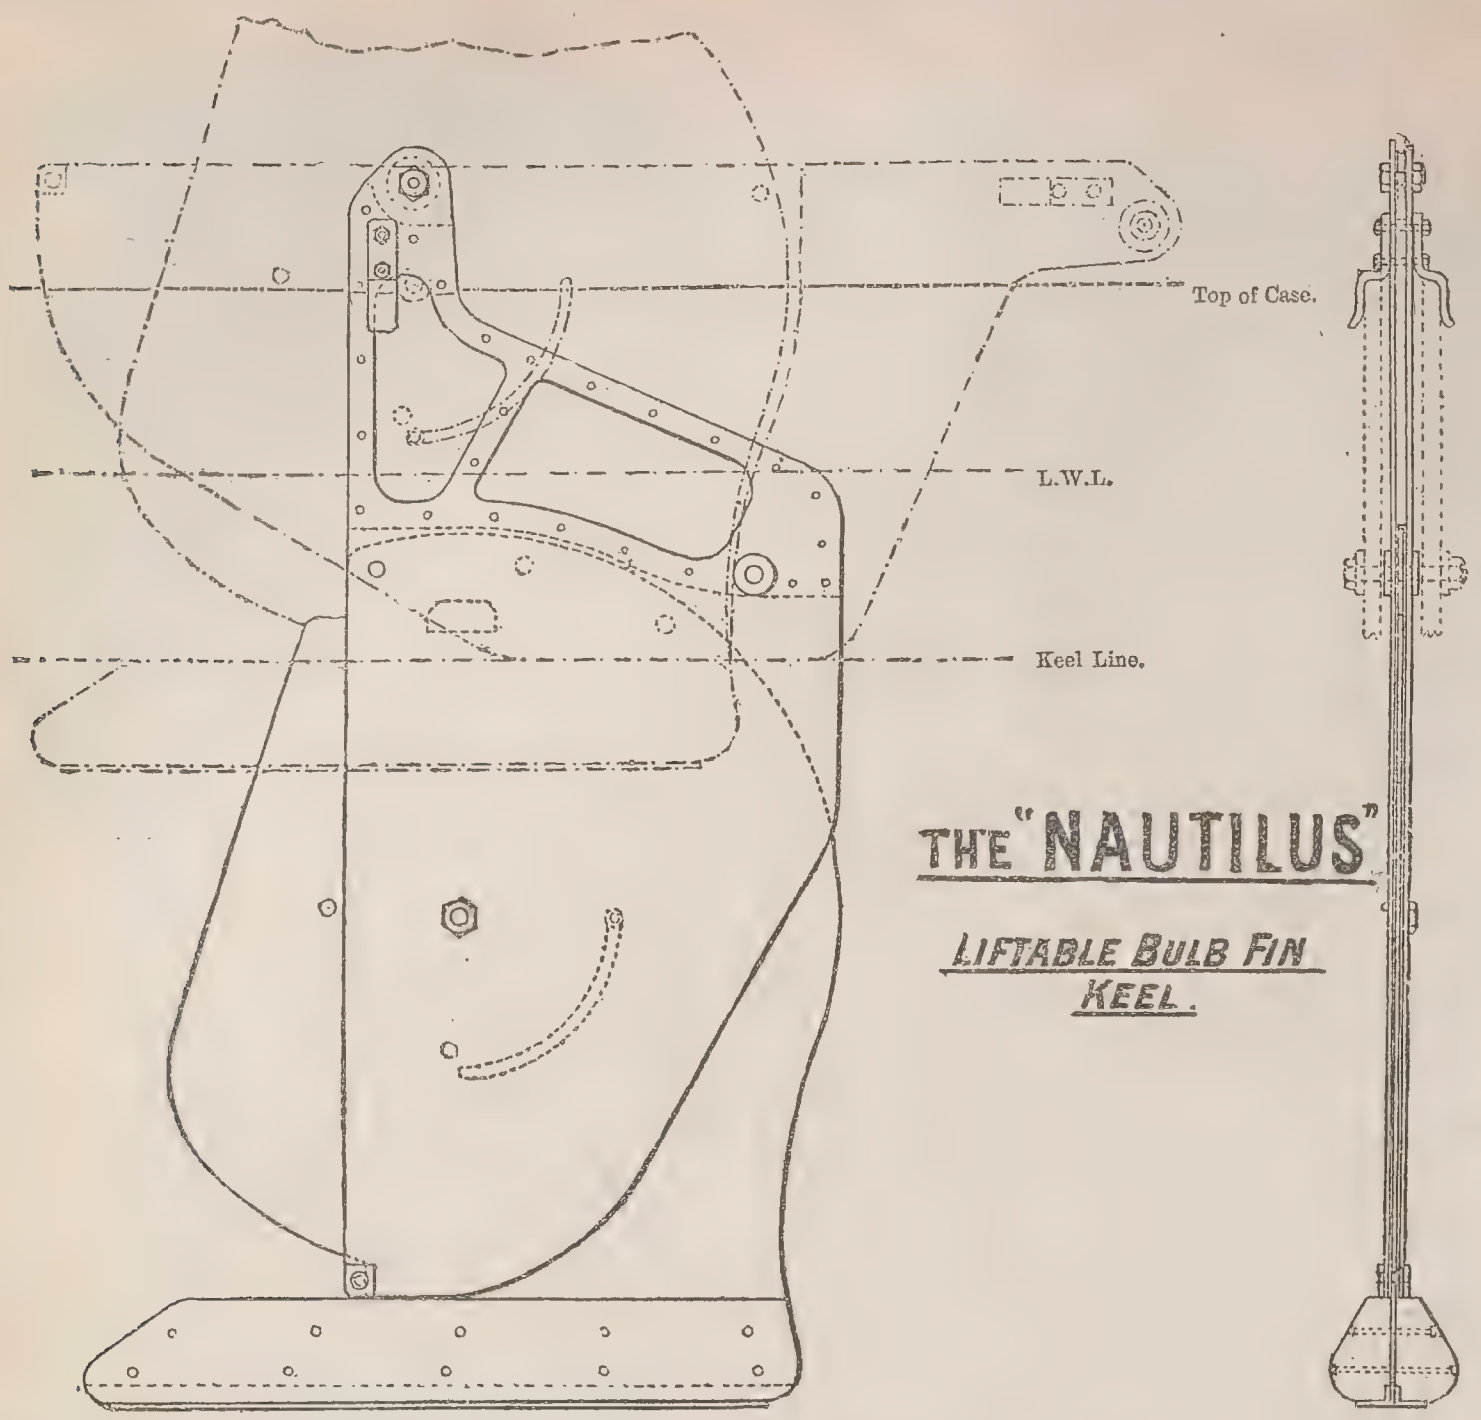
Oneida, steam yacht, Com. Benedict, Seawanhaka-Cor. Y. C., arrived at New York from a Southern cruise on April 26.

Hermione, steam yacht, designed by G. L. Watson, has been chartered for the season by Robert Goelet.

Sultana, steam yacht, designed by J. Beavor Webb, has been sold by T. L. Park to J. R. Drexel.

Canoeing.

A CANOE CRUISE ON THE POTOMAC.



[*Concluded from page 317.*]

RETURNING to Harper's Ferry we reload our camera and make preparations for a climb to the old stone fort situated on the top of South Mountain, just opposite the town. The old army road is the way up, it is something like two miles in length and at places the ascent is rather steep, the road having been unused since the war is in very bad repair, the many rains having made it a sort of a watercourse down the mountain. After a hard climb we reach a clearing about half way up; here there are remains of old earthworks, erected as a protection to the fort above. The only occupant of the works at this day being a very pretty grass snake, we gave him a slight inspection and passed on, allowing him to retain peaceable possession of his fort. About a mile further on we reach a fort of earthwork and stone large enough to hold a considerable garrison, and some distance above this on the very top of the mountain we find the remains of the stone fort, now in a broken down condition.

The view from this eminence is grand; in front lies the valley of the Shenandoah, while to the right and left the Potomac winds its way among the mountains; it is said by the inhabitants of Harper's Ferry (the majority of whom, however, have never raised sufficient ambition to make the ascent) that a distance of twelve miles can be seen from this point on a bright day. The trip down the mountain is not without exertion and causes a feeling of weakness in the knees. One feature of our stop at this place must not be omitted; the lock-keeper, noticing our camera, formed an idea that we were photographing for pecuniary profit, the result, on our return in the evening, we find a number of the people gathered around dressed in their "Sunday clothes" ready to face our instrument.

We gently break the news of our use of the camera, and compromise the situation by taking a photograph of the lock-tender's children. We break camp, push away for a few miles before dark, and are soon in the second part of the rapid, which is somewhat heavier; that is, deeper water and larger waves, but the channel is fairly well defined and furnishes good sport. The entire rapid—that is, from dam above Harper's Ferry to the end—is not less than three miles in length, and should not be attempted by any one unfamiliar with rapid-running. From the foot of this rapid down to Point of Rocks there are many small rifts, which add much to the pleasure of the cruise. At the village just mentioned began a stretch of river running down to Seneca, a distance of about twenty-nine miles, without a rapid or eel rack to break the monotony. The current being fair, it does not prove very tiresome. About twelve miles below Point of Rocks we take the Virginia side around a large island, according to instructions received from fishermen just above, as we desire to visit the battlefield of Ball's Bluff. A small, clear stream, the outlet of a large spring several miles back from the river, empties itself just at the head of this large island. We push our canoes in and enjoy a light lunch.

About a mile below this place we land, and climbing the bluff look for the Government Cemetery, that we may locate the battlefield; but a growth of weeds is all that we find. Noticing on the shore of the island opposite a large scow, we land there, and make a search for the house, which we think must be in the near vicinity. We are rewarded by the sight of a large, level field of fine wheat, with reaping and binding machines in full swing, and numerous farm hands at work in the gathering of the

harvest. We are soon across to the large stone farmhouse. The family are gathered in front, under the shade of a large tree. We are given all the information we could desire regarding the battlefield and cemetery.

Thanking the people for their kind attention to our requests we return to the river, and just as we push our canoes from shore are surprised to see an old gentleman who had conversed with us at the house appear on the scene and request us to accept of his hospitality for the night, offering to go with us in the early morning and show us over the battlefield. Of course, we accepted without hesitation; we shall always have a warm spot in our hearts for that family. In the evening the men came in from the fields and we became acquainted with the old gentleman's sons, who were college graduates, and were turning their education to a very practical use in farming on an extensive scale—the farmer of to-day must be well educated and well read, else he soon becomes a mere laborer and not a prosperous citizen. In the morning we take a photograph of the old gentleman's grandchildren, as bright and happy a pair as one could find in many a mile. Accompanied by several members of the family we visit the battlefield of Ball's Bluff and have the places of interest pointed out by one who was a soldier on this battlefield. The position of the Union forces was indeed unfortunate; with a cliff of more than 100ft. at their backs they had no retreat, and when flanked by the Confederates, their general killed, artillery taken, there was naught to do but surrender or perish, as many did in the attempt to descend the almost perpendicular side of the bluff. Some, reaching the river, overloaded the scow that had brought many of them across the day before, and sank in the river, thus finding a watery grave. A few that could swim succeeded in reaching the island, and a few others escaped by following up the river bank and crossing the river at a ferry some distance above, but the detachment of several hundred was reduced to a few stragglers. We listened attentively to the description so kindly given us by our guide; we retrace our steps down the bluff and bid farewell to our friends of a night; such hospitality as was shown on this occasion is characteristic of the Southerner, and is indeed never to be forgotten by the canoeist.

Our trip down to Seneca was without particular interest save the unusual width of the river, especially the last four miles, where it broadens to the width of perhaps a mile, and resembles a lake to such an extent that one can scarcely persuade himself that he is on a river that in a few miles will be scarcely a hundred feet wide. We arrive at the Seneca Dam, which is of a loose construction, made by collecting the stone from the river and some from the nearby quarry and erecting a dam without the use of mortar.

Near the Virginia side of river we find a channel and dash through the opening. Below we encounter a very formidable rapid of perhaps two miles in length; with a high river the rapid would not be so troublesome, as the majority of rocks would be covered, but we have a low river and do considerable sharp paddling to avoid the many jagged edges, seemingly running right at us. One peculiarity of this rapid is that the rocks almost invariably point up stream and are of brown stone, the larger part of rift rock encountered down to this point having been limestone.

After safely picking our way through we find ourselves on a swift, although rocky, river that soon carries us down to Great Falls. To avoid this cataract it is necessary to go down the canal for about two miles; a telephone message to the main office of the canal company gives us the necessary permission and pass through the seven locks that lie ahead.

Great Falls is not a precipitous drop, as are many cataracts, but a most beautiful combination of the cataract and rapid, the entire fall being a little more than sixty feet, the river flowing through a gorge for about a mile below the main falls. It is a wonder to the writer that some enterprising company does not lease the place and improve it as a summer resort, as at the present time the walk across to the falls is rather rough and to view them in all their grandeur requires a little hard climbing.

We enjoy a good supper at the hotel, located at the entrance of walk to the falls, after which we paddle on down the canal, as we wish to carry back into the river before night. One thing we shall bear in remembrance was the kind offer of the captain of a small excursion steamer on the canal to carry us and our canoes into Washington on his return that evening with a party of excursionists; but the feeling of independence, so strong in the bosom of the cruising canoeist, and the prospect of a lively river yet before us, prevented the acceptance of his offer.

A rather difficult carry is found to the river, a distance of perhaps a mile below the seven locks; we finish our transfer just as darkness settles down upon the valley; so, with the aid of our lantern, we are soon within the walls of our domicile; a feeling of indolence seizes us, and we turn in.

Knowing we have a paddle of a few miles only on the morrow, we sleep until the morning sun compels us to arise and look for cooler quarters; packing up our duffle after a successful breakfast, we run down the river to Glen Echo, where we expect to be met by some friends in the afternoon. We re-enter the canal, erect our tent, clean up our outfit, give our canoes a good washing and ourselves likewise; we then wander around the grounds of Glen Echo. It is a melancholy sight to see the large stone buildings erected by a Chautauquan society standing in idleness; the large amphitheater, with its magnificent pipe organ; and all around stillness reigns supreme; it is as if one were in the deserted buildings of some old Roman town, the inhabitants of which had suddenly departed; this immense failure was occasioned by a malaria scare, a very ridiculous idea where the air is as dry and pure as can be found in any locality.

Late in the afternoon, as the log-keeper reclined at ease, the other savage stole softly away, and as the eyelids of the one grew heavy, the other was meeting some very lovely young ladies at the entrance to the deserted village, and ere the log-keeper had finished his nap he was awakened by the apparition of sundry pretty girls and young men of civilized dress, with baskets and boxes upon their arms. It is but just to add that the last-mentioned articles made a very feeling impression upon the canoeists, and that in the course of the evening the feeling was communicated to the contents of the baskets. Late in the evening we escort our friends to the cars and return to dream over the pleasant ending of a most delightful trip; but we must not say ending, for we yet have several miles of rapid water before us.

In the morning we enjoy a breakfast of our entire stock of provisions, for to-day we dine in Washington. A swift river is with us, and we soon arrive at the loose stone dam above Georgetown. Lifting over, we find ourselves in a lively rift, the commencement of Little Falls, running down for perhaps two miles; the channel gradually, then suddenly narrows, and we are in a mad rapid, seemingly not more than 100ft. in width, with great boulders standing high above the river on either side and in the channel also. The rapids wind up with three wild plunges, and woe to the canoeist that attempts to run this place in an open canoe. Backing water with our paddles we drop off into the great foaming waves below; the canoes nobly ride them, but the waves are so high that they break on deck and in the largest plunge are completely around the canoeist. The last plunge takes us into tide-water, so we land and bail out the water that has found its way in around our covers; for with all our care it is impossible to run a rapid of this nature and not take in some water. What a delightful sensation it is to be borne along at a terrific speed down a sheet of water, amid large rocks ready to dash you to pieces, and yet the reliable paddle, seemingly so frail, will, if rightly used, guide you through as unerringly as though you were on the still waters of a canal; and he with a steady hand will, if once a trial is given, pronounce rapid-running the most exhilarating exercise in the catalogue.

We are now paddling on tide-water, and where's the pleasure, except in cases where the duffle is supplanted by the rosy face of a maiden. We quicken our stroke, and soon arrive at the boat house. Hauling our canoes in, we depart for home amid the gaze of citizens, for our appearance is indicative of a Coxeyite.

Thus ended a most delightful fortnight's vacation, and to him who enjoys a quiet communion with nature, coupled with a muscle-building exercise, we would say: "Go thou and do likewise."

The Nautilus Liftable Bulb Keel.

WE reprint from the *Field* the following description of the new liftable bulb fin invented by Mr. W. Baden-Powell:

The "Nautilus" keel was invented during 1893 and perfected in working parts in the spring of 1894 by Mr. W. Baden-Powell, who, having obtained provisional protection, transferred all rights and liabilities to Mr. Bull, of 87 Sumner street, S. E. The keel was built and fitted to the Nautilus, Mr. Baden-Powell's little sloop, last summer, and was fully tested in two months' open-water sailing on the Solent and in river work on the Thames, and at all points it acted perfectly, though at times severely tried.

The main object of this invention is to combine the ballasting properties and lateral resistance of the fixed bulb fin keel with the advantages of the lifting center-plate, and thereby to obtain at will the qualities of an uncapsizable deep-drafted craft for windward work, or of a shallow draft for convenience in navigating shallow places, or for housing or transporting purposes, when the keel is fitted to small raters or yacht's boats.

Two points in which existing patterns of lifting bulb keels are faulty are, that the lead bulb when lifted, as a rule, very considerably shifts its position longitudinally, and thereby alters the trim of the vessel; or that the keel when down can only be lifted by operating the lifting gear, and, therefore, is not self-acting when striking ground or a submerged obstruction. In the "Nautilus" keel the first objectionable feature is reduced to a minimum, and the second is nonexistant.

The accompanying drawing displays the keel in the down position by full lines, and in the up position by dash and dot lines; and the sectional drawing shows the centerboard trunk or case in dotted lines. The general idea of the working and construction will thereby be seen to consist of an harmonious combination of movements set in action either by manual power in the vessel or by external force, such as running aground; and on the other hand, while maintaining the capacity for these lifting movements, a practically rigid bulbed fin-keel is obtained by well-balanced pivoting and automatic locking of the movements in certain directions.

A center-plate, carrying at its bottom end a lead bulb-keel, is pivoted between two parallel plates, which are connected together at top and bottom in such a manner as to allow the central plate to oscillate in one direction between them. The parallel plates are pivoted in the usual centerboard case or trunk, a little above the boat's keel. The parallel plates, which are riveted together at their upper or head part over a filling frame piece, carry two cranked arms, which, when the plate or keel is quite down, lodge upon and also grip the upper edges of the centerboard trunk or case.

A pivoted pawl carried in the after part of the case can be let fall upon the shoulder at the upper after-edge of the center-plate, and thereby locks the center-plate against oscillation so long as it or the keel is not lifted.

On the head of the parallel plates being moved forward by a suitable tackle or gear, the center-plate immediately becomes free to oscillate until it is quite up, with the bulb along under the boat's keel or until it is specially locked at some intermediate position of hoist by the insertion of a fid or pin above the case. In this intermediate state of hoist the bulb is still in a horizontal position, and is locked against oscillation, but is yet liftable by gear or ground.

In another form of construction, described in the specification covering the invention, the bulb is fixed on two parallel plates which are suspended from one lifting or central plate which works between them. In either case, by disconnecting the suspending bolt and unshipping the bulb plate or plates, the lifting plates or plate remain and can be used as an effective pivoted centerboard for river work.

The latter form of construction is intended chiefly for use in small raters, boats and canoes, where the weight of the bulb would probably not exceed 3cwt. The construction shown in the drawing, here given, would be convenient in yachts of larger proportions, size and weight being a question for the engineers to determine in relation to the probable strains.

As to the yacht or boat's construction to carry such a keel, it will be noticed that almost any ordinary centerboard case would carry the keel; the essential points are that the case must be open along its top, that, for a heavy bulb, the case must be strongly built or kneed at and about the pivot bolt. The height of the upper edge of the case above the waterline must be kept low, on account of the position of the cranked arms on the head of the lifting plates. The dropped pawl in the after part of the case has in practice been found an efficient stopper to the water overflowing the case top when sailing at high speeds; in a 0,5-rater or 1-rater about eight inches of case above water is enough.

The plates of the keels thus far made are of "Bull's metal," an extremely strong alloy; and the lifting gear is the ordinary runner-and-tackle—a four-part tackle for choice. A winch winding the steel "runner" on to a drum can be used, but is not so handy as a common tackle in a small rater. The bulb can be of any form desired, provided the correct balance is attended to, and the upper surface should be flat so as to engage the under side of the keel when completely up.

Rifle Range and Gallery.

Pacific Coast Riflemen.

SAN FRANCISCO, April 15.—*Editor Forest and Stream:* Yesterday the regular club shoots of the Shell Mound contingent were held.

A tricky northwest wind blew all day and only a few riflemen got good scores. At this range the rifleman's body is exposed only to a wind from the northwest and north, and when such a wind prevails it has a trick of seizing a shooter just as he pulls the trigger and revolving him far to the east.

The pistol devotees were far more fortunate and some fine shooting was done, especially by our rising young shot C. M. Daiss.

Scores of the Germania Schützen Club, 200yds., 20 shots, 25 ring target, only one score allowed.

Champion Class:—Dr. L. O. Rodgers 430; first class and second class scores did not reach the required standard to win; third class, N. Ahrens 425.

S. F. Schützen Verein, Champion Class, J. Utschig, 432; first class, D. B. Taktor 421; third class, F. Koch 417; fourth class, Hy. Burfeind 367.

Columbia Pistol and Rifle Club.

Pistol, Club Medal, Champion Class:—C. M. Daiss 91; F. O. Young 89; S. Carr 89; E. Hovey 87; A. H. Pape 84. First class: J. E. Gorman 91; D. W. McLaughlin 85; Dr. Rodgers 83; F. Baumgartner 81; P. Bohr 70. Second class: F. Dennis 85; L. Zimmerman 78; A. Fetz 76; Kennedy 74; Jacobsen 71; Thompson 69; Foester 61; Umfred 56.

Pistol, Blanding Medal, C. M. Daiss 97; S. Carr 96; F. O. Young 94; J. E. Gorman 91.

Rifle, Kuhnle Medal, A. Gehreb 81; Dr Rodgers 79.

Military Rifle, Creedmoor Target, E. Hovey 46, C. Perry 43.

ROEEL.

The .22 Short Smokeless Cartridge.

THE new .22 short smokeless powder cartridges, loaded, by the way, with American E. C. "Rifle" powder, which the U. M. C. Company has put upon the market, will no doubt have a tremendous sale as soon as they are better known. They combine great accuracy with a minimum of smoke, smell, noise and fouling. In fact, in this latter respect they are well nigh perfect, a long period of firing leaving the gun practically as clean as after the first shot.

As the trajectory of these cartridges for short distances is practically the same as the ordinary black powder ones, they may be interchanged, and thus used to clean the gun when fouled with black powder.

The brand of E. C. rifle powder loaded in these cartridges resembles mustard seed in size and appearance It has not yet been put upon the market in bulk, and riflemen who wish to use it must be content for the present to purchase the fixed ammunition.

Cincinnati Riflemen.

CINCINNATI, O., April 21.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, at the German ring (Union) target. Weather and light good:

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

May 8-10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O; $200 added money, Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 15-19.—SAN ANTONIO, Texas.—Nineteenth annual meeting and tournament of the Texas Sportsmen's Association. Open to the world, $500 in cash and $500 in merchandise added to the purses. O. C. Guessaz, Sec'y.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec'y, Kansas City.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $3,000 added to the purses.

May 21-25.—HOUSTON, Texas.—Tournament of the Houston City Gun Club; live birds and targets; open to all amateurs.

May 22-24.—ROME, N. Y.—Annual tournament of the Rome Gun Club; two first day at targets, third day live birds. W. P. Rayland, Sec'y.

May 23.—WAUZEKA, Wis.—Opening shoot of the Wauzeka Gun Club.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 29-31.—URBANA, Ill.—Annual tournament of the Crystal Lake Gun Club, of Urbana, Ill., $300 added money.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec'y.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith, Sec'y.

June 13-15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 13-15.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19-21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

At the Auburn (N. Y.) shoot on April 18, the sixth event on the programme was a team shoot between teams from Utica, Syracuse and Binghamton, with two teams from here. This was at 50 birds, and was won by an Auburn team as follows: Auburn—Carr 43, Tuttle 45, Brigden 42; total 132. Utica—E. D. Fulford 47, Mayhew 46, J. Fulford 87; total 130. Binghamton—Kendle 40, Hobby 44, Brown 45; total 129. Auburn, Second Team—Brunker 43, Stewart 35, Corning 42; total 120. Syracuse—Lefever 29, Glover 46, Wagner 44; total 119.

Kind words from the Pacific slope: The *Breeder and Sportsman*, of San Francisco, Cal., in its last issue makes the following flattering comment: "FOREST AND STREAM'S report of the Grand American Handicap is the best report of a shoot that we ever read."

The Yale-Harvard-Princeton shoot will be held at New Haven, Conn., on May 18.

"When are you going South?" That's the question all shooters seem to be asking one another just now. Cincinnati, Dayton, Knoxville, Lynchburg, Memphis and Wilmington, all offer inducements, not to mention Little Rock, San Antonio and the Kansas State shoot. The Illinois State shoot will also catch several of the boys.

Dr. Carver and H. D. Swartz, a pigeon shooter from Scranton, Pa., shot a couple of 100-bird races last week. The first took place at Wilkesbarre, Pa., on April 25. The high wind that prevailed made the shooting difficult. Carver killed 85 out of 96, Swartz 60 out of 95, the latter retiring. In the second match, at Scranton, on April 26, Carver killed 99 out of 100, missing his 91st bird. Swartz retired in the 75th round, having missed 13 birds.

In a 20-bird sweep at Harrisburg, Pa., on April 11, A. W. DuBray, of the Parker Gun Company, and J. R. "Kane," of Mifflin, Pa., divided first money with 19 out of 20.

The Peoria Target Company's tournament took place on May 1, 2 and 3 of this week, at Peoria, Ill. W. T. Irwin was manager of the shoot.

The third and deciding match in the series of team races between the New Utrecht and the Riverton Gun Clubs will be shot some time this month on neutral grounds. As each club has won a heat, this race will settle the question as to who pays for the $150 trophy the teams are shooting for.

Mr. W. H. Mead, secretary of the Carteret Club, scored a win for the "President's Cup" on Wednesday, April 17, by killing 19 out of 20. The birds were very fast, and Mr. Mead, who is shooting very well now, must have done some great work to kill that number. Among his competitors were George Work, J. C. Knapp, etc.

Statistical fiends will be pleased to note that at Lou Erhardt's great amateur shoot at Atchison, Kan., a report of which appears elsewhere in this issue, the total number of entries in the 17 events programmed for the three days was no less than 1,187! Three more entries would have made the average for each event just 70! The highest number in any event was in No. 8—96; the lowest was in No. 14—52.

The Newburgh, N. Y., starters who took part in the Peekskill shoot last week were full of their tournament, which comes off next week. As visitors to these annual tournaments of the West Newburgh Gun and Rifle Association always have a good time, there's not likely to be much lacking in the way of attendance.

Although July 10-12 is over two months distant, I have heard several shooters talking about the tournament of the Altoona, Pa., Rod and Gun Club, which will be held at Wopsononock on those dates. I have a personal interest in that club, and I know every inch of "Wopsy," so perhaps I'm prejudiced in favor of that peak of the Alleghanies. Still I can't help saying that I don't know of a more perfect spot for holding a tournament than at Lookout Point, 1,100ft. above the valley of the blue Juniata, where this shoot will be held.

The West Haven Gun Club, of New Haven, Conn., held its annual meeting and elected the following officers: President, H. M. Hartley; Secretary, J. J. Snavely; Treasurer, George Evans; Directors, Frederick Hyde and Theodore G. Durant.

A rod and gun club was recently organized at Harrisville, Mich., known as the Alcona County Rod and Gun Club. The following officers were elected: President, L. A. Colwell; Secretary, Chas. Conklin; Treasurer, F. A. Beede; Vice-President, D. W. Mitchell; Captain, H. C. Kibbie; First Lieutenant, G. W. Balch; Second lieutenant, John Wood; Directors, C. H. Killmaster, John McGregor and G. W. Lachapelle. Object, protection of game and fish.

The Yankton, S. D., Gun Club is making active preparations for a three days' tournament to be held on July 3, 4 and 5. Two days will be devoted to inanimates and the other to live birds. The president of the club is Geo. W. Frostenson; the captain, H. E. Brisbine.

Mr. D. Kirkwood, secretary of the Boston, Mass., Gun Club, under date of April 22 says in relation to the short sketch of the early history of the Boston Shooting Association given in the account of the association's tournament, which appeared in FOREST AND STREAM of April 20: "The B. S. A. first began at Wyoming, Mass., called the Malden Gun Club, some two years later came over to Wellington, and in course of time became the Wellington Gun Club; a few years ago it was changed to the Boston Shooting Association. The Boston Gun Club started as the Raymond Sportsmen's Club at Beachmont, Mass., C. A. Loud and J. Emery being the principal originators. Later it moved to Medford to suit the rifle portion of its members, such changes nearly finishing the entire club. In 1880 it came to Wellington considerably before the Malden Gun Club. In 1884 it was reorganized as the Boston Gun Club, with W. B. Witherell as president, and as such exists to-day, the secretary possessing all records from the date of its inception."

Justus von Lengerke has called my attention to the fact that all the members, save one, of the winning team in the New Utrecht-Riverton match at Woodlawn, L. I., on April 24, used Schultze powder.

The court of Baltimore county, Md., decided on April 22 that pigeon-shooting is legitimate, and that shooting at live birds is no violation of the law in regard to cruelty to animals.

The Wauzeka Gun Club, of Wauzeka, Wis., has been recently reorganized; its opening tournament will be held on May 23. Mr. W. H. Thomson is secretary of the club.

Manager Shaner, of the Interstate Association, writes: "I take pleasure in informing the readers of FOREST AND STREAM that the Winchester Repeating Arms Co., of New Haven, Conn., are subscribers to the Interstate Association. The Winchester Co. joined the association April 1."

Another new fixture is the eleventh annual tournament of the Sportsmen's Association of the Northwest, which will be held at Portland, Oregon, on June 13-15, under the auspices of the Multnomah Rod and Gun Club.

Last week it looked a certainty for a match between C. Cockburn, of Toronto, Can., and J. L. Brewer, of this city. It looks a decided uncertainty just now, although the stake money is all up. The articles forwarded for Brewer to sign contain a stumbling-block that has made the New York man refuse to sign them. Objection is raised to the following in regard to the referee and the stake money: It (the stake) is "to be handed by him (the stakeholder) to the winner of the match on the written order of the referee, from whose decision there shall be no appeal whatever, either to law or otherwise; the said J. L. Brewer to be allowed twenty-five dollars ($25) for expenses incurred by coming to Toronto." Brewer says that he will not sign the articles as they stand. Philip Duffy, of 227 Myrtle Avenue, Brooklyn, offers to bet Brewer $500 or $1000 that he (Brewer) cannot kill 90 out of 100 pigeons, the birds to be furnished by Duffy.

The shooting done by Mr. Kendle, of Binghamton, N. Y., at the Peekskill shoot was remarkable from the fact that the shooter has but one eye and one arm.

The following extract is part of a personal letter written to me by T. A. Divine, of Memphis, Tenn., dated April 26. Perhaps Mr. Divine will forgive me for making it public: "You know that most of the tournaments of the present day are run on the principal of the more money you can win, the greaters inducement for the people to come. We are going to infuse a little more sentiment into our coming shoot. We are going to try and bring together that element of shooting gentlemen who love to shoot for the enjoyment there is in it, who love to stay in the shade and while away the hours in pleasant story telling—high-class men, who are oblivious as to what their scores or their friends' scores are; who care nothing about the blackboard; who do not stop to consider the question as to whether they are in first place or last place, but who are bent on enjoyment, and will go away from this shoot perhaps poorer in purse, but so much richer in friendly experiences and enjoyments, that they will forget that they have ever lost a dollar. We are making every preparation possible for the enjoyment and comfort of everybody that comes here, and the best part of it is that our city is with us, and the visitors will find here a hospitable greeting that is found at very few places where tournaments are held." Keep me a place in the shade, please.

EDWARD BANKS.

Programme of the Kansas State Shoot.

THE programme issued by the Metropolis Gun Club, of Kansas City, Kansas, for the Sixth Annual Tournament of the Kansas State Association, on May 21, 22 and 23, is one upon which its compilers have exercised a great deal of care. It covers all the ground very fully and tells everything that any shooter is likely to want to know. Twenty-eight pages and the cover ought to be able to tell any story!

One of the chief items of interest is the fact that this tournament is strictly for amateurs, all professionals and paid agents of manufacturers being barred. There will be also no handicap, for reasons set forth in the programme. Another little note one, too, that appears in similar works very frequently was as follows: "Pooling and dropping for place are discountenanced, and will be summarily dealt with." The Allmon Hotel will be headquarters, the annual business meeting of the association being held on Tuesday evening, May 21. "Jim" Elliott will run the shoot and see that everything runs smoothly. The events for each day are sufficiently varied to prevent any chance of monotony. The following extract shows that the association is not above leaving the beaten path in its efforts to bring out the shooters: "As an inducement to and for the benefit of the poorer shooters, we have broken over the time-honored custom of adding money to the purses in sweepstakes and started an innovation by hanging up the profits of this tournament in purses of from $25 to $100 each, two such events each day, and making the entrance therein the price of the birds only, at which rate, if there is no gain to the contestant, there can certainly be no loss, and as all ties will be divided, the novice will not get shot out when he ties for money. As a further inducement to the poorer shot, or novice, we have placed on each day's programme two 'jack-rabbit' sweepstakes, an explanation of which will be found elsewhere in this programme; and while it is not claimed that a novice can win money under this system, it is certain that no expert will win more than sufficient to pay for his shells. We believe that this system of running a tournament is all in favor of the poorer shooters, and the attendance at this shoot will demonstrate whether or not they are deserving of such recognition."

Anybody that has an idea of attending this shoot should write to A. W. Peck, secretary, Kansas City, Kan., for a progamme. The matter of railroad rates, unsettled at the time of issuing the programme, is a subject on which Mr. Peck can doubtless furnish all information by this date.

New York German Gun Club.

DEXTER PARK, L. I., April 17.—The regular monthly shoot of the New York German Gun Club took place here this afternoon, 21 members competing for the medals. J. Frazer, Dr. Hudson, A. Schmitt and A. Busch tied for first place on 7 kills out of 8. On the shoot off at 3 birds, Busch missed two and retired, the other three killing straight. It then became a miss-and-out, which resulted as follows: Frazer, under the club rule, was placed at 25 yards and scored a kill; Hudson shot from 28 and killed, while Schmitt stood at the 31-yard mark and missed. The next round found Hudson at 31 yards and Frazer at 28. Both killed, and then Frazer went back to 31 yards and Hudson to 32. Each scored another kill and each went back a yard; then Hudson missed, while Frazer killed and received first medal, Hudson took second and Schmitt third.

Lenow vs. Sevier.

LITTLE ROCK, Ark., April 18.—To-day Messrs. Lenow and Sevier shot a match under the following conditions: Each shooter was to shoot at 25 live birds, 12-gauge guns, 28yds. rise, Sevier to use but one barrel, while Lenow was to use both. As the scores show, Sevier never had any chance to win. Lenow took the lead from the start and kept increasing it all the time. When the match was finished he led his opponent 11 birds. Had he used but one barrel he would have won just the same, as he would have scored 11 birds. In a number of instances he used his second barrel unnecessarily. The weather was propitious and the birds were good, nearly all getting off as soon as the trap was pulled. Taking this into consideration, Lenow shot a great race, using good judgment and shooting in good time. Sevier lost 4 birds dead out of bounds, 2 of these through careless work on the part of the boy who attempted to retrieve them. This, however, would not have changed the final result. Score:

Trap Score Type—Copyright 1895 by Forest and Stream Publishing Co.

Sevier.....0 0 1 1 0 1 • 0 1 1 • 0 0 0 • 1 0 0 0 1 1 0 0 • 0— 8

PAUL R. LITZKE.

Brewer's Great Work.

DEXTER PARK, L. I., April 27.—John L. Brewer proved this afternoon that he is holding his gun as straight as ever he did. As the result of a bet made by Brewer's backer with a certain party, who desires to be nameless, Brewer shot at 100 birds on these grounds, being matched to kill 90. The birds were decidedly good, a duffer being a *rara avis*, yet Brewer killed his 100 without a stumble, using a Greener 12-gauge and E C powder. This is Brewer's first "century run," although he has several times in the past killed 99 out of 100. When Brewer had killed 75 straight, an argument was started by the man who had backed the birds, a claim being made by him that the bet was that Brewer could not kill 90 straight. This was denied, of course, but Brewer's backer put up more money that his man could accomplish even that feat. That he did so is proved by the score, which shows that the first barrel was used with telling effect. As a matter of fact the second barrel was used for the most part as a "safety" measure. Score:

Brewer (30).....1111112221212211121211111—25

The Elizabeth Bi-monthly Tournament.

ELIZABETH, N. J., April 26.—The bi-monthly tournament of the Elizabeth Gun Club closed to-day. The attendance on both days was small, the three days' tournament at Peekskill, N. Y., acting as a strong counter attraction. During the second day's shoot an interesting little episode occurred. A pigeon hawk flew low over the grounds while the shoot was in progress. Class picked up his gun from the rack, put in a shell and fired at the hawk, which was by this time quite a long way off. When Class fired, the hawk dropped a small object, but the bird went on. When picked up the small object was found to be an English sparrow!

Scores made during the two days were as follows:

No. 1, 10 targets 50c; Jackson 9, Astfalk 8, Wakeman 1, C. Von Lengerke 9, Van Dyke 8, Stevens 10.

No. 2, 10 targets, unknown angles, 50c.: Jackson 10, Astfalk 8, C. Von Lengerke 9, Stevens 7, Wakeman 0, Van Dyke 9, Roberts 5, Heritage 8.

No. 3, 15 targets, unknown angles, $1:

Jackson	110111111101101—12	Van Dyke	101111111111111—14
Astfalk	100101011111111—10	Wakeman	010011001101001— 7
Heritage	101001100110101— 8	Roberts	111111011111101—13
Von Lengerke	111111111111010—13	Woodruff	011101111101001—10
Stevens	101111110110101—10		

No. 4, 10 targets, reversed order, 75 cents: Jackson 9, Astfalk 6, Van Dyke 9, Stevens 6, C. Von Lengerke 7, Wakeman 3, Woodruff 8, Roberts 7.

No. 5, 20 targets, unknown angles, $1.50:

Jackson	11101010111101111011—15	Lengerke	11111110111011011111—17

The New Utrechts won Easily.

WOODLAWN, L. I., April 24.—To-day the team of the New Utrecht Gun Club easily defeated the Riverton (N. J.) Gun Club's team, making amends for the defeat administered to them at Riverton on March 27, when the home team won by four birds. In to-day's contest the New Utrecht men started with a rush, scoring 32 out of their first 33 birds, as against 24 killed by their opponents; this gave them a lead of 8 birds, and after that the Riverton men were never dangerous. In rounds 2, 3, 10 and 16 the home team killed all their birds, while in rounds 1, 5, 14, 15, 17 and 18, only one miss was recorded on their score. Three misses were made in rounds 4, 8 and 20, 8 out of 11 being the count number of kills made in any one round by the home team. The Riverton men, on the other hand, killed all their birds in but one round—No. 7; 10 kills were registered in rounds 4, 6, 10 and 12. Four rounds totaled but 28 kills out of a possible 41, four birds being missed in each of rounds 8, 15, 19 and 20. In round 11 six of the visitors missed their birds. The totals at the end showed: New Utrecht 191, Riverton 170. At the end of each round the totals stood:

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
N Utr'cht.	10	21	32	40	50	59	68	76	85	96	105	114	123	133	143	154	164	174	183	191
Riverton.	8	16	24	34	43	53	64	71	80	90	95	105	114	123	130	139	148	156	163	170

Chris. Meyer made top score, killing all his birds; Duryea, Winn and Phister each scoring 19. Davis led the visitors with 10 out of 20. The teams were 11 men a side, each man shooting at 20 birds, club handicap rise. The New Utrechts' percentage was almost 87, a remarkably high team average on such birds as they trap at Woodlawn. Riverton's average was a fraction over 77. The result shows that the hoodoo supposed to have exerted an evil spell over the club in the shape of a stuffed owl (whose fate is told elsewhere) has, at any rate, been temporarily laid. Scores:

New Utrecht.

The Peekskill Tournament.

THE annual tournaments of the Peekskill (N. Y.) Gun Club are always well attended. To any one who has ever visited this little city on the banks of the Hudson during the progress of one of these tournaments the reasons are not hard to find. In the first place, Peekskill is easily reached, and is a central point in a good trap-shooting section; secondly, the accommodations at the grounds of the gun club (if the light for target shooting is not of the best) are ample, and everything about the club house is arranged with a view to the comfort of both shooters and spectators; lastly, the Peekskill boys know how to run a shoot and to entertain their guests while attending to the routine work of a tournament. This is a knack which some clubs possess in a marked degree, and it is one that helps very materially to assure the success of a shoot. It was a matter of regret to me that other engagements prevented my being at Peekskill during the first two days of the last tournament, April 24 and 25, when the shooters were smashing targets. By my absence I missed seeing one or two shooters whom I would have liked to meet again, among the number being W. P. Rayland ("Rags"), of Rome, N. Y.; George Mosher, of the Syracuse Arms Company, and Sim Glover, of Rochester, N. Y. By the way, Glover didn't do a thing to the targets on the second day, did he? A record of 189 out of 195, an average of 97 per cent., is a corker!

On the first day most of the boys were off in their shooting, O. R. Dickey, manager of the Boston Shooting Association, alone doing anything remarkable, his average of 95½ per cent. being away above any of his fellows. Glover with 90½, and Taylor and LeRoy with 89½ and 89 per cent. respectively were closely bunched for the next places. The second day saw some remarkable averages recorded; Glover led with 97 per cent.; then in order came Fulford and LeRoy with 94, Apgar 92½, Dickey, Van Dyke and Rayland 91¼, and Hoffman with 90½! In the team race, the New York team won somewhat easily, the New Jersey team being second and the Peekskill men coming in last. It is only fair to state that the latter team did what many another team would have done under similar circumstances. At the time when it started in to shoot, the New York's big score staring it in the face, a small-sized hurricane that was fathered by a thunderstorm swept across the grounds and the deed was done, all chance of winning being knocked on the head. After that a small score was a certainty. Twenty-nine shooters took part in the events on the first day, 27 shooting on the second day.

Thursday, April 25, was live bird day, and a more perfect day it would have been hard to find. Perhaps a little more breeze to aid the birds might have been desired, but then the birds provided by the club were as good as any that I have seen trapped lately; they were particularly good in the 15-bird race. Among the shooters were: H. C. Higginson and James Taylor, of Newburgh, N. Y.; Van Dyke, of Dayton, N. J.; T. H. Keller, Plainfield, N. J.; E. D. Fulford, Utica, N. Y.; Capt. Money, Oakland, N. J.; M. F. Lindsley, Hoboken, N. J.; Oscar Dickey, Wellington, Mass.; B. "Leroy" Woodward, Campello, Mass.; Justus von Lengerke, of the firm of Von Lengerke & Detmold, New York; G. Kendall, of Binghamton, N. Y.; F. L. Train and G. A. Barker, members of the Cobweb Gun Club, West Farms, N. Y.; Neaf Apgar, Evona, N. J.; Fred. G. Moore, New York city; "Taos," a disguise which effectually concealed "Count" Lenone, Passaic, N. J.; "Arnold," of Albany, N. Y.; and H. P. Dain, captain of the club, J. B. Halsted, M. S. Perry, "Thomas" (W. H. Pierce), of the Peekskill Club. Among those who looked on were: David Brown and Geo. H. Taggart, president and captain respectively of the West Newburgh Gun and Rifle Association; W. H. Brown, of Binghamton, N. Y.; "Johnny" Hoffman, of German Valley, N. J.; "Billy" Hobart, of Newark, N. J., etc., etc. The blackboard was looked after by B. C. Everinghim; Milton Jordan, president of the club, and Edward F. Hill, its treasurer, taking care of the cashier's department. W. Fred. Quimby, of New York, was of great assistance to the club on the target days, acting as squad hustler, etc. Empire targets were used on those days, being thrown from five expert traps, the electric pull working well.

In the main live bird event, on the third day, 15 birds, hardiest rise, $10 entrance, birds extra, 21 shooters put down their names. The conditions called for 5 equal moneys, 5 high guns, three misses out. As it happened six were left in at the finish, Fred Moore and Justus von Lengerke killing straight, Train killing 14, and Halsted, Arnold and Fulford saving 13. The first three named each took one-fifth of the $210 in the pot, the three others dividing the remaining two-fifths, $84. Moore, Von Lengerke and Train all used Schultze powder, a fact that tickled Justus highly. Moore's shooting was of a very high class; during the day he killed 28 out of 30 birds, scoring his last 25 straight. Train also shot well, killing 26 out of 30. Halsted was especially fond of saving his shells, his scores showing that out of the 25 birds he killed during the day, only five needed a second barrel. Fulford's score is better than it looks, as he drew some very hard birds, particularly during the big race.

There is one thing I want to make a note of before closing, and that is the excellent and business-like way in which the scores were kept; the manifold copies were as clear and legible as the originals, every detail in the conditions being plainly written. If only all secretaries and club officials would do the same, a great burden of responsibility would be lifted from the shoulders of both the trap editor and printers of FOREST AND STREAM.

The tabulated scores of the target events are made out for only the programme events. The first day's programme was as follows:—Nos. 1, 3, 5, 8 and 10, known angles; Nos. 2, 7 and 9, unknown angles; No. 4, traps in reversed order; No. 6, expert rules, use of both barrels. The second day's programme contained 11 events, No. 9 being the team race: Nos. 1, 3, 5, 7, 8, 9, 10 and 11 were at known angles; Nos. 2, 4 and 6 at unknown angles.

First Day's Scores.

Below is given the table of scores, showing each shooter's percentage in the programme events on the first day, April 24:

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*10*	*10*	*15*	*10*	*20*	*15*	*20*	*25*	*20*	*10*	Shot at.	Broke.	Per cent
Dickey	..	..	..	..	18	15	19	23	20	10	110	105	95½
Glover	10	8	15	7	18	13	18	23	18	10	155	140	90⅓
Taylor	..	10	13	8	19	12	18	23	18	..	135	121	89½
LeRoy	..	..	..	..	17	14	16	22	20	9	110	98	89
Fulford	10	9	12	7	18	11	17	21	19	9	155	133	85¾
Smith	..	..	..	..	..	..	..	16	22	17	8	75	63	84
Kendall	9	9	12	7	11	8	18	20	16	..	145	120	83
Stansborough	..	10	11	7	18	12	14	21	17	..	135	110	81½
Rayland	..	10	14	..	..	..	15	14	18	10	100	81	81

Everinghim	1011011111111111111111101—22—107

The following shot in the optional sweep in connection with the team race: Von Lengerke 22, LeRoy 24, Dickey 21.

Extra No. 1, 15 targets, unknown angles, $1.50: Mosher 10, Dain 11, Dickey 15, LeRoy 14, Glover 14, Fulford 15, Apgar 13, Kendall 13, Brown 11, Halsted 9, Carl Von Lengerke 10, Hobart 10, Loder 7, Keller 14, Hoffman 7, Smith 13.

Extra No. 2, 25 targets, unknown angles:

Leroy	1111111111111111111111111—25
Apgar	1111111111111111111111111—25
Fulford	1111110111111111111111111—24
Money	0011110110111111111111111—21
Glover	1111111111011111111101111—23
Halsted	1001011000011110011111111—16
Rayland	1111011110111111111000111—20
Quimby	1100101000010101001100010—10
Money	1111101111111111111111111—24

Extra No. 3, 10 targets, unknown angles, $1: Pringle 8, Fulford 10, Glover 9, Money 10, Apgar 10, Leroy 9, Mason 9, Horton 6, Rayland 10, Frost 4.

Extra No 4, 10 pairs, $1.50: Money 18, Fulford 17, Horton 10, Van Dyke 14, Mason 12, Halsted 12. Glover and Frost shot at 5 pairs, Frost breaking 10 and Glover 6.

Third Day's Scores.

The following are the full scores made on this day:

	No. 1.	No. 2.
E D Fulford	22121—5	2101111222— 9
Capt Money	12122—5	1202111212— 9
G Kendall	21221—5	1120111101— 8
T H Keller	21122—5	2222222202— 9
F L Train	11112—5	1211210100 - 7
P R Dickey	12221—5	0221112122— 9
B LeRoy	22111—5	1012220211— 8
F Van Dyke	2111•—4	2002222222— 8
J Halsted	01211—4	1110211111— 8
F G Moore	02220—3	2222222222—10
L Carpenter, Jr	01101—3	0110201201— 6
H P Dain	01220—3	0122222101— 8
G A Barker	01•21—3	2000010002— 3
Dr Horton	10200—2	1010110022— 6
M Perry	....	0211121202— 8
Arnold	....	2011111101— 8
N Apgar	....	1221112200— 8
H C Higginson	....	1200220011— 6
Taos	....	1020002001— 4
Jas Taylor	....	1222110222— 9
W D Southard	....	1002112221— 8

No. 3 was a handicap at 15 live birds, $10 entrance, birds extra, 21 entries, making a total purse of $210, which was divided into five equal parts, the five high guns taking the money:

F G Moore (30)	222222222112222—15	O R Dickey (28)	012122200— 6
Von Lengerke (29)	2212111122112221—15	M F Lindsley (29)	22002220 — 5
F L Train (28)	1122111121111022—14	M Perry (27)	20202220 — 5
E D Fulford (30)	0222222211220222—13	H C Higginson (27)	1020210 — 4
J Halsted (28)	2111110111231011—13	Taos (26)	0121010 — 4
Arnold (28)	2220011212122212—13	Kendall (26)	210010 — 3
N Apgar (30)	1111202222020 —10	Capt Morey (30)	10020 — 2
Van Dyke (29)	20022222210 — 8	G A Barker (25)	000 — 0
H P Dain (27)	11201202110 — 8	B LeRoy (28)	000 — 0
T H Keller (28)	2202022210 — 7	Jas Taylor (28)	000 — 0
Thomas (29)	2120211020 — 7		

Moore, Von Lengerke and Train each drew one-fifth of the purse; Fulford, Halsted and Arnold divided the remaining two-fifths.

Dunellen's Opening Day.

NEW JERSEY once more promises a "Dunellen Gun Club," and a live and energetic one at that. The present club is an organization of very recent date, having been born since the new year came in. Its president, J. G. Lindzey, and its secretary, T. W. Sisty, are men who will not let the club die of inanition. With a neat little club house, grounds as level as a billiard table, and a brand new set of empire traps with an electric pull, the club is ready to entertain its guests in good shape. To-day it had an all-day shoot as a sort of formal opening of its grounds. The notice given was rather short, and owing to that, and also to the fact that just at this time there was rather a plethora of trap-shooting tournaments going on, the attendance was hardly as large as it should have been. The Plainfield boys showed up well and Messrs. J. L. Chamberlain and Campbell, both of Flemington, N. J., also put in an appearance and shot in a few events, making good averages. Keller led with a percentage of 92½ for 160 targets shot at, Van Dyke and Apgar tieing for second place with 90½. To rightly value these percentages it is necessary to give the nature of each event. Nos. 1, 3 and 7 were at known angles; Nos. 2, 4, 6, 8, 9, 11 and 12 at unknown angles; No. 5 at traps in reversed order; No. 10 at 5 pairs. The cashier's department was well handled, the shoot altogether being thoroughly enjoyable. The following is a table of the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12			
Targets:	*10*	*10*	*15*	*20*	*20*	*10*	*20*	*10*	*10*	*10*	*10*	*15*	Shot at.	Broke.	Per cent
Keller	10	9	12	19	18	9	19	10	9	9	9	15	160	148	92½
Apgar	10	9	15	20	15	10	19	10	10	8	7	12	160	145	90⅔
Van Dyke	9	9	13	19	19	10	18	7	9	8	9	15	160	145	90½
Smith	9	9	12	20	16	9	17	9	9	6	9	14	160	139	87
Chamberlain	..	..	..	..	..	7	19	9	8	..	..	..	50	43	86
Campbell	..	..	..	..	..	9	17	..	8	..	..	..	40	34	85

Thornburg	1001111001001101000010011—11

*Ellicott shot at 15 targets, breaking 11.

No. 3, same: Willard 20, Skinner 16, Carson 18, Steck 16, Cummings 20, Bingham 19, Jones 15, Stannard 16, Thornburg 15, Glover 15, Ellicott 17.

No. 4, same: Willard 17, Stannard 21, Carson 17, Ellicott 20, Bingham 20, Cummings 18, Skinner 17, J. L. Jones 12. Thomson shot at 15—10 dead.

No. 5, same: Willard 15, Stannard 16, J. L. Jones 15, Ellicott 18, Glover 17, Bingham 20:

No. 6, 6 pairs:

Glover.....10 11 01 10 10 10—6. Jones.....10 10 11 11 01 11—9

W. F. D.

Valley City Gun Club.

GRAND RAPIDS, Mich., April 25.—Mr. Oswald von Lengerke, of Chicago, was our guest to-day, having stopped over to renew some acquaintances among our shooters. A visit was made to the Valley City Gun Club grounds and a little practice shoot organized. Scores:

No. 1, 10 singles and 5 pairs: Von Lengerke 13, Kelsey 12, Wharton 20.

No. 2, 20 singles: Von Lengerke 18, Wharton 19, Kelsey 16.

No. 3, regular weekly shoot, 25 targets: Walton 16, Karstens 18, Coleman 21, Calkins 19, Gilmore 18, Porter 11.

No. 4, 20 targets, semi-expert rules: Walton 18, Gould 17, Coleman 16, Karstens 14, Kelsey 16, Temple 17.

No. 5, same: Kelsey 10, Porter 7, Gilmore 13, Temple 12, Karstens 18, Walton 16.

No. 6, same: Coleman 11, Kelsey 11, Temple 18, Walton 18, Gould 15, Karstens 13, Gilmore 7, Edie 2.

No. 7, 10 targets, one man up, 5 unknown traps: Kelsey 5, Walton 7, Gould 6, Gilmore 4, Coleman 5, Edie 2, Karstens 5.

Mr. Oswald von Lengerke explained the "Jacksnipe" style of shooting, and a few of the members gave it a trial: Kelsey 12 out of 13, Karstens 10 out of 15, Coleman 3 out of 9, Edie 6 out of 11, Calkins 4 out of 8.

C. F. ROOP, Sec'y.

Louis Erhardt's Shoot.

ATCHISON, Kansas, April 19.—Knoxville and Memphis will have a large attendance of shooters, but they will have to hustle to beat Erhardt's tournament, not only in number of entries, but in enthusiasm and in the good feeling which was displayed by all on account of of Louis Erhardt's popularity. They came from Missouri, Nebraska, Indian Territory, Iowa, Louisiana and all parts of Kansas; 96 entries in one event is a good many shooters nowadays, when 25 is considered a fair attendance in most tournaments.

But Louis attends all the shoots in the western country, and all the boys come to his tournament if they possibly can. His store was the headquarters for them all, and was nightly crowded, some looking at games, some in groups talking about the shoot, and all over the counters were others loading shells. Somebody made the remark, "How do you keep track of the ammunition used, Louis?" "I don't keep track of it, I leave it to the boys themselves." says Erhardt. And that is the kind of a fellow he is, and therein lies his popularity. An entertainment committee composed of Warren Ferguson, B. O. Running, and Louis Erhardt, entertained the boys in good shape. The shoot was ably managed by John Parker of Detroit, representing the Cleveland Target Co., E. C. Powder and Winchester Repeating Arms Co.

This was a strictly amateur tournament, though the scores will bear comparison with most of the open tournaments. The shoot was held on the racetrack grounds about two miles from the city. The background was very bad, and that was the only complaint heard. One set of bluerock traps with North's electric pull, and one set of empire traps and empire electric pull were used for programme events, while another set of bluerock traps and electric pull were used for sweepstake shooting, and were kept going constantly from start to finish. Bluerocks and empires were used. By Monday noon the traps were all ready for practice, and quite a number of early arrivals indulged in a little sport. The cashier's office was ably handled by Messrs. Lawton and Jennings. A thorough working force enabled Parker to handle the large crowd of shooters with comparative ease.

Tuesday morning 100 shooters were on the grounds by 8:30, and the fun began in spite of a cold drizzling rain, which did not clear away until afternoon. It was an interesting sight to see fifteen men standing up in a line and listen to the constant popping of the guns, which was kept up until 6:30 in the evening. Wednesday was a bright, warm day, and a large crowd of spectators was in attendance. The entries ran up to 96 in one event this day. One of the interesting features of the day's shoot was the score made by the Richmond, Mo., team—59 out of 60. Another was the shooting of Warren Ferguson, a very popular young man of Atchison, and a new shooter, breaking 20 straight in No. 12 event, and winning first firize, a handsome Marlin rifle, all alone among 60 entries. The third day was another bright, warm, sunshiny day, and was conducive to good scores, and the shooting was kept right up until 6 P. M. Altogether 32,000 targets were thrown. The sweepstake scores are not published, but at least 10,000 targets were thrown from these traps and each event averaged 40 to 50 entries.

Col. A. G. Courtney was here exhibiting his new Lefever ejector, and, as usual, made lots of friends for himself and gun. J. A. R. Elliott was also here looking after the interests of the empire target, and showing some very fine samples of the new Winchester trap gun. Jim gave a very clever exhibition with the gun and elicited a hearty round of applause from spectators. Messrs. Parker, Elliott and Courtney did not participate in the tournament, as experts and manufacturers' agents were barred. But each one did quite a line of advertising for each and every one of the firms they represent. I must not forget to make special mention of Al Bennett, of Kansas City, who ably assisted in making the shoot run smoothly; he was here, there and everywhere.

Never was there a nicer or pleasanter aggregation of shooters than at this tournament. The Kansas City boys were here in full force booming their shoot, next week. Messrs. McIlhany, Calhoun and Sowers, of Weir City, were here talking up their shoot, May 8, 9 and 10, and a genial and gentlemanly trio they are. Herewith is a partial list of the other shooters present: W. D Alexander, Milford, Neb.; Bennett, Emporia, Kan.; T. L. Ackerman, Stanton, Neb.; J. W. Barre, Louisiana, Mo.; A. T. Emery, Mahoska, Kan.; D. D. Bray, Syracuse, Neb.; J. L. Beightle, Valley Falls, Kan., E. L. Ditert, Topeka, Kan.; J. J. Buser, Fidelity, Kan.; M. A. Brawley, Frankfort, Kan.; J. J. Cornett, Linnville, Mo.; Clay, Frankfort, Kan.; H. M. Davis, Richmond, Mo.; G. Stevenson and G. Hall, Waterville, Kan; F. M. Eaton, Genoa, Neb.; G. R. Tackler, Cedar Creek, Neb; J. J. Gray, Severance, Kan.; J. George, Downs, Kan.; C. D. Hagerman, Wymore, Neb.; F. C Harwood and J. M. Higgins, South Cedar, Kan.; C. W. Mason, Richmond, Mo.; Miller, Lincoln, Neb.; T. B. Newton, Bern, Kan.; Powell, Lincoln, Neb.; B. T. Rice, Frankfort, Kan.; L. B. Reader, Ft. Madison, Ia.; John Renfro and J. L. Renfro, South Cedar, Kan.; James Stevenson, Bronte, Kan.; M. E. Sharpe, South Cedar, Kan.; H. R. Saunders, Pardee, Kan.; G. A. Schroder, Columbus, Neb.; B. E. Strong, Geneva, Neb.; E. D. Trotter, Kinsley, Ia.; C J. Weis, Frankfort, Kan.; L. T. Genmett, Ft. Madison, Ia.; J. P. Gillespie, Savannah, Mo.; N. J. Gregg, Frankfort, Kan.; J. F. Hauber, Hiawatha, Kan.; A. P. Hampton, Frankfort, Kan.; M. T. McDonald, Richmond, Mo.; Geo. Maglott, Hiawatha, Kan.; A. L. Martin, Highland, Kan.; John O'Kane, Fidelity, Kan.; C. T. Reust and J. M. Rhodes, Frankfort, Kan.; B. O. Running, Atchison, Kan.; A. D. Renfro, South Cedar, Kan.; T. E. Ruggles, Jewell City, Kan.; Shiras, Ottawa, Kan.; F. W. Sharpe, Lincoln, Neb.; W. A. Saunders, Pardee, Kan.; W. C. Snodgrass, Frankfort, Kan.; C. D. Taylor, Richmond, Mo.; H. L. Weyer; F. A. Short, Atchison, Kan. BUCKSHOT.

The following are the scores made on the three days in tabulated form. Had they been run in full, there would have been no room for anything else this week. Nos. 1 to 5 were shot on the first day, Nos. 6 to 13 on the second day, and the remainder on the third day:

Trap at Little Rock.

LITTLE ROCK, Ark., April 23.—The final contest for the Pulaski County medal, which took place recently, was robbed of much of its interest from the fact that no matter who won the contest it could have no bearing on the final result. Dickinson being so far ahead of the rest of the contestants that none of them could overtake him, he would once more become the permanent possessor of the medal. The medal was once a challenge trophy, and to be won and successfully defended against all shooters in Pulaski county for one year. This Dickinson accomplished, and then put the medal again to be contested for under the following conditions: The trophy was to be shot for for one year, and there were to be two contests each month during the spring and summer and one during the fall and winter months. Each shooter to shoot at 50 targets, known traps, unknown angles, and the shooter making the best average in any 10 contests to retain it permanently. Score:

Dickinson.....11111111111101111111110111110101111011101101010111001—40
Duley.....11111111111101111101111111110101111000101111111011—41
Pemberton.....11111110111110101111111111111111111111101110111011110—44
Lenow.....00100111011110100101011111001110111011111110011—32
Irwin.....01101110111001101111011111110010111111110111111010—37

Appended are the scores made in the final contest, also a complete record of the scores made by all those who participated in any of the seventeen contests which took place for the medal, and a list of the guns and ammunition used by the contestants. A glance at the record made shows that Dickinson has again won the trophy. His average, taking his ten best scores, being 86^{1}_{5}. French is second with an average of 88^{4}_{5}, closely followed by Duley, who is third, with 83^{3}_{5}. This shooter has shown the most marked improvement; a year ago he was shooting about 50 per cent.; to-day he is one of the best shots in the club

PAUL R. LITZKE.

Lynchburg Gun Club.

LYNCHBURG, Va., April 25.—Our club is making some improvements in its grounds for the better handling of the traps and the comfort of the trappers. These improvements prevented very much practice to-day. Still, the following scores were made, each event being at 20 targets, unknown angles:

No. 1: Scott 19, Terry 19, Moorman 18, Nelson 17, Empie 17, Miller 15, Cleland 11.

No. 2: Nelson 17, Empie 17, Moorman 14, Scott 14, Cleland 13, Miller 13, Terry 13.

No. 3: Terry 20, Empie 17, Nelson 16, Moorman 16, Scott 16, Miller 14, Cleland 10.

No. 4: Terry 20, Nelson 19, Scott 19, Empie 18, Moorman 18, Miller 17, Cleland 13.

No. 5: Cleland 16, Empie 15, Nelson 13, Moorman 12, Scott 12, Miller 8.

F. M. D.

Work and Knapp Shoot a Tie.

ON Wednesday, April 24, George Work and J. P. Knapp met for the second time on the Westminster Kennel Club's grounds at Babylon, L. I., in a 100-bird match. This made the third race between these two crack amateurs at 100 birds; one was shot at Larchmont, the other two at Babylon. The first, which took place at Babylon on Jan. 23, resulted in a victory for Work by three birds, the score standing 84—81 in his favor. The second was shot at Larchmont on Feb. 22, Knapp winning this time by the score of 89—86. The third match, therefore—the one shot on April 24—was looked upon as a sort of deciding heat, and was awaited with considerable interest. So quiet was the affair kept, that only a very few friends of the shooters were on hand. More's the pity, because those who were absent missed as pretty and as

Worcester Sportsman's Club.

WORCESTER, Mass., April 16.—Scores made to day by the Worcester Sportsman's Club in the cash prize series of 1895. This series will consist of twelve shoots for a prize of $50. Each shooter will shoot at 25 targets, known angles. The weaker shooters are allowed a certain number of lost birds scored dead. Following are the scores:

	Score.	Added.	Total		Score.	Added.	Total
Mascroft	21	0	21	Ide	14	3	17
A W Walls	21	0	21	Bartlett	14	2½	16½
Forehand	21	0	21	Kennerson	16	0	16
Davis	20	0	20	R C Walls	11	0	11
McLellan	17	2	19				

These scores were made by members of the Worcester Sportsman's Club at the first shoot in the merchandise series for 1895 on the above date. The series will consist of twelve shoots, 50 targets per man each shoot, 25 regular angles and 25 reversed angles. The nine highest scores of each man in the series will be taken for his winning score:

	Regular.	Reversed.	T'l		Regular.	Reversed.	T'l
Davis	20	19	39	Buck	20	16	36
Kennerson	23	16	39	McLellan	18	16	34
A W Walls	22	16	38	Bartlett	21	13	34
Mascroft	22	16	38	Ide	20	13	33
Forehand	20	18	38	R C Walls	18	11	29

WORCESTER, Mass., April 20.—The following account, taken from the Worcester *Daily Spy*, tells the story of our shoot, which took place yesterday, April 19: "The Worcester Sportsmen's Club held an all-day shoot at the North Pond Park, Friday, and indulged in sweepstake shooting, team races and individual matches. The shoot was attended by such well-known cracks as B. Leroy Woodward of Brockton, of national reputation as a trap-shooter, and the two Bennetts, W. W. and F. E., the champion pistol-shots of the world, who are among the leading trap-shooters of the country. Woodward, who shot under the name of Leroy, broke all previous records ever made before the traps in this city in continuous shooting, his average for the forenoon being 90 per cent. and for the afternoon 95 per cent. This record is phenomenal, from the fact that of the 150 birds broken, one-half were thrown from the traps by what is known as the reverse system, the most difficult system ever used. Another feature of the day's shoot which aroused great interest was the individual race between W. L. Davis of this city and Fred. E Bennett of Boston. The race was at 50 birds, 25 regular and 25 reverse system. The result was a victory for Mr. Davis by a score of 45 to 42. The detailed score appears elsewhere. Still another feature of the day's sport was a team shoot for the dinners between teams captained by Ide and McLellan, which was shot in four sweepstake events, as follows: 10 reversed, 10 regular, 15 reversed and 15 regulas, making practically four events. Capt. Ide's men won by a score of 315 to 299. Among the Worcester men who made remarkable scores in the sweepstakes were A. W. Walls, W. L Davis and John Mascroft The weather conditions were perfect for great shooting, and great shooting was done."

The first four regular events were the sweepstakes, comprising the team shoot between Capt. Ide's team amd Capt McLellan's team, with a total of 50 birds. The results were as follows:

Capt. Ide's team: F. Bennett 44, W. W. Bennett 43, A. W. Walls 41, Leroy 40, Colvin 35, Ide 34, Bucklin 30, G. Davis 26, Stowe 22; total 315.

Capt. McLellan's team: Mascroft 45 Forehand 41, Davis 38, Kennerson 37, Buck 34, Parker 32, Elmer 28, McLellan 25, Sampson 19; total 299.

No 5. 20 targets: First, Mascroft, 19; second, Davis and Leroy, 18 each; third, W. W. Bennett. 17.

No. 6, 20 targets: First, W. W. Bennett and Leroy 18 each; second, A. W. Walls and Mascroft. 17 each; third, Davis, 16.

No. 7, 10 targets, unknown angles: First, Leroy, 10; second, Davis, 9; third, W. W. Bennett, 8.

No. 8, 10 targets: First, Leroy, 10; second, W. W. Bennett, 9 third, F. E. Bennett, 8.

No. 9, 20 targets, reversed: First, Leroy, 18; second, A. W. Walls 17; third, Bennett and Davis, 16 each.

No. 10, 20 targets: First, Leroy, 20; second, W W. Bennett, 18; third A. W. Walls, 17.

The detailed score of the individual race between Davis and Bennett first half known angles and second reversed, is as follows:

Davis .....11011011111111111111111111101111011111111111101—45
F Bennett.....11111111101110111101101011111111111111110101111110—42

A. W. WALLS.

Afton Gun Club's Tournament.

AFTON, Ia., April 18.—The tournament of the Afton Gun Club closed to-day. The weather was fine, but the attendance was very light. The members of the home club laid themselves out to give their guests a pleasant time, and succeeded admirably. Among those from outside were: C. M. Grimm, Clear Lake; Hamilton, Kingsley; Dr. Douthett and McFarland, Osceola, and Chas. W. Budd, Des Moines. The scores made during the two days were as follows:

No. 1, 10 targets, $1: Graham 9, Walker 5, Douthett 8, Spencer 7, Budd 8.

No. 2, 15 targets, $1.50:

Budd	111111111111111—15	Graham	111110111111110—13
Douthett	111111111111111—15	Spencer	011101101111101—11
Walker	111011111010101—11		

No. 3. 10 targets, $1: Budd 8, Graham 10, Douthett 8, Spencer 8, Walker 5.

No. 4, 12 targets, $1.25: Budd 9, Douthett 10, Spencer 9, Walker 6, Graham 11.

No. 5, 12 targets, $1.50: Grimm 7, Douthett 11, Walker 8, Spencer 7, Budd 10, Bagg 7.

No. 6, 10 targets, $1.25: Walker 6, Douthett 9, Spencer 7, Budd 6, Raymond 7, Grimm 9.

No. 7, 10 targets, $1.50: Raymond 2, Walker 7, Spencer 7, Douthett 6, Budd 9, Grimm 8.

No. 8, 10 targets, $1: Grimm 9, Walker 9, Budd 8, Spencer 7, Douthett 7.

No. 9, 10 targets, $1.25: Douthett 10, Budd 8, Walker 5, Spencer 6, Grimm 8.

No. 10, 10 targets, $1: Douthett 9, Spencer 9, Budd 9, Grimm 9.

No. 11, 10 targets, $1: Grimm 10, Douthett 9, Budd 9, Spencer 7, Van Winkle 5.

C. W. BUDD.

WESTERN TRAPS.

EUREKA CLUB OF CHICAGO.

CHICAGO, Ill., April 20.—The Eureka Gun Club held a very pleasant shoot this afternoon, on a very pleasant day, and with a very pleasant attendance. There was to have been a busine s meeting to take up among other things the question of a proposed summer tournament to be given by the club, but after deliberation it was decided to let this meeting follow later.

MR. WILLARD GOES EAST.

To-day was the last shoot with the Eureka Club of its president, Mr. C. E. Willard, who resigns his presidency of the club, and severs many other pleasant relations in Chicago, on his departure for another scene of life. Mr. Willard to-morrow says good-by to Chicago and starts for Hartford, Conn., where he will after this make his residence, assuming additional business relations with the Colt's Patent Fire Arms Manufacturing Co., with which he has long been connected as representative in the West. Mr. Willard carries with him the best wishes of a very large circle of friends.

FROM KENTUCKY.

Mr. W. D. Thompson, president of the Paducah (Ky.) Gun Club, whose organization is due to him, is in the city for a short stay, and as at Eureka grounds this afternoon. Mr. Thompson is connected with the Chesapeake & Ohio Railway. He often shoots with Memphis Gun Club, at Memphis, and predicts a great success for the June tournament of the Memphis Club.

A NEW NITRO.

At Eureka Club shoot to-day Mr. W. H. Skinner was using shells loaded with the new American nitro, the Leonard Smokeless. Mr. Skinner says that there was formed in New York to-day the American Smokeless Powder Co., which will put this nitro on the market Mr. Skinner will represent this company at the tournaments and elsewhere, and is a good man to push a good thing along.

FOREIGN TRAVEL.

Mr. Skinner goes to Goshen, Ind., shoot next week. Eddie Bingham, who still is a large part of the gun and loading department of Montgomery Ward & Co., goes to Galesburg, Ill., shoot next Monday.

WAS A CORKER.

Louis Erhardt's tournament at Atchison, Kan., this week, was a corker, Report comes that he had over 150 entries in some events. He broke the record last year and bids fair to do so this year. The boys are said to have had a ripping good time.

TEXAS STATE SHOOT.

Oscar Guessaz, the tireless hustler of San Antonio, Texas, and president of the State Association, this week announces the nineteenth annual tournament of the Texas State Sportsmen's Association, May 15, 16, 17, 18 and 19, under the "management of O. C. Guessaz." That means a success, and a deserved one, for Mr. Guessaz has worked very hard in getting up this tournament. The programme is an enticing one to the shooter, with its $500 added cash and $500 added merchandise. In a typographical respect the programme is one of the most beautiful of the season, coming as it does from the Guessaz & Ferlet press. Pictures of scenic points of interest around old Santone fill many pages. The Alamo is there, and the surrender of Santa Ana is depicted in a full page. Santa Ana only had one good leg, and in this picture is shown having his other leg extended by a surgeon. This is not prophetic or realistic, for it is sure that no one connected with this tournament as shooter or contributor will ever feel in regard to it that one of his legs is longer than it really ought to be.

CHICAGO, Ill., April 26.—Dick Merrill, who has spent the winter in Texas, most of the time at San Antonio, has returned to his home in Milwaukee. He ran over to Chicago for a day this week and just to get a little practice at shooting, not having had very much this winter. He went down to Watson's and had a little pigeon match all by himself. The day was windy and the birds were good, not one needing to be flushed. Dick shot at 130 birds and scored 120, with a few dead out, which is a pretty good start off. The tournament people want to watch the Milwaukeean this year, for he is feeling pretty good after his sojourn South.

GOSHEN SHOOT.

The dispatches to Chicago have the following results of several shoots of this vicinity this week:

GOSHEN, Ind., April 23.—This was the opening day of the Northern Indiana and Southern Michigan gun shoot. There were sixteen events. George Kolb won the local merchant's shoot, securing 18 out of 20 bluerocks. W. H. Skinner, of Chicago, winner of two 20-bird shoots, secured 19 in the first and 14 in the second. Kolb secured 18 out of 20 in the bird shoot.

GOSHEN, Ind., April 24.—The champion medal shoot was the big event in to day's tournament. Leroy Miles was winner of the medal and Henry Kolb second. Summaries by events: First, 5 sparrows—Winners: Skinner, Bussel, Miles. Second, 8 sparrows: W. H. Skinner first, Cline second. Third, 5 sparrows, Miles and Kapp first, Cline second. Fourth, 7 sparrows: Skinner first. Fifth, 5 sparrows: Skinner and Witt winners. Sixth, 13 sparrows: Skinner and Witt winners. Ninth, 5 sparrows: A. B. Witt first, second to locals. Tenth, 7 sparrows: George Bungay winner.

GOSHEN, Ind., April 25.—Attendance at the meet of the Northern Indiana and Southern Michigan gun clubs' tournament was the largest ever present at any previous tournament of the association. The summaries:

No. 1, 15 single bluerocks: George Kolb, Goshen, wins; William Douglas, Warsaw, second.

No. 2, miss and out: Kolb and Skinner, Chicago, 6 each; Skinner wins.

No. 3: George Kolb won, Skinner second.

No. 4: T. Camfield, Warsaw, won; W. C. Stacey, Sturgis, Mich., second.

No. 5: Roy Miles, Milford, won; George Kolb, second.

No. 6, 15 live birds: Eight tied for first; George Kolb won, Skinner second.

No. 7, 5 singles and 5 pairs: C. Beckner, Waterloo, won; Roy Miles, second.

MICHIGAN LEAGUE.

BATTLE CREEK, Mich., April 23.—The Michigan League Trap Shooters' tournament opened to day. Participants were present from Grand Rapids, Detroit, Manchester, Litchfield, Kalamazoo, Jackson, and Battle Creek, Mich., and O. von Lengerke of Chicago. Nine events were shot. The first average was won by Parker of Detroit, who scored 97 out of a possible 112; Widdicomb of Grand Rapids second, with 93. In the team championship race Grand Rapids team No 1 scored 53; team No 2 65; Battle Creek team 61.

BATTLE CREEK, Mich., April 24.—In the State Trap-Shooters' tournament today the individual State championship was won by Holt of Manchester, expert 25; Walton, Grand Rapids, semi-expert, 23; Gould, Grand Rapids, amateur, 24. The shoot was twenty-five singles. The challenge shoot between Grand Rapids and Battle Creek teams for the shooting and fishing trophy was thirty singles, unkown traps, and ten pairs of doubles. The totals were: Singles—Grand Rapids, 101; Battle Creek, 84 Doubles—Grand Rapids, 57; Battle Creek, 63. Grand totals—Grand Rapids, 158; Battle Creek 147. The day's average was won by W. Thomas of Jackson, 82 out of a possible 98. The next meeting of the league will be at Grand Rapids the latter part of May.

GALESBURG SHOOT.

GALESBURG, Ill., April 23.—The fifty live bird match between Dr. Carver of Kansas City and Tom Marshall of Keithsburg for a purse of $100 a side was won by Marshall by a score of 46 to 44. Carver became careless and seemed nervous after missing the first bird. Fine target breaking was done by World's Champion R. O. Heikes of Dayton, O., E. D. Rike of Dayton, O., Ed. Bingham of Chicago, William Gilbert of Philadelphia, Ill., W. T. Irwin of Peoria, G. D. Jones of Beardstown, Al Miller of New Boston, L. M. Hardin of Springfield, and E. E. Deterline of Keithsburg. Heikes broke 145 targets without missing.

GALESBURG, Ill., April 24.—In the shooting tournament today Tom Marshall of Keithsburg won first place in most of the target matches, Heikes, the world's champion, fell off greatly. Miller of New Boston, Baker of Kewanee, Bingham of Chicago, and Hillman of Pekin were the other winners in the leading events, the local shooters and many of the outsiders being outclassed. The Bogardus-Irwin match was postponed until tomorrow.

GALESBURG, Ill., April 25.—Capt. Bogardus and "Tramp" Irwin of Peoria at the shooting tournament today shot a match of 50 birds at $100 a side. Irwin won by a score af 44 to 41. Bogardus protested, claiming Irwin did not use the kind of shells agreed upon. Referee Bingham of Chicago awarded the match to Irwin. E. HOUGH.

909 SECURITY BUILDING, Chicago, Ills.

The Keystone Shooting League, of Philadelphia, Pa., has issued the following programme of club shoots for May, June and July: Live-bird days—May 4, 8, 18 and 22, and June 1. Target days—May 1, 11, 15, 25, 29; June 5, 8, 12, 15, 19, 22, 26, 29; July 3, 6, 10, 13, 17, 20, 24, 27 and 31. On live-bird days the programme will be: No. 1, 5 birds, $2.50; No. 2, 10 birds, $5; No. 3, miss and out. Birds extra in all events. On target days the programme set for decision will be five 15-target races and one 20-target race. The Geo. Cohen trophy will be contested for by members only on the second and fourth Saturdays of each month during 1895.

Meadville Gun Club.

MEADVILLE, Pa., April 17.—At the shoot to-day in Event No. 1, 25 targets, 15 known angles and 10 unknown angles, Frank Ehrgott made the first 25 straight recorded in our score book. The 15 unknown known angles were practically unknown, owing to the bad condition of traps and trappers. Scores:

No 1, 25 targets, 15 known angles, 10 unknown angles:

Hayes	0100101111111101000001100—13
Clemson	1111010111011110000100111—16

Hotchkiss	1111011011101011100011100—16
Kellam	0110101011011010001001100—12

CHOKE BORE.

Missoula Rod and Gun Club.

MISSOULA, Mont., April 21.—The members of the Missoula Rod and Gun Club did not appear in their best form to day, the 14-mark being the highest reached. Mace, Merrard and Searles, of the A class, tied on that score, and in the shoot-off Searles captured the gold medal for another week. Sterling secured the silver medal on the same score of 14. Conditions: 20 targets, unknown angles:

A Class.

Mace	00111101101111011101—14	Brayton	00100111100000010100— 7
Searles	11011110100110011111—14	Merrard	10011110100111111110—14

B Class.

Woody	10011001110111101101—13	Hunt	11101100000000010110— 8
Kern	10111011000111101100—12	Sterling	11101111000101110111—14
Allinson	00101001001011000111— 9		

In accordance with the rule under which the club is now working, "That after each four shoots the members are reclassified for the succeeding four (those having broken 60 per cent. or upward constituting the A class, and those having broken less than 60 per cent. constituting the B class)," the four weekly contests ending with to-day's shoot results in the following reclassification:

A Class.	Broke.	Shot at.	Per cent.	B Class.	Broke.	Shot at.	Per cent.
J P Merrard	53	80	66¼	J K Wood	19	40	47½
W H Mace	57	80	71¼	J M Evans	20	40	50
W P Brayton	50	80	62½	F Allinson	22	60	36⅔
Lieut Devol	25	40	62½	H W Thompson	14	40	35
C A Searles	59	80	73¾	T E Evans	16	40	40

F P Kern	50	80	62½	A M Stevens	23	60	38⅓
Capt Andrews	13	20	65	L L Hunt	32	80	40
Robt Rogers	14	20	70				

WILL CAVE.

Getting Rid of a Hoodoo.

ON Saturday, April 20, several members of the New Utrecht Gun Club went to the club's grounds at Woodlawn, L. I., to compete for the E C. Powder cup. In addition to the cup the management decided to put up a special prize of a somewhat curious nature. Bad luck in team races has been perching upon the club's banner for some time past, and it had come to be a recognized fact that the club was possessed of something in the nature of a hoodoo. The Jonah picked upon was a large stuffed owl of magnificent proportions, the claim being that the club had had nothing but ill luck in inter-club contests since the owl appeared in the club house. Accordingly, that owl was put up as a special prize. The only two members who contested for the E. C. Powder Cup that killed straight were Furgueson, 3d and T. H. Keller, the latter forfeiting on the shoot-off to Conney and his 16-gauge gun. Keller, Shepard, Pool and Conney then shot off miss and out for the hoodoo, the two latter missing their first birds. Shepard and Keller had killed 3 each when Keller decided that he would prefer the doctor to have the owl, being probably a trifle superstitious. He accordingly forfeited his claim to the *objet d'art*, Dr. Shepard taking the bird and whatever went with it. Scores:

C Furgueson, 3d (B)	1222222222—10	J N Meyer (B)	2011122112— 9
T H Keller (B)	2122222222—10	G Nostrand (A)	1112021122— 9
*Dr Shepard (C)	1211122221—10	C M Meyer (A)	1202222022— 8
*Dr Pool (C)	2222112221—10	D Deacon (A)	2202222202— 8
W F Sykes (B)	2221222•22— 9	Knowlton (C)	1002112212— 8
C A Sykes (A)	2112101121— 9	G W Coulston (A)	2120100120— 6
C Furgueson, Jr (AA)	2222222202— 9	M Van Brunt (B)	2022022022— 6

* Not in for the cup or sweepstake.

The Texas State Shoot.

THE nineteenth annual tournament of the Texas State Sportsmen's Association, as already announced, is set for May 15-19. It will be held at San Antonio, Tex., under the auspices of the San Antonio Gun Club, on the Jockey Club grounds, and under the management of Texas Field, a gentleman whose voting name is Oscar C. Guessaz, of San Antonio. The programme for the five days is made up of live bird and target events, good money being added to nearly every event. In those events where no cash is added there are several valuable merchandise premiums offered for competition. To add $500 in cash and $500 in merchandise is something nowadays, notwithstanding the $3,000, $2,000 and $1,200 of added money in some of the largest shoots. Mr. Guessaz writes that he is working hard to revive interest in trap-shooting in Texas. It must be said that he is going the right way about it; his efforts deserve to meet with success.

LYNCHBURG'S INTERSTATE.

"On to Knoxville," is the way Elmer Shaner has headed the cover of the programme for the Interstate Association's tournament at Lynchburg, Va., on Friday and Saturday, May 17 and 18. That "On to Knoxville" is a good idea. The Southern Railway Company can land all the Eastern contingent at Lynchburg, let them shoot there a couple of days, and then carry them right away into the heart of the mountains, getting them to Knoxville, Tenn., in good time for a rest up before the siege begins that lasts from May 21 to 24.

The Lynchburg Gun Club adds $200 to the purses, $100 on each day. The programme calls for six 15-target events and four 20-target events, a total of 170 targets, at the uniform rate of entrance of 10 cents a target, or $17 for the day. Experts, of course, shoot under expert rules all the time, winners of first money in any event shooting in the expert class in the next event they enter. Amateurs shoot at known traps, unknown angles. This system may be hard on the professionals, but the amateurs like it, and they are a good class to cater to. Shooting commences each day at 9:30 sharp. Headquarters for sportsmen during the tournament will be the Arlington Hotel. Mr. Thomas H. Nelson, secretary of the Lynchburg Gun Club, will be glad to furnish any additional information on application.

Ashly Gun Club.

ASHLY, La. April 23.—The following scores were made by the members of the Ashly Gun Club this afternoon:

Andrew Sevier	0110010000010000000110000— 6
J W Kilbourne	1011011111111111110011101—20

E. P. MANGUM.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

Hudson's Bay Trips of 700 Miles.

We take parties from the above ALGOMA PARK resort at Sault Ste. Marie, Ontario Canada, to James Bay and return, furnishing tents, canoes, guides, cooks, food and all that is required for the trip, for the sum of five dollars ($5.00) per day each; parties of ten or more to be guaranteed.

Taking in the north shore of Lake Superior by steamer to Jackfish Bay, thence north through numerous lakes and rivers to Albany River, down the Albany to Moose Factory, on James Bay, and return to ALGOMA PARK, the whole trip taking about thirty days, thus affording one of the finest canoe trips on the continent through this almost unknown part of the Dominion. Good trout fishing in the lakes and rivers south of the Height of Land, and on the north or James Bay side innumerable flocks of wildfowl, geese, ducks, plover, etc., make their home.

The resources of the Hudson Bay country are coal, iron, kaolin, etc., discovered by the geological surveys of Canada (see Geo. Reports), also seal and salmon fisheries, oils, otter, beaver, sable and silver fox furs, walrus ivory tusks and feathers. This trip has virgin fishing and hunting grounds never fished or hunted by white man.

For further information apply to KIRKWOOD & McKINNON, Sault Ste. Marie, Ontario, Canada.

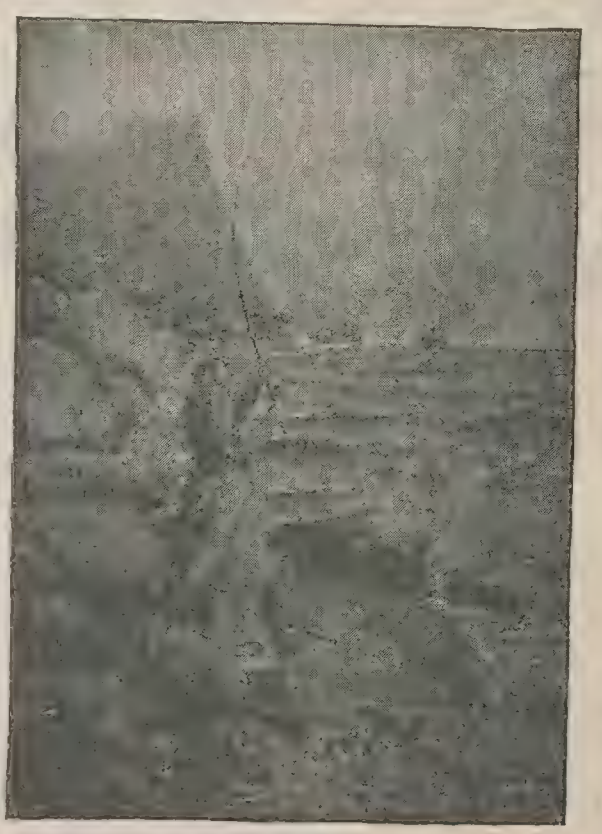
Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

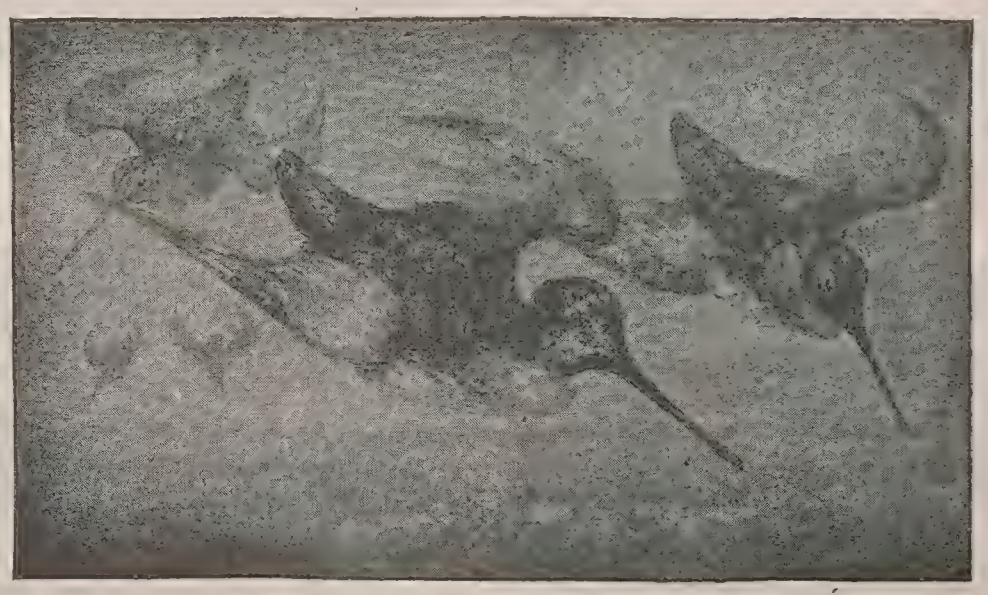
HE'S GOT THEM.

AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

THE SPORTSMAN'S EXPOSITION.

EVERYTHING promises that the Sportsman's Exposition, which will open in Madison Square Garden, in this city, next Monday, will be a most successful affair. In scope the display will be comprehensive; all that pertains to the rod and the gun will there have a place. The exhibits made by manufacturers and dealers will be varied and complete, and will afford a striking exposition of the variety and perfection of the sporting goods of the day. The collections of trophies and pictures and other accessories of the craft will be numerous, interesting and worth travelling a thousand miles to see. We need not urge every sportsman in the land, who can possibly visit New York next week, to attend the Exposition for his own sake. It will prove not only beautiful, interesting and attractive, but educational as well.

Membership in the Sportsman's Association (which costs $1) will entitle the holder of a member's card to return transportation from New York to his home at one-third of the regular rate.

New York city is just now in the glory of fresh spring verdure; the sun shines bright, sparrows chatter merrily in the parks, and the streets are not dug out in trenches and pitfalls so much as usual. If the sportsman comes in force he shall own the town.

The FOREST AND STREAM will welcome its friends in the two spaces, Nos. 73 and 74, which will be found on the south of the main aisle, near the center of the building. While shrinking from any appearance of egotism or of an undue magnifying of self, we may suggest that the FOREST AND STREAM exhibit will in itself be worth your visit to New York. The large oil painting, "Chained to Business," will be certain to awaken a responsive sympathy in the breast of every beholder.

Our issue of May 25 will contain an illustrated description of the Exposition, and we shall provide for an increased demand for that number.

A. H. GESNER.

MANY readers of FOREST AND STREAM will regret to learn of the death of Rev. A. H. Gesner (better known to them as "Stillaboy"), which occurred at his home in Sing Sing, N. Y., on April 30.

Mr. Gesner was a retired clergyman of the Episcopal Church; but besides his love for his Master, he had an added love for God as revealed in the beauty and the creatures of His universe.

During the latter years of his life, and after a premonition of paralysis, which showed itself two years ago and incapacitated him for active work, he engaged himself in writing for FOREST AND STREAM, hoping by degrees to regain the facility of speech which characterized him as a preacher and worker in the Church. He was regaining these powers slowly, but his physical strength gradually declined.

When his last illness came upon him he was at work upon a story for this paper describing a trip into the woods in the month of May in company with the Indian, Nuel.

Our readers will remember his delightful series of papers on "The Prescription," "The Museum Moose," etc., which elicited so much praise and happy comment. There is in manuscript another story, of the "Museum Caribou," which is designed for early publication.

Mr. Gesner was a close and sympathetic observer of insect, bird and animal life, and delighted in the varied revelations of nature as the seasons circled in ceaseless course.

Some time before his death he had suspended from a twig in his study—upon which sat three stuffed owls—a cocoon. On the evening of the day of his funeral, his daughter-in-law heard a rustling, and looking up saw a large moth slowly evolve itself and crawl out upon the twig.

Mr. Gesner always used to hold this up as a type of the Resurrection, and would beautifully describe the various changes from larvæ to gorgeous butterfly. Occurring at such a time when the last sad rites had been said over his grave, it spoke in words of comfort of the triumph of his faith, symbolizing his love for the Risen Master and the new life of creation as displayed in the insect world.

Mr. Gesner died in the full possession of his faculties, and only the night before his departure spoke of the coming of the birds with the May-tide: "I hoped to hear them sing here, but now I shall hear them in Paradise. Won't it be lovely?"

Like one who turns his face homeward after a long journey, so he went out into that fair country "whither Christ has gone before."

ONE-MAN POWER.

IN nearly every branch of sportsmanship there have been complaints of cliquism and one-man power, and the instances have been few indeed when these honest, yet thoughtless, complaints have had any just grounds to rest upon.

In every special interest in the realm of sport, the care of affairs seems to devolve naturally sooner or later upon the care of a few men, and not infrequently one man will be dominant over his fellows.

To the unthinking, the mere fact of the preëminence of the individual is accepted as his unwarranted arrogation of power and importance. They do not consider that the incentives of sportsmanship are distinctly different from those of business life, wherein the really serious and earnest work is in incessant action. In matters of business, competition is ceaseless. To struggle is a necessity. But, above the necessities, men long for more importance. The desire for wealth, the ambition to shine in higher positions above his fellows, are incentives to men to strive constantly in professional and industrial life. When they devote their energies to certain lines of thought or effort, it is not an unfair inference that they are seeking an ultimate and just profit. But the standards of the industrial world are not always just standards for the measurement of values in the realm of sportsmanship, though they are not infrequently the data of many warranted inferences and conclusions. By far the greater number of men engage in sport for its own sake. They have an inborn passion for it. Unlike action in the business world, in sportsmanship there is seldom an ulterior mercenary motive.

In their love of sport, many men are unselfishly enthusiastic. Their fancies may take distinctly different channels—some may be fond of yachts, of guns, of dogs, of sports of land or water, and it is well that it is so.

The sportsman perceives that there is a community in nature distinctly apart from the selfish competition of the workaday world. It has under proper conditions no limitations. The rich and poor alike can enjoy its benefits and beauties.

But there are some features which must be properly conserved and promoted. There are contingent interests which must be organized and encouraged. There is much to teach and much work to do. There are men who assume the task. Thus there is the enthusiast who advocates and works for the protection of game and fish; the one who organizes trap-shooting and rifle clubs, field trial clubs, or canoe and yachting associations, and who devotes his time, energies, and often his means, in promoting and perpetuating the sport of his fancy. He begins the work that few would attempt, and in which still fewer would persist after beginning. But the worldly standard of value is too often applied to his efforts, and the complaint of one-man power is made. The unselfish efforts of the enthusiast for the benefit of his guild are too often rewarded with ingratitude. Even if the efforts of the enthusiast are not wholly unselfish, they confer benefits so general that they are a public gain.

Betimes, when the criticisms and complaints are intolerably unjust, the enthusiast abandons his fancy and participation in sport. Then the malcontents learn his real value. They were, more or less, beneficiaries of his efforts. Few of them did more than grumble or rebuke. When the enthusiast, the one-man power, retires, action ceases. If there is no direct monetary profit, it frequently happens that there is no one to act in his stead.

If a body have force, character and action, there must be a power which can act promptly and intelligently. If the one-man power, who is managing successfully, is deposed, what is offered to fill his place? Another man, who, if he succeeds, must necessarily be a one-man power. If the managing power be more than one man, which malcontents are disposed to term a clique, and is deposed, who is there to fill its place? When a man is unselfishly striving for the public good, or when he is giving a just return for a consideration, the complaints of the disgruntled have no value.

In such instances as men engage in sport and its contingencies from motives wholly mercenary, the complaints were just. Such mercenary purposes bring their own correction. It is of the good and true men of which we speak.

The one-man power is a necessity in the affairs of sportsmanship. Were the one-man power removed, the interests of game and fish protection, trap-shooting clubs, rifle clubs, yachting clubs and field trial clubs would languish and perhaps would die.

Had there been no one-man power in action, the interests of sportsmanship never would have attained their present greatness.

THE WILKS BILL.

HERE is the text of the Wilks bill in the New York Assembly, where it has been ordered a third reading, is likely to come up at an early day, and to be passed and sent to the Senate: "§ 249. No person shall be deemed to have violated any law or ordinance by reason of his selling, exposing for sale, transporting or possessing, or attempting so to do, the body, or a part of the body of any wild animal or bird in the close season for such animal or bird, provided it be proved by him that said wild animal or bird was killed outside this State."

This would open the sale of game the year around. It would mean not only that New York city would be, like Boston, a dumping ground for Western and Eastern game, but that the market slaughter of game in this State would be vastly increased and would go on the year through. The measure is one that has not a single redeeming feature. It should not be allowed to become a law. We cannot afford open markets for the twelve months through.

This is something which concerns every sportsman of New York, and every sportsman concerned should send his protest against the Wilks bill to Senator Donaldson chairman of the Senate Committee on Game and Fish.

GAME IN PARKS.

WE print to-day the first installment of the "FOREST AND STREAM'S Second Annual Report on Game in Preserves." The conclusion of the report, including notes on the Litchfield Preserve and a number of others, will follow in our next issue.

SNAP SHOTS.

We understand that the members of the Game Committee of the New York Assembly, after having promised both verbally and in writing to report favorably Mr. Niles's bill to prohibit deer hounding, at the next meeting of the committee promptly forgot these pledges and voted against the report. One man only remained true to his pledge—Mr. La Fetra. The value of the word of the average New York legislator is well known, and it now appears that his bond is worth no more than his word. The game law committees of both Senate and Assembly have done as much harm at this session as they could, and apparently with malice aforethought.

The appointment of Mr. A. C. Collins, of Hartford, to the new Connecticut Fish and Game Commission is in every way admirable. Mr. Collins has done more than any ten other men in the State to protect game and fish and to bring offenders to justice. He has for the most part been obliged to work single-handed. Now that he is in a position of increased responsibility and with enlarged powers, he may be depended upon to do good public service. His appointment was vigorously opposed by the pound fishermen, who have in the past found in this active and determined individual the only obstacle to their unrestrained violations of the statutes. The other Commissioners are Mr. N. Williams, of Salisbury, and Mr. J. A. Bill, of Lyme, reappointed.

AMERICAN GAME PARKS.

The "Forest and Stream's" Second Annual Report on Game in Preserves.

Blue Mountain Forest.

MR. AUSTIN CORBIN has every reason to congratulate himself on the entire success of his efforts to preserve some of the large game animals of America, which are gradually becoming extinct through want of proper laws for their protection in the States and Territories.

Canada may be included in this accusation, as game is murdered there for skins and heads as readily as in the United States.

Considerable has been said in these pages of the progress of affairs at the Blue Mountain Forest, and will be further told from time to time.

In the Blue Mountain Forest, New Hampshire, there has been a steady and rapid increase in all the herds, particularly among the elk, deer and wild boar. There are probably within the fence 750 elk, 700 deer and 500 wild boars. The moose have not increased so rapidly, but they count about 100, old and young. The buffalo have done well, but the original number was comparatively small, and there are not more than 55 all told. The comparatively large increase in elk and deer is accounted for by the fact that two herds of deer and three herds of elk were transferred from Babylon, Long Island, which was their home for several years, to the more congenial atmosphere of the mountains of New Hampshire.

Among the late comers to Blue Mountain Forest are a pair of beavers, which appear to be quite at home. They are located near the ponds and have done some dam building. Singular to relate, they have been visited by several of their own species, which have been seen only twice by the keepers. Where the visitors came from or went to no one knows. It may be that a beaver colony exists somewhere not far away, which has never been discovered. This is not at all unlikely, as the remains of two

"GROVER CLEVELAND."

genuine beaver dams have been found in the swamp close to the fish ponds. These two ponds are now well stocked with bass and pickerel and the streams with trout.

The dog colony is also increasing rapidly both by importation and breeding. There are now in the kennels over sixty dogs, comprising St. Bernards, great Danes, English foxhounds, German boar hounds, fox-terriers, pointers, setters and rabbit beagles.

A few months ago two female boar were captured, but it was found impossible to catch a male, so a fine specimen was imported from the Black Forest in Germany. They will be kept in an inclosure by themselves, as the experiment of breeding them in captivity is to be tried. There were until lately a large number of foxes and coons upon the mountains. They have been thinned out by hunters employed for that purpose, who shot over 100 red foxes and 50 coons within a few months.

Keeping watch and ward over 26,000 acres of land and thirty miles of fence is no small job, but as in all Mr. Corbin's affairs everything is done systematically. There is a complete telephone system connecting all the stations, ten in number, with the superintendent's house, which latter is connected with Mr. Corbin's residence. Daily reports are made, Sundays excepted, from each of the stations to the superintendent, who transmits the substance of them by wire to Mr. Corbin's office in New York. The rules for the guidance of the keepers require them to report as follows: If any indication of trespassing; if everything is all right so far as known; how many animals, if any, have been seen and the kind; any general information in connection with the forest that would seem important for the superintendent to know. The stations are: Central, East Pass, Walker's, Grantham, West Pass, White Water Brook, Head Station and Brighton. The main stations are Corbin's, Stockwell's (superintendent), Davidson's (in charge of the west side of the mountain). In addition to the daily reports all station keepers must report immediately to the superintendent trespasses or any other information coming to their knowledge. The keepers have nice roomy cottages for their families and all are to be remodeled in Queen Anne style. They are located at different points of the forest just outside of the forest fence.

A few of Mr. Corbin's friends have hunted during December. They were mainly after "pig," but would take a deer or elk if they could get it. Five boars and three stag elk was the extent of the bag. Elk meat is much finer than deer, as it is not dry, but when properly cooked is as juicy as beef, and has a very pleasant flavor. The largest elk weighed 600lbs. when dressed. The wild boar meat is very firm and not so fat as that of the domestic animal. It has a peculiar flavor, which is attributable to the food it lives on, such as nuts, young roots, etc. It is decidedly a clean animal. It requires to be cooked in a quick oven, and the smell caused by the process would make a moribund individual feel the pangs of hunger. One pig was 250 and the other 100lbs. The hunting party was composed of a member of the largest banking house in London; a well-known Scotchman, who is a great shot; Mr. Corbin and Mr. Edgell. The party traveled to the foot of the mountain in sleighs, halted on the east side, and taking their guns and rifles, started into the brush. They had only gone a short distance when up jumped a Belgian hare. The Scotchman knocked it over with a bullet from his Winchester, but he regretted this shortly after when a small drove of boars were sighted, headed by a big male. The hunter crept slowly forward and when he had made a very fine sight pulled the trigger, but alas! there was no report. He had forgotten to remove the empty shell after shooting the hare, and he was almost inclined to be pro-

BLUE MOUNTAIN ELK.

fane. The big pig and his fellows whisked their tails and vanished quickly, and the hunter lost his bacon. Hunters are prone to make merry at each other's mistakes, and much merriment was indulged in, which was cut short by the sudden descent of Mr. Edgell for a distance of about 20ft., caused by a treacherous snowbank. The gentleman was kept busy for several minutes after he landed picking the snow out of his eyes, ears, nose and gun, which was sticking stock uppermost about 5ft. away. When the operation was over he remarked, "Well, that's the first Corbin bank I ever knew to be unsafe."

The experience gained by Mr. Corbin shows that large game will thrive in locations where the climate is reasonably steady, and browse is to be found in quantities; also, that the elk and deer are the hardiest and most prolific; that the boar can find plenty of food in the brush; that the buffalo can be domesticated without much trouble; and that it takes a pile of money to carry out this idea, which the National Government, and each of the States and Territories, should have done for the protection of large game long ago.

The writer is of the opinion that it would be in order just now to pass laws which would prohibit the killing of large game for five years at least. This would keep not alone our so-called hunters at home, but the hundreds of foreigners, who make flying visits to America for no other purpose than to kill for the pleasure of killing (for which some of them are willing to go to the ends of the

IN NEW HAMPSHIRE.

earth), and who bring along an arsenal, ready to obliterate anything from an ant to a buffalo. The only redeeming quality they possess is, that they do not write articles for the magazines illustrated with pictures of impossible episodes, such as hunting moose in Canada, the hunters wearing summer costume and ungloved hands, or taking photographs of the same animals in places where they have not been seen for the past seven years or more.

T. H. RYAN.

Adirondack Mountain Reserve.

BEEDES, N.Y., March 1.—Adirondack Mountain Reserve was incorporated in 1887, and at once acquired title to Township No. 48, Totten and Crossfield's purchase, in the towns of Keene and North Hudson, Essex county, New York, containing over 28,000 acres of land and water. In the year 1890 some 1,600 acres, in various lots in said town of Keene, were purchased and added to the original property of this company.

Township No. 48 was never subdivided into lots. It lies in one of the wildest and most picturesque regions of the Adirondack Mountains—a tract where nature has spread out beauty and grandeur with a lavish hand. The policy of the Reserve has been to keep its territory, especially said township, in its natural state so far as practicable—to preserve the lakes, streams and forests in their native beauty, and to protect the game thereon and stock its waters with trout. No timber is allowed to be cut except dead or fallen trees for fuel, and trees in the way of roads and for building camps. This tract, Township No. 48, retains in the main the original growth of trees, its forests never having been given over to the lumberman's axe, and destruction by fire or water flooding has been remarkably slight. Situated as it is amid and containing within its boundaries some of the high mountains of the State, being well supplied with water and bearing a primeval growth of many kinds of trees, this territory affords ample shelter and choice homes for animals, birds and fishes, and is in fact by nature a veritable paradise for game. Mts. Marcy and Dix are upon its borders with summits just outside the lines, and Gothics, Haystack, Sebille, Noonmark and other lofty peaks stand within its lines. Its principal waters are the two lakes Au Sable, each two miles in length, with their outlet, a river of the same name; Elk Lake lies adjacent to and has an inlet of considerable water from its territory. Besides these there are other small ponds and many streams of worthy size.

When the Adirondack Mountain Reserve was organized, one of its chief regulations was to allow no hunting, for several years at least, on the property, and to employ wardens to watch and protect the same. As a result, the game animals—the deer more particularly—have increased in numbers amazingly. Observations made now compared with those made in 1888 give unmistakable evidence of this. Then deer were found few in numbers, and hunters or those accustomed to going in the woods in these regions say deer were scarce. Now they are quite abundant, and it is safe to say the deer have increased tenfold in numbers here during the last seven years. At the Upper Au Sable Lake, in early summer, it is not an unusual sight to see from eight to twelve deer feeding on the lily pads near one spot. As many as fifteen have been seen at one view, and by taking a boat and passing for a mile along the favorite feeding grounds thirty deer have been seen in a single morning or evening. The inlets to Au Sable and Elk lakes give excellent cover and feed for deer in either summer or winter.

The deer seem to learn and know where hunting is not done, and hence go to and inhabit protected localities. When hunters in this section go out to start dogs they like

AT SHORT RANGE.

to get near the Reserve bounds, and they say the deer are more plenty there than in places where no protection has been given. There are many places on Reserve lands today where deer are yarded by the deep snow, and they are taking care of themselves so far as the food question goes. The reports which have been circulated at different times by way of newspaper articles, "That the deer are starving and dying in the snows of the Adirondack regions," are not verified in this locality by those who know the facts. If dogs and poachers are kept out of the woods where deer stay in the winter, as a rule the deer will care for themselves and live through the hard times of snow. Occasionally one may die from starvation, but in the greatest number of cases when deer are found dead in the snow, the cause of death may be charged against men or dogs.

Many deer when worried in deep snow by dogs will die if not bitten, and when one is bitten by a dog that deer rarely, if ever, lives long after. Old hunters contend, and maintain it with proof, that the bite of a dog kills a deer in 99 cases out of a 100. The day of wolves and panthers here is past, and the greatest foe with which the deer now have to contend is the dog. Keep the dogs chained up during the close seasons and the deer will fare better. If the law allows hunting of deer with dogs for a certain time, then mighty restrictions should be put upon the use of dogs out of season. Every dog, whether a hound or cur, which is allowed to be used in hunting deer should be licensed. The game laws should be so made as to compel, under heavy penalty, all persons who own or harbor dogs which will chase deer to procure a license which will allow the use of such dogs during the hounding season only. Do not allow dogs which will chase deer at large, whether in forests where deer inhabit or any other place, except in the open season. Many a dog good in the race after a fox or rabbit is good also on the track of a deer, and hence much mischief. If you cannot draw the line with a dog between a fox and a deer—and you cannot, for it is only a step from the fox hole in the field to the deer shelter in the forest—then make the owners keep their dogs tied up except in the deer hounding period. Dozens of deer in Essex county every year are chased during the close season by dogs put out in fox hunts, and it is fair to presume that in other counties of the State dogs do the same thing.

Of the fur-bearing animals bear are common in this region. In this county fifty bears are known to have been killed in 1894, and of these this section produced its fair proportion.

Foxes, raccoons, mink and martens here are quite plenty. A fisher is seen occasionally and an otter rarely. Trapping to any extent has not been permitted on the Reserve.

As to game birds in this section the partridge is the only

one worthy of note, and there is a scarcity of other kinds. The partridges have protection on this Reserve and they are increasing in numbers. Hundreds of these birds were killed by hunters in this and neighboring towns last fall.

All the waters of this section are good for and contain speckled trout, and there are lake trout in the Upper Au Sable. When the Reserve acquired the property here, trout few in numbers had been taken from its waters each season for several years previous. This was not due to little fishing being done, but to a scarcity of fish. It was lamented that lakes and streams, once famous for the abundance of trout procured, had become nearly exhausted. It was a case of overfishing for years with nothing done toward restocking. The Reserve has done much, by protection all the time and by restocking with fry in four different years, to increase the number of fish in its own and in neighboring waters. It is believed there is an increase from year to year, and some streams in which there were no trout, until the stocking by means of fry three and four years ago, are now showing good results. Fishing has been allowed since the season of 1889, under certain restrictions and regulations. Permits in writing, for the use of a limited number of rods, are issued to persons desiring to fish on week-days during the time from July 5 to Aug. 15 of each summer. A permit allows the holder to take a stated number of fish in one day, and this number varies, as the property is divided into several regions for fishing purposes, and in some regions more fish may be taken than in others.

After use the permits are returned with a count of the trout killed and any special remarks the fishermen may see fit to make. In this way the Reserve has been able to keep fishing in its waters within bounds and to have a record of the catch each year. Some years special permits have been issued as tests, allowing fishing earlier in the season than July 5, and in such cases the trout have been more readily taken, and in greater numbers in a given time, than in the fishing after that date.

For the six years last past the average catch of trout per season has been 1,500, and the largest lake trout caught weighed 10lbs. and the largest speckled trout 5lbs. The only other fishes inhabiting these waters are bullpouts, suckers, dace and chubs.

All things considered, the showing for trout in Adirondack Mountain Reserve waters is good. To bring the fishing here back to its present state has taken labor and money, and many difficulties have been met and overcome. Perhaps the average number of fish killed each year, stated above, would not be deemed even a fair yield in some localities. But taking into account the fact that the most of the fishing which gives that result has been done in the sultry part of the season—in a time when trout are hard to catch in any of the waters of this State—and that more frequently than not persons who were not experts in catching trout did the fishing, we are encouraged to think it a good average. The trout are gaining in numbers over estimates made in 1888, and holding their own since 1892, when the last fry were planted.

What has been done for the fish and game here by the Reserve proves that restocking and protection amount to something, and the policy will be continued. The Reserve has tested its policy of protection beyond the point of experiment, and finds its results quite satisfactory. It is confidently believed that private clubs, with objects like or similar to those of this Reserve, can with proper systems and management do more to preserve the game and fish in the State than the game laws do as they are and have been for years administered.

W. S. BROWN, Superintendent.

Sumner Park.

The private reserve known on the maps as Sumner Park (W. West Durant sole owner) is in Totten and Crossfield's purchase, Hamilton county, N. Y., 56,000 acres in a body, being the whole of Township No. 6, 25,000 acres of Township No. 34, 3,000 acres of Township No. 19 and 1,700 acres of Township No. 5.

On Township No. 34 there are good lake and brook trout and bass fishing, with a large number of deer. There are, from actual measurement, about 1,700 acres of water, including Blue Mountain Lake, Eagle Lake, Utowana Lake, Stephens Pond, Minnow Lake, Cascade Lake, Rock Stream, Loon Brook, Minnow Pond Stream, Bear Pond Stream and a part of the Marion River. Scenery mountainous and fine.

Township No. 19.—The top of Blue Mountain is on this; also numerous small brooks.

Township No. 6 and a portion of No. 5.—Abundant brook trout, lake trout and black bass fishing. Great quantity of wild deer, as many as thirty at one time on one small lake having been seen the past summer in the day time. On this are lakes Shedd, Sumner and Mohegan, and three or four miles of the shore of Raquette Lake, besides Bear Pond and Unknown Pond, Sumner Camp Pond, Wakely Pond and twenty miles of brook trout fishing streams. Scenery mountainous and very beautiful.

The present object is to preserve the fish and game and save the valuable timber. On the preserve are numerous camps and keepers' lodges. One-half of the whole is strictly preserved by the head game-keeper, John Callahan, and his six assistants, and is under general supervision to prevent fires and violations of the game laws. There is practically no part of the preserve denuded by fire.

The lakes for five years have been stocked with European brook trout, native brook and lake trout and landlocked salmon, and more recently with frost fish.

W. WEST DURANT.

Furlough Lake.

NEW YORK, Jan. 8.—*Editor Forest and Stream:* In my Furlough Lake Park there are now 50 elk; last year we had 35; this shows an increase of 15 elk, not counting one of the finest specimens which we were compelled to kill on account of his becoming so vicious that it was unsafe to allow him to go at large, he having previously attacked and seriously injured one of the attendants about the place. The elk seem to be suited to the surroundings of the park and are in prime condition. The one that was killed dressed 1,000lbs.

There are now in the park 13 deer; 2 in excess of our report of last year. There was, however, an increase of 4, 2 of which died last fall on account of the cold and deep snow. The red deer do not do well on account of being driven out of the park by the elk, and are therefore fed near the barns during the cold weather with hay and oats. The elk also are fed hay in the winter time from a long rack, which has been placed in the park.

Of rabbits, 600 have been turned loose in the park since last report, and there are still 135 rabbits in stock, the same as reported last year.

The pheasants show a decrease of 3 since last report; there being now only 25. This decrease is accounted for by the fact that they were confined in a limited space, and also that a great number of their eggs were sterile.

GEORGE J. GOULD.

Ne-ha-sa-ne Park.

NEW YORK, Feb. 18.—*Editor Forest and Stream:* Replying to your inquiry in regard to the game in my Ne-ha-sa-ne Park, I would say that I have turned out 30 more elk since last year, and two black-tailed deer, which were all that arrived alive. All my elk are doing very well indeed, especially those which were turned out the first winter. I have also a couple of antelope, which are doing very well. I have only been able to secure two moose, but am now negotiating for seven or eight more.

W. SEWARD WEBB.

The Liberty Club.

MERIDEN, Conn., Jan. 16.—The English pheasants have done first-rate during the past year. The prairie chickens, which were brought here last year, do not seem to thrive very well in our climate. Partridges and quail did exceedingly well and are standing the winter well so far. More quail will be imported this spring by the club. T. A. J.

Adirondack League Club.

IT is, I believe, quite impossible to make a reasonably exact estimate of the number of deer in our 116,000 acre preserve. During one day I saw 24 deer—but I may have seen the same ones twice. I saw in one pond feeding on lily pads and on the borders of the pond nibbling and drinking 12 deer at one time—therefore I know there were that many. Last fall, in a discussion with some of our sportsmen and two of our oldest guides, all seemed to agree that there were at least 1,000 deer on the league club grounds. There is no doubt whatever that the number is increasing.

We do not permit floating, but we are rarely short of venison in season, for a skillful sportsman finds no difficulty in getting a shot within a reasonable time.

We have not introduced any exotic birds and shall not do so until we can get rid of their destroyers—foxes, owls, hawks, etc. We have many ruffed grouse and believe they will naturally increase rapidly if we can get rid of their destroyers.

In fish stocking, I think we have this year done as effective work as any club in the North Woods. We have put nearly half a million fry carefully in the spring inlets to our various lakes and streams—brook trout, salmon trout and landlocked salmon. We have also just finished putting in 26,000 21-months old trout. We have a well-appointed hatchery and retaining and rearing ponds, and expect to have in a very few years the finest fishing in the country.

W. H. B.

Lookout Mountain Club.

UTICA, N. Y.—The Lookout Mountain Club owns a tract of 5,000 acres exclusive of water, and South Lake is entirely within this tract. We also have a shore line on North Lake of about 2½ miles. In addition to the above, the tract contains about 20 streams and brooks. The waters abound in speckled and salmon trout. We kept the waters of South Lake well stocked before our club was formed and shall continue to stock all the waters, but more extensively than before. Deer are very plentiful, also partridge. There are also many hares, rabbits, wild ducks, woodcock, snipe, and squirrels. In the waters are brook, speckled, brown and salmon trout and landlocked salmon.

Fishing and hunting regulations prescribed by the State game laws govern, except where further restrictions are imposed by the rules of the club. As our organization is a new one, we have not yet introduced any new varieties or exotic game.

The preserve is admirably situated for the preservation of game and fish, as it is about 20 miles from the railroad to our headquarters, which distance makes it less open to the general public. Our tract adjoins the tract owned and leased by the Adirondack League Club and they pass through our preserve to reach their Honnedega Lake Lodge.

F. W. SESSIONS, Sec'y and Treas.

MR. AUSTIN CORBIN'S BUFFALO HERD.
Blue Mountain Forest, New Hampshire.

Hamilton Park Club.

Editor Forest and Stream:

There is very little of interest to give you concerning the Hamilton Park Club. Deer and fish are plenty and seem to be increasing in number all the time. We have not introduced any exotic game, birds or animals, having an abundance of the native game already. Partridges are very scarce, as they seem to be all through the Adirondacks.

CHARLES T. BARNEY.

The Cutting Preserve.

BOSTON, Mass.—The Cutting Preserve is located in the northeast quarter of Township No. 12, called Riversdale, in St. Lawrence county, N. Y. The preserve contains about 9,000 acres. The land in this preserve is rolling and covered with the original growth of timber, no trees having ever been cut from this land. There are three ponds—Train, Weller and Blind ponds, all first-class deer ponds. Also, Trout Lake extends a little way into this preserve.

Up to within the past two years, the ponds were the favorite camping and carousing resort for people living in that vicinity, but they abused their privileges to such an extent that I was obliged to make it a preserve and cut off their privileges. They were in the habit of going in at all times of the year, whether in season or out of season, and killing deer and catching fish illegally, to such an extent that they were fast exterminating both. I found that they took out ten deer the day before I went in one year, all of which they had killed illegally with

dogs, for no hounding is allowed in St. Lawrence county.

The preserve is not inclosed in any way; all game can come and go as they please, and as no dogs are allowed on the preserve, game is protected and the deer are increasing very fast, the whole of the territory being natural feeding ground for them. I have concluded to allow no does or fawns killed at any time, and I think that this should become a State law for a few years, as well as a club regulation.

I cannot state as to the number and kind of game, but should estimate that there are between 100 and 200 deer at the present time, and there will be a great many more in the near future. Only six deer were killed on the preserve during this entire season. Last year there were probably about fifteen killed, but previous to this time I think some years as many as fifty have been killed, and only a small part of the meat has been preserved, most of the deer having been killed out of season.

As to other game, there are a good many beaver and otter on the property and other fur-bearing animals. Bear are quite plenty, and one was killed by the keeper. Partridge are also quite numerous.

There are about fifteen miles of trout brooks in this preserve, all of which abound in speckled trout. Only a small number of fish were caught this season, as I wish to increase both the size and number. The people in the vicinity have in former years been in the habit of going in and taking them out, salted, in butter tubs, and different ones have boasted of 500 or 600 fish caught in one day. As parties would usually stop a week camping you can estimate the quantity that a party would catch during a week's trip. They have also been in the habit of taking trout in nets and with dynamite from Trout Lake.

The people now think that it is a hardship to be deprived of this hunting and fishing, but how long would there be any fish or game if such acts were allowed to continue?

Our party this season killed no deer or partridge or caught any fish except for actual use while in camp. Whether I continue to hold this preserve alone or whether I put it into a club, the hunting and fishing will be closely restricted, and no one will be allowed to break any of the State laws or kill any deer or catch any fish except as per the preserve regulations.

Up to the present time I have made no attempt to put any imported game on the property. My object in making this preserve was not to restrict other people's rights, but to protect the game of the State and at the same time protect my own property from trespassers and from liability of fire, for I found that my camp was continually broken open by these people and my boats and provisions destroyed, and I could get no clew as to who committed the acts, but since making a preserve of the property I have had very little trouble, and the deer, instead of being as wild as formerly, have become so plenty and tame that we are continually seeing them in the woods and around the ponds when we are in camp.

One of my ponds and part of my preserve is located in Franklin county, where hounding is allowed, but I have made a rule that no hounding shall be allowed or dogs brought on to the property.

I think it would be a good idea for your paper to agitate the question of hounding in the Adirondacks. It is allowed in part of the counties, and not in others. The objection is not only in the number of deer that are killed in front of the dogs, but also those that are not driven to water, but are so exhausted that they die. I would also call your attention to the fact that the State of New York does not furnish a sufficient number of wardens to protect the game, and if there had not been a move made by private parties in protecting the game of the Adirondacks in the last few years, there would be very little game there now. The increase is almost wholly due to the protection afforded the game by private parties.

FRANK A. CUTTING.

The Sportsman Tourist.

IN THE NORTHWEST.

IF some of FOREST AND STREAM'S readers and hunting enthusiasts could drop into northern Minnesota wilds they would think themselves in paradise. Though the district is dismal and uninviting as to scenery, the game and fishing there would more than offset the surroundings. I never imagined this section good for anything except tamarack swamps and Chippewa Indians; but at Cloquet, Minn., the ice was just breaking up and the banks of the Cloquet and St. Louis rivers were lined with fishermen armed with spears, who were taking goodly numbers of pickerel and pike—and good big fellows they were.

On the train coming west to Aitkin I met a Mr. Norton, who lives at Cromwell, the town on the Northern Pacific which was wiped out of existence in ten minutes by the awful timber fire cyclone which laid in waste such a vast tretch of pine country last fall. I asked this gentleman f there was any game in the vicinity of Cromwell, and his answer was a puzzle: "There used to be before the fire." When asked if he noticed any game running ahead of the fire, he told me that at the time he did not take particular notice, but afterward remembered that he saw lots of small game—rabbits, squirrels and wolves—passing by his farm a short time before the smoke of the cyclone was noticed. A couple of deer ran across a plowed lot ten rods from the railway depot, and on the Kettle River, six miles north, wolves, bears, lynx and deer were mingled in great numbers. Speaking of fishing in Tamarack Lake, Mr. Norton said that bass, pickerel, pike, croppies and muscallonge were plentiful, and the bait mostly used was angle dogs—or worms, as he afterward explained.

But at Aitkin I struck a genuine Izaak Walton in George W. Lott, the postmaster, and from him learned that I was in the center of a bear den. If Mr. Bobo, of Bobo Station, Miss., had his pack of dogs here he'd be in it on bear and no canebrake to impede his way. One hundred and nineteen bears were killed in two weeks within a radius of 12 miles of Aitkin, one huge fellow being slain 10 rods from the courthouse. Mr. Lott, so far as I have been able to learn, wears the belt for the largest black bass caught yet in Minnesota. I send FOREST AND STREAM a photograph of this rare finny king. It weighed 8lbs. 1oz. when taken from the water, though Mr. Lott has placed its weight at 7¾lbs. when weighed in presence of witnesses, sealed, signed and sworn to.

At this place I also saw a curiosity in the deer family. It was nothing less than a yearling fawn pure white in color, of unusual height and proportions, which was killed by a Chippewa Indian and sold to Mr. Foley for $12, and is now valued at $100 or more. Mounted animals and heads are plentiful at Aitkin and Brainard. At the latter place one saloon has its walls embellished with four huge moose and 11 deer heads, the value of which are respectively $50 and $15 each, but not for sale.

There is some trout fishing at North Branch, Minn., on the St. Paul & Duluth Railway. Fish are being taken in spite of Minnesota's rigid game law and alert wardens. A stream there six miles from town, if able to talk, could "give away" some of North Branch's most prominent citizens who are poaching trout regularly. During the forest fires nine bears were killed within the limits of St. Cloud in one day. At Royalton, a few miles north, thirty or more were gathered in a radius of fifteen miles. This information I gathered from reliable sources; so, Mr. Bobo, jump aboard the cars, get Hough at Chicago and let him come to Minnesota and consummate his desire—a bear.

Coming into Wisconsin a week ago, I got out of the bear country, but fell head over heels into trout brooks. At Rice Lake, Wis., I met Mr. M. P. Barry of the "Blueberry route," as it is familiarly known. Mr. Barry years ago was with the Smithsonian Institute and has made a collection of every beast, bird, reptile and mineral curiosity of this State for the institute. He told me about getting an albino hawk and a pair of albino quail. Rice Lake, after which this place is named, is a body of water half a mile wide and three miles long abounding in bass, muscallonge and pike, some few other fish. Plenty of trout streams hereabouts. In 1894, they were stocked with 80,000 fry; this year 60,000 have been placed in streams within a radius of three to twelve miles. Plenty of fish are now being taken, one gentleman showing me a 2½-pounder of the rainbow variety and a lot of the speckled tribe. The season has just opened and everybody has gone out to-day to fish. The game and fish laws are good, black bass, green bass, Oswego bass, well-eyed pike, pickerel and muscallonge being protected during March, April and May. Few flies are used here, angle worms being the favorite bait. I am now headed for the Superior region and will probably pick up something there.

F. J. S.

THE SUNNY SOUTH.—XII.

Round Rockport Way In Texas.

CHICAGO, Ill., April 17.—As I pen these last lines on my little typewriter machine it is spring in Illinois, and there is a drift of laziness in the air as though caught from the languid airs of the South. The wildfowl have come up from their southern sojournings, and have departed for the further north. Perhaps some of those very ducks and geese which our industrious party tried so hard to murder down in Texas have fanned their way over the home of Col. Bill Peabody and his friends in Cincinnati, or over the abode of the celebrated dogman of Milwaukee, or across the smoky burg of Chicago. In the whistle of their wings I hear the sound we heard far down in the sunny South, and it being, as aforesaid, spring, and laziness being permitted to the sons of men, I can shut my eyes and see the whole panorama of our pleasant voyaging in the land by the sea of ease and restfulness.

The last days of our trip were to be spent at Rockport, and our car was run down there from Sinton, we holding Mr. George Fulton close prisoner aboard, and also for part of the time his brother, Mr. Jas. C. Fulton, whose home is at Rockport. Arrived at the latter village, our party scattered in the usual fashion on individual quest of pleasure, the major part being safe of discovery near the oyster houses, in pursuit of the innocent and uncloying fowl of the close-kept secrets. One party took the boat Novice and sailed one day down to the beautiful channel known as the Aransas Pass, the fishing grounds for the tarpon. We did no fishing, but took it all out in lying on deck and just living. The next morning after that we sustained a great loss in the *personnel* of our party, Mr. Guessaz being called home by telegram from his partner in San Antonio on business matters. This was a damper on the fun, but by this time we were beginning to try to let go of the South, and were talking about having to get back to work ourselves. Nevertheless, we determined to take one more run up the coast to try for some canvasback, and accordingly pulled out for Hines's Bay, forty-five miles distant, early as possible the next day. I will not weary by a long story of that part of our wanderings, for really we were a bit disappointed here, finding that the fresh water of the Guadalupe River, whose presence nourishes the wild celery that makes this a great feeding ground some years, had this year been so limited in its extent by the dryness of the season that the feed had all died down. We saw some few canvasback, it is true, and we bagged about a dozen and a half in our one-night stand there; but we found no snipe shooting, as we hoped, and were not content to stop for the duck shooting.

Oysters While You Wait.

It was about noon of our first day at Hines's Bay that we spread our sail for the homeward flight. The wind was baffling and uncertain, and we found much difficulty in making our way through the many reefs and shoals of these shallow waters, which for 20 miles hardly average 4ft. in depth except along the narrow channels, and where the best of pilot knowledge is a necessity. At length, in spite of the best efforts of the Bludworth boys, we struck a reef, going well aground. Edging along this bar after we got back from the contact, we learned by the grating on our keel that we were on an oyster reef—indeed, nearly all the reefs of that locality are oyster reefs. At this discovery a great shout went up from the Northern men, and at once the anchor was dropped and we went to dredging for oysters in the limited way made possible by tools such as a boat hook and a hoe. At length Johnnie Bludworth grew disgusted by his inability to supply the ready demand for raw oysters, and plunged bodily over the side, going just over waist deep in the water, so that only one corner of his eye showed above water when he stooped down to gather the oysters in his hands. This was a trifle rough on Johnnie, for the water was cold in spite of its being so near the Gulf Stream; but the rest of us profited largely by his venture, for we soon had a great pile of fine fresh shell oysters heaped up on the deck, whose opening and eating occupied a good part of the evening. Then, after the deliberate fashion of men who are not due anywhere at any given time, we again hoisted sail and slowly tried further through the reefs.

Voices of the Night.

Dark settled down on us, or rather sunset and darkness, for there was a misty moon, and we were still 25 miles from Rockport, crawling along in a faint and puffy wind opposite the low shores below the mouth of Hines's Bay. Far toward midnight we sat out on deck and enjoyed the lovely sail by night. When passing close along a certain long point, which the boys told us was called False Live Oak Point, we began to hear great quantities of wildfowl of all sorts, these voices of the night coming to us in a confused murmur of gabbling, honking, trumpeting and quacking, with many interspersed sounds of a wild, strange sort, such as none of us could name. Very melodious and wildly fascinating these hidden sounds seemed to us, coming out of the misty, unknown shore, whose outlines we could not see. We began to think it all over, and as the sounds of feeding birds continued and seemed to represent a great body of fowl, perhaps the very location we had been feeling around for on the coast, we concluded the best thing to do was to drop anchor and investigate a little in the morning. We turned in, or at least most of us did, though the skipper and crew navigated till 3 o'clock in the morning, in order to drop anchor at what they thought was a favorable spot for the morning's shooting. This was to be the last day of our trip on the coast, and the faithful owners of the Novice wanted us to have a good time.

A Royal Sight.

We did have a good time, perhaps the best time of the whole trip so far as the shooting was concerned, for certainly at no other point did we see such abundance and variety of wildfowl, and had we stayed for a day or so at this point we could surely have shot to our hearts' content. We found that there was a long expanse of water about a quarter of a mile inland from the shallow salt water bay, and this lake or arm of water we at first took to be fresh, though we found later that it was connected with the salt water by a narrow channel at each end. This inland lagoon was nearly two miles in length and was perhaps a half mile across at its widest point. On each side of it there ran many ponds and pools of shallow water. All these connected waters, as well as the shoal water of the bay in which we had come to anchor, bore innumerable thousands of fowl which were evidently finding plenty of feed, for they were all very fat and heavy, as we found later. I have never in my experience seen so royal a sight as that uncovered by the morning sun as it rose above these favored waters. There were long lines of honkers riding out at sea and passing inland to the lakes; there were ducks in strings and clouds coming and going along the coast and over the ends of the inland arm; hundreds of silver gray herons stood in gaunt profile along the sedgy flats inshore, and there came to us often the wild trumpeting of the great bugler cranes. Out in the bay, in great white squadrons of many acres in extent, floated the greatest birds of all our wildfowl, the big white swans, whose melancholy but melodious notes came wafted in volume on the early air of morning. The music of these many great birds of many sorts was loud, continuous and stirring, and the whole scene might well have moved to excitement more hardened sportsmen than ourselves. We were ready to admit that on this, our last day in the country, the gulf coast of Texas had massed its attractions to show what it could do.

A Successful Shoot.

But to get at the shooting was another thing. The cover was very low and meager, and a blind was a work of hours. Decoys we did not use—except that Mr. Peabody for part of the time had out a small fleet in a little pondhole, with the result that he killed more ducks than any of us, the mallards and pintails decoying as beautifully as one ever saw them do anywhere. We were all in too big a hurry and too much crowded for time to take much care with preparations, and so scattered in all directions and got into such cover as we could over a mile or so of country all along the inland lake. That the birds were obligingly tame we soon learned, and soon they began to pay the forfeit of their ignorance. In the early morning light I could hear the guns cracking, almost before one could see the length of a gunshot in the fog, and as the day grew clearer I could from my own point of operations see the stands taken by Burton, Dubois and Merrill, and could now and then see the deluge of fire and smoke from Jimmie Bludworth's awful gun, and hear the ping of the .44 with which Johnnie was trying to put in the morning, he having no gun with him. It was all exciting as a skirmish.

That was one of the mornings when everybody was lucky. Dick Merrill killed so many geese that he could hardly lug them over from the lake to the boat landing. Wilbur Dubois and Bob Burton had geese and ducks both in their string, and Mr. Peabody was regularly cutting down the mallards in the finest bit of decoy shooting he ever had had in his life. Jimmie shot up all his shells, and Johnnie used up the last of his rifle cartridges, getting a fine honker and a splendid specimen of the white bugler crane before he was compelled to cease firing. It was about 11 o'clock when we first rounded up on the beach off the Novice anchorage, and when we piled up all our game we had a magnificent showing—nearly four dozen ducks, a dozen of the largest and fattest geese I ever saw, all Canadians, besides some white fellows not enumerated, the big crane and also a fine great swan.

Adventures with a Swan.

The swan I was lucky enough to kill myself, and we had quite an adventure over it before we got it in the boat. I was away down at the end of the inland lake, near a flyway I had discovered, and was lying flat down on my back where the grass was about 6in. high, calling mallards, which often drew over from the bay to the lake at that point, so that I got a little shooting of a snappy sort, inasmuch as I could not move in the least, and so could not see the birds till they came over and past me. Very often a great line of geese would come down my way, after paying tribute to Dubois, Peabody, Burton and Merrill up above me, and though these usually kept out over the open water away from my point, I occasionally got a shot at them. It was well on in the morning when I heard a great honking and chattering and calling coming down the wind to me, and looking up carefully I could see bearing down the lake the largest flight of wildfowl I ever saw on the wing at one sight in my life. There were geese, ducks, white geese, everything a man ever did hear of in his life, all in one great scatter

ing cloud. The string of fowl extended over quarter of a mile in width and was twice that deep or more. They were coming very low, milling up and down and talking in a constant deafening chorus over some subject which appeared to have the greatest interest to them. I could see that some of the great flight was bound to pass directly over me, and as they came on I dug myself into the hard ground as far as I could, lying flat on my back and not daring to move even an eye over in the direction of the birds, though I had the hardest sort of work to keep from turning my head over to peep at them as they came on in their wavering flight, the great noise of their calling growing nearer and more thrilling at every moment. They seemed to me to be within 300yds., but I dared not move. Now they were within 200, I said to myself, and now perhaps 150. I was clutching my gun hard, and doing all I could to keep down till the moment I should see the birds right over me. It was just before the instant when I was about to sit up and fire that, right above and between me and the oncoming flight of fowl, I heard a faint, soft, deliberate whispering of great pinions, and then heard, almost at my ear and startling in its volume and its nearness, a great, deep, melodious, trumpet-like note, which I can only say sounded sweet and sad at the same time. At the instant this note sounded, I saw two great white swans passing over me, they having started to cross from the bay to the lake directly at my point, and having crept up on me without my having any suspicion of their presence. In the half-flash of an instant I made up my mind what to do. The Canadians were almost on me, and I was sure of a brace of them at least; but I had killed enough of geese. I would try for the swan instead. On the moment of this resolve I sat up and fired at the nearest swan. Already it had seen me, and with a great sweep of its strong wings was attempting to rise. Its body was at an angle, and its left wing, the one furthest from me, was strained beneath its body, slanting down, as the bird tried to get up and away. This sudden turn and the tense straining of the bones and muscles of the wing to lift the heavy body gave me my swan. I heard the strong load of No. 4 shot cut into the body of the bird, and saw a great sad splash of red stain its side as it fell. The left wing bone, the one furthest from me, had given way close up at the shoulder. As quick as thought could work I fired at the other swan, which was now on level pinions, and it paid no sort of attention to it, but sailed off apparently slowly and undisturbed. My crippled swan seemed close to me when I fired at it, but when it struck the water I saw how very deceptive the great size of these birds makes them. I ran to the edge of the water, and into it as deep as I could go, and fired eight loads of No. 4 at its head and neck, but I could not make it bob its head. I saw the shot spread wide around it, and knowing how admirably the gun I was handling shot that particular charge, I knew then that the bird was no doubt 75 or 80yds. from me. It was only a lucky chance that brought it down. Moreover, it was not yet mine, for with wild and melancholy callings to its mate the poor creature was swimming out rapidly into the middle of the lake. One often hears of the song of the dying swan, and one also hears that idea ridiculed as an absurdity, but I am ready to say that the saying has excellent foundation. I have never heard a more mournful note than that poor bird gave as it tried in vain to rise and join its mate. Surely it spoke of grief, surprise and despair in its soft clarionet reiterance. Could I have made it whole at that moment I gladly would have done so.

It would not do, however, to leave the swan alone to perish on the water, and I could not get near it to finish its sufferings. It was a mile back to the landing, and it would be a two miles' pull to get a boat around into the lake from the Novice anchorage. This latter was a necessity, and though it was now nearly time for us to leave for home, the others said they would wait, and Johnnie volunteered to take the sinkbox around in and get the swan, Dick Merrill and I walking along shore to watch the rushes where the crippled bird might have hidden. It was nearly an hour before Johnnie got around, the wind being bad for him, and when Dick and I came to the place where I had left the swan we found a flock of about 300 other swans that had lit in there. I had taken a rifle along this time, to kill the cripple if it was lying out far from shore, and I fired a few shots at this flock, thinking of course to see the cripple remain when they flew. To our surprise the water was left entirely bare. My swan was gone!

Dick was a little disgusted at this, and maybe thought I hadn't any swan, but we proceeded to hunt all along the shore for nearly half a mile. Johnnie came up then with the boat, and at length, after we had about given up the search, we saw a low mass of white feathers lying among the rushes about a quarter of a mile from the place where the swan had fallen. The great bird crouched close among the foam bubbles, using its last artifice to save its life, but we saw it as it tried to hide, and I called Dick to kill it with his gun, as I did not want to spoil the body with a bullet. Dick stepped back about 25yds. and fired at the swan with a load of No. 6, shooting at the neck of the bird, but the impact hardly seemed to jar it, and it continued its heavy crawling toward the water. He ran up closer and fired again, and even then when I picked the great bird up it was not dead, though dying. Then for the first time we saw how large it was. We could not weigh it, but its beak was high as my head as I lifted it just clear of the ground, and it made a good tug to hold it up at arms' length. Thus we secured one of our most considerable trophies. Later I learned that the skinning of a swan is one of the hardest operations in the preparing of trophies. The fat was thick and soft and oily to an unbelievable extent, and the butts of the quill feathers came clear through into it, so that it was hard to keep the skin whole and clean of grease.

North-Bound.

We left these last happy hunting grounds with very much regret, for we had found no prettier place to shoot than this, yet our icebox was well stored with game as it was—so well that we gave much to friends at stopping places in Texas and still had some fat geese aboard the good car "202" when we reached St. Louis and came to break the last links of our party.

We had said good-by to Mr. Geo. Fulton before we left, and now we had to say good-by to his brother and the others of our acquaintance at Rockport. We resolved to pass a day at San Antonio, and Dick Merrill, who had determined to spend the entire winter on the coast at Rockport, concluded to run up with us to San Antonio to see the last of the party. We wired Oscar Guessaz to meet us at the afternoon train, and so at last begun to undo the fetters that had so pleasantly bound us to the coast country and headed north for our return.

Beware the Jaguar.

Oscar Guessaz of course had a long programme of entertainment for us in the city, and the first part of it was in evidence when he showed up at the depot with a spanking team and carriage to take us out to the old mission, the barracks, the grounds of the rifle club, the sulphur springs, the San Pedro springs, etc., etc.—there is a world of interesting features all around San Antonio, and it is well called the best of the American winter cities. The springs are fitted up as show places, with features of museums and menageries. At San Pedro springs, where the lovely little San Antonio River comes rippling up out of the ground, there is a very notable collection of native wild animals—including a live and very active jaguar, which can reach about 25ft. with his arm and is quicker than a streak of lightning. I was going to pat this fellow on the nose, but he didn't look at it that way, and swiped a piece of skin off my hand before I could see he was going to do anything. You can't pat jaguars any. Talk about boxing kangaroos! If I know anything about boxing, that speckled misanthrope at San Pedro Gardens could give all the kangaroos or other two-legged boxers in the world a liberal education on sparring for scientific points. Man, who makes his living nowadays by gun or by theft, is no longer much good as an animal, and has lost all the quickness of the animal of prey.

We all called of course at the Aransas Pass Railway offices, where Mr. Peabody made thanks to General Manager Montserrat for the many courtesies that had been shown his party in Texas by the Aransas Pass Road—no doubt the most obliging railway on earth. General Passenger Agent Martin and his pleasant assistant, Mr. Lupton, we also thanked for many kindnesses, such as traveling shooters do not always receive in the colder-hearted north country. Enough cannot be said for these gentlemen, or for all those who so signally entertained us all through the great State of Texas.

Sadie, The Chile Queen.

In the evening we met a great many of the hearty craft of shooters in old Santone, and were busy visiting these with the indefatigable Guessaz, who knows everybody

SADIE, THE CHILE QUEEN

and is known of all, up till the hour of the last detail of hospitality he had arranged for our pleasure. For there remained yet one point of interest to be visited, one leading citizen to be seen, one more friend to whom we must say farewell. Need I mention Sadie, the *Chile* Queen? If Sadie be not one of the features of interest of San Antonio and one of the leading citizens of the town, to what or to whom shall we ascribe that honor?

Of course a *chile* supper at Sadie's *casa* was to be the close of ceremonies at San Antonio. Sadie was going to give us this supper herself, but we couldn't allow that. Sadie was still doing business at the old stand, and so was her Mexican cook Pancho.

"Pancho is so funny when he is drunk," said Sadie, philosophically. "To-day he got drunk, and he went out in the yard and climbed up in a tree to go to sleep. I had to get up on the ladder to wake him up. He looked so funny, asleep up in the tree!" And then Sadie called Pancho in to see the gentlemen he was to cook for, all of whom regarded with a certain curiosity the gentleman whose habits lead him to go to sleep in trees when under the weather a bit with *auguardiente*. But Pancho could cook *blanquillas* and *chile con carne* and all the other *chile* things just as well as ever. And Sadie could be charming as ever as *chile* hostess. She is probably the last of the long dynasty of *chile* queens, the modern San Antonio looking with reproach on the picturesque old ways of living which once obtained. I have already told how the *chile* stands once lined the markets, making the night bright with their flaunting torches, and enlivening the street with the charms of varied costume and vivid outdoor life. Then came the change by which the *chile* business lessened and went within doors. Sadie has long had her restaurant in a shop of her own. To her no worthy successor has ever appeared, and it may be she is the last of the *chile* queens, as she has been one of the most notable and historic of her unique class. Marriage is usually the end of the *chile* queen, and Sadie now is married. Indeed, if I am not mistaken, Sadie said that she had married one or two men since we were last there, and that she intended to keep on marrying until she got a good man, and then intended to stop. This I take to be proof of a strong common sense quite worthy of a ruling sovereign. But maybe Sadie was joking, for any way she was as *debonaire* as ever, and as fetching, and as ready with repartee. In a few moments Sadie was addressing the head of our party as "Bill," somewhat to his surprise and therefore to her own enjoyment. And this time, although there were several of us, she decorated each with a fine fresh flower for his buttonhole when we said good-by. Sadie is not to be misunderstood. She is simply unique, the last type of a vanishing class which has no precedents, which suffers no comparisons, and needs no comment. In presenting the portrait of Sadie, the *Chile* Queen, FOREST AND STREAM offers a unique feature, and introduces personally to each sportsman of the land the jolliest, squarest and best-natured fellow in the world! After this, where else in all the world shall one buy his *chile* supper!

Where but in the South?

And where else in the world shall one go for his winter voyagings if not to this sunny South about which I have been trying to tell? It is a land too little known, too little understood. Its customs, its institutions and its attractions are but dimly grasped by those who have not visited it. To those who have done so they cannot fail to appeal most strongly. The Sunny South is the coming land for sportsmen to know. When they know it—as one may say the sportsmen of this country have through FOREST AND STREAM had their first and almost their only chance to know it in sporting journalism—they must love it, as all do who have seen it, and having loved it, they will pray it never may be changed. These things we spoke of as the wheels bore us to the North, we having almost in sadness said good-by to the last of our many new-found friends. Of these, in Tennessee, in Louisiana, in Mississippi, in Texas, we still hear; and of course having met them we cannot deny ourselves the pleasure of at least hoping to meet them all again, either in the South or in the North; and if it be in the latter locality, we can only hope to emulate to the best of a poor ability the customs of the land of the ever-open door.

Natural History.

THE ART OF TAXIDERMY.

"THE best man can be beaten." This is certainly true, at least so far as taxidermy of the present day, and the art of reproducing nature in the animal, the bird, the fish and the reptile are concerned.

In an article published two years ago, entitled "High Art in Taxidermy," I spoke severely in reference to the generality of mounting (more properly termed stuffing), where the unfortunate specimen is simply stuffed with some cheap material, such as straw, excelsior, old rags, newspapers, etc., to the fullest extent of the skin, the result being a shapeless mass, without meaning and without any attempt whatever at anatomy or life-like expression. The true taxidermist can produce an exact counterpart of the living specimen itself from a fresh or properly treated skin. I refer more particularly to mammals, as in these is found the better opportunity to clearly define the anatomy and show the skill of the taxidermist in the development of muscles, expression and action, even to the reproduction of the more important veins. The skillful artist can reproduce the wonderful poses of life, showing how action can be put into the specimen by proper positioning and modeling of the bones and muscles, the study of expression by developing every wrinkle of the skin on the face. In fact the art is fast reaching that standard where I have long wished to see it placed, that is on a level with sculpture and painting.

The true naturalist and taxidermist must possess the best qualities of sculptor and artist, as well as be master of natural history and of anatomy, not alone of the human body, but of the mammal, bird, fish and reptile. There are but few such in this country, but it is simply for want of encouragement. Fine art in this country was in its infancy fifty years ago. Wm. Hart was one of a few American artists who at that time struggled hard to interest American people in American pictures. Look at the position of fine art here to-day; scores of brilliant painters are making or have made their mark. Wyant, Innis, Church, Wm. Hart, and many others now rank with some of the best foreign artists, and their names and works will live forever.

France is far in advance of other nations in the art of taxidermy. Germany and England have more recently developed the fine scientific school for mounting, the latter within about fifty years. The lion group in Central Park Museum was mounted by Verreau, an old Frenchman, in Paris, twenty-five years ago. It is still fairly well preserved and would to-day certainly put to shame many of the outrageous caricatures stuffed by some of our so-called American taxidermists. Encouragement is what we need. It is an elevating and worthy art. In most of the colleges and schools of France it is taught as a regular branch of study. They all own their collection of specimens for the study of natural history. Give us the same opportunities and we will soon lead the world.

Sportsmen and naturalists in this country have become discouraged and disgusted with work received from men who are simply in the business for the dollars and cents they can make. But this class is found in all professions. There are cheap musicians, cheap pictures, cheap everything. One artist can obtain one hundred times the price of another for a painting. The same with the sculptor. Then why not so with the taxidermist? Americans are not yet educated up to paying the price necessary to encourage the finer class of work. For instance, three years ago, when in London, I had the pleasure of seeing a group of two lions mounted in fighting attitude. It was a grand piece of work; the fearful straining of the muscles, the eyes fairly bulging from their sockets, with mingled fierceness and pain, the claws and teeth sunk deep into each other's flesh, and blood oozing from the fresh wounds. No picture or statue could represent so much with the same subject. There was the natural skin, teeth and claws mounted; so real in appearance that it was almost life itself.

That group had been mounted for an English lord, and the price paid for the labor was about £1,000, or about $5,000, and it was well worth the sum as a work of art. What profession requires more knowledge, more skill? For example, where the sculptor leaves his work as finished, the taxidermist is but half through. By far the most difficult and scientific part is yet to be accomplished. When the model or manikin is ready for the skin, every muscle properly developed as in life, in the condition the

sculptor considers finished, the taxidermist turns to the wet, relaxed specimen skin, places it over the manikin, bringing the seams together in their proper places, joining them in an invisible manner, and every inch of skin, with every curl or part in the hair brought over its correct place on the animals, and again modeled over the manikin; the fine finishing touches bringing out the detail in the smallest wrinkles of the skin and the exact expression of the eyes, nose, ears and lips. After this work has thoroughly dried, the coloring and modeling in wax of the mouth and nostrils is a work of art in itself, as the colors differ in nearly all species of animals.

The making and coloring of artificial rocks is quite an essential feature, and should you have the fortune to run across one of these modern mounted specimens, you will at once appreciate the advancement being made in this art and allow me all that I claim. There are exceedingly few first-class men of the new school, but encouragement is all that is needed to produce the talent and place us ahead of the world in this art, as in many others.

WILLIAM W. HART.

STARLINGS.

Editor Forest and Stream:

I have been extremely interested in the letters that have recently appeared in your paper regarding the starling. If, as your correspondent writes, the bird has actually become colonized in this country, no person ought to be more delighted than the agriculturist, no one better pleased than lovers of song birds. It is unfortunate that such a nuisance as the so-called English sparrow should ever have been brought to this country. I am surprised that any person with any knowledge of the habits of this bird would think of encouraging it, but with the starling it is far different. This seems to be a bird with two great objects in life, the first being to clean up the pastures from all insects that dare to show themselves, the second being to praise the Great Being for the blessings of existence, both of which are done in a thorough and energetic manner, either of which ought to be a sufficient reason for their existence; and if the bird can be successfully colonized in any or all the States of the Union and Territories I consider it will be a considerable acquisition.

In the midland counties of England, where the starlings are almost always to be found, both in winter and summer (the only time they are absent being when the huge flock moves from one place to another on account of food), I have had many opportunities of watching them, sometimes for hours. About the middle of February, when the very first signs of spring are felt, the starlings may be heard on the tree or near the spot where they intend to nest. They are at first rather wild, but if the weather continues good they will not fly away until you approach very near. They are known to the initiated by their song and powers of mimicry without seeing them. Besides their natural notes, which are many, they are capable of mimicking many of the other birds, their powers varying from the song of the barn swallow to the harsh note of the blue heron. Not even satisfied with singing as well and as loud as possible, the bird keeps up a flapping of the wings for several minutes at a time during the most vigorous recitals. Nor do they soon grow tired. Probably during the time the male bird is going through this song and dance, the female will be inside looking to see how much repairing last year's nest needs. Should anything suspicious occur the song stops, the male bird utters a harsh note, *crake, crake,* not unlike the alarm note of the blue jay, when out comes Mrs. S. from the hollow limb, or wherever she may be, and away they both fly until the coast is clear again. This is probably repeated a few days when the nesting commences.

When the nest is finished from four to ten eggs are laid and incubation goes on. After the young are hatched they are fed entirely on insect food the latter part of the time, much of which is composed of the hard-shelled kinds. After the young are out of the nest they soon learn to take care of themselves, and they then consume large quantities of what is locally known as the May bee. Here I hear of a similar insect called the June bug.

This brings me to the thought that the chances are that if the starling could be successfully colonized where the locusts are so very troublesome, it would not be so long a time before they would be greatly reduced in numbers or almost completely destroyed. I also think the birds would almost clean out the potato bug and striped squash bug, and generally lessen many other of the insect pests that are so common in many of the States.

More than one nest of young are raised in the same hollow during the spring and summer, but whether by the same pair of birds or not I could never determine. If by the same pair, then there are many birds which never nest each year, as there are flocks of birds moving from place to place throughout the year, and these seem never to have any interest in the birds that are nesting, nor do the nesting birds ever seem to notice them.

During the fall the young birds change their plumage from a drab to almost a black or what appears such, many of them acquiring a lustrous sheen toward Christmas, with the addition of many specks of creamy white, giving the bird a very striking appearance when one has the rare good luck to get near enough for close inspection.

It is during the winter months in open weather that the bird is doing his very best work as a bug exterminator. Collecting together all his brothers and his sisters and his cousins and his aunts of all and every demonination, he seeks the pastures, both upland and meadow, and descending in a cloud at one end they proceed in very business-like manner to clean up all insect life that dares to show itself, even to only a toe. This they do until the whole of the pasture is cleaned up. Should the supply have been good, as it is sometimes in mild winters, the whole flock are liable to betake themselves to some one or more tall trees in the near neighborhood, when they will all join their voices in one grand chorus, apparently of thanks, each bird not singing as the males do at nesting time, but each seeming to be doing his sweetest *dales* and relying on the number for volume. After some minutes spent in this song of thanksgiving, the whole flock cease suddenly and depart with a rush of wings that make a sound like thunder. Should nothing disturb them they will shortly descend on another pasture, where the same programme will be followed out. At even time they may be seen in one long line, from east to west, flying north to roost. What time they start or where they roost I never could satisfy myself, nor could I ever tell if all the starlings in the country were in one flock. I have never consulted any authority on this matter of their gathering in flocks, but it seemed as if there could not be room for many such flocks as those I have seen passing over during September and October and later in the year.

As a friend of the agriculturist I do not know of his equal; as a songster and mimic there are few better; as an amusing pet or cage songster after his juvenile days are over few can compare with him. But he must not be allowed to gain a nesting place in the dove cote if one wishes to raise young pigeons. He seems to have some means of preventing the young of the pigeon from hatching. I do not think there is any danger of his ever supplanting any of the native birds of this continent, unless it be those breeds which are more indolent than he; to such he should give a moral lesson in industry and utility.

In confinement I should think the young could be successfully raised with using the larvæ of the wasp or yellow jacket, the larvæ of the ant, all kinds of insects (except the earth worm until the birds are well grown), hard-shelled bugs and beetles without the shells until the young commence to feather, shreds of raw meet fed sparingly, houseless snails, and in fact almost all kinds of insect life; and I think the great secret is in a variety of it. The nest of the yellow jacket is easily taken so as to procure a supply of larvæ for many days; young can be hand raised on these alone.

The introduction of the bird to this country should mark a red letter in the diary of the squash and potato grower, and it is to be hoped that the restriction of immigration will not be carried to such an extent as to include the starling.

COMEDY.

A GROUSE IN THE HOUSE.

HINSDALE, Ill., April 29.—Last Sunday a neighbor sent over for me to come and see a bird she had just caught. Being busy at the time, I did not go until late in the afternoon, when to my surprise I found she had a hen ruffed grouse, which had calmly strolled into the house from an adjacent piece of woodland.

Her little boy said the bird walked across the road, up the piazza steps and into the hall, the doors being wide open; then it went up-stairs, where the lady found it perched upon her window sill.

The bird made no attempt to escape until placed in a box, then in trying to get away it injured its head so badly that they were compelled to kill it.

The grouse laid an egg while in the box. They had picked the bird when I arrived, and I carefully examined it for traces of some injury, but could find none; it was in exceptionally fine condition and apparently as sound as a dollar.

I have known several cases of birds flying into or against buildings when pursued by hawks, but never before heard of such a shy and wary bird as a grouse deliberately walking into a house.

I regretted very much not having been able to preserve the bird alive, as they are extremely rare here, and she was evidently about to begin her season's nest.

T. C. M.

As in Buffalo Days.

LINCOLN, Neb., April 28.—*Editor Forest and Stream:* I inclose a clipping from to-day's issue of the *Nebraska State Journal,* which does remind some of us of olden times on the plains.

E. E.

It reads: "A royal battle occurred yesterday afternoon at Lincoln Park. It was such a one as the old settlers used to see when the plains swarmed with buffalo and a man's life was not worth a penny if he were caught in a vast herd of these magnificent beasts. There has been a herd of seven cows, two young and one old bull in the park for some time. Living up to the custom of their ancestors, the young progeny, assisted by the seven cows, started out yesterday afternoon to put the old fellow upon the sod in the very shortest possible space of time. For one hour and a half they fought with a frenzy that was enough to make the blood of the witnesses curdle. The enraged bellowings, the sharp grunts of pain as a horn was driven into the sides of the maddened bull, made the scene one to be remembered. The old fellow fought hard for his life, but the younger and stronger bulls were too much for him finally. It was nine to one, and when the battle ended the immense form of the old bull lay in the dust. His body was punctured so badly by the horns of his persecutors that his hide was not worth saving. The younger members of the family did not escape unscathed. Several of them will carry scars with them through life, which will doubtless remind them, when their descenddants attack them, how they treated their immediate ancestor."

The Few Song Birds.

WEST PARK, N. Y., May 4.—*Editor Forest and Stream:* I was much interested in the note of "F. C. B." from Framingham, Mass., April 21, on the scarcity of spring birds. The writer's observations agree with my own. Not one bluebird at my place this season, and we usually have two or three pairs nesting about. I have seen but three specimens, a pair early in March and a solitary bird in April. Robins are abundant, but not so numerous as last season. There is a marked falling off in the number of swallows, meadow larks, red-winged blackbirds and warblers. Our trees should be swarming with warblers on their way to higher latitudes by this date. So far I have seen and heard only the pine-creeping, the yellow warbler, the black-throated green, and the black and white creeping warbler. The native sparrows seem to have held their own. I have seen one kingbird and heard the oriole this morning. The severity of the winter in the South, I fear, has been very destructive of the birds.

JOHN BURROUGHS.

Some Elk Horn Measurements.

CLEVELAND, O.—I send you exact measurements of the horns of bull elk killed by me in Colorado Sept. 14, 1894. A photograph of this animal was given with my article published in your issue of Dec. 8, 1894. Around burr, 14¼in.; around beam, between second and third points, 7¾in.; length, around curve, to end, 54in.; length to point of fourth antler, 53¼in.; width, inside greatest spread, 38in.; number of points, 19. I should be pleased to have other sportsmen give the measurements of their trophies for comparison.

A. ST. J. NEWBERRY.

Game Bag and Gun.

FROM A WOODSMAN'S VIEW-POINT.

NORTHWOOD, N. Y., April 22.—*Editor Forest and Stream:* Here is an advertisement clipped from *The Sun* of April 21: "Restaurant de Paris. French Snails. Escargots de Bourgogne. Red Head Duck, Grouse, Partridge, Venison, &c. 73 Washington Square, 4th street, New York."

I don't just understand the bill of fare. Partridge up here means ruffed grouse, and I have a notion that if I'd go out and kill one of them now and Acy Legg of Grant heard of it I'd get myself into trouble. Acy is game constable.

I don't understand the venison part either. Up here among us woodsmen when a man gets a piece of venison in April he don't go around advertising it in the papers, but slips it into his cellar after dark, salts some of it down and eats the rest when he hasn't got company. Maybe though it's antelope or something else from the West the restaurant has to sell.

It's just such advertisements as that, picturing gog-eyed, stomach-happy, wine-bibbing, unlawful, game-eating dudes, that make us woodsmen, who haven't tasted fresh meat since our neighbor 'cross the creek killed a small doe last fall, gather to ourselves our rifles and sneak up Little Black creek way in the spring and try for a buck in the red. Of course does are no good. They are thin and their meat is in such a condition that no woodsman would eat the stuff.

We have read lots of articles in papers telling us folks that if we don't stop crusting and spring deer hunting we will kill all our game; then we won't have it any more, boo-hoo. And then our boys won't have anything to do but catch chubs and suckers and shoot chickadees and drink whisky or play cards.

Then a big drove of murdering city hawks come up here in the fall a-banging at this and that, shooting does and bucks and "yearlings," and wishing all the while that they could get more. If we guide them in they won't let us carry rifles, but make us do the valet act all the while, washing dishes, toting grub and ammunition, or putting out dogs, while they sit on the runways cocked up straight and rifle clasped tight, shaking their noses till they point south, southeast and west in the fraction of a second, jumping three feet into the air if a bluejay yells over their heads, but just the same letting the blood squirt out of the deer when they do come in—they could not help it hardly, shooting a gun with more bullets than a double-barreled shotgun could carry buckshot.

Then about the scores. Somebody ups and writes to a sportsman's paper, telling what an awful good time he had, how lovely his dogs worked, and how he got only six or ten or seventeen partridges the first day, six the next and twenty-one the next, and so on. The biggest day's score of a woodsman, so far as I know, in this region was four partridges in one day; the next best was three, but several have killed as many as two. Just the same we are preached and cussed at for annihilating the game.

That isn't all either. A lot of men band together into a trust. They buy up two or three farms, a few hundred acres of woods, put up a fence sometimes, post a keeper and tell us to stay away. If we don't, along comes the keeper with a rifle on his shoulder and he says "git." We have to, too, because we don't understand lawyers and their trapsins, and if we didn't go that keeper might try to shoot; then if we shot we don't know what would become of us, so we sneak it after dark or when the keeper's sick or something.

I'll tell you just what happened to me last fall up at Moose River. I was hunting deer with as nice a party as ever I went with. They put me on a first-class runway, and I saw as many if not more deer than any one of them. In fact, one of them never saw a deer on that trip. I was at the Gorge Runway the day after I had killed one—I was the first one of the party to kill—when along came one of those Adirondack League guides. Says he: "Well, where's your ticket?"

"What ticket?" says I.

"Why, the visitors' card."

Then I knew what he meant. I was below the League line and on League property (if I was not below high-water mark, which I guess I was). If I did not have a guest's card I would promptly be ordered off. I didn't have any card. Then he said that I was so and so of such and such a place. I said I was. "Then you had better go." I said I would, and then that fellow went up to our camp at the natural dam and with a broad grin on his face said that he'd "scared young Spears clean off of his boots."

I am young, that's true. I can't raise a mustache yet. I've tried, but I can't. I was scared, too. He had a gun and was a big, big man, and was sitting within 3ft. of me as he talked. I was expecting to be marched off League lands at the point of his gun. He said up to camp that my face was white and my hair stood on end. I guess it was. I felt a little silly, anyhow.

Just the same, it is just such treatment as that, whether it's right or wrong, proper or improper, that makes us woodsmen, when we gather in the blacksmith shop, curse these men who try to keep us from the only play that we have, and give their guides authority to drive us like criminals from their land. It may be right that they should own the game and fish because they own the land, have wealth, and pleasurable city homes fixed up with fine things such as we never saw; and that we, because we are poor and are not rich enough to buy these things, should be treated worse than League dogs. To these men we are odd of speech and odd of habits; we are ragged, usually dirty. These are the result of our labor and of our environment. But among us are just as good men, just as brave and just as honest, as are to be found among the wealthy people who are trying to control our playground so much as to keep us away from it.

There are desperate men among us whom I have heard declare, as was once proposed concerning the seal fisheries, that to bring the arrogant clubs and individuals to their senses "I'll kill everything that walks, flies or swims, which those fellows seek, whenever I get a chance." And they are doing it. How much only they themselves know.

It may seem that I am a man with a grievance; that I am speaking against the sportsmen's clubs from purely

personal motives, especially after my relating the experience with a club guide; but let me assure the reader that there are dozens of persons who have been treated almost as I was, not alone woodsmen, but people of eminent respectability outside of these clubs from the cities.

I fear that I will see the day when deer will have ceased to exist in the Adirondacks because the State did not buy up a great tract of land, properly protect it from hunters, that the overflow of game might supply the surrounding woods, where rich and poor alike could enjoy a sport which makes rugged, honest men when properly followed.

It may have been violent to have written the above against what is regarded as proper institutions by sportsmen, but only those who have lived among the woodsmen can or do understand how deeply this subject has stirred them. RAYMOND S. SPEARS.

CHICAGO AND THE WEST.

Worse Than a Nullity.

CHICAGO, Ill., May 4.—Minnesota reports a law showing a clause providing a $25 non-resident shooting license, and openly declares this to be in retaliation for the North Dakota law establishing a similar license. North Dakota has already stated emphatically that her license clause was inserted in retaliation against Chicago's proposed Blow bill, which would have wiped out all Dakota game. Nebraska has also said openly that her attempted license of $50 for non-resident shooters was a measure retaliatory against Chicago. Leaving out all question of the desirability of license provisions in the game laws, does it not appear to the friends of the man Blow, who devised the late iniquitous measure known as the Blow bill, that he has proved himself not only a nullity but worse than a nullity in matters of game protection? All these little things coming from all over the great West, which is directly affected by Chicago game laws, must surely furnish cheerful reading for the illustrious warden in question.

Meantime there continues a very ominous silence at Springfield on game law matters. It is practically certain that there will be no improvement and no change in the Illinois game law.

Trout.

Rev. L. A. Crandall, of Chicago, with friends, departs this week for trouting waters in Wisconsin, probably Dudley, on the Prairie River. I wish him good luck. Mr. H. L. Morrill, of the 'Frisco Road, and several friends, of St. Louis, passed through Chicago early in the week in a private car, bound for upper Wisconsin after trout, of which may they take abundance. The streams around Waupaca are reporting good catches the past week. Mr. E. H. Holmes, of Milwaukee, and Mr. Nat. Cook, of Chicago, go next week to the Fence River in Michigan North Peninsula, on a trouting trip, and will no doubt do well, as that region is beginning to show a good spring run of trout.

The Possum Club.

In the past we heard more of the Possum Club than of late, but the Possum Club is by no means dead. Every once in a while a few members meet at the Possum caterer's, Bill Werner's, and revive the old practices—except that it is now close season on possum, and they have to eat something else. Last week a select assemblage of the members, including Messrs. Mussey, Dicks, Organ, Haskell, Place and Hamline met at Mr. Werner's, and surprised that affable provider of good things by presenting him a fine painting by the well known sportsman artist, Prof. Edmund Osthaus. The latter has done few things more happily than this painting of two pointers at point in the field, and there are few happier men than was Mr. Werner when the boys sprung this beautiful gift upon him.

It was not long after his pleasant evening at the Possum reunion that Mr. L. M. Hamline had a very different sort of evening. His furniture factory in the West division was burned and much of his spring style furniture went off like hot cakes. Mr. Hamline is one of the best known of the Chicago shooters and is serving as member of the executive committee of the State Association this year. His friends sympathize with him in his business loss, which, owing to good insurance, might have been very much worse.

Around Milwaukee.

This week I spent over at Milwaukee, in and around one of the prettiest of the Lake cities, which is located right on the edge of one of the best sporting regions in Wisconsin. The Milwaukee man does not have to go far for duck shooting, or for snipe and woodcock shooting, or for the best of bass fishing, or for trout or 'lunge. In short, he is 85 miles nearer paradise than the Chicago *confrère*, who is forced to go through or beyond Milwaukee to get at the best of his sporting grounds.

Out at "Merrilland," in Merrill Park, the great old homestead, whose broad acres still defy the encroaching streets of advancing city, is where Dick Merrill and his brother Fred keep a few of their many dogs of all sorts, notably the pack of beagles of which kennel readers hear sometimes. Thirteen miles further country-ward is their big farm, Brookfield, and here are the larger kennels, where these lovers of the dog, for the dog's sake, raise a lot of pointers and setters of a very good sort. Dick does not think that anything can ever replace Paul Bo in his regard, but old Paul Gladstone is trying to fill that vacancy the best he knows, though now thirteen years old, and very grave and dignified thereby. We turned out a lot of the youngsters for a run over the green fields, among them a nice Strideaway puppy and a very pretty young lady descendant of Paul Bo, rejoicing in the name of Pauline Bo. The dogs enjoyed the fun and so did the rest of us. It is a great misfortune of a city man that he rarely is situated so that he can keep a dog with any comfort to either himself or the dog, and I could appreciate the pleasure to the dogs and their owners, here in so happy a surrounding.

Acclimatized Pheasants.

Still out from Milwaukee, perhaps twenty-five miles further into the country, we came to the country place of Mr. Howard Bosworth, on the shores of Nagawicka Lake, some two or three miles from Nashota station. This is where one of the most interesting experiments in pheasant raising in the West is now in progress. Mr. Bosworth met Dick Merrill and myself and took us out to the place so that we could see the stranger birds at their home in the lake region of Wisconsin.

Mr. Bosworth has entered his third year, I believe in pheasant farming, and now feels that he is well beyond the experimental stage. He has lost a number of young birds through mishandling when young, but is confident he will rear this year's crop in safety. At one fell stroke of misfortune he lost fifty birds last winter, all mature birds, one little mink doing all the damage in one night. In spite of this he now has sixty full-grown birds, mostly the Chinese pheasants, with a few English ring-necks, in his yards at the country place. We found these confined in pens 18 by 20ft. in size, all the pens surrounded and entirely covered with wire netting. There are ten of the pens, each containing one cock bird and five hens, the wings of all being clipped on one side each six weeks, so that they cannot fly against the wire and injure themselves. Mr. Bosworth feeds a compound made of Spratts game meal, Spratts "crissel," a little bone meal, and crushed oyster shell. In the water he was using a touch of Venetian red, though this was only for temporary correction of slight disorder. The birds have begun their laying, some dozens of eggs having been already collected. Mr. Bosworth expects about 1,500 or 2,000 eggs this season, and has already made plans to turn out some of the old birds next season at a certain place in Wisconsin. He is laboring to get the bird introduced permanently as one of the game birds of the State, and hopes others will aid to this end all possible. With the admirable facilities at his hand and the valuable experience he has acquired in handling the birds, his success seems assured for the future on a good big scale. It would be a grand thing if we could hope some day to see this bird native to the Wisconsin woods and fields. They are beautiful creatures, the hens especially presenting a decidedly game look as they scuttled rapidly around the yards in their swift and timid fashion. We thought the English bird rather handsomer than the Chinese, but it is said to be not so hardy perhaps, and to be possessed of no special qualities of excellence over its Mongolian neighbor. All the males of both sorts seemed too highly painted to fill the American eye for a game-looking bird; but that is habit merely. Active, strong, alert and vigorous, these birds would surely be all our shooters could ever ask for the field, and I hope we may some day see them all over the middle West. Wisconsin has passed a law protecting them. All Mr. Bosworth's birds appear at this writing in perfect health, and there is reason to believe that the good he has done his State in his plucky experiment (which has at date cost him over $3,000) will eventually come to be one generally known and recognized.

While our host was entertaining us at his place, Dick Merrill and I discovered that he had some perch fishing at his boat landing, and forthwith went angling for them, catching a dozen or so for breakfast. All perch lovers should remember that it is the small perch, about as long as one's finger, which are the best to eat. The great ones, as long as one's hand, we put back into the water.

Mahn-a-wauk.

We had now had some diversity of pleasure, what with the dogs and the pheasants, but we were to see still another line of Milwaukee sport, to wit, the seemly art of canoeing, as practiced by that vigorous body of sailors, the Mahn-a-wauk Canoe Club. This body has a charming club house on the lovely shore line which lies at the foot of a sweet green park, and both without and within the house is one for emulative example to other clubs. The interior decorations, as shown in the great hall, I consider to be the best and most tasteful things of the kind I have ever seen in any men's assembling room. It is easy to be clumsy in trying to do something nautical, something horsey, something athletic in any way, but the Mahn-a-wauk artist has erred in no such way. His decorations, made of spars, oars, paddles, bits of rope ends, squares of brown packing paper, pieces of old carpet matting, odds and ends of all sorts, are in no wise lugged in by the ears, yet are just the things young men could wish about them in their unceremonious hall of meeting. It is well that there be boats and hints of boats in a canoe hall, but it is also well that lovely woman add grace and beauty now and then to a wall not too severely prim. If lovely woman be done in colors, as shown in the loving satires of the American pictorial press, and if lovely woman be framed by a scorched edge to the plate displaying her loveliness, all this same being nailed upon the wall and surrounded by a coiled and knotted rope from some fellow's old canoe gear, no man who is any man can object to her presence—not even in two hundred different places, or as part of a score of different designs. You would not think, at first, since you have chances to buy picture frames at $20, $50, anything you like for price, that if you thrust your fist through a piece of brown paper, turned back the edges of the rent and painted them green, you would have a frame good enough for your best girl's best photograph, would you? Yet this is true. Moreover, a piece of carpet matting, torn through, with a smear of bronze on one corner and a daub of green on the other, might not appear the most suitable frame for a galaxy of beauties. Yet these canoe men, who certainly are the most delightful people on earth, know very well the value of such things in conjunction with masks and foils, and bats, and bows, and decoy ducks, and pennons, and burgees, and trophies, and all sorts of mannish things. And so do the ladies who come down and visit the Mahn-a-wauk house. The ladies always ask who did these decorations. It is all the work of Fred Dickens, the Western Canoe Association's secretary, a man who ought to be doing decorative things for a business, instead of about a million of unimaginative souls who are doing "art" work. I call Mr. Dickens's canoe notions artistic in every sense of the word as I understand it, and congratulate the club which owns him.

It is one of the pleasant Mahn-a-wauk customs for members to do their own cooking when they meet at the club house, and we had a little fête of that sort while I was over there—the party being made up of Messrs. Huntington, Holmes, Dickens, Merrill, Friese, McWhorter, with Nat Cook of the Chicago Club, who happened to be in town at the time. We all helped get supper, which was a great and artistic success in a culinary way. We had perch, and we had the succulent sissinger from Vienna, and we had corn and potatoes and a great beefsteak, and a whole lot of other things, finishing with a truly artistic cup of coffee, the latter executed by Mr. Holmes. The dishwashing was a matter of great scientific precision. When most folks wash dishes they carry them with care to the resting place in the cupboard; but when canoeists wash dishes, it is necessary to form a long line from the dish pan to the pantry, each article as washed and dried being tossed to the next man in waiting, he catching it in mid-air and so transferring it to his neighbor. This reduces the ordinarily prosaic sport of dishwashing to an amusement fraught with a certain *verve* and excitement of its own. There are many new ideas hid under canoeing roofs. Certainly one must say that under the Mahn-a-wauk roof rests all that needs to make a healthy and vigorous canoe club and all that evidences a healthy and vigorous lot of young men.

The Shooters of Milwaukee.

As a shooting town Milwaukee has always been strong, both as regards rifle and shotgun. It soon will hold one of the largest rifle tournaments of the season, and at the close of the month of May will offer no less than two good trap tournaments, those of the National and South Side gun clubs. The former is the younger and the latter the older of the Milwaukee gun clubs. There are many prominent handlers of both gun and rifle in Milwaukee.

In short, our neighboring city of the inland sea, commonly called the Cream City, holds indeed the cream of the sportsmanship of a large and energetic State, full of good sportsmen and grand sporting opportunity. We do not always hear all we might like to hear from this big and clean and busy city, but that I suppose is because the Milwaukee sportsmen are too busy having a good time. There is plenty there to write about and plenty to do in the Cream City, and the only complaint to be made against it is that we of the other parts of the world get to hear so little about it all.

Elk in Wisconsin.

It was at Milwaukee, by the way, that I saw the most tangible evidence ever known by myself bearing on the former presence of the elk in the State of Wisconsin. I have earlier heard that the elk was once native over a great portion of the State, and have seen some men who could give facts about it, but I have never before seen any of the antlers or bones of that animal found in Wisconsin. Yet at the taxidermist studio of Mr. Carl E. Akeley I saw a fine pair of antlers found not long ago at Hale's Corners, about eighteen miles from the business part of Milwaukee. This specimen was found buried in the sand of a little marsh or lake and was in fine preservation, though it was destroyed through the eagerness and carelessness of the workmen. The antlers were taken out still attached to the skull. They are very large and even, with great beams and fine branches. The specimen is of great interest.

In Mr. Akeley, by the way, if one may be permitted to institute any comparisons, one finds the artistic taxidermist *par excellence* of the entire West. He is well known as the man who skinned the big elephant Jumbo when he was killed some years ago. Mr. Akeley is this summer to come to Chicago as taxidermist for the Field Columbian Museum, where his really artistic work will no doubt be admired by many. In his process of modeling all the art of the sculptor seems in evidence, and the skin of the finished figure, instead of being tight and tense, shows every vein and every muscle worked out in perfect relief. The wooden look of the merely "stuffed" animal is absent, and there is a new feature in taxidermy, that of a conception, a modeling, so that one must call the workman not merely a workman, but also an artist. When we called, Mr. Akeley was doing an African gazelle for the Field Museum, and I am free to confess it seemed something of a revelation to me. There was also a mounted head of a stag, with open mouth and drooping ears, which must recall crisp October to any man who ever hunted deer. This piece is called "The Challenge," and I labored with Mr. Akeley to get it for the Sportsmen's Exposition in New York, where perhaps it may yet appear. E. HOUGH.

909 SECURITY BUILDING, Chicago.

"BUCK FEVER" VS. "BUCK AGUE."

SINCE you have invited all to take part in discussing which of the above expressions has the sanction of popular usage, I ask the privilege of siding with "Kingfisher." My life has been largely spent among the backwoodsmen and "first settlers" of Iowa, Missouri, Arkansas and Texas, and I have heard the expression "buck ager" in nearly every locality visited; but with "buck fever" I am unacquainted, save through the writings of those who were presumably too choice in their language to say "ager" and fancied that the term "buck ague," sounded less euphonious than the one chosen.

My father was in his time pretty well known as a hunter in the forests of northern Pennsylvania, and years later, when I first commenced hunting large game, he cautioned me against "buck ague" and quoted cases wherein its victims had lapsed into temporary fits of abject idiocy—absolutely forgetting to look through their rifle sights when taking short range shots at deer. I remember I once thought such stories a trifle hard of belief, but in course of time my incredulity vanished. I had an attack myself, and it was "ager;" not a particle of fever about it. Speaking, as I do, from the vantage ground of personal experience, I think my evidence should have weight in this case—unless some one can be found who, under similar circumstances, had the fever without the "shakes."

Throughout the malarial regions of the Southwest the term fever and ague, so commonly used elsewhere, has given place to another quite as expressive—namely, chills and fever. Shortening this, the natives speak familiarly of having the "chills," or by way of variety the "fever." In the vocabulary of the "swamper" these became synonymous terms, and it seems to be commonly understood that the word "fever" without a qualifying adjective invariably means that intermittent disorder which gives the sufferer alternate touches of arctic and equatorial temperatures every second or third day, as the case may be. There are many swamp dwellers who "chill" each autumn with delightful regularity, and would vehemently disclaim any acquaintance with the ague; but put them on a deer stand with a greenhorn, and they would watch him with delightful eagerness to detect symptoms of that dreaded ailment, "buck ager."

Let your readers decide this matter according to its merits, and without calling upon incompetent lexicographers for assistance. I, for one, object to accepting Bartlett as an authority. No man can claim universal knowledge, and hence we find that his "Dictionary of

Americanisms" is full of inaccuracies, It is a work of great merit, but its compiler—like Hammond, who is one of his references on this particular point—was perhaps better versed in literature than in the lore of the forest.

S. D. BARNES.

FORT WORTH, Tex.

DETROIT, Mich.—The editorial allusion in FOREST AND STREAM of April 27 to the criticism of "Kingfisher" on the use of the term "buck fever" to express that common, but highly unsatisfactory, condition of the hunter's nervous system which sometimes follows the discovery of the "noble quarry" within easy rifle shot, leads me to offer in evidence in support of Brother "Kingfisher" some suggestions in considering the appropriateness of his position. It is perhaps not a question of great moment whether it is called one or the other, any more than the importance of la grippe as a term for influenza, break-bone fever or dumb ague. There can be no doubt about one thing—it is a mighty unpleasant affair to the man who has it.

Analyzing the term from the point of view of an actual experience, it would seem that buck ague is the correct term. Anybody who is at all conversant with the delights of a genuine ague, as we used to know it in the West, can hardly fail to forget that an Arctic chill merrily coursing up and down one's spinal column, and playing with beautiful abandon all through the marrow of one's bones, and ricocheting from point to point of one's anatomy for several consecutive hours, is succeeded and accompanied by a series of involuntary shakes which could put to shame a perfectly healthy Peruvian earthquake, and is duly followed by a fever to the like of which a lake of molten lava would be a cheerful and cooling companion.

This, then, it would seem, fixes the analogy between these two distressing maladies. The supersensitive person who is suddenly confronted by a colossal buck, and proceeds to become agitated, excited, perturbed and otherwise incapacitated from "drawing a bead" on the game with any certainty, is conscious of a decided chill along his vertebræ and throughout his system generally, accompanied by a quaking of the nether limbs and symptoms of a general breaking up.

By the time this has ceased and the cause thereof has disappeared utterly from his gaze, if the said hunter is not then "hot" clear through, under his collar as well as elsewhere—mad, too, as well as hot—why then he hasn't had buck ague at all.

Bartlett was a careful investigator of terms and phrases, but he quotes, as you say, but one authority in this case in support of the choice of the terms. I suppose, as a matter of fact, that the terms are localisms, and each is used in different sections of the country; but to be technically exact and consistent, I vote on the side of "Kingfisher" on the question.

FRANK HEYWOOD.

Spring Shooting and Breeding Birds.

HALIFAX, N. S., May 3.—*Editor Forest and Stream:* It might be of service to you in the fight against spring shooting to mention to you that on April 20, while fishing up a small stream, entering into Bedford Basin on this harbor, I disturbed a pair of black ducks. Shortly after this I heard a rustling in the bush across the stream, when out came three young ducks but a short time hatched. This being the case in Nova Scotia, surely the young birds would be further advanced by the same date in your State.

C. J. CREIGHTON.

THE FLORIDA CENTRAL & PENINSULAR RAILROAD.—The Florida Central Railroad has issued for the benefit of sportsmen a carefully compiled list of game and fishing resorts reached by their line, together with particulars as to hotels and boarding-houses. Here is a sample of the information: "Woodbine, Ga.—Forty-nine miles north of Jacksonville; delightful little village; fine, rich, black soil. Information furnished by J. K. Bedell, or G. W. Adams. A happy surprise to lovers of gun and dog; wild bear, deer, turkey, duck and quail abundant; no guides necessary; climate delightful; pure water from artesian wells; excellent hotel accommodations." The Florida Central has a "warm spot in its breast" for sportsmen. It not only makes special traffic rates for parties of sportsmen, but it also carries free of charge dogs and hunting implements. A large map of its territory will be sent free of charge by A. O. MacDonell, Gen. Pass. Agent, Jacksonville, Fla.—*Adv.*

Sea and River Fishing.

IN THE YELLOWTAIL BELT.

SANTA CATALINA, Southern California.—The Southern California season for ocean fishing is just opening and promises well. It might be said that there is no especial season, as fishing goes on here every day in the year, but the really game fish of large size come in shore in May and afford the best sport up to November. One may catch small fry off the wharves of San Pedro, Santa Monica, Long Beach and Redondo, and good fishing is to be had in the boats that go out from San Pedro and troll for barracuda up and down the beaches; but the coast of Southern California in the main is a long stretch of sandy beach with few bays and harbors or rocks. Not only this, the prevailing wind is from the west and a continued sea piles in upon the sands, making fishing off the beach not always a pleasant occupation.

The sea fishing, then, when good results are desired, is confined to the two islands off shore—Santa Catalina and San Clemente. They are both from eighteen to twenty miles long, abounding in little bays, rocky shores and cliffs, where the game fish swarm.

Santa Catalina is the largest island and reached from the mainland by a fine steamer service, the trip from Los Angeles being about 45 miles or three and a half hours, giving one a delightful sail across the Santa Catalina channel that is about 30 miles wide. The island lies parallel with the coast, so that its south side is rough, and the north, abounding in harbors, is smooth. On the southwest side a little town—Avalon—has been built up, which in summer boasts a population of 5,000 to 6,000. It is the nearest thing to Bar Harbor one can find in Southern California, has one fine hotel and many smaller ones, while leading up the streets on the sides of the cañon are the cottages and summer homes of the visitors.

The little town is a fashionable resort, and that the Southern Californians love fishing is evident from the fact that Avalon is crowded all summer, and everybody goes fishing. In time, when better known, it will become famous among the lovers of true sport.

The method of fishing here reminds me more of that of Alexandria Bay, on the St. Lawrence, and it only required Will Massey and his boat, well known on the bay, to complete the resemblance. The shores are abrupt and precipitous, and the method is to take an oarsman or row yourself and troll or cast with live or dead bait, the former method being the most in vogue. There are dozens of oarsmen and hundreds of boats, and in the morning the little bay presents a gay scene as the fishermen and parties start out. My old oarsman on the St. Lawrence used to row me twenty-five or more miles a day, and here it is often the same, and sometimes against the wind, the men being sturdy fellows. One of the oldest oarsmen is Mexican Joe, who has been on the island forty years and will tell you all about it. Joe knows where all the Indian mounds are, and has headed several expeditions in the interest of archæological investigation which have produced some remarkable objects in stone and shell—the household gods of the ancients who occupied these islands from time immemorial.

I secured Joe for my day's fishing, and one morning we started before the sun had left Arizona, his rays just being seen on the snow-capped peaks of San Bernardino, San Jacinto in the Sierras, 75 miles away. The water of the bay was so smooth that the high rocks which we passed were perfectly reproduced. As we rowed slowly along I noticed a number of ripples on the water, made by numerous fins, and standing up, saw that we were entering a school of sea bass. They fairly colored the water a deep gray, and ranged from 20 to 60lbs.—magnificent fellows. They divided and passed on each side of us, not 10ft. distant. Joe said they would not bite, and he was a true prophet.

For years the California fish have been caught on hand lines, their size apparently precluding the idea of a rod and reel; but now the latter is used. Our equipment was made up of two rods, one a split-bamboo weighing about 16oz., with a large expert reel holding about 350ft. of 21-strand line; the other a nondescript which I had used for bass in the East and which weighed 9 or 10oz., the tip being about 4in. of a split-bamboo tip of a trout rod. The line was an 18-strand cuttyhunk, with an expert reel—the largest to be had in Los Angeles. I had one of these on each side and 75ft. of line out.

For 100yds. we rowed through this band of fish, but not one would touch the bait—a 4in. sardine or smelt; and I find that these fish are wary, not more than one or two being taken a day on the line through the season, though it should be said that numbers are hooked, but are too big to manage. Rounding a little point we came into the green water of the open ocean, where a fresh wind was blowing, and here I had my first strike. The reel gave a warning note which grew into a wail of agony and 100ft. of line was gone in a single rush, then 10, 20, 30ft. torn off with rasping sounds before I ventured to apply the brake, and then the ominous strain on the rod was a warning to be heeded.

Joe had stopped rowing and was following the motions of the rod with staring eyes and anxious countenance. "My Scott!" he whispered, "that great fish, he the boss sure. How he kick! Look out, sir!" and he deftly pulled the boat around, keeping her stern to the fish that had made a magnificent rush to the side, taking the tip of the rod 4ft. under the water. The gamey fish was apparently just "warming up for the fight," as Joe said, as it began a series of rushes that sorely tested the tackle.

In years past it has been the correct thing to take this fish with a line about the size of an Eastern cod or even a halibut line, but the one now cutting the water like a knife, leaving a sheet of silvery ripples behind it, was little larger than a trout line and it was a question whether it would stand the tug of war. I have taken nearly every game fish in American waters, but never met so well equipped a fighter. Its rushes were magnificent and its resources endless. One moment it would dash directly at the boat, and to reel the slack line in was almost impossible. Then when many feet had been taken the fish would dash 50ft. like a shot from a gun, making the reel scream and the rod bend like a whip. Then the fish would turn quickly, sound like a plummet, hammering at the line with sturdy blows, to rise and involve itself in a complete frenzy of motions. This was kept up twenty minutes before it showed any signs of weariness, while the fisherman, it must be confessed, was weary. But gradually the sag became steadier, and slowly the reel began to gain, and after several more rushes I caught sight of a gleam of silver and yellow as it dashed by. Another scuffle, more screeching from the reel as the big fish saw me, more reeling, and then Joe with a quick move fixes his gaff, and with a lift dropped the silver beauty into the boat.

"What a fish! My Scott, what a fish!" exclaimed Joe, with eyes sparkling with excitement. What a fish indeed! A magnificent creature, 4ft. in length and weighing at least 35 or 40lbs. In shape it somewhat resembled the salmon, hence one of its names—the white salmon. The upper surface is a rich blue, iridescent in the sunlight; the lower portion pure silver. The eyes are blue, large and expressive; the mouth powerful and head large. The median line is a yellow, while the tail is also brilliantly yellow, giving the fish a rich and beautiful appearance. So far as its fighting and game qualities are concerned, I will place it in the front rank.

In the course of the day several other specimens of this fish were taken, with a dozen barracuda, which afforded good sport on the rod; and on the west coast, just off the kelp, we ran into a school of rock bass which were rising like black bass. They ran up to 6lbs., and gave some good sport on a light split-bamboo trout rod.

The yellowtail is a capricious creature. On the return we passed thousands. The water for acres seemed to be filled with them, but when *en masse* they would not bite. The power of the fish can be estimated when I say that one which I struck made a single rush of 300ft. and how much more I know not; my line was that long and went. I would suggest for this sport a large reel of the best quality, one that will multiply and hold 600ft. of 18 or 21-strand. An oil silk salmon line would be the ideal for this work, but I have found none that will stand the salt water. The yellowtail is the *Seriola dorsalis* of science, and ranges up to 80lbs., but this is the exception. I found that length does not indicate weight. Thus, one measuring 4ft. weighed 45lbs.; another, 3ft. long, 40lbs.; still another, and by far the finest specimen I have seen taken on a rod, measured 4ft. in length and weighed 62lbs. With a hand line, trolling from a power launch, large numbers of the fish are caught.

PISCATOR.

ANGLING NOTES.

St. Dunstan's Memorial.

Last week I mentioned the memorial window to Izaak Walton in St. Dunstan's Church in London, and this week through the kindness of Mr. R. B. Marston FOREST AND STREAM is able to present illustrations of the center light of the window and of the marble tablet placed on the front of the church. The window, which was designed and executed by Percy Bacon & Brothers, Oxford street, London, is more than five times the size indicated by the center light.

The standing figure of Walton is a copy of the statue by Miss Mary Grant which stands in a niche of the great screen in Winchester Cathedral. The lower figure of Walton in his study was designed by the makers of the window. The two side lights containing the portraits of the men whose lives Walton wrote are of equal size with the center light here represented, and the three together make up about half the height of the window. The window and tablet cost $550, and this sum was raised, as was the fund to erect the statue in Winchester Cathedral, through the efforts of Mr. Marston. I am sorry to say, if my memory serves me, that to both of the subscriptions to these memorials there was but a single contribution from the United States, and yet Walton's memory is cherished by anglers the world over, and all who have a kindly feeling for the Father of Anglers will feel grateful to Mr. Marston for his efforts to perpetuate his memory in marble and stained glass.

"Stocking Waters."

Under this heading a writer in *Land and Water* writes in a way to delight my heart, and echoes my own ideas so truly that I would like to quote his entire article. Rearing and planting natural food fishes has been and is a hobby of mine that I have ridden at a good pace, but it is rarely that I have seen anything on this subject from any other pen than mine. This gentleman, writing over the *nom de plume* of "Rod," says: "In connection with fishculture we are accustomed to hear a good deal of the sort of fish with which the water is to be stocked, but next to nothing comparatively of the food with which they are to be supplied when there. And yet the second matter is, in many cases, the more important consideration of the two. It is generally taken for granted, seemingly, that if you put a good class of trout fry into a water, you are bound to have a fine class of trout as the necessary result. The breed of fish introduced is the only thing considered, and the question of the food on which they are to grow to the desired size and condition is ordinarily dismissed without a thought. It is taken for granted that there is sure to be plenty of food in the water. It is overlooked that the very fact of the water requiring to be stocked with good fish is of itself evidence, in most cases, that the matter for primary consideration is the food supply of the trout already there. When that is attended to, you may reasonably entertain a hope that in introducing fresh blood you are likely to do permanent good. When a place is overfished, or heavily fished, as for instance Loch Leven, in such exceptional cases you may well need to replace by artificial breeding the numbers taken out by the rod. But, ordinarily, when the trout in any water are small and few, and the poverty of the trout supply cannot be traced to overfishing * * * the fault lies with the food supply. Of course you may have the size kept small by the place being overstocked. But that is only another form of the same case, the fault still lying with the food supply, because the numbers are too great for the available food supply. * * * Whatever good strain of trout you may import, they must, in time, inevitably dwindle to the size of the indigenous fish, unless, indeed, measures are simultaneously taken to improve the food in the water."

"Rod" mentions the introduction of "fresh blood," but as he lays no stress upon it perhaps he does not realize how important it is to put fresh blood into water where trout have become small from inbreeding for years. This fresh blood to produce an outcross has much to do, as I believe, with increasing the size and condition of fish, and must be considered in connection with the food supply.

The food for trout that "Rod" mentions particularly consists of the natural fly (*Ephemera*) and fresh-water shrimp (*Gammarus pulex*), and cites instances from his own experience that a very large proportion of the natural fly food is eaten by the trout in the larval stage. He says: "Taking good and bad rising hours together, there are at least twenty full-sized and half-sized larvæ in the trout to one winged fly." These are what we call May flies or drakes, about the transplanting of which I have written recently. His idea is to cultivate this natural food in waters to which the trout have no access and then allow it to overflow into the water where the trout are.

As to fresh-water shrimp "Rod" says: "With the fresh-water shrimp the experiment has been tried with marvelous results, as the rate at which they will reproduce themselves, when given immunity from destruction in the immature stage, is beyond conception. I have seen them reared in a pond set apart for the purpose of breeding them for trout, and, when a small shutter was removed, they simply poured out in such countless numbers that they had the effect of thickening the water. They are water scavengers, feeding on any dead animal matter, and would find delectable sustenance in well-diluted sewage or in any animal refuse. How many times in a year a fresh-water shrimp would breed, and how many generations would result from one pair in a twelve-month, would be an interesting problem to see worked out. And yet on the strength of personal experiments made in similar matters, and on the observations of practical experiments made by another with fresh-water shrimp, it may still be confidently affirmed that tons, aye, in sober earnest, and with no hyperbole, tons of such living natural food could be reared at a nominal rate of expenditure, and be led to find its own way naturally, without any artificial porterage, into the adjoining lake. * * * To all creatures subject to great risks of destruction during the periods of reproduction, nature has granted proportionately enhanced rates of fertility to enable them to overtide the exceptional dangers of extinction; and these same enhanced powers of reproduction, when properly taken advantage of, enable them to leap at once into amazing multitude."

This method of rearing natural food is very like, if not identical with, that practised by the late Thomas Andrews at his trout farm in England, and there is no good reason why it should not be adopted in this country.

Ice in the Lakes.

A friend who has just returned from an extensive drive through the Adirondacks tells me that on April 28 the ice had not left Lake Pleasant, the western boundary of his drive, nor Thirteenth Lake. The streams were high and the water thick, and there was no fishing to be had. On the 27th, with Mr. W. F. Rathbone, of Albany, I went to Port Henry on Lake Champlain, and Commodore W. C. Witherbee drove us into the mountains on the extreme eastern edge of the Adirondacks. The ice was out of the ponds, but the water was high and thick. One of the highest peaks was covered with fresh snow that looked as if it had fallen the night before. In spite of the sun there was a chill in the air, even at midday, and altogether it was too early for trout fishing. A few trout had been caught in the streams, but their actions were very like suckers, as they remained at the bottom and took bait with great deliberation. The truth is, that the 15th of April is too early for good stream fishing in northern New York.

"Trout of Any Kind."

The fish and game law of New York provides that "trout of any kind" shall not be taken except at certain times, and this language has caused no end of confusion, for it does not mean what it says. It is apparent that "trout of any kind" refers only to the various species of shallow water or brook trout, as by reading a number of sections from 103 to 116 it will be found that a distinction is made between "trout of any kind" and salmon (lake) trout. Section 105 is the one that provides that "trout of any kind" shall be taken only at certain seasons, and Section 108 provides a distinct and mandatory season for catching "salmon trout and landlocked salmon." Other sections provide that "trout of any kind, salmon trout and landlocked salmon" shall not be taken under 6in. in length. This language is repeated in several sections. Lawyers have been called in to settle the question of what the law really meant, but they could not agree.

I wrote to the Attorney General for a construction of the law, and after quoting the two sections, 105 and 108, he says: "I do not believe it was the intention of the Legislature to include salmon trout or landlocked salmon within the provisions of Section 105. This seems to be clearly evidenced by the fact that Section 108 makes all necessary provision for them in a way that is unmistakable. To my mind Section 105 refers to brook trout and that to embrace all species of the brook trout family. This, in my judgment, is the only solution of the apparent conflict between the two sections." This opinion of Attorney General Hancock has not satisfied people who should be satisfied, and I doubt if a conviction could be obtained, before a jury, for catching lake or salmon trout between April 15 and May 1. It may be said that this will make little difference, as there is now a new codification of the game law before the Legislature which will probably become a law before the Legislature adjourns; but this new game bill contains the exact language of the present law in that it provides a close season for "trout of any kind," and a different close season for salmon trout and landlocked salmon. If this language is not changed before the bill becomes a law the confusion and contention will continue until it is amended.

A. N. CHENEY.

THE FISHING SEASON IN CANADA.

An Earlier Opening than was Expected.

Editor Forest and Stream:

It is quite a common expression that "there is no spring in Canada," so sudden is the transformation from winter to summer. I have known the thermometer to register upwards of 80° in the shade before the last snow-drifts had disappeared in shady nooks, and while ice still held upon some of our northwestern lakes. Anglers, however, still hug the theory of a Canadian springtime, as the frequent references in angling literature to "spring fishing in Canada" amply testify. If we measure its duration by the space of time that elapses between the disappearance of ice from the surface of angling waters and the period when summer's heat drives the trout into deep water seclusion and brings forth its annual plague of flies, the season is decidedly short. Hence, no doubt, the desire of so many American fishermen to be kept posted by friends in Canada in regard to the prospects for the opening of the angling season.

I do not, at the present moment, call to mind any season in which promises of late spring fishing have been so agreeably disappointed. A month ago it looked as though the opening of the season of 1895 would be as late as that of 1894 was early. Present indications are that it will not be more than a week or ten days later in the year than was its predecessor. This morning I received a postal card from Robewal, signed by Mr. A. W. Patterson, who was last year in charge of the Island House and of the guides at the Grande Décharge, and is at present manager of a new hotel at Lake St. John. He says, speaking of that lake:

"Water rising. Ice getting shaky. I have men on the watch for the first fish. Expect fishing earlier than we had thought."

From this I take it that the ice may leave Lake St. John at any time within the next week, and almost certainly before these lines appear in print. The postal card was dated yesterday, April 29. The 15th of May is not likely, therefore, to be too early for spring fishing, either for ouananiche in Lake St. John or for trout in other northern waters, and this would place the opening of the season at the Grande Décharge at about the 8th to 10th of June.

Mr. R. R. McCormick, of Cocoanut Grove, Florida, and his son write me that they will spend much of the summer camping and fishing in northern Canada. They will make a tour in the country beyond Lake St. John, and after acquiring membership in a couple of clubs controlling trout waters in Canada will spend some time upon the preserves in question.

Colonel Andrew C. P. Haggard, D.S.O., author of "Tempest-Torn," "Dodo and I," etc., a brother of Rider Haggard, who ascended the Peribonea with me in 1893 as far as Tschotagama, and whose acquaintance was formed in that year at Lake St. John by many American anglers, writes me from Scotland, where he has leased a shooting lodge, that he hopes to return to America for a season's shooting and fishing in July next.

Everybody interested in the subject of fish protection will regret to learn that from motives of economy the Canadian Government has decided this year to reduce by $10,000 the vote for salary and disbursements of fishing overseers and guardians, and that upon similar grounds the Government of Newfoundland has decided to abolish its Commission on Fisheries.

E. T. D. CHAMBERS.

QUEBEC CITY, April 30.

BOSTON AND MAINE.

BOSTON, May 3.—So far the returns from brant shooting along the Massachusetts coast have been very unsatisfactory. The first party to visit the shooting home of the Monomoy Brant Club got one brant. The second party got eight. The third, or Boys' party, got seven; not one brant apiece. Mr. E. Frank Lewis, one of the most genial sportsmen of the party, was brought home last Saturday dangerously sick with pneumonia. Mr. Warren Hapgood, the senior member and founder of the club, is absent now at the shooting boxes. Mr. Walter L. Hill is with him as an invited guest. It is a feature peculiar to the present season that all the birds killed are old birds. The absence of young birds is remarked by almost everybody who has gunned along the coast this spring.

The ice is not yet out of the Rangeley Lakes, neither is it out of Moosehead. I have a personal letter from Mr. O. A. Dennen, proprietor of the Kineo House, dated April 29. He says: "I should say, from present indications, that the lake would be clear of ice about May 10; possibly sooner." Mr. Dennen is very good authority on the ice in Moosehead, having followed it for years, and if he is correct in his conclusion this time, the ice may be expected to be out of the Rangeleys about May 12, since the Rangeleys usually clear about two days later than Moosehead. The only theory that disfavors this conclusion is the fact that several of the other Maine lakes and ponds have cleared earlier relatively than follows in line with such conclusion. Swan Lake, near Belfast, is clear, and Commissioners Stanley, Wentworth and the new member, C. E. Oaks, were fishing there last week. Reports say that some large trout were taken. Lake Auburn is also clear of ice, and the same Commissioners have been fishing there. What success they had is not yet made public. Reports also say that Sebec Lake is clear of ice. This lake is usually clear five or six days earlier than Moosehead.

Newfound Lake, in New Hampshire, was partly clear of ice a couple of days ago, the ice having moved down from the upper end. Immediately some of the fishermen were on hand to try for the celebrated lake trout that are early taken from that lake each year by those who know how it is done. Gen. Paul Lang landed a magnificent trout 41½in. in length and weighing 15lbs. The fish was shown in the window of the Boston & Maine Railroad office, on Washington street, this city, and attracted a crowd of the curious. The big trout of Newfound Lake is a feature of recent date. A few years ago such trout were almost unknown to residents.

Among the most anxious for the ice to leave the Rangeleys is Mr. C. P. Stevens, the owner of Camp Vive Vale, in the Narrows, Richardson Lake. He has several wagers that the Rangeleys will be clear by the 5th, but he is likely to lose. He is to start even before the ice is out. He will be alone this year, with Charles Edgar Marston as guide. Mr. Frank Stevens, of the same office, cannot get away this year. Mr. E. J. Shattuck has become more interested in fishing some waters further into the wilds of Aroostook county. Mr. Smart is too busy to go a-fishing. Both of these gentlemen were the early founders of Camp Vive Vale, with Mr. Stevens.

Another early fisherman to that lake will be Mr. Edwin A. Dow, of Woburn, but of the leather house of Stephen Dow & Co., Boston. He expects to be accompanied by Mr. Place, a long-time fishing and yachting companion. They will go to Camp Stewart, with the Cutting boys, Will and George, as guides. Mr. Dow's business partner, Mr. Frank F. Dodge, has recently built a hunting and fishing camp on a celebrated lake in Nova Scotia. With a cousin and fishing friend he has already made a trip to that lake this spring, and has had good sport with the trout. Later he will have photographs of his camp and the surroundings, and he will give me all the particulars concerning the location—a comparatively new one to the fishermen from "the States"—for the FOREST AND STREAM. They have been able to purchase a good share of the shores of the lake where their camp is located, for a very reasonable sum, and from the fact of the rapid growth in sporting interests in that direction they are naturally a good deal pleased with their success.

Boston, May 4.—Mr. Walter L. Hill has just returned from his outing with Mr. Warren Hapgood, of the Monomoy Brant Club. This was the last party of the season. Not a brant was shot by this party. In a measure to make up for the lack of brant to shoot, Mr. Hill shot a skunk that had previously been caught in a trap. This may seem like a trivial record, but it goes on to the Monomoy records as the only brant shot by the party. The record shows the poorest season for brant since the club was formed—for some thirty years, in fact. As mentioned above, party No. 1 got one brant; No. 2, eight; No. 3, seven; No. 4, one skunk. Mr. Hapgood has a theory that the sand is gradually washing into the grass, hence the brant are ceasing to come there to feed. But in connection with this theory, it must also be remembered that the Muskeget Club members and shooters have taken very few brant this year. A report is at hand, however, that there has been good brant shooting within a week at several points along the Nova Scotia coast, and a number of brant have just arrived in the Boston markets from these points.

Tom French, of Andover, Me., and well known as proprietor of one of the Richardson Lake steamers, writes Mr. Geo. T. Freeman, under date of May 2, that the ice will doubtless be out of the Rangeley Lakes by the 7th or 8th. Mr. G. W. Wadsworth, who will be one of the early ones to be off for the Rangeleys, has a letter from his guide, Geo. B. Huntoon, which suggests that the ice will be out of Rangeley by the 10th or 12th. The proprietor of the Mooselucmaguntic House writes friends here that the lake will hardly be clear of ice before the 12th. The FOREST AND STREAM will have a special dispatch if the Rangeleys or Moosehead clear before this number goes to press. Otherwise, it may be safely concluded that those lakes will be clear by the 12th or 13th of May. I notice that a correspondent of the FOREST AND STREAM is in doubt about the date of the Rangeleys' clearing in 1893. If he had looked at the record annually published in this paper by myself for the past dozen years he might have seen that the ice cleared from those lakes May 20, 1893.

SPECIAL.

NORTH CAROLINA STRIPED BASS.

A NEGRO fisherman, named Mose Peet, caught a 50-pound rockfish, or striped bass (*Roccus lineatus*), last Friday with hook and handline, and cut fish for bait, in Bryce's Creek, a fresh-water stream which empties into the Trent River, some two miles above Newbern, and some forty miles from the ocean beach. Striped bass are very abundant in Bryce's Creek just at this time and run in great schools in pursuit of the herring which are passing up to the head waters of the stream to spawn. As an indication of the vast multitude of the herring in this and neighboring waters of the North Carolina sounds, it may be mentioned that Dr. Wm. P. Capehart, at his notable fishery at Avoca, on Albemarle Sound, caught 400,000 at a single haul of the seine one day last week; and it may be assumed that striped bass are favorable, though very few were taken just there. They are more abundant in the tributaries of Pamlico Sound. They run up all the rivers in vast numbers, and if rod fishermen were only made aware of their opportunity they could find sport with correct tackle at the Trent River county bridge, near where Mose Peet took his fish, beside which the old performances at McComb's Dam, on the Harlem River, forty years ago, would dwindle into insignificance. Tarpon fishing in Florida won't compare with it.

The remarkable aspect of the whole matter is that up to recent date scientists have expressed incredulity regarding declarations that striped bass (*Roccus lineatus*) were found in great size and numbers in the upper waters of Southern streams, and as recently as 1888 a notable ichthyological authority questioned in an official publication my statement printed ten years previously in the *Sportsman's Gazetteer* to that effect, intimating that I was "probably mistaken by the resemblance of this species to the brassy bass (*Roccus interruptus*)."

Besides this splendid game fish, which attains a weight of 70lbs. and upward, we have here the finest black bass fishing, with twenty other varieties to select from; and it seems strange that these waters, from which our fish-packers ship $200,000 worth to Northern markets every season, should have been so long overlooked by anglers, who persist in going to Tampa, Aransas, Indian River, Homosassa or anywhere else, no matter how distant or however poorly rewarded and little encouraged. We have here at Newbern the Hotel Chattawka, which the FOREST AND STREAM advertised all winter, and at Morehead City the magnificent seaside Atlantic Hotel, with its accommodations for 800 guests and vaulted ballroom 100ft. square; while at Beaufort, within sight of where President Cleveland trolled for Spanish mackerel last May a year ago is the snug and homelike house of Sarah Davis, whose fame has had a steady growth for thirty years all over the country.

Mem.—Fifteen years ago I told your readers about the Roseau Region in Northern Minnesota, near where I built a comfortable hotel for sportsmen, and begged them to come up and shoot the moose, elk, deer, caribou, geese and grouse, but no one came except old John Davidson and Andrew Carnegie, and Dr. Phillips's party of Penn Yan, New York; and now I dare say, after I am dead and buried, and the last fish has migrated to other waters and departed forever, they will begin to find out where the most delectable fishing ground on the Atlantic coast was; just as they have now discovered the Roseau Region after forty post offices have been located there, and an inhibitory law enacted to prevent the destruction of the remnant of the game.

Let your anglers of leisure come down and try the salt water and estuary fishing in this vicinity until the 10th of June, and by that time I would direct them to Covington, Va., 2,000 feet above sea level, in the heart of the Blue Ridge, where they can then catch mountain trout, black bass and pike-perch until the end of summer, with comfortable home and board at reasonable rates.

NEWBERN, N. C., May 1. CHARLES HALLOCK.

ANGLING WATERS NEAR BOSTON.

BOSTON, Mass.—There are very few places in Massachusetts which contain as many anglers as the city of Worcester. It has even been said that they far outnumber the trout native to that locality. This assertion is stoutly and seriously denied by some of the knowing ones, who always know where to go to find a good mess. A number of very good brooks are to be found within easy distance of the city. While all are not successful in fishing them, the finished artist seldom fails to secure a sufficient number to satisfy a modest ambition. There are a few private or leased waters in the vicinity which are not open to the public, but enough are left open (barring an occasional "no trespass" sign) to provide very good sport to all wishing to try their luck. The names and location of some of these streams are: Bummet brook, North Grafton; Merriam brook (quite a large stream), Grafton; Bumbo brook, Paxton; Fessendon brook, Paxton; Bryant brook, Leicester; Nigger brook, Spencer; Cold Spring brook, Harvard; Dark brook, Auburn; South brook, Shrewsbury; Happy Hollow brook, Oakdale; and Muddy brook, Boylston. All of these streams have particular places, known best to the initiated, where the trout hide.

The streams named are all within easy distance from Boston and are quite often visited by fishermen from the Hub. In the other direction from Boston, on the line of the Boston & Maine R. R., are several good brooks, naturally improving as one gets further away from the city. Over the Maine State line near Berwick are some notably good streams. A friend, fishing in this locality recently, secured a nice string, the largest weighing 1½lbs., the brook being very high and swollen at that.

Coming close to the city, we have a few brooks which at one time afforded excellent sport, but now, although quality remains, quantity is much reduced. Some of these which might be mentioned are: Traphole brook, Sharon; Walpole brook (emptying into Fowl Meadow), Canton; William Henry brook, Canton; Cheesecake brook, Newton; and several fair streams in Sudbury, Dedham, Lexington and Arlington. Those who know how sometimes astonish their friends by bringing home a number of fair-sized trout even from these waters.

Everybody is aware that old Cape Cod is the banner ground for trout fishing near Boston. While very many of the best waters on the Cape are controlled by clubs or individuals to the exclusion of the public, there still remain many places where that highly flavored beauty, the brook trout living in tide-water streams, may be found. Some of these I will mention in FOREST AND STREAM later on.

HACKLE.

THE WALTON MEMORIAL IN LONDON.

From the London Fishing Gazette, April 15.

THE first suggestion of a memorial of Izaak Walton was made, I believe, by the late Mr. John Major over seventy years ago, as will be seen from the following extract:

EXTRACT FROM JOHN MAJOR'S INTRODUCTION TO HIS EDITIONS OF WALTON.

"Soon after the appearance of my first edition in 1823, I received the following from Michael Bland, Esq., F. R. S.:

'The Walton and Cotton Club, to which I am the secretary, adopting the idea suggested in your introductory essay, have resolved to institute an immediate inquiry into the condition of the insufficient monument to the memory of Honest Isaak in Winchester Cathedral, with the view of taking some steps toward the erection of a memorial more worthy of the man, and more honourable to those who delight in that recreation which he has so beautifully portrayed.' Whatever may have hitherto obstructed the above expressed intention, I still feel perfectly satisfied that it will be yet carried into effect. One gentleman, I was credibly informed, offered to put down 200 guineas to commence the work. But let a one guinea subscription be set on foot, and the lovers of literature and angling will carry it in a summer's day! The Dean of Winchester, I understood, to have expressed himself delighted that an honour, so justly due, should be paid to him as the 'Historian of the Church.'"

This is from Major's edition, published in 1844—one of the most charming of the whole series of editions—but it was not until 1878 that a marble bust of Walton was erected by public subscription in his native town of Stafford, in St. Mary's Church—the church in which he was baptized.

In September, 1886, I saw a letter in the *Times*, dated September 23, from Mr. H. T. Jenkins, a member of the Portsmouth Waltonian Club, Southsea, calling attention to the fact that the Very Rev. Dr. Kitchin, then Dean of Winchester, had intimated that he would like to have a statue of Walton in the Great Screen, and expressing a hope that anglers would provide the funds. On October 2, 1886, I opened a subscription, and, thanks chiefly to the liberality of the readers of the *Fishing Gazette*, I have been enabled to carry out what has been for so many years the desire of anglers, viz., that worthy memorials of Walton should be erected in Winchester and London.

R. B. MARSTON.

The Unveiling of the Window.

St. Dunstan's Church, Fleet street, was well filled on Friday, April 5, on the occasion of the Walton Memorial Window by Mr. Walker Baily, Master of the Ironmongers' Company.

Punctually at 12 the Rector commenced a brief service with appropriate prayer, and then called upon Mr. Baily.

Mr. W. BAILY, Master of the Ironmongers' Company, said: Mr. Rector, Mr. Marston, Ladies and Gentlemen,—The Ironmongers' Company are very sensible to the honor paid them by inviting their Master to take part in to-day's ceremony. The Company has had many men of note and worth among its members. To name but a few: naval heroes, as Hood and Exmouth; noble-hearted and munificent benefactors, as Betton and Geffery; civic magnates, as Denham, Avenon, Draper, Cletherow, the Cambells, the Thorolds, Beckford. But noted as these worthies are in their respective ways, we are proud to have numbered amongst our fellowship the still more widely-known name of Izaak Walton, whose charming pastoral, the "Compleat Angler," has been an English classic for upward of two centuries, and will probably remain one, wherever the English tongue prevails, for centuries to come. Briefly as the records of the Company were kept in former days, they nevertheless give a few particulars concerning Walton's earlier life which, so little being known about him during that period, possess an interest. I may perhaps on this occasion fittingly refer to them in a few words. On Nov. 12, 1618, Walton, "late apprentice to Thomas Grinsell, was admitted and sworn a free brother of the Company." He was then twenty-five years old, and, upon the high authority of Mr. Marston, there is no record of his life between the date of his baptism and this entry in our Court Book. In 1629 he was one of thirty members of our Yeomanry, who served as "gentlemen in foins," that is to say, in gowns faced with foins, or the fur of the marten, in the pageant provided for the mayoralty of our member, Sir James Cambell; and he performed a like service in the pageant of Sir Christopher Cletherow, Lord Mayor in 1635, also our member. In 1637 he was chosen and sworn Warden of the Yeomanry; and two years later he paid over to his successor the "'rest' of his account of Wardenship, £2 7s. 10d." On that occasion he presented to the Company an apprentice of his, one Edward Blurton, and paid the usual fee therefor. This slight circumstance, I may mention, is now made known for the first time: it has escaped the notice of previous inquiries. In 1641 he paid his quota, amounting to £3, of one of the forced loans levied on the City Companies by Charles I. He was described in our Court Book of that day as "of the parish of St. Dunstan's-in-the-West." Thereafter he seems to have taken no further par in the affairs of the Company, and apparently to have left no trace of his address. I wish that our records threw some light upon the debated question as to the trade or calling that Walton followed; but they do not. After careful search, I have not discovered the faintest hint as to the occupation of Grinsell, his old master; or as to that of Cavell, who in turn was Grinsell's master; or as to that of Dane, who was Cavell's—thus going back to at least a generation before Walton was born. It has been surmised that, because in the license for his marriage with Rachel Floud, in 1626, Walton was described as of the "Cittie of London, Ironmonger," he would not have so styled himself had he been, according to the usually received tradition, a sempster or haberdasher. The opinion is plausible so far as bare words form a guide; it is not so, however, when regard is had to the Custom of London. By that Custom one who is free of the City of London, when styling himself as a Citizen, appends the name of some trade or craft. That name, however, does not necessarily indicate the trade or craft he actually follows. It simply means that he is a Freeman of the Livery Company of the City of London which bears such name; and that it is in virtue of presenting the copy of his Freedom in that Company to the Chamberlain of London that he has been enabled to take up his Freedom of the City of London also. The Custom still prevails in the present day. A citizen of London, in any address to his fellow-citizens, signs himself, regardless of what his actual calling may be, as "Citizen and Mercer," "Citizen and Goldsmith," and so on, according to the Livery Company of which he was first made free. Hence Walton's description of himself in his marriage license was technically correct. The word "Ironmonger" simply meant that he was free of the Ironmongers' Company. There is nothing whatever therefore, either in the records of the Ironmongers' Company or in the wording of Walton's marriage license, to disturb the received tradition that his calling was that of a sempster or haberdasher. There are few names which excite more pleasing associations than Walton's; none in which the virtues of the loyal citizen, the pious churchman, the devoted admirer of the works of nature, shine with more attractive grace and luster. The singular charm that his character must have possessed is strikingly evidenced by his close intimacy with many of the most learned and illustrious of his contemporaries. Even in these leveling days, it would scarcely be within probability that a tradesman of moderate standing, as Walton was, should be the bosom friend of highly-placed dignitaries and men of family. Yet, in an age when ranks in the social scale were far more sharply defined than they are now, Walton was the close, the esteemed and life-long friend of Donne, the poet-preacher, Dean of Old St. Paul's, and sometime Rector of this parish; of Sheldon, Archbishop of Canterbury; of Sanderson and Barlow, Bishops of Lincoln; of at least three other Bishops, one being Ken, his brother-in-law; of the saintly George Herbert; of Sir Henry Wotton, courtier, diplomatist, and Provost of Eton. And the simplicity, piety and honesty of the man shine out in his books. The "Lives," perhaps, display more literary style; but "The Angler" ever has been, and is likely to remain, the popular favorite; though we may say of it, as Goldsmith said of his own "Vicar of Wakefield," "There are a hundred faults in this thing, and a hundred things might be said to prove them beauties. But it is needless." Allow me, Mr. Marston, to give expression to congratulations, which will be general, upon the successful completion of you and your colleagues' labors to provide London with a memorial of one of the most virtuous and pure-minded of its worthies in past days. No site could you have selected so appropriate to receive it as this—the Church of the parish in which Walton resided some twenty years, and intimately associated with so many of his joys and sorrows. Here, under our feet, lie in dust Rachel, his first wife, and seven of their children; here, in the churchyard, was first published "Compleat Angler." It is now my privilege to unveil this window; and, when I have done so, I dare say, Mr. Marston, you will be so kind as to tell us something about it. May it serve for generations to come to adorn this sacred fane, and to assist in keeping alive "meek Walton's Heavenly memory."

MR. R. B. MARSTON said the memorial of Walton in Winchester Cathedral had led up to the one they had seen unveiled that afternoon. The speaker told how Dr. Kitchin, Dean of the Cathedral, as a result of a communication on the matter, had expressed the pleasure it would give him to reserve a niche in the Great Screen for a statue of Izaak Walton; and he (Mr. Marston) knew that anglers were very glad to hear that such a kind offer had been made. Thanks to the readers of the *Fishing Gazette*, he was afterward enabled to obtain the necessary amount for the statue, which was executed by Miss Mary Grant. That lady, hearing of that day's ceremony, had expressed a desire to be present, and he hoped she was, as the central figure on the window was a copy of Miss Grant's work in the Cathedral Screen. Continuing, Mr. Marston explained that the particular memorial which had called them together that afternoon was first suggested at the Walton Tercentenary Celebration which took place on the banks of the Lea at Broxbourne. Reference was made to that at Winchester, and as London was without a memorial, it was decided to take steps to provide one here, and he had to thank the Rector of St. Dunstan's (Rev. Mr. Martin) for the kind manner in which he had assisted him to get up the memorial. Many firms, some of which were on the continent, had applied to have the honor of making the window, but he (Mr. Marston) thought it would be best to employ an English firm and as a result the work had been executed by Messrs. Percy Bacon and Bros., of Newman street, Oxford street, London, who had done similar work in all parts of England. Referring to the quality of the window, Mr. Marston said the colors would last as long as glass could last, and he believed there was some glass in England over 1,000 years old. He then described the window in detail.

The center light of this window contains a full-length figure of Walton, being a copy of the charming statue by Miss Mary Grant in Winchester Cathedral, and a smaller panel shows him seated at his library table surrounded by books and trophies of his art. The side lights enshrine portraits of men whose lives he wrote. At the top of the left hand light is Sir Henry Wotton, with his coat of arms, and a view of Eton College, of which he was for some time Provost. Lower down is Bishop Ken and an elevation of Wells Cathedral. In the lowest panel is George Herbert, the poet, and his church at Bemerton is depicted on a shield. At the top of the right hand light is Dr. Donne, Dean of Old St. Paul's, of which the west front is shown; beneath him is the "judicious" Hooker and his delightful little church at Barham, near Canterbury. The third panel depicts Bishop Sanderson and his cathedral at Lincoln.

Angels in the tracery hold scrolls of the virtues. In the two side quarterfoils are blazoned the arms of St. Dunstan and of the Ironmongers' Company. The center quarterfoil contains the intertwined monograms of Izaak Walton and Charles Cotton.

MR. MARSTON then proceeded to refer to the men whose portraits surround Walton, and said that he could not do better than quote what Walton himself had written about them, especially as they would recognize in the descriptions many characteristics of the writer himself.

Walton's "Life of Dr. Donne" was, said Mr. Marston, published in 1640. In it Donne is thus referred to: "He was of a stature moderately tall; of a straight and equally proportioned body, to which all his words and actions gave an unexpressible addition of comeliness.

"He was of too brave a soul to offer injuries, and too much a Christian not to pardon them in others.

* * * * * * *

"He was earnest and unwearied in the search of knowledge, with which his vigorous soul is now satisfied, and employed in a continual praise of that God that first breathed it into his active body, which once was a temple of the Holy Ghost, and is now become a small quantity of Christian dust;

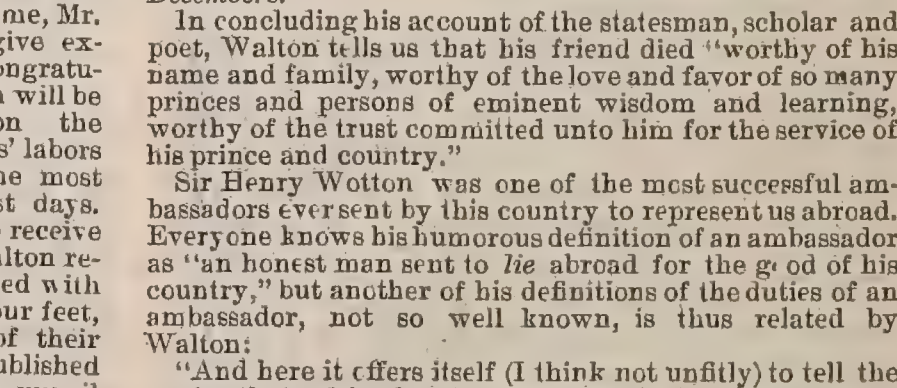
"But I shall see it reanimated."

MR. MARSTON said the last words he had just quoted said as much as any sermon could for Walton's calm belief in and assurance of a future life; it was characteristic of the man that his religion was a part of himself, and even an atheist could not read Walton's writings without being convinced of their honesty.

Dr. Donne, continued Mr. Marston, was Rector of St. Dunstan's, and afterward Dean of St. Paul's. Walton was a constant hearer and great admirer of his sermons.

In 1651 Walton published the life of his great friend and angling companion Sir Henry Wotton, who is thus described: "He returned out of Italy into England about the thirtieth year of his age, being then noted by many both for his person and comportment; for indeed he was of a choice shape, tall of stature, and of a most persuasive behavior; which was so mixed with sweet discourse and civilities as gained him much love from all persons with whom he entered acquaintance.

"And whereas he was noted in his youth to have a sharp wit, and apt to jest; that, by time, travel and conversation, was so polished, and made so useful, that his company seemed to be one of the delights of mankind."



In describing Sir Henry Wotton's life when he was Provost of Eton, Walton says:

"Nor did he forget his innate pleasure of angling, which he would usually call *his idle time not idly spent;* saying *often, he would rather live five May months than forty Decembers.*"

In concluding his account of the statesman, scholar and poet, Walton tells us that his friend died "worthy of his name and family, worthy of the love and favor of so many princes and persons of eminent wisdom and learning, worthy of the trust committed unto him for the service of his prince and country."

Sir Henry Wotton was one of the most successful ambassadors ever sent by this country to represent us abroad. Everyone knows his humorous definition of an ambassador as "an honest man sent to *lie* abroad for the good of his country," but another of his definitions of the duties of an ambassador, not so well known, is thus related by Walton:

"And here it offers itself (I think not unfitly) to tell the reader that a friend of Sir Henry Wotton's, being designed for the employment of an ambassador, came to Eton, and requested from him some experimental rules for his prudent and safe carriage in his negotations; to whom he smilingly gave this for an infallible aphorism—that, to be in safety himself and serviceable to his country, he should always and upon all occasions speak the *truth* (it, adds Walton, seems a State paradox); for, said Sir Henry Wotton, you shall never be believed, and by this means your truth will secure yourself if you shall ever be called to any account; and 'twill also put your adversaries (who will still hunt counter) to a loss in all their disquisitions and undertakings."

I was fortunate enough, said Mr. Marston, to secure only last week a copy of the first edition of Walton's "Life of Mr. Richard Hooker," the author of the "Laws of Ecclesiastical Polity," published in 1665. I say fortunate because this particular copy had been presented by Walton himself to Doctor Warmstrey, Dean of Worster; and what makes it more interesting is that the printed list of errata has been run through by Walton in ink, and the whole of the errors have been most carefully corrected in ink by Walton himself.

Last Sunday evening I was showing my wife Walton's own handwriting in this little book, now 230 years old. We carefully compared the handwriting with divers bits of Walton's writing which have been facsimilied by editors of his works; there could be no doubt about its genuineness, and when, in answer to a natural inquiry as to what I had given for this little shabby volume, I mentioned the price, my wife said, "Well! I always thought you had Walton on the brain, but now I know it!" The ladies never will look on these things in the proper light.

Walton's "Life of Hooker" was written at the earnest request of Dr. Sheldon, then Bishop of London, himself a great angler, being especially fond of barbel fishing. In fact, it is interesting to note that, besides Walton himself, at least three of those whose portraits are given in this window were also anglers. Dr. Donne is described as a great practitioner, master and patron "of angling," and George Herbert, divine Herbert, also Walton tells us, loved angling. In his "Compleat Angler" he quotes those sweetest of verses beginning—

Sweet day, so cool, so calm, so bright.

Whether Thomas Ken, Walton's friend and relative, was an angler I know not, but the portrait of the author of two of the finest hymns in the English or any language is well placed in such a window as this. Millions have sung, and millions more will sing, Ken's morning hymn, commencing:

Awake, my soul, and with the sun
Thy daily stage of duty run.

And the equally beautiful evening hymn:

All praise to Thee, my God, this night,
For all the blessings of the light.

My earliest recollection of anything is of my father, "The Amateur Angler," playing the music of these grand hymns.

Walton's "Life of Dr. Robert Sanderson, Bishop of Lincoln," whose portrait is the last in the window, was published in 1678, five years before his death.

MR. MARSTON, referring to the "Compleat Angler," said it was first published in 1653; it had gone through five editions in Walton's lifetime, and more than a hundred editions of it had since been published, several of them in America. He described it as a charming English classic, and quoted what several well-known writers had said about it. He said he had to heartily thank Mr. Baily, the Master of the Ironmongers' Company, for unveiling the window. He felt sure those present would agree with him (Mr. Marston) that it was most appropriate that the Master of the body with which Walton was connected should perform the ceremony, and he was certain they had been delighted with the information Mr. Baily had given them regarding Walton's associations with the Ironmongers' Company. He also desired to heartily thank the subscribers to the fund, the surplus from which, as agreed, would be devoted to the Anglers' Benevolent Society, of which he (Mr. Marston) was proud to say he was president. It was a society which had been started by the workingmen anglers of London for the purpose of helping brethren in need, and if anyone was desirous of supporting the memorial, they could not do better than forward their subscription to that society. Mr. Marston concluded by calling upon Mr. William Senior (angling editor of *The Field*) to say a few words, and, at the same time, thanked him and other writers of the angling Press for the great help rendered in connection with the memorial.

Mr. SENIOR said that, as chairman of the riverside meeting held up the Lea, which had been referred to, the pleasing duty had been put upon him of asking Mr. Baily to accept their hearty thanks for having unveiled the window, and for the interest he had taken in the movement. The excellent speeches they had just listened to left him (Mr. Senior) very little to say. He, however, would like to remark that Mr. Baily might rest assured that his speech would be of peculiar interest to all Waltonian students, both in this country and the New World, for they had heard a great deal in it that was interesting, and much that was actually new with regard to Izaak Walton. He thought the statements Mr. Baily had been able to make as a result of his researches should inspire them to seek for further discoveries in old documents as to the life of Walton. Proceeding, Mr. Senior said it was to Mr. Marston that they owed not only the statue in Winchester Cathedral, but the beautiful window which had just been unveiled. Again, on behalf of the London anglers, he thanked Mr. Baily for having most literally, as well as figuratively, put the hall mark to a splendid work—to a beautiful window which illustrated a good man, which illustrated an interesting chapter or period in English history, and which, he further ventured to say, was not out of harmony with a beautiful church.

Mr. BAILY, in reply, thanked Mr. Senior very much for his kind words, and could only say he felt very proud, during his year of office, to participate in the privilege which had fallen to his share.

The Rev. WM. MARTIN said, on behalf of the churchwardens and parishioners, he accepted most gratefully the beautiful window offered them, and placed in the church that day. They also desired to tender their warmest thanks to Mr. Marston and others who had taken such an interest in the memorial. He did not look upon it simply as the memorial of one worthy man, but of seven worthy men, and he thought it would be very interesting if some one would write the history in connection with the window, bringing into the book also the history of those men.

A hymn was then sung, and with the benediction the unveiling service was brought to a close.

Nearly all the subscriptions promised, amounting to about £115, having been received, Mr. R. B. Marston, the Hon. Sec. and Treasurer of the Walton Memorial Fund, last Tuesday paid Messrs. Percy Bacon Bros., 11 Newman street, Oxford street, the sums agreed upon for the Window and the Marble Tablet, viz., £100 and £10 respectively, and when all the subscriptions are finally received he hopes to have a surplus of from £5 to £10 to hand over to the Anglers' Benevolent Society.

Now is the Season of Our Discontent.

THESE bright sunny days with the zephyr breezes are turning my thoughts to the deep green woods and the purling brooks, and ere long I hope to be where the tree shadows make and the tinted trout hide.

ALEX. STARBUCK.

DO FISH FEEL PAIN?

COLORADO.—*Editor Forest and Stream:* In recent and frequent correspondence I notice controversy is rife as to whether or not fish experience pain from wounds or lacerations. That a fish is subject to great fright is certain; which would seem to infer that their nervous composition was capable of sustaining a shock. But that it is sensible to injury or pain, I willingly resign to older heads for the solving of what, to me, is an intricate problem.

"F. S. J. C.," in FOREST AND STREAM of the 27th, cites several instances which seem to contradict the theory that a fish has any nervous organization whatever. I also have in mind several instances of similar character which were recalled by the perusal of these articles on this subject.

Last fall, while trouting along one of the numerous good streams that abound in this section, I came across a shady pool of considerable size and depth, wherein I was certain lurked some of the aged denizens of the creek. It was in the evening and I was fishing up stream. I cast my flies under the overhanging boughs, and hardly had they touched on the water before I was made aware of the presence of a lusty trout in a heavy strike. I was kept busy for the next few minutes keeping him out of the roots which lined the banks, when my line suddenly slackened and I drew it in, to discover that my lower fly—a brown hackle—had been broken off where the hook joins the gut. I repaired the break and made another cast, being immediately rewarded with a second strike, which from the disturbance created I concluded must be the same fish. He, in some manner, failed to hook himself, but a second later my line straightened out and whizzed through the water toward the right bank, and not wishing to lose my prize, I turned the butt toward him, when the hold again broke, depositing my flies in the tree tops overhead. In trying to dislodge them I broke the gut, and, as usual in such cases, my flies remained in the tree top—probably do yet—and there I was, discovering, to my dismay, that my fly book was in my coat pocket in camp, a couple of hundred yards down the creek.

As to the time it took to reach camp I cannot say; but in a very brief period I had returned to where my rod was lying and affixed a new fly. Again a cast was made and again the fish responded in fine shape. This time he was successfully landed—a very beautiful specimen, tipping the beam at a trifle over 2lbs.—and upon examination I found my brown hackle lodged in the roof of his cavernous mouth; also a strip of skin about an inch and a quarter long by half an inch wide torn from his side, and a very ugly wound exposed, from which blood was still dripping. In striking the second time he had probably snagged himself on my lower fly.

Later we were fishing in the Mesa Lakes—a very beautiful group of mirror-like ponds that are the delight of the disciples of Walton from all over the country—and gradually worked our way around to where a small creek empties its crystal waters into the lake. We were having splendid success, having landed thirty-four in nearly as many minutes, and then we had to fish after that, managing to secure some very beautiful trophies. Where the creek enters the lake it falls over a 6ft. embankment, leaving a shallow stream of about 20ft. between the falls and the main body of water. Several large red fellows were seen lazily moving about in the shallow water, and we took great caution lest we should be observed. They would not take the fly in the creek with any great activity, so my companion could not resist the temptation, and pulling his .38 Smith & Wesson shot at a fine large fellow, which he hit. After considerable splashing he started down the stream like a flash, leaping clear out of the water at one time. My fly was resting on the water at the mouth of the creek, dancing on top of the current, when suddenly my reel began to sing and about 30yds. of line spun out into the lake, which was immediately hauled in after a slight struggle with a trout of considerable weight on the end. Blood was running out of him very profusely, and we found a large, jagged hole torn through him, made by the revolver ball.

A short time ago a young friend of mine was fishing in the Grand River, a short distance from the city, and landed a 12lb. whitefish with a big steel hook fastened in his belly, to which was attached about 6ft. of line tied in the center of a twig 3 or 4ft. in length. Some boy had evidently fastened his line over night and the stick had pulled out of the bank when the fish became snagged. If he could have felt pain he certainly would have felt it pulling against that 4ft. stick through deep water. The hole, which the hook had torn pretty badly, was apparently very much inflamed from appearances.

Several other instances have occurred to me, but I will not recount them at present. But whether fish feel pain under such wounds I am at a loss to determine; if they do, then their instinct for preying on insects is predominant over all others, and they lose their pain in their greed. Some experienced head inform us on the subject.

CHAS. G. SUMNER.

ASBURY PARK, N. J.—*Editor Forest and Stream:* The recent discussion of this subject is to all students of nature one of importance and is worthy of consideration by all classes and conditions of men. To the sportsman it has a meaning of great breadth. If the negative be sustained then there need be no qualms of conscience over the quarry, as struggling for freedom he darts hither and yon, seeking to free himself from a bondage of the nature of which he is ignorant.

If on the other hand the affirmative is the case, then there is but one duty for the angler, to land the captive as quickly as is consistent with safety and at once dispatch the sufferer.

Personally I am a strong believer in the affirmative. To believe otherwise is, in my opinion, contrary to all the laws of nature which govern and direct the entire animal kingdom. Wherever brain power exists there must of necessity be capacity for pain, and in just the proportion of intelligence and nervous organization of the animal affected is it lessened or intensified. The horse is more keenly sensitive to the stroke of the whip than would be any other animal of lower intelligence and less nervous development. Fishes, occupying as they do a very low plane in the kingdom to which they belong, must of necessity be very much less susceptible to the sensation we call pain than the warm-blooded animals; but I cannot believe they are entirely devoid of pain nerves.

If we except their wonderful propensities for reproduction, their strongest impulse is that of appetite. Numerous personal observations convince me fully that hunger entirely overbalances any other physical discomfort they may be subjected to. I once hooked an immense plaice in the inlet of one of our rivers, and, using light tackle, was compelled to drown him before attempting to land him in the boat. The water was very clear, and I was enabled to watch every movement of the fish. To my surprise I saw him strike thrice at the swinging sinker I was using, and upon landing him I found the hook firmly imbedded in the stomach.

On another occasion I took a weakfish, whose back was terribly lacerated by the claws of a fish-hawk; and so recently had the injury been sustained that blood was oozing freely from the wounds. In both cases it would seem that the pain incident to the circumstances would have been intense, yet the desire for food arose paramount.

A. A. Brower, the noted angler, a few days since told me he once took a pickerel which had gorged a catfish, and the sharp, spike-like rays of the fins were protruding through both of the pickerel's sides, yet in this unpleasant predicament he did not hesitate to take the bait.

Still, with all the evidence which can easily be procured to the contrary, it is but fair to presume there is a certain sense of pain, however dull that sense may be, which pervades all animated nature, of which fish are not by many degrees the lowest type. LEONARD HULIT.

NEW ENGLAND WATERS.

BOSTON, May 4.—The days of anticipation for New England anglers are almost over, and now comes the effort to realize on the hopes built up during the past winter. From every side come reports that lake after lake is yielding up its icy surface under the influence of the warm spring sun and melting rains. All of the New Hampshire lakes are now free and clear, and most of the Maine lakes are in the same desirable condition. The Rangeleys and Moosehead are still hard and fast, and just when the great day will be is, indeed, hard to say. Perhaps it may come before FOREST AND STREAM'S next issue. Certainly it cannot be far from that date. A party who left Rangeley on May 1 told me that there was still 20in. of blue ice out in the lakes, but as the edges are very much broken and decayed there is nothing to anchor it, and a good wind or rain would soon finish it. A letter from Moosehead states that it was very cold in that region about May 1, but prophesies at the same time that the ice will go out by the 6th. This seems rather too sanguine. Another letter received from Grand Lake, Maine, states that the lake is clear of ice to Munson's Island and was expected to be all clear in two or three days. Since then I have heard that it is entirely cleared. Lake George, in New York, has been open for some time, and one or two Boston parties are making up to go there. Reports from Sebago indicate the fishing to be excellent, most of the salmon taken thus far being heavy-weights. Many parties are either on their way to the lakes or making up to go, and this week will see an exodus of fishermen from Boston and surrounding towns, all armed with trolling tackle such as is witnessed but once each year.

Messrs. J. J. Gilligan and Thornton A. Smith, both great lovers of the sport, took a short trip recently, to try a much-fished brook at North Lakeville, Mass. They were quite successful, catching a number of trout, and Mr. Gilligan succeeded in landing one big fellow weighing slightly over 2lbs. To pick out a beauty of this size from a stream so near Boston is a rare experience, and in order to have ocular proof of his prowess, to show his friends, he is having it set up by Frazer.

While fishing at Moosehead last season, Mr. F. H. Talcott, of Boston, succeeded in hooking a very large fish. It took him a long time to get his victim near the boat, and although the fish was in an exhausted condition, it required many successive efforts on the part of his guide and a great loss of nerve tissue to Mr. Talcott to get his majesty in out of the wet, owing to the net (although of ordinary size) being totally inadequate for the occasion. Vowing that he would never be caught in such a scrape again, Mr. Talcott has had a small gaff hook made out of a large size cod hook. This can be attached to the net handle, and the next time a Moosehead fish tries to evade Mr. Talcott's company by rolling out of the net, he will be promptly and tenderly lifted into the boat. The idea is excellent, and one that might be copied to advantage by brother anglers.

Mr. L. S. Dow and party from Hartford, Conn., passed through Boston last Thursday, on their way for a few days' fishing at Winisquam Lake, N. H. Mr. Dow has fished these waters very successfully for a number of seasons, and those of his party who have not visited this locality before will be under the right tuition to insure success.

W. D. Brackett, of Stoneham, Mass., and W. P. Clark, of Peabody, Mass., will leave for the Rangeleys as soon as word comes that the ice is out. These two gentlemen present a record for constant companionship which very few men can boast of. This is the twenty-fourth successive season that they have fished together at the Upper Dam. When one considers the many causes arising from business, sickness, etc., which necessitate the postponement or total abandonment of fishing trips time and again, this showing may be pronounced as remarkable, and I doubt if it can be equaled in New England. Frank E. White, of Brockton, and Mr. Brown, of Peabody, will accompany them on this trip.

Mr. Louis G. Hoyt, of Kingston, N. H., has issued a circular regarding a contemplated fishing trip which is quite unique in character. All of the party are well-known anglers, and that a good time awaits them is an assured fact. The circular reads as follows: "The steamer Iris will leave Lakeport, N. H., on Saturday, May 11, at 1 P. M., for a cruise on Lake Winnepesaukee, trout trolling, with the following party: Dr. A. B. Jewell, Newton, Mass.; Dr. F. O. Loveland, Newton; Russell H. Fellows and John H. Fellows, Brentwood, N. H.; Stephen F. Nichols and Louis G. Hoyt, Kingston, N. H.; Dr. J. E. S. Pray and Gilman B. Hoyt, Exeter, N. H. The party will be left at Wolfboro at 2 P. M. May 15, where the catch will be shipped to Boston by special freight leaving at 2:40 P. M. A part of the party will from here proceed north to Dan Hole in search of salmon. The public will have notice of the size of the catch by the Boston quotation for trout the following day. The boat will have a caterer, and will be stocked with provisions and the customary wherewithal for a successful fishing trip, and nothing need be supplied by any of the party except time and patience. The angling experience of the members has

covered a wide range and the success of the combination cannot but be assured. Messrs. Jewell and Loveland have landed the salted cod off Brackett's counter, Pray and G. B. Hoyt have clubbed the wily alewife in its haunts below the Squamscott dam, the 'Fellows' have turbined the lordly eel at the rapids of the Coppyhole, and Nichols and L. G. Hoyt have cast for flies amid the odors of pennyroyal and creosote. Signed. L. G. HOYT for the committee."

The Dr. Libby party, of Boston, including Dr. C. H. Gerrish, of Exeter, N. H., have lately returned from a few days' fishing at Lake Winnepasaukee. The trip proved very enjoyable, and a number of trout were taken, the largest of which weighed 7lbs.

Mr. C. W. Willard, one of the Rhode Island Fish Commissioners, and Capt. C. C. Maxson, both from Westerly, R. I., passed through Boston last week *en route* to Newfound, Sunapee and Pleasant lakes, New Hampshire. They will spend about ten days fishing the three lakes. Pleasant Lake is located near Scytheville, and is the water recently spoken of in FOREST AND STREAM as to be opened, after a long-closed season, on May 1.

A jolly crowd, consisting of James Edgar, F. S. Thomas, E. Frank Swift, R. M. Fullerton and Willis Marble, started a few days ago for Lake Rocignolle, Nova Scotia. They expect to be gone about two weeks, and fly-fishing for trout will be the order of the trip. Mr. Thomas is a pioneer in Nova Scotia fishing, and under his able tuition those of the party who are making this for their first trip will speedily become experts in the art of fly-casting.

Two other Brockton gentlemen, E. O. Noyes and J. Chipman, started for Weld Pond, Me., on Monday last to try the salmon and trout fishing. They will be gone about one week.

L. D. Chapman and J. A. Littleton, of Boston, with four other gentlemen, making a party of six, start next Friday night to try the salmon at Weld Pond, Me. As the fishing is reported excellent there, and the party are all veterans at the sport, no doubt there will be a great round-up of salmon.

A large lake trout, on exhibition in the window of the Washington street office of the Boston & Maine R. R., attracted the notice of many people a few days ago. The fish was caught at Newfound Lake, N. H., by General Paul Lang, of Oxford, N. H., formerly a member of the staff of ex-Governor Goodale. It was caught trolling, weighed 15lbs., and took a long time to land. This gentleman has a record, in 1894, at the same lake, of twelve fish caught, with a total weight of 140lbs.

HACKLE.

Northern Michigan Trout.

DETROIT, May 4.—May opened with soft skies, balmy air and a mighty rush for trout streams of northern Michigan. Never, perhaps, has the fishing been better, during the first days of the season, thanks to the policy of the State respecting fish protection and the enforcement of the laws governing the same. The occupations of the conscienceless rascals who went in for dynamite and every other murderous method for destruction have departed. The vicinity of Baldwin, Mich., in Lake county, abounds in fine trout streams, and they are having plenty of visitors. Baldwin Creek, which flows through the town, Sanborn Creek, the Middle Branch, Danaher Creek and others are good trout waters; in the first named, a brown trout has been taken weighing close to 5lbs., while others of this excellent fish and of speckled trout have been taken at the mill dam and below, weighing over 3lbs. each. Rainbow trout also have been taken in this vicinity. Sanborn Creek has always been a fainter stream, and although thousands of fish are every year taken, there is apparently no diminution of the supply.

In the Middle Branch, rainbow trout are the more numerous, of large size, ranging in weight from 2 to 5lbs. In the Little Manistee, north of there, trout abound, and it is also a popular stream; though the fish are somewhat smaller in size, they make up in quantity what they lack in size.

Around Reed City, the fishing has always been good, but the present season bids fair to break all records. A telegram from a friend received yesterday, tantalizingly states: "Everybody went fishing yesterday (May 1), and the catch was unprecedented, aggregating at least 2,000 fish, brook trout, brown trout and rainbows. One German brown caught weighed 2lbs. 12oz. dressed, within a mile of the Flint and Pere Marquette Railway depot. One of the rainbow trout weighed 22oz. and was taken about one block from the railway station"—and so it goes. It is awfully exasperating to be obliged to forego all this great sport, but it's a good thing to remember—if you can't go, "why take the FOREST AND STREAM and read about it."

B.

"One Better."

WABASHA, Minn., May 3.—*Editor Forest and Stream:* I have just returned from a trip over in Wisconsin, in the vicinity where the incident occurred regarding the bear and old rifle, with the string attachment, of which I wrote to you some time ago.

The friend with whom I went had always succeeded in catching a larger trout than I, and on our first afternoon out I succeeded in landing among others, after a hard fight and a troublesome time in a drift pile, a handsome trout 16in. in length and weighing 2lbs. Soon after, I met my friend on the stream below as the shadows were gathering, and on his inquiring of my success I replied, "One little one," intending to surprise him when we arrived at camp.

I passed on down the stream and soon went to camp, and on arrival fastened my big trout by the door in full length, so that it would show off to good advantage and attract my friend's attention when he came in.

He soon after arrived, and looking at my trout said, "Ah, you rascal, you tried to fool me, didn't you, but I can beat that," and he reached down in his basket and pulled out a monster trout, held it up side of mine, and it measured 18in. and weighed 3lbs. I didn't say anything, or do anything, but just sat down and looked at them.

WAPAHASA.

The Wabasha *Herald* comments on the fish caught on the occasion referred to by "Wapahasa": "Perhaps the finest string of trout ever brought to this city was exhibited by Major Jewell to-day. They are part of a catch made by himself and Geo. F. Benson, of Lake City, in Rush Creek, Wis. Three of the largest weighed a fraction over 6lbs., two weighed 5lbs., and the largest of the lot, 3lbs.

Central New York.

ITHACA, N. Y., May 2.—The trout season in this part of New York is proving a great success. Some splendid catches have been made by local anglers. Recently W. H. Willson and Arthur Post took seventy trout in one day from a stream near Slaterville. Mr. Neil and a friend, one day last week, caught forty in the same locality. Other studious disciples of Walton have scored well-filled creels from points near McLean, Harford Mills, Speedsville and Slaterville. A friend at Cortland writes me that some remarkably fine catches have been made in Cortland county.

Lake fishing has hardly begun yet. The local dailies note the taking, by a local fisherman, of a 14-pound salmon trout from Cayuga Lake.

A plant of 800,000 pike-perch from the Government hatchery at Washington, and 300,000 muscallonge from the Caledonia hatchery, will very shortly be put in Cayuga Lake.

A good many pickerel, I am told, were shot in the marshes here this spring by a certain class of gunners, who excused their presence there by the contention that they were duck hunting.

That prolongation of the wildfowl season was a fatally bad business for pickerel, as well as for the ducks.

M. CHILL.

"Forest and Stream" Fishing Postals.

WOLFEBORO, N. H., May 1.—The ice went out of Lake Winnepesaukee April 26, and fishermen from out of town commenced to arrive here Monday. Lake trout are biting better than ever before and are very fat. Landlocked salmon are also caught averaging about 4lbs.; trout 3 to 8lbs., once in a while a larger one. The largest ever taken here weighed 20½lbs. Fishermen make their headquarters here at the Sheridan House, kept by Tom Lees, an old sportsman well known throughout New England.

HORN.

CENTRAL LAKE, Mich., April 29.—A thirty-pound maskinonge was taken in Central Lake, April 26, by deep trolling. It is very unusual to catch these fish so early in the season.

KELPIE.

Night Fishing.

APROPOS of night fishing for trout, I may say, that two years ago I ran across a queer little character down at Blodgett's Mills, four miles south of Cortland, N. Y., who was known through all that country round as an eminently successful trout angler, and who, furthermore, did all his fishing at night. This man derided the idea of angling for trout at any time other than between 8 P. M. and 5 A. M.

M. CHILL.

The Main Ice Out.

[*Special to Forest and Stream.*]

BOSTON, Mass., May 6.—*Editor Forest and Stream:* The ice went out of Moosehead May 5, and the boats are running. The ice left Mooselucmaguntic to-day. This clears the Rangeleys three or four days earlier than expected. The trout fishermen are on the move.

SPECIAL.

Game and Fish Protection.

MAINE GAME AND FISH INTERESTS.

Editor Forest and Stream:

An article appeared in your paper of March 23 from Manley Hardy, of Brewer, Me., in which he criticised the work of the Maine Fish and Game Commissioners somewhat severely, which is nothing new for him, and which we have always passed by unnoticed. Neither do I now propose this as an answer to Mr. Hardy, but strictly for yourself; nor should I have taken any notice of Mr. Hardy's article had you not indorsed it so strongly in your editorial of March 30. It is you I am answering and not Mr. Hardy. If Mr. Hardy has any grievances or suggestions to make, if he will present them to the proper authorities, who are the Commissioners of Fish and Game, they will be treated with proper respect and careful consideration, but we will not belittle our department by answering any communications of this kind through the newspapers. Throwing mud may be all right for boys, but not for gentlemen, "even if you have the most ammunition on your side."

In your editorial of March 30 you say, "It cannot for a moment be thought that Mr. Hardy is either ignorant or prejudiced. On the contrary, there are few men in Maine who have so wide an experience as he has on the protective question. He is able to look at it from the point of view of the guide and the woodsman, and also from the point of view of the dweller of the city and the summer visitor. Statements such as those made by Mr. Hardy cannot be brushed away by the denial of any man, however worthy. Nor can they be explained by the statement that no sufficient appropriation is made by the State."

Now, Mr. Editor, this seems to be a pretty sweeping assertion, making him a kind of Webster's Dictionary in regard to fish and game matters in Maine, and beyond dispute. Well, you may be correct, but from what I have seen and known of him—and I have known him for 20 years, and used to often see him in Bangor—and from anything he has ever said to me, or of any interest he has ever shown in the fish and game of Maine, I have seen only in his articles in FOREST AND STREAM. Neither have I ever known of his giving any information or assistance to the Bangor Commissioner. I live some distance from Bangor and do not know so much about the transportation of game, by personal observation, as I do at this end of the State, where we have no trouble of any amount in that direction. But let us dissect Mr. Hardy's statements and see if they will stand investigation, and see if your estimate of Mr. Hardy is correct. What I shall write you will be the truth, stated fairly and candidly, and which I can substantiate by the evidence of the best men in Maine.

Some years ago you published a long series of articles from Mr. Hardy and his daughter, well written and readable. Among them were many thrusts at the Commissioners, for what reason we never knew. I do not intend to go back and take up old manuscript only partially; the reason why I do so is that a part of his assertions date back several years.

He says trout were then and are now openly sold at Augusta in close time, and goes on and says, "I saw them on the bill of fare at the Augusta House. Senators and Representatives were eating them. I saw a large quantity of trout openly displayed at Augusta for sale. When I stated the facts to Commissioner Stilwell, he promised to investigate. The result was that he told me he had a letter from a warden, to whom he said he wrote to look the matter up, that there had not been a trout in the market for the winter. To-day a gentleman told me he ate trout at the Augusta House week before last. Our Commissioners often visit Augusta and cannot help knowing this." The largest part of this is true. That which is not true spoils the rest. I can best illustrate by telling a story. I once went fishing with the proprietor of a fashionable hotel in Maine for trout and white perch. In a deep pool we found a lot of suckers, from which we filled our baskets. On the bill of fare for supper we had white perch. We caught no perch; the hotel people had bought no perch; they looked like suckers; they tasted like suckers; they were suckers in their native element, yet on the bill of fare they were white perch. The Augusta case is a *fac simile*. I examined these fish at Augusta myself. Have seen them there and elsewhere often. They are not trout; they are not togue; they are unlike anything we have in Maine. Mr. Stilwell was right when he told Mr. Hardy no trout had been in the market for the winter. It was none of our business what they called them on the bill of fare at the Augusta House, and if Mr. Hardy was stupid enough to eat them and call them trout, he is not the man he has the reputation of being in the columns of FOREST AND STREAM, at least, or that I took him for myself. If he is the ichthyologist he has the reputation of being and calls those fish trout as specified in the law, he is entitled to horn No. 1 in that dilemma he has manufactured. If he ate them and thought them trout, the other horn is also his.

You will observe that in FOREST AND STREAM of March 30 you have an article from a correspondent who signs himself "Chandler," who writes about those same Augusta trout and says the same thing about them as myself. His authority cannot be questioned in that or other fish and game matters in Maine. His place in the class of fish and game protection in Maine, and his knowledge of fish and game, is far in advance of Mr. Hardy's. He is intelligent and reliable, and has the confidence and respect of every true sportsman at home and abroad. His testimony cannot be gainsaid, notwithstanding Mr. Hardy to the contrary.

Second—Mr. Hardy says, last winter a man selling salted trout, which he said came from Newfoundland, was arrested and fined; and that just such trout had been openly exposed for sale in front of our markets; there was but little doubt but what they came from out the State, but it damaged the marketman to have them peddled, and the marketman must be protected. This is a misrepresentation. The facts are these: this was the first case brought to our notice. The man was arrested and convicted. He appealed from the decision of the court. The case is now before the full bench to decide whether salted trout caught in Newfoundland in open time can be sold in Maine. The man has paid no fine; it is a question if he ever does. Would it not have been unjust to have gone on prosecuting like offenses and against advice of counsel till the courts have decided whether they can be sustained?

Third—The assertion that the rich man is allowed to kill game to waste, and the poor man who kills to feed his family is prosecuted, is ridiculous and not worth wasting ink to answer. Mr. Hardy knows better than that himself.

He says, one of our prominent Bangor merchants offered to testify that he had paid money to a warden not to see a deer he was shipping to a friend, and gave the name of the warden to whom he paid it. On this being told to a warden he claims that he had authority from the Bangor Commissioner to look after all outside matters, and the offer being made to prove it, the answer was, "If you can prove this you had better have the man arrested."

This is a new phase of that dilemma and something unheard of before. All I can say is, that I think he is making an assertion that he cannot back up and I believe is untrue. Can you believe a merchant can be found in Bangor who is fool enough, even if he had done what Mr. Hardy says, to testify to anything of that kind? Not only criminating himself and subjecting himself to a fine of $40 for illegal transportation, but for bribing an officer also. I challenge Mr. Hardy to produce the proof. If it is true he can do so easily. If it is true the Commissioners will be very glad to know it.

Mr. Hardy says, one day Bangor would be full of deer and the next day none would be seen. This was repeated week after week with no local sale of any amount. That the people could not get any venison without buying a whole deer. This I presume may be true in a measure. What if it is? Is that any evidence that it was all illegally shipped to Boston or elsewhere?

There is no law on our statutes to prevent every deer, moose and caribou brought into Bangor being bought, sold and shipped to Boston legally. You can go into Bangor in open time, buy two deer, one moose and one caribou and ship them to Boston or elsewhere. Any man going to Boston can do the same. There is no law to prevent. Do you suppose all the sportsmen coming to Maine kill all the deer themselves that they take home with them? Some of them, to my knowledge, do not. Often a deer will sell for more to some unlucky sportsman in Maine than it would bring in Boston market. I do not pretend to say that no deer are sent to market from Bangor illegally; but if Mr. Hardy knows so much about the illegal shipping of deer from Bangor, why don't he inform the Commissioners, which he has not done? He has no right to make any such assertions unless he knows it and can make the assertion good.

In years past there have been complaints made that many moose and deer skins were bought in Bangor by local buyers, that were crust-hunted and killed in open time and their slaughter encouraged. Mr. Hardy used to be, if he is not now, one of the largest buyers of furs and skins in the State. Yet I am not ungenerous enough to say, nor do I for one moment believe he would engage in that nefarious traffic, yet we could say it with just as good grounds, to say the least, as he has accused us.

You say statements such as those made by Mr. Hardy cannot be brushed away by the denial of any man, how

ever worthy; nor can they be explained by the statement that no sufficient appropriation is made by the State.

There is no need of saying anything in regard to the sufficiency of the appropriation. That has been decided this last month by the Governor and Legislature of Maine giving us double the appropriation we ever had before, also doubling the salary of the Commissioners. If the Governor and Council and the Legislature of Maine are not the best judges of the needs of Maine, then I don't know who are.

Mr. Editor, I do not propose to have any more controversy through the newspapers. If we have been so negligent in our duty, what has made Maine what it is, one of the best States in the Union for fish and game?

I ask you in justice to the Commissioners to publish this article *verbatim*. HENRY O. STANLEY.

DIXFIELD, Me., April 12.

Fisheulture.

Colorado Commission.

DENVER, Col., April 30.—*Editor Forest and Stream:* There has been a change of officers in all the departments of fish and game. The present Commissioner is Gordon Land, Denver, Col. State Superintendent of Hatcheries, H. M. McDill, Denver, Col. Deputy Game Wardens, F. S. Smith, Fort Collins, Col., and W. H. Clark, Meeker, Col.

The State Fish Commissioner is also State Game and Fish Warden, whose office is Room 20, Capitol Building, second floor, Denver, Col.

GORDON LAND, State Fish Commissioner.

HANDLERS AND A CHAMPION STAKE.

Editor Forest and Stream:

During the past two years there have been several attempts made to call a meeting of such members of the Association of Field Trial Handlers as happened to be present at the field trials where the call was issued, for the avowed purpose of disorganizing the club and disposing of the cash in the treasury. But for some reason the meeting was not held, and at present writing the affairs of the Association are in the same state of suspended animation which has characterized them for the past nine years.

Thinking matters over appertaining to field trial events for the past ten years, the affairs of the Association came under my consideration, and I have given the matter considerable thought, and think I see how, out of the remains of the old club, can be built up a new, stronger and more useful one.

Reviewing the past, it appears as though the old club was born before its time; field trial handlers were fewer in number; there were but two clubs in active operation, and one of them was in the last throes of dissolution, and, all in all, the interests of the handlers were not so well identified, in all respects, as they are at the present day. Then the old club lacked backbone as a legislative body, and placed on its statutes laws that it was wholly incompetent to execute. It was this lack of executive firmness that wrecked it; but it is entirely unnecessary to go into wearisome detail concerning matters which are familiar to all the members of the club.

It has occurred to me that now is the time to give impetus to the affairs of the old club by disorganizing it, and out of its membership collect the charter members of a new club. As I mentioned before, I have been giving this matter a great deal of serious consideration of late, and have thought of a plan which, if carried out properly, would make the new club a necessary and important factor to field trial interests throughout the country; and the object of this article is to submit this plan to my associate handlers and brother members of the old Association for their consideration and approval.

The old club has about thirty or forty dollars in the treasury, and there is not a member of the old club who would not vote to give every cent of it to promote field trial interests, so I think there is no fear of an objection to the new club becoming the owner of the treasury of the old, particularly if the charter members of the new club are composed of the members of the old one.

The number of field trial handlers in the country is now more than double what it was ten years ago, and as it would be to the interest of all to join, the new membership would put the club on a sound financial standing from the start, and would only need good managing to continue so. The members should, of course, be only *bona fide* handlers, and only men following that occupation for a living, whose good standing qualified them for membership, would be eligible.

The exact field, in all its detail, to be covered by the club, could be decided later on, but the club should profit by the experience taught it by the old club and confine its jurisdiction to limits within the scope of its legislative powers.

It should be thoroughly understood, and so embodied in the constitution, that the club is to meddle with no matters that do not directly and vitally concern it, or come under direct course of its legislative power. That under no circumstances will it permit itself to indulge in unfriendly legislation toward any field trial club, association, or individuals connected with the same. A clause in the constitution, fully covering this matter, should render such legislation a matter of impossibility.

It appears to me that the old club was formed without absolutely an object in view of a practicable, useful nature; if the deportment of its members continued good there was absolutely no field in which it could operate. It was indeed pledged to assist all field trial clubs; but how the club, acting as a club, would render any greater assistance than would the members as individuals was never explained; suffice to say that there was very little important business to be found on its docket to be transacted at its meetings, and in endeavoring to bring up matters to keep up interest, much of a frivolous, useless nature was discussed.

To avoid this rock on which the old club ran aground, I would suggest that the object in forming the new club be principally for the purpose of adding a new and attractive feature to the field trial circuit which it now lacks to make it complete, and that is a champion stake to be run at the conclusion of the last trial of the season on the West Point grounds, at a date that will meet the satisfaction of all.

It is my opinion that there is no body of men who ought to be more competent to arrange the competition of an important stake, such as this would be, in greater fairness to all competitors, embodying a more exhaustive test, the results of which would carry the superior qualities of the winner into greater prominence before the public, and none whose decisions would give better satisfaction or be accepted with greater confidence, than those of a club formed for the purpose by men composing the field trial handlers of the United States.

It is an undeniable fact that the country is becoming flooded with dogs that have won at field trials of whose comparative merit to the winners of previous, or, one might safely say, the same year, little can be told, as there now exists no way of direct comparison; therefore I think all will admit the necessity of such a stake, of which the novelty and usefulness will give new interest to field trial matters. There exists no reasonable objection to experienced men, such as field trial handlers are known to be, managing a stake of this description. It is the most important stake possible to suggest, and carries sufficient professional importance to demand professional management by professionals whose experience in all the details of field trial competition qualify them for the undertaking.

No regular field trial club has ever succeeded in running a champion stake to the entire satisfaction of the public and itself. A club in running off its regular stakes consumes so much time, which is apt to be lengthened by unpropitious weather, that it is a too expensive undertaking to put in several days longer with making an exhaustive test between few dogs, when by not having it on their slate it would be possible to end with the week. Again, it is difficult for a club to secure judges for the length of time needed, and there are other obstacles in the way, which show the wisdom of a club handling regular events not putting the champion stake on their slate.

But such a stake is needed badly. Now, who should run it? It is hardly probable a club would be formed to handle that event alone, outside of the one designated by me, so I consider that it devolves on the handling fraternity to take the matter up and make a successful issue of it.

I argue that it is the special field of the handling fraternity to do so, as they as competitors are directly interested, and must, in conducting matters fairly to themselves, conduct them fairly to all. And if all the handlers will enter into the undertaking with unselfish motives, striving by every effort of which they are capable to make the stake regarded by every one as squarely and fairly run, without favoritism to any man, absolutely placing the best dog and no other, it will be patronized according to its merits; and the benefit that each and every handler would derive by the creation and successful running of such a stake ought to insure their best efforts.

It would require the assistance of the club to arrange the details of the stake proposed; but as a suggestion to set all to thinking, I would suggest separate stakes for pointers and setters, the winning of each to confer the title of champion of their class, and an absolute to be run at the finish, sufficient time being given to determine the superior dog of the respective winners. This would place the best dog of the pointers conspicuously before the pointer breeders, and the best setter before the setter breeders; and the absolute would show the comparative merits of the two breeds much more satisfactorily as represented by the champion of each breed.

The amount of the purses could be arranged more satisfactorily later, but it would be necessary for them to be large. I should think the making of the money in the first two stakes, say of $100 to each, and $100 to the winner of absolute, would be large enough, as the honor of winning would compensate for the purses being small.

The entry placed at $25, with $25 additional to start, would permit this and leave sufficient surplus to defray the expenses of running the stake. The club should not care to make anything out of it, but there would of course be years when the entries would not cover expenses, so it would be wise to add a small amount to the treasury each year, when possible from the stake, to meet the short years. It would in my opinion be a wise thing to place no bar on the winners to prevent their competing the following year, for in theory it appears that, if a dog has the superior qualities to defeat all comers as long as his owner cares to run him, the fact is demonstrated that he is the dog to breed to.

Take as an illustration such a superior young dog as Delhi, and suppose that, in addition to his winning the Derby and the All-Age Stakes, as he did at West Point, he had run in the stake I propose and won the champion for pointers. To bar him from running in the champion stake again would in my opinion defeat the object for which field trials are held, and that is to improve the field qualities of our setters and pointers, and bring into public notice the best specimens to breed from.

The next year might bring out another young pointer that would win the Derby and All-Age Stakes; and what the breeders would want to know is: which is the better, Delhi or the recent winner, and only an impartial trial of the two would answer the question.

A grand old dog such as Rip Rap makes a fitting milestone in canine history, and it is always in the hardest competition (like stake suggested) that his qualities have shown the brightest.

A Pointer Stake for champion honors, composed of such dogs as Strideaway, Delhi, Jingo, Lad of Rush, Tick Boy and others, would be a most interesting stake, and the final tilt between the winner of it and the winner of the Setter Stake would make a most exciting event.

In forming the new club there could be a by-law framed, making it obligatory for any member not competing in the stake to serve as judge at the request of the club, without other remuneration than expenses. In case the said member had a reasonable excuse showing wherein serving would inflict a hardship on him, the club deeming same sufficient could excuse him. This would insure the club a supply of competent judges to select from, and if a greater number of judges would be deemed an advantage, the stake could be run under five judges, three handlers and two competent non-handlers, or *vice versa*.

In presenting my suggestions, I have only attempted to do so in the barest outline, believing that if the matter was taken up by my associates as a club, that all matters of a disadvantageous nature would be eliminated in filling in the detail. The most difficult feature which presents itself is holding a meeting of the members of the old Association.

Their places of residence are wide apart, and few could afford the expense of attending a meeting except at such times as all found themselves together at some field trial event.

It is possible that enough will attend the chicken trials in the Northwest to hold the required meeting there, or there might be some plan suggested that would permit it being held before that date.

A great deal of necessary matter preliminary to holding this meeting might, however, be arranged by correspondence, and I would be pleased to receive indorsements from all handlers by mail, that a thorough understanding may be arrived at, as early date as possible.

I am perfectly willing to do all I can to aid matters, and would suggest that all communications be addressed to me at present, until a more satisfactory arrangement can be made.

Therefore, will all the members of the old Association please write me, giving their views of the question, and offering such suggestions as they consider useful to further matters, and bring about the meeting of the Association at as early date as possible? W. W. TITUS.

WAVERLY, Miss., April 29.

UNCAS, MY BULLDOG.

UNCAS was a bulldog, named after the celebrated Indian chieftain of that name. I do not know that bulldogs are credited with the possession of unusual intelligence, but my dog Uncas I thought had a great deal.

I became the owner of him in a gradual way. One evening, some years ago, I called at the house of a friend. While sitting near a table engaged in conversation with him, the edge of the table-spread, which hung half-way to the floor, was pushed out and the head of a bulldog appeared. In answer to my look of inquiry, my friend remarked that the dog (a recent acquisition) was all right. I proceeded to cultivate the dog's acquaintance to such good purpose that after a few evening calls we were very good friends, so much so that when I sat in my buggy one night ready to start for home and my friend said that I could have Uncas for a present, I had only to say, "Come, Uncas," and he followed me home and remained with me, apparently understanding fully that he was to do so. Though the two places, my friend's home and my own, were less than two miles apart, and Uncas often went with me back and forth, he never tried to remain away from his new home.

Uncas proved to be kind in disposition and cheerfully obedient to any order which he understood. My home was on a farm, and Uncas soon learned to kill woodchucks and snakes. His first skunk was a revelation to him. We were in the woods looking for stray cows when I saw Uncas make a rush for some object, and the next instant he reeled back paralyzed. He was the most disgusted and sickest dog in existence. Then followed a series of rollings and retchings, and plowing up of the leaves with the side of his head, highly amusing to witness. When we started on our way again Uncas was a wiser and very much sadder dog. He had met a weapon which had upset all his calculations, and he had been defeated. He killed many of them afterward, and thus had his revenge.

His tactics with a snake—a flat-headed or puff adder, for instance—were nearly similar to those I have read of a wolf using with a rattlesnake; that is to say, he kept up a continual barking and a rushing round and round the snake; then came a rush, a snap, a shake, a toss in the air, and these acts were repeated till the snake was killed.

But it was as a house dog that Uncas interested us most. He soon learned to shut a door when requested to do so, and sometimes, after pushing through a door, he would turn and shut it without orders. If I was working in the field some distance from the house, he would come, when sent, to call me to dinner, and finally learned to come at any time for me when told to do so. On such occasions he would generally jump around me to attract my attention, and sometimes he would have a note attached to his collar. His accomplishment was very convenient and saved many steps. This he was never taught. The first time he was told to go and call me to dinner, he started and came directly to me. If I was in the house in a room apart from the rest of the family, Uncas could be told to go and find me, whereupon he would come to my door and push it open with his foot, and then lie down and wait for me.

One day a neighbor came to the house. Uncas met him a rod or so from the door; then turned and walked beside him to the door, and as the man rapped the dog put his forefeet on the doorstep and gave a single bark, then stood beside him till the door was opened.

Another time two ladies rapped at the door, which stood open. Pretty soon Uncas came to the door, and the ladies

started to come in. He turned and preceded them into a room, where they seated themselves; then he went to another room and attracted the attention of a member of the family.

Another time a man rapped at the south door. No one heard him except Uncas. My aunt, E., was sweeping a room at the time in the back part of the house. The dog came to the door of the room, looked at her an instant, then gave a single bark. Not receiving any attention, he stepped a little nearer and gave another bark. This attracted her attention, and the dog turned and led her to the door where the man was.

I often went across the lots to call on the friend who gave me the dog, and found it very difficult to keep the obscure path in the night when returning. Then I would call on Uncas to guide me. He would take the path, and, keeping a few feet in advance, would lead me straight till we reached my own open lots. He soon learned this so well that, though he would run wild in going from home, returning he would take the position in advance and show me the way home without orders. He being nearly all white enabled me to see him in the dark, and thus made it easy for me to keep in the path.

Alas, poor Uncas! poor old Uncas! He was a homely dog—at least, most people would call him so—but to his own folks he did not seem to be homely. I have even heard Aunt Eliza say, "He was nice looking." He did have a most amiable disposition, and he seemed to possess a high order of intelligence. When one of my aunts (two of them were over eighty years of age) would set a dish of food on the table, Uncas would at once take it under his special care and protect it from the cats. He would not permit one to come near it, nor would he touch it himself. To the aged ladies such little aids were a great help. In many ways he made himself very useful, and the knowledge came to him naturally, as no one ever tried to train him. The things he was told to do he seemed to understand from the first time he was told.

He was also a peaceable dog, but I suppose for variety's sake liked a fight once in a while when there were good and just grounds for it. He was a noble, faithful friend, and, notwithstanding that good looks were lacking, he commanded admiration for his many good qualities.

I remember once that I was to be away from home and asked a friend to stay with the aunties over night. That was the time that Uncas made a great mistake. The friend went out to the barn to feed the cattle, and he found a large gander walking around on the barn floor. He did not seem very friendly and acted as if he was able to take care of that barn and himself; so the friend told Uncas to "Look out for him." When he spoke his back was turned toward the gander and he was looking toward a goose which was sitting on a nest, so I suppose that the dog went at what he supposed our friend was looking at. Uncas, besides, knew that there was a goose there. He quickly brought her off the nest, then the friend and the gander united their forces to save the goose; but Uncas had got that goose in obedience to what he supposed were orders, and now he was going to hold on to it to please himself, and hold it he did.

When I returned home and heard of the fate of the goose, I took Uncas to the barn where he had made a wreck of the goose, he having picked the feathers all off from it, and I whipped him. The poor dog I think felt the punishment keenly. A very short time afterward he was missing. In the morning I went in search of him and found him dead a few rods from the barn behind a large rock, and I have sometimes thought that he died of a broken heart. Still, it may be that he could not endure the disgrace. So ended the life of a noble animal.

H. E. PHINNEY.

CONNECTICUT.

E. Bardoe Elliott.

THE many friends of the late E. Bardoe Elliott will be grieved and shocked to learn of his death, which occurred at Bellevue Hospital, May 2. The cause was acute Bright's disease, superinduced by an attack of inflammatory rheumatism with which he had been afflicted about one week. He was in the prime of life, about 34 years old. In 1888 he came to this country from England, and, having a genuine love of dogs, he devoted much time and attention to them. From special newspaper work he was engaged on the staff of the *Fancier's Journal*, and later was for a time kennel editor of the *American Field*. In February last he engaged as editor in the publication of the *Kennel News*, in company with Frank S. Anderson of Chicago. He strove earnestly for its success, and was in attendance at the Boston show in the interests of his paper, after which he came to New York. April 28 he became ill. Dr. J. P. Bradbury diagnosed the trouble as inflammatory rheumatism. On Wednesday night he became delirious, and on Thursday morning was removed from the Ashland House to Bellevue Hospital. His wife, mother and child arrived on Friday night. His remains were taken to Chicago for a final resting place.

In his professional life no man was more fearlessly outspoken, nor was any one more earnest in being just. No man was more popular in the fancy; none had more friends. Many a sigh was heard; many an eye was dimmed at his untimely passing away. Messrs. Oldham and Mortimer were untiring in their friendly efforts in his behalf, and did all that could be done to lessen the gloom of the sick chamber.

DOG CHAT.

In our business columns will be found the advertisement of the ninth annual trials of the Manitoba Field Trials Club, to be held on chickens at Morris, Manitoba. Also the advertisement of the Continental Club, which will hold its chicken trials at the same place. The importance of these events and their interest are worthy of the earnest support of owners and handlers.

This week Mr. W. B. Wells, Chatham, offers Llewellin setter puppies. Mr. C. Funston, Bloomsburg, Pa., wants a broken pointer dog. Mr. Henry C. Burdick, Springfield, Mass., offers pet dogs, and the Chequasset Kennels, Lancaster, Mass., offer St. Bernard puppies.

Mr. Al. G. Eberhart, Cincinnati, writes us that entries to the Humane Bazar's bench show are coming in in good numbers. It is expected to be a society event. Power Hall, devoted to the show, is 300ft. long, well lighted and ventilated. Entries close May 14. The prizes are cups and merchandise. The show is to establish a home for dogs which are taken up on the streets. Entries should be sent to Al. G. Eberhart, Superintendent.

A meeting for the purpose of organizing the new social club will be held at the Hotel Marlborough, 1,355 Broadway, May 9, at 8 o'clock. Nearly fifty responses have been received to invitations sent out.

The well-known pug dog Eberhart's Cashier died on May 3. He won many prizes.

The Wankie Kennels' Culblean was run over recently by an express train of eight cars. The loss of an ear and a cut over the eye and nose indicated a narrow escape from a violent death.

Mr. John P. Haines, president of the A. S. P. C. A., has issued a notice to the dog owners, who are residents of the city of New York, that they must procure their yearly licenses and pay the sum of $2 therefor. Licenses date from the first day of May. Licenses, or renewals and tags, can be obtained at the headquarters of the Society, 10 East Twenty-second street. Dogs not licensed pursuant to law will be seized and taken to the Shelter for Animals, 102d street, East River. Failure to comply with the law subjects the offender to a fine of $10. A reward of $25 will be paid by the Society for the arrest and conviction of any person found stealing a dog bearing a license tag of the Society in the city of New York.

The National Fox Hunters' Association held a meeting at Lexington, Ky., recently, and set Nov. 18 for the date of their next competition. The committee will meet on June 1, when it will determine on the place for holding the meeting.

Mr. W. P. Frazer, Toronto, was the recipient of a gold watch from many exhibitors at the recent Toronto show, as a testimonial of esteem and appreciation of his energy, successful management, courtesy and good temper.

The officers of the Northwestern Field Trials Club are: Thomas Stone, Calgary, President; W. B. Wells, Chatham, Vice-President; W. T. Hunter, Wheatland, N. D., Second Vice-President; Thomas Johnson, Winnipeg, Secretary-Treasurer; Managing Committee: W. T. Hunter, Thomas Johnson, J. B. Kelly, James Phillips, H. A. Greely, T. A. Montgomery, Rev. W. H. Spence, Thomas Stone.

Secretary Madison advises us that Mr. W. B. Wells will judge the Continental chicken trials.

The following is part of a letter circulated in behalf of the family of the late E. Bardoe Elliott, and it already has been responded to liberally:

"It is proposed to get up a subscription, not only to cover all funeral and other expenses, but, if possible, to raise a small fund to hand his wife to help her tide over the difficulties which his sudden death entails. All his friends are earnestly requested to send some contribution for this purpose to Mr. James Mortimer, Hempstead, N. Y.; or to Mr. E. M. Oldham, 166 West 79th street, New York city, who have the matter in charge. Any little will help in this good cause, and it is hoped that a generous response will at once be made to this appeal."

The report of the Aberdeen Coursing Meeting, published in FOREST AND STREAM last week, was written by Mr. S R. Huntley. Dr. Royce wrote the last paragraph only. By accident Mr. Huntley's name was dropped out in the make-up.

Mr. N. B. Nesbitt, the well-known trainer and field trial handler, who has lived for many years at Chesterville, Miss., has accepted a two years' engagement to take charge of the kennels of Mr. De Pauw, of Louisville. Mr. Nesbitt will start for Manitoba about July 1 and will run in the field trials held there, and probably in the trials of the quail circuit.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Canoeing.

A British Canoe Yawl.

THE following letter is from a well-known British canoeist and boat-sailor, Vice-Com. F. Cecil Lane, B. C. A. His long experience in small boats makes his comments very gratifying to the designer of the craft mentioned. We may say that the "scag," as it is known in this country, is the after deadwood of a small boat or canoe, from the rudderpost forward:

8 WEST HOE TERRACE, Plymouth, Eng, April 20.—*Editor Forest and Stream:* Back in the past winter of our discontent, my old canvas packet parted her moorings and went ashore under Plymouth Hoe. She was more or less an experiment always, although a good useful "barkie," in which I had often had good times and made long passages.

She was damaged, but not very seriously, because canvas-covered constructions are practically indestructable, but methought I would retire her to grass, near my house-boat, after a little repair, and go for a new boat altogether.

The idea "worked." I notice that ideas about boats have this tendency, and I took to pencil and paper, though, in effect, before I touched them says I, "What do I want?" This, be it noted, was at Xmas last, while the old hulk lay prone under the snow.

The answer I gave myself was: I want a boat in which I can be "comfy;" one that my dearest earthly belongings can sail in on the sea in comparative safety (*ver. sap.* the word "comparative"); one that I can sail and handle myself; one that I shall not get too wet in when cruising, except under certain unforeseen conditions, when all who go to sea are bound to take a drenching, over all, once in a way; one that will be fairly fast and able; one that can be easily lifted on a beach by two, or rolled on rollers by one man up and down; one not too heavy to pull in a calm or against a moderate tide or stream; one that I can sleep aboard of, if desired; one that will carry all my nautical *lares et penates*—and there are many nowadays; lastly, one that will carry her sail, and one that will go on the blue deep sea of these lovely coasts of ours, and anon up the many beautiful muddy and shallow (at low tide) rivers and creeks, such as Tavy, Lynher and Nottar, etc., where at times a draft of more than six inches is a serious inconvenience to clean landing.

Well, dear Mr. Editor, all the above are *desiderata* that have often troubled many minds to consolidate in one packet, but you and I seem to have been simultaneously struck by one slungshot, and although we are widely separated, the thought must have hit us together or nearly so.

I placed my design in the hands of Kessell & Son, the clever boat-builders of Davenport. They "caught on" in February last, and early in March as pretty a creation as an enthusiastic boatist would wish to look on grew up under their able fingers—17ft. ×4ft. 11 in. over all, 15ft. l.w.l., midship depth 13in.—and now follows the reason for my writing to you. A week after my "packet" was finished came to this club the ever welcome FOREST AND STREAM of March 30, and behold! "coincidence queer," there appeared on that magic page a "one-design" canoe yawl from the pen of one "W. P. S."

I was a proud man that day, to recognize an almost precisely similar conception to the outcome of my own lucubrations. So alike are the two boats, there is no necessity to publish my lines and description, it is only needful to increase the size of yours to insure having mine, bar some details of construction, however.

One planet of such magnitude in one hemisphere, and one star of lesser brightness in another, cannot shine on a benighted world of canoeists without the inhabitants deriving benefit thereby, and the smaller luminary ventures to beam congratulations on the one who has given to the world quite the most all round suitable design for a useful purpose canoe yawl, and hopes for the sake of the somewhat waning sport the plans will be generally adopted, until that day arrives when the ideal boat is discovered which combines all the desirable qualities of cruising and racing, the faculty of carrying on till all is blue above and below like a Scotch tea clipper, the ability to come through and out of a gale in tolerable comfort, reefed down, or showing a rag only in the rigging, a good turn of speed without sporting muslin that can only be set in a gentle zephyr, and when too old for cruising or racing, by reason of her shape and construction, can be usefully turned into a family barge or used for market gardening.

We shall look in vain for this boating man's *vade mecum*, you and I know too well, so I am content with our ideas of a craft for the present.

Your next paper to hand gives your sail area, and here again we are alike, only the one is more cautious.

My old spars, sooth to say, governed my cloth, and when I saw what Kessell had done for me, I sent them to J. J. Jackson of Northwich Cheshire, and ordered 110sq. ft. in two sails, exactly like those in FOREST AND STREAM of 6th instant. Perhaps I have erred on the side of caution about my old sticks, and a feeling for my purse dictated this and the omission of many other details of construction which I note, with approbation, are in the specification of my occulting planet over yonder.

I do not run to "brass" and "aluminium," I am but canvas and galvanized iron, but all the same we both have the right thing in size, shape, weight and utility, and I hope both will be equally pleased with their ultimate productions. But one word more, pray what is a "scag?"

The context leads to thoughts of head, sail or forefoot, but I am adrift on a "scag;" Dixon Kemp cannot rescue me. Live and learn is a good motto, and next time a gleam reaches me from your hemisphere, I shall probably be illuminated. F. CECIL LANE, Vice-Com. B. C. A.

New York C. C.

THE New York C. C. has arranged the following races for the season:

May 25, 3 P. M., short sailing race, triangular course, 1½ miles; two classes: first, over 75ft. sail area; second, under 75ft. sail area; 4:15 P. M., short paddling dash; 4:30 P. M., handicap paddling race, ½ mile; 5 P. M., tandem paddling race.

May 30 (Decoration Day), 11 A. M., ½ mile paddling race single; 12 M., ½ mile paddling race tandem; 2:30 P. M., 3 mile sailing race, triangular course; limit of sail area, 100sq. ft.; 4:30 P. M., maneuvering race; 5:40 P. M., club parade.

These events will be held off of the club's new house at Bensonhurst.

The spring regatta, open to all, will be held on June 15, and the fall regatta, open to all, Sept. 7. Prizes will be offered for both regattas.

Races, both paddling and sailing, for record and points, for members of the club, will be held on the various Saturdays of June, July and August. Suitable prizes will be presented to winners. Details of these races will be announced later.

June 22, first trial race for international challenge cup; June 29, second trial race for international challenge cup in conjunction with Marine and Field Club; July 4 and 6, races for International challenge cup. LOUIS L. COUDERT, Sec'y Regatta Committee.

70 WILLIAM STREET, New York City.

CANOE NEWS NOTES.

THE following account of the drowning of a well-known English canoeist and yachtsman is from the *Field*. Mr. Tredwen was a brother of Mr. E. B. Tredwen, so well known in connection with the Pearl canoes, both being members of the Royal C. C.

"A very sad accident occurred on the River Yare on Saturday, April 13, to a very skilled and experienced yacht sailer, Mr. Alaric H. Tredwen, a member of the Royal Corinthian Yacht Club, who was drowned in the river Yare, close to the Seven Mile House. His sailing boat, the Carina, started from Oulton for Yarmouth, the party on board consisting of Mr. A. H. Tredwen, who steered, Burgess, a boatman, Dr. Gatley, Mrs. Barton and two daughters. After sailing to the New Cut they beat down the Yare to the Seven Mile House, where the boat heeled in a squall, filled, and sank. Mr. Tredwen made a gallant attempt to save Mrs Barton, supporting her and encouraging her till his strength was exhausted, when he called to the boatman, Burgess, who had swum ashore; then, giving Mrs. Barton a final push towards the shore, sank. Burgess ran down the bank and plunged in the river again. He brought Mrs. Barton to the shore, but in the meantime Mr. Tredwen had sunk. Miss Barton was also drowned, although an excellent swimmer, her cloak having got over her head. Dr. Gatley and Miss Viola Barton succeeded in swimming ashore. The bodies of Mr. Tredwen and Miss Barton were recovered next day." At that time of the accident, Mr. E. B. Tredwen and Mr. Poultney Bigelow were on a cruise on the North Sea in the former's singlehander Walrus.

The Marine and Field Club has already issued a very attractive programme of its sixth annual invitation race of June 29, illustrated by three views of the club house and grounds at Bath Beach. The races will be: Morning—1. Sailing, unlimited, for Marine and Field Club perpetual challenge cup; 6 miles. 2. Sailing, limited, canoes of the new type; 6 miles. Afternoon—Senior sailing, A. C. A. handicap race; 6 miles. Tandem paddling, Marine and Field Club perpetual challenge cup; 1 mile. Sailing, unlimited, Marine and Field Club trophy; 6 miles. Thirty entries have already been received, from Philadelphia, Boston, Lowell, Montreal and other places.

The New York C. C. has received a challenge from Mr. Charles E. Archbold, of Montreal, for its international challenge cup.

FIXTURES.

*Dates marked thus are unofficial.

MAY.

3. Cor., Atlantic City record, Atlantic City.
4. San Francisco opening, San Francisco Bay.
5. San Francisco open race, San Francisco Bay.
11. Pacific opening, San Francisco Bay.
11–12. San Francisco cruise, San Francisco Bay.
18. Cor., Atlantic City record, Atlantic City.
18. Huguenot, cat-boat class, New Rochelle, Sound.
18–19. San Francisco cruise to Mare Island.
24. Royal St. Lawrence, opening and squadron sail, Montreal.
25. New Rochelle special, cabin cats, New Rochelle, Sound.
25–26. San Francisco cruise to Goat Island.
26. California annual regatta, San Francisco Bay.
26. Williamsburg opening sail, Sound.
30. Atlantic opening race, New York Bay.
30. Harlem annual, Sound.
30. Brooklyn opening, Gravesend Bay.
30. Audubon annual, Hudson River.
30. Cor., San Francisco race, San Francisco Bay.
30. San Francisco cruise, San Francisco Bay.
30. New Jersey annual, Hoboken, New York Bay.
30. Fall River open, Fall River, Mount Hope Bay.
30. South Boston open, South Boston, Boston Harbor.
30. Plymouth opening, Plymouth.
30. Southwork annual, Philadelphia, Delaware River.
30. Cleveland squad sail, Lake Erie.

JUNE.

1. Yale Cor. annual, New Haven.
1. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal.
1. Cor., Atlantic City record race, Atlantic City.
1. Atlantic special, New York Bay.
1-2. San Francisco cruise to Vallejo, San Francisco Bay.
8. Knickerbocker annual, College Point, Sound.
8. Atlantic special, New York Bay.
8. Hugenot special, New Rochelle, Sound.

8. Royal St. Lawrence cruising race to Cascade Rapids, Montreal.
11. Atlantic annual, New York Bay.
11. Williamsburg Club, Sound.
13. New York annual, New York Bay.
15. Atlantic special, New York Bay.
15. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal.
15-16. San Francisco cruise to St. Quentin, San Francisco Bay.
15. Larchmont spring regatta, Sound.
15. Philadelphia annual, Tinicum-Delaware River.
17. Massachusetts open, Nahant-Massachusetts Bay.
17. Cor., Atlantic City special cup, first race. Atlantic City.
22. Yankee Doodle-Norwood race, Hudson River.
22. Douglaston annual, Douglaston Sound.
22. Atlantic special, New York Bay.
22. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal.
22-23. San Francisco cruise, San Francisco Bay.
23 California regatta, San Francisco Bay.
24. Seawanhaka Cor. annual, Oyster Bay, Sound.
24. Pavonia annual, Communipaw, New York Bay.
25-26. Seawanhaka Cor. annual race to New London, Sound.
29. Atlantic special, New York Bay.
29. Yankee Doodle, Vamoose, Rex, race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29 New Rochelle annual, New Rochelle, Sound.
29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

MR. C. OLIVER ISELIN, the managing member of the syndicate which is building the new Cup defender, was at Bristol on May 1, and on his way back to Providence was subjected, willingly or unwillingly, to an interview, in the course of which he told nothing important which was not fully known before. The only new points disclosed by him were that still a third mainsail was being made, by whom he would not say; that the contract had been made with the understanding that the Herreshoffs would build no other yacht this year to defend the Cup; and that he proposed to hold the firm to the agreed forfeit of $1,000 in the event of the yacht not being ready by June 15, and of $100 for each extra day's delay. While he confirmed certain conjectures this confirmation was hardly needed in view of other corroborative evidence.

IN spite of all attempts at utter secrecy, the many reports and rumors of the past three months have finally crystallized into some important facts, which are very fully summed up in an article which we reprint from the Boston *Globe*. The new defender will be a keel cutter, resembling Valkyrie and differing materially from Vigilant; the dimensions being 126ft. over all, 90ft. l.w.l., between 23 and 24ft. beam (probably 23ft. 4 to 6in.) and about 19ft. draft. The sail area, which has been closely approximated from measurements of the spar made in Boston, will be about 12,300 sq. ft., or say 1,000sq. ft. more than Vigilant. The details of material and construction are also very fully known.

AFTER three months of wild guessing, the Boston *Herald* has at last published a story which is partly true. How its news was obtained we do not care to state, but we are aware of its source of information, which for several weeks has brought it very close to the center of the Herreshoff shops. Through this channel the *Herald* has been able to obtain rough sketches of the sheer plan and midship section, and the dimensions, spacing and nature of the various steel frames.

THIS news is not only most welcome as giving another test of a boat which has always carried the sympathy of American yachtsmen, but as making still another boat for the class through the season and for the trial races. The prospects at the present time, however, are that the racing of these great boats will be almost as indeterminate and inconclusive as in 1893. The new defender will not be launched before the spring tides in June, which means that at best she cannot take part in the early summer regattas. Vigilant will be ready in a short time, but Jubilee's rebuilding will take probably a couple of months. Navahoe will not fit out until July. This means that the big yachts will miss all the June races, and not be in sailing trim before July. In that month there is no racing for other than smaller yachts, and we shall be treated to the usual spectacle of the "foxy" owners sailing all in different directions and giving out wonderful stories of 14 and 16 knot speeds. Not until the first week in August will the fleet come together for a little racing as a preliminary to general strengthening and alterations, which may be expected to continue until the date of the first Cup race, early in September.

The energy and skill which has enabled the defenders to do quick work in the past has evoked praise from yachtsmen the world over, but it is tempting fate to leave everything until the last month before the Cup races. The boats should be ready for all the racing they can possibly get in June, and, failing that, every effort should be made to race them steadily through July by way of preparation for the trial races in August.

THE detailed description of the new Herreshoff 20 raters which we publish this week cannot fail to interest our readers. As both yachts will be at their destinations almost as soon as the news is in print, and so within reach of the rules of any foreign designers, the publication of these details now can harm no one. According to the London *Times*, Mr. Will Fife, Jr., has an order for a 20 to meet Niagara, and she will of course be an extreme fin-keel.

WE understand that the American Model Yacht Club has received a challenge from a Boston Model Yacht Club for its perpetual challenge trophy, in which case the races will take place on Labor Day. The trophy, which was illustrated in the FOREST AND STREAM of March 23, is of sterling silver, finished in white and blue enamel, and was made by N. H. Shepherd from a design by George H. Townley, of the American Model Yacht Club.

The Name of the Cup Defender.

SOME little time since we commented unfavorably on the common place and hackneyed name selected by Lord Dunraven for the new challenger. *The Yachtsman* of April 18 retorts in kind over the name of the new defender as follows, to which we have nothing more to say: "In view of the generous prize competition, instituted by a press bubbling with patriotism, for the purpose of selecting a suitable title for the new Yankee Cup defender, there seems to be a dreadful bathos in the name actually chosen—Defender. It is descriptive, it is true, but what would the American press say if Lord Dunraven had selected Offender for his new yacht's name? Not long since we read an article in the FOREST AND STREAM dealing with and lamenting the sameness of the names given by Lord Dunraven to his first-class yachts. The article had point at the time it was published but how would it read now?"

The *Field* also comments on the subject in a vein of sarcasm called forth by the *Herald's* gushing story of the child sponsor of the new yacht:

Some time ago the New York *Herald* offered a prize for the best suggested name for the new yacht which is being built to defend the America Cup against Valkyrie III. Many thousand names were sent in, and the selection was left to the owners of the yacht—Mr. Vanderbilt, Mr. Iselin and Mr. Morgan. It was quite a youthful idea to advertise for a name, and quite appropriately the idea has been fructified by a beautiful child only six years old, herself rather heavily weighted with the names of Constance Cleveland Roberson. She said the name of the new yacht must be Defender; she probably dreamt it, but this is the history of the inception or inspiration published in the New York *Herald*:

"The *Herald* sent a representative to tell the young woman the news, and he discovered the fortunate winner to be rather a shy, pretty little girl, only six years old. She was quite overpowered as well as delighted to think that she had secured the honor of having suggested the name of the Vanderbilt-Iselin-Morgan boat. Her father at breakfast said, 'Hello, Constance, here's something to interest you.' He showed her the *Herald's* announcement of the contest. The child, being fond of the water, was pleased with the idea. She selected the Linda, the Corinda and the Defender, but liked the last best, clipped out the *Herald* coupon, and wrote 'The Defender' in large Roman characters, not being sure of her ability as a writer in ordinary letters. She sent it to the *Herald* and won the prize. 'I am very fond of the ocean,' she said. 'I have been on Lake George, for instance, and can row two oars. I would like to be a sailor.'"

We are sorry that nothing of the kind could possibly be done in this out-of-date country. Valkyrie three times in succession for the name of a Cup challenger shows the lack of a child's originality or inspiration, and the name itself rather suggests defeat than success, as Valkyries dealt with the slain, not with the living. However, should Valkyrie III. measure her speed with the new American yacht, we trust that Miss C. C. Roberson's formidable suggestion in the name Defender will not unnerve her crew.

Vigilant.

THOUGH Vigilant in her western passage has not beaten her own record on the easterly passage last year, she has outdone all previous records in this direction, her time from the Needles to Sandy Hook Lightship being but 17 days, 18 hours and 25 minutes. She was in charge of Captain Charles Barr, who crossed the Atlantic in 1885 as a boy in the forecastle of the little cutter Clara, who brought out the 40ft. cutter Minerva, as master, in 28 days in 1888, and who took Navahoe across to England in 1893. With him was Mate Leonard Miller, formerly of Jubilee, and a crew of twenty men and a dog. The party left New York on May 19 by steamer, and on arriving at Southampton the yacht was quickly fitted out, and on April 11 she was towed from Fay's yard to off Netley, where her compasses were adjusted; at 3:30 she made sail and passed down Southampton Water and the Solent, and at 5:20 P. M. took her departure from the Needles, passing the Lizard at 9:20 P. M., April 11.

The log is briefly as follows:

April 12—Light westerly winds; 235 miles.

April 13—Wind fresh; clear weather; moderated in afternoon and became cloudy; 227 miles.

April 14—Wind E.S.E., blowing strong; cloudy. Set spinaker on short spare spar used for spinaker boom, but that broke 6ft. from the end and we lost it and the spinaker. At midnight gybed and clewed down the mainsail, and, the wind moderating, replaced spinaker boom with the club for clubtopsail and set another spinaker; 233 miles.

April 15—Moderate breeze; E.S.E.; cloudy; 213 miles.

April 16—Light wind, E.S.E.; lumpy sea; ship rolling heavily; 173 miles.

April 17—Wind N.E., light; 173 miles.

April 18—Wind S.W. light; boat rolling heavily; wind lulled at 4 P.M.; heavy seas continued; 98 miles.

April 19—Wind W. by N.; light breeze, broken by squalls; 232 miles.

April 20—Strong northerly wind; 269 miles.

April 21—Strong northerly wind, very cold, with fog. Temperature of water 37.59 degrees. On lookout for ice, as packed ice was evidently near, because, in spite of the high wind, the sea was smooth, the ice evidently forming a breakwater. After passing the ice, seas got high, and oil bags hung over bow and quarter; 189 miles.

April 22—N.N.E. wind, light; 59 miles.

April 23—N.W. wind, light; 158 miles.

April 24—S.S.W. wind, strong, heavy sea. In afternoon wind fell, but sea remained heavy; 125 miles.

April 25—Westerly wind, veering to W.N.W. Fresh breeze and heavy head sea; 93 miles.

April 26—Wind S.W. Got out of Gulf Stream and struck a heavy thunderstorm, with forked lightning. Kept her on the northerly tack, not wanting to go to the southward and come about and so lengthen voyage. Thick and foggy weather; 79 miles.

April 27—Light easterly wind; 216 miles.

April 28—Strong easterly wind, making great going; 232.

April 29—Fog and light easterly wind.

The total distance sailed was 2,932 miles. The only mishap was the breaking of the end of the spinaker boom, by which the spar and sail were lost. The yacht was towed to the Erie Basin on May 1 and quickly stripped, her mizzenmast and bowsprit being sent ashore with all her gear. She will be for the summer in charge of Mr. E. A. Willard, who has been so closely identified with Gen. Paine on Mayflower, Volunteer and with Vigilant in 1893. Under his able direction she will be fitted out and raced by her present crew against the new Cup defender, and every effort will be made to push the new boat. There is little probability that Vigilant will be lengthened, but some important changes are to be made, the Herreshoffs will furnish a new mainsail, with the cloths square to the leach. The centerboard slot is still blocked up, but the new board will soon be brought from Bristol and shipped in the trunk. The yacht will be docked this week at the Erie Basin.

Mr. Brand's Challenge.

THE following correspondence, just made public, gives the details of the coming races between the English half-rater, Spruce IV., Mr. J. Arthur Brand, and such boats as may be built to meet her:

SEAWANHAKA CORINTHIAN YACHT CLUB,
NEW YORK, March 15, 1895.

J. Arthur Brand, Esq., 32 Gresham Street, London, E. C.

MY DEAR SIR: Acting upon the suggestion contained in a letter from Mr. William Willard Howard, addressed to several American yachtsmen, the Seawanhaka Corinthian Yacht Club, to which said letter was referred, decided at its last regular meeting to offer an International Challenge Cup for competition among small yachts, conferring upon the Race Committee of the club full power to conduct the negotiations and arrange all the conditions pertaining thereto.

The letter from Mr. Howard, dated Tiflis, Russia, Jan. 21, 1895, states in substance that in the event of a challenge cup offered by a leading New York club, you would challenge with Spruce III., the race to take place in September next, and would also enter additional races for prizes offered by this and other clubs, which would become the property of the winner.

From Mr. Howard's letter we understand that you will challenge through one of your yacht clubs at three months' notice, provided conditions are satisfactory. Mr. Howard kindly offers his services in effecting suitable arrangements upon his return to England in May, but adds that by the time his letter is received in America he will be 1,000 miles into Central Asia, with a Paris address from which letters will be forwarded. It has therefore seemed advisable to the committee to address you directly in order that an understanding may be reached before American yachtsmen, who contemplate building such craft for this season's racing, shall have placed their orders. By concluding arrangements for these races at an early date we believe that much greater interest will be developed and that you will be assured ample sport in the class of yachts you desire to meet. Inasmuch as Spruce III., which we learn is 15½ft. load waterline and carries 190sq.ft. of sail, has a racing length of 14.64ft. under "Seawanhaka rule," which rule, as you are probably aware, has been quite universally adopted in this country, we prefer to announce that the challenge cup will be offered this year for yachts of 15ft. racing length. This will be in accordance with our customs, and, we believe, will impose no penalties upon the challenger due to difference in rules. The club book sent herewith embodies our rule in full, with time allowance tables. Should you prefer to race boats of 15ft. racing length and under, without time allowance, we should have no objections.

[The conditions recounted in Mr. Brand's reply appear here.]

We would urge upon you the desirability of planning your visit so as to arrive in New York early in August. In the judgment of this committee these races should precede those for the America's Cup, which will probably begin about Sept. 15, as, at the conclusion of the latter, public interest in yachting for the season will wane very rapidly. Reaching here on or before Aug. 10 you will have time to make preparations, become accustomed to the Sound courses, and permit the races to be sailed the latter part of August or early in September.

In conclusion, we unhesitatingly promise you a hearty sailors' welcome on the part of American yachtsmen, and particularly from the members of the Seawanhaka Corinthian Y. C. Awaiting your reply, I have the honor to remain, my dear sir, very sincerely yours,

CHARLES A. SHERMAN,
Secretary Race Committee S. C. Y. C.

34 AND 36 GRESHAM STREET, E. C.
LONDON, April 3, 1895.

DEAR SIR; At the general meeting of the Minima Y. C., held on Friday, March 29, your letter, with one of my own, was laid before them by the committee and received their warmest approval, and the following resolution was passed unanimously: "The club in general meeting having read Mr. Brand's letter and inclosures, sanctions his challenge being made, and he is authorized by the Minima Y. C. to negotiate for terms. Mr. Brand to sail under the club burgee."

In accordance with this resolution the committee met yesterday, the 2d inst. They thought that as the race is to be a representative one they could not back a challenge with a last year's boat, so have only consented to my challenge with Spruce IV., and the following cable was immediately sent to your club:

"*Tremenico, New York:*

"Minima sanctions Spruce IV. only."

I have consented to challenge with her if all parties agree. Spruce IV. has been designed for me for the purpose of Miss Bennett's meeting Mrs. William Willard Howard, who has challenged her to race on the Solent this season with a new ½-rater from Clayton, U. S. A., and has the same load-waterline as Spruce III. The committee have consented to back my challenge with Spruce IV., under the following suggested conditions in compliance with the ones in your letter of March 15:

1. The cup shall be a perpetual international challenge cup. The Seawanhaka Corinthian Yacht Club shall have the custody of the cup in the first instance, and every challenge shall be through some recognized yacht club of a foreign country, and the cup when won shall be delivered to and held by the club through which the challenge was made.

2. A challenging yacht shall be met by only one competitor.

3. The races shall not be less than three or more than five in number. The cup to be taken by the winner of the majority. To be left to the Seawanhaka Yacht Club to settle in September.

4. The American courses, while the cup remains in the custody of the Seawanhaka Corinthian Yacht Club, shall be on the waters of Long Island Sound, in the vicinity of Oyster Bay. They shall consist of a triangular course and a course to windward or leeward and return. Each leg of the triangular course shall be 3 nautical miles in length, and shall be sailed over twice, making a total of 18 miles. The course to windward or leeward and return shall be 4 nautical miles to each leg, and shall be sailed over twice, making a total of 16 miles. The courses might well be shortened at least one-third.

5. The start shall be a flying one, without corrected time allowance.

6. The helmsman shall be an amateur. Total number of persons on board shall be limited to two.

7. In the 15ft. class yachts shall be measured with crew on board. With crew on board the weight of crew shall be arbitrarily fixed at 300lbs. for purpose of measurement in order to equate the difference in individuals.

8. All ballast shall be fixed (weighted centerboards shall be considered ballast).

In determining sail area a system of measurement shall be employed which shall give as nearly as possible the exact number of square feet thereof. (The race to be for 15ft. racing length, only Seawanhaka rule provides that Spruce IV. measurements do not exceed that when measured with 300lbs. on board. Her l.w.l. with crew of two on board Y. R. A. is 15ft. 6in.—the sail area, as suggested by your club, to be limited to 200 or 220 sq. ft.) Suggestions as to future competitions for the cup, they agree to leave to you, but do not wish it to exceed 25ft. But I myself, as a lover of the small classes, should like to suggest that it be limited to 19ft., as I believe your club, in giving the cup, wish to further the small yachts and not the larger ones, such as 2½-raters; but this matter lies entirely with your club as donors, and it is presumption on my part to suggest the alteration of future years.

I am afraid I cannot get to New York as early as you so kindly suggest, but will do my best. The races will, at any rate, not take place before the second week in September. I have asked my old friend, Mr. Henry Sturdee, of 240 State street, Albany, New York, U. S. A., to act for me in New York, and, no doubt, much time will be saved if you wanted anything settled in a hurry. I am always ready for a good sporting race, so will leave the number of open races to you, but for sport's sake they ought to come off after your Cup races. * * *

Trusting that all necessary arrangements will soon be satisfactorily arranged, I remain, my dear sir, yours very sincerely,

J. ARTHUR BRAND.

CHARLES A. SHERMAN, Esq., Sec'y Race Committee, S. C. Y. C.

Vice-Com. Rouse, Seawanhaka C. Y. C., has already ordered a 15-footer from the Herreshoffs, a centerboard boat. The limits are so clearly defined in the above as to give all necessary information to the designer, and those desiring to build will be able to begin at once. Mr. Brand's new boat, Spruce IV., will be built by H. C. Smith, of Oxford.

An Amateur-Built Steam Launch.

THE following letter was accompanied by a photo of a very shapely little steam launch, of excellent design and construction, so far as the picture disclosed. The writer is one of the many who have been helped to a knowledge of boat building through "Canoe and Boat Building for Amateurs." The little book was not intended originally to cover much more than a canoe, but its exposition of the principles of designing, drafting and building is so clear and thorough that it has served a much larger purpose than its author ever expected:

"BURLINGTON, Ia., April 2.—*Editor Forest and Stream:* Inclosed you will find a photo of a little home-made launch, a description of which might interest some of your readers. The boat is 20ft. long by 5ft. beam, 2ft. deep to top of sheerstrake, height of coaming 3in. She is carvel built, of clear white cedar ⅝in. thick; keel, stem and sternpost of white oak; keel rabbeted; ribs ⅝×⅞in., spaced 4in.; centers made from selected red elm, running from wale to wale in one piece except at deadwoods. Seams all perfect and double caulked, fastenings throughout of copper and brass. Sheerstrake, washstrake, coaming and nosing of quartered oak. Decks of cherry, caulked. The top, from sheerstrake up, is finished in natural color with spar varnish. The boat is fitted with sun awning and tent for cruising. She was built in a house-boat, or cabin boat, as they are called here, of which there are now hundreds, yes, thousands, on the Mississippi River. The motive power of the launch is a 2-hp Sintz gasoline vapor engine, the actual consumption of which is about three gallons of gasoline for ten hours' running. The launch makes a speed of 6 miles per hour up stream and 9½ miles per hour down stream, which is very good for so small a power, as the engine only weighs 305lbs. I have a truck and windlass for hauling out the boat, and keep her housed the same as a rowboat. She can be gotten under way in less than one minute. I would like Mr. Stephens to come out and take a spin in her, as I got my first instructions from his "Canoe and Boat Building for Amateurs."

JOHN J. OHRT.

Fleur de Lys.

THE schooner Fleur de Lys, Mr. George Trotter, arrived at New York on May 1 after a long and stormy passage from Southampton and Plymouth, in the course of which she lost a man through a rather unusual accident. She sailed from Southampton on March 23 in charge of Capt. Otto Petersen, with only the crew aboard, Mr. Trotter being in New York, preparatory to his marriage, which took place quite recently. On her voyage down Channel a link in the quarterlift parted and the boom dropped, striking one of the crew and injuring him fatally. The yacht put into Plymouth, and did not resume her voyage until April 2. She encountered bad weather and was delayed by the loss of the lower bobstay pin, which was replaced with much difficulty. The daily runs were as follows:

	Miles.		Miles.
April 3	134	April 18	37
April 4	216	April 19	126
April 5	64	April 20	203
April 6	57	April 21	230
April 7	Hove to	April 22	175
April 8	Hove to	April 23	104
April 9	23	April 24	25
April 10	104	April 25	50
April 11	68	April 26	72
April 12	170	April 27	Calm
April 13	245	April 28	110
April 14	79	April 29	180
April 15	61	April 30	125
April 16	197	May 1	170
April 17	115		

The yacht will be laid up for an indefinite time at Manning's Basin, Mr. Trotter having just sailed for Europe on his wedding trip.

Yampa.

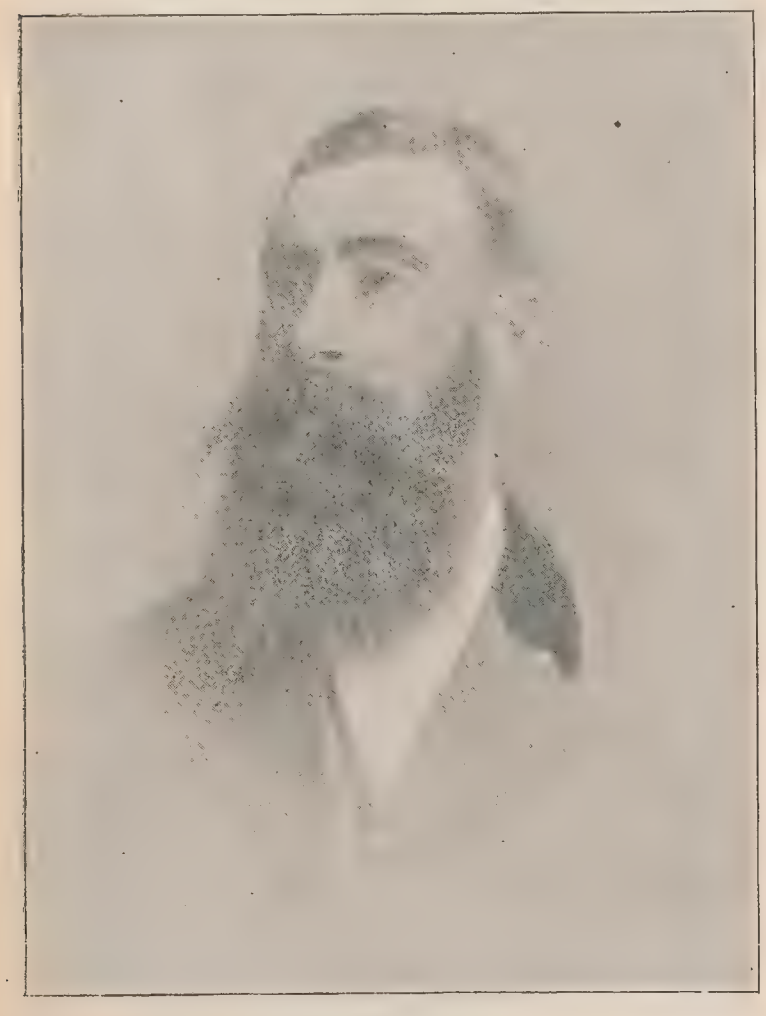
FROM private letters we learn that Mr. Palmer and his friends have been enjoying a delightful cruise aboard the schooner Yampa in the Mediterranean, the following being a brief summary of their movements: Arrived at Gibraltar from New York on Feb. 14, Mr. Palmer and two friends joining by steamer on Feb. 24. Sailed on Feb. 28, and off the Spanish coast struck a Levanter, and put into Malaga under double-reefed mainsail on March 1, sailing again on March 4 with a good west wind, but again met the Levanter and stood over for Oran, on the Algerian coast, spending one day there. On March 6 the yacht was under way early and a two days' run along the African coast brought her to Algiers, where she laid until March 13, when a day's run brought her to Boujie. On March 17 she was at Phillipeville, sailing next day and reaching Tunis on March 20, having head winds all the way. On March 23 the voyage was resumed, Malta being reached on March 25, where a long stay was made. A start was made on April 5, on April 6 a short call was made at Syracuse, next day a fine run was made through the Straits of Messina, and on April 9 the yacht reached Naples. Yampa has attracted much attention from her size and appearance wherever she has called, and her party have been most courteously received.

The Cleveland Y. C. has arranged the following fixtures for the season: May 20, squadron sail; July 4, local regatta; Aug. 17, ladies' day; Sept 2, fall regatta. The building fund for the new club house now amounts to $14,000, and work will be commenced at once, the building being ready some time in July.

NIAGARA—SHEER PLAN.

Niagara and Isolde.

"And the devil bubbled beneath the keel;
It's pretty, but is it art?"



THE talented Mr. Kipling, of Vermont, has recently written a poem entitled "The Conundrum of the World," from which we venture to quote a couple of lines, in connection with the conundrum of the waters which the equally talented Mr. Herreshoff, of Rhode Island, has inflicted on the yachting world. We trust that no apology to either is necessary.

Up to the present season it has been possible for yachtsmen to evade the conundrum of the Bristol designer, as it has taken practical and successful form only in the smaller classes, in which the boats are used only for a few hours sailing or racing, with no thought of real yachting, or of life aboard day in and day out. This was the case even in the largest, Dacotah, she being used exclusively in one locality and for racing.

The two boats just shipped across the Atlantic are, however, so much larger as to put a very different aspect on this question of the bulb fin-keel, as the future of yacht racing must depend on the way in which it is dealt with by yachtsmen.

So far as Wenonah, Morwena, Meneen and Wee Winn are concerned, the type matters little, as to-day, in all of the classes from 5-rating downward, the racing is confined to racing boats of the latest design and the most expensive and elaborate construction. The boats are too small for life aboard in any case, and it matters little how much they draw or how limited the internal space may be. It seems quite certain now that, whatever may be done in the future to conserve the essentials of a yacht in the larger sizes of pleasure craft, in these small classes but few restrictions are necessary, and that the racing machine can safely be allowed full sway in them.

Where the limit may be properly drawn between the sailing boat and the legitimate yacht is yet a question; certainly not below 5-rating or 25ft. racing length, and possibly as high as 10-rating—Dacotah's class—of 36ft. racing length; but there can be no question that the

CAPTAIN JOHN BARR.

limit has been far exceeded when the 20-rating class is reached, and that the introduction of the racing machine in this class can work nothing but harm to yachting.

The 20-rating class was one of the first to take definite shape on the adoption of the rating in place of the old tonnage rule in 1887, Mr. Watson leading off in 1888 with the steel Vreda, a fine little ship of 45ft. l.w.l., 10ft. beam and under 10ft. draft. Her superiority in speed and general accommodation to the old 10-tonners, of 42ft. l.w.l and 7ft. beam, carrying the same sail area—2,600sq. ft.—was evident from the first. Next year Mr. Fife came into the class with Dragon I., the first of the series of three yachts built for Mr. F. C. Hill, and with which he has led the class in every year from 1889 to 1893, and which last year, in her second season, was still close to the top.

The 20-rating class, like all others, has felt the influence of modern ideas and has tended more and more toward the fin form, the dimensions expanding and the displacement contracting; while Vreda measured 9.5ft. depth of hold on 10ft. beam and about 9ft. 9in. draft, Dragon III. measures but 6.8ft. depth, with a beam of 13ft. 2in. and a probable draft of 11ft. At the same time, apart from the great draft, the 20-raters always have been, and still are, yachts with good accommodation, and perfectly fitted for the work that they must do in making the racing circuit of the British coast. The extreme type, even to the plate-fin, has, it is true, invaded the class during the past year, but with so little success as to still leave the odds in favor of the craft that may still be called yachts. Among these is Zinita, a 20 of 12ft. 6in. beam, designed and built by Mr. Fife in 1893 as a "fast cruiser," at least with no thought of competing for first honors with Dragon III. and the recognized cracks of the class, but which has shown remarkable speed, winning 13 first and 7 other prizes to 36 starts last year. Her wins were mainly in the home racing on the Clyde, but she distinguished herself by a very creditable performance in the south in company with the entire 20-rating class, and proved that it was still possible in this class to combine speed with other desirable qualities.

That the same will be true through the coming season we have serious doubts; the record of the Herreshoff fin-keels Wenonah and Dacotah gives good ground for the belief that the new Niagara will sweep the 20-rating class, as these two have swept in succession the 21/2 and the 10-rating classes; and an inspection of the boat shows only too plainly that she has small claim to the name of yacht, but must be classed as a day boat, or sailing machine.

The two 20-raters just shipped from the Herreshoff Works, Isolde, owned by Prince Leopold of Hohenzollern, and Niagara, owned by Mr. Howard Gould, are of the same dimensions and to all appearances identical, in fact, they were built from the same moulds. It is said that the latter boat, Niagara, is somewhat shorter on the waterline, thus carrying more sail, but the difference if any is very slight. The dimensions are:

Length over all	65ft.
Fore overhang	8ft.
After overhang	11ft.
L.w.l.	45 to 46ft.
Beam	12ft.
Least freeboard	2ft. 9in.
Sheer, bow	1ft. 6in.
stern	2in.
Depth keel to deck	5ft. 6in.
Draft hull only	2ft. 6in.
extreme	11ft.

The above figures are, of course, not given by the designer, but are very closely correct, as is the accompanying sketch of the sheer plan; the transverse section is only approximate, intended to show the fin construction, draft and the extent and nature of the accommodation

The construction is in its way admirable; in fact, whatever our opinion as a yachtsman, as a canoeist we cannot speak two highly of these beautifully modeled and built canoes. The model is not very different from the older Herreshoff fin-keels, but the lines are faired and fined down, the fore overhang is quite moderate in length and fullness of lines, and the transom is a distinct improvement on the older boats, being shaped with a moderate curve instead of being sawn off square in the usual Bristol fashion, which, as is well known, is anything but "ship-shape." In fact, it looks as though Mr. Herreshoff's visit abroad last year had led him to abandon his habitual disregard of appearance and conventionality, and to attempt something of a yacht-like finish to the stern. The rounding of the transom and the working of the oak sheerstrake into the mahogany transom are both evidences of a desire for improvement in this direction.

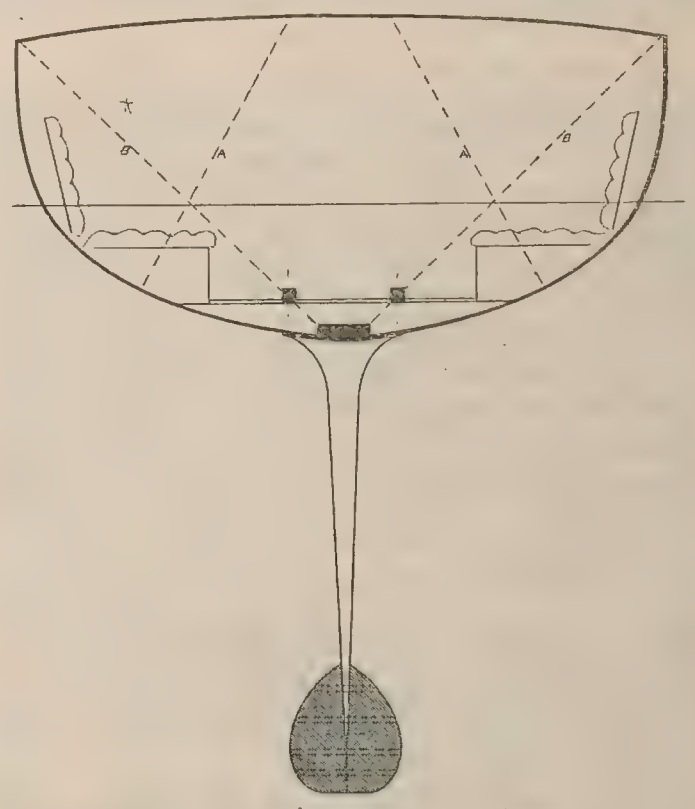
The bent keel, running almost the whole length of the boat, is of white oak, 10×4in., the frames are all of bent oak, sided 15/8in., moulded 21/4in. at heels, 2in. at bilge and 11/2in. at heads; spaced 16in; with oak floors 4in. deep over keel and sided 13/4in. The strength of a fin-keel boat depends mainly on the floor construction, and the floors themselves are numerous and well fastened, while through the middle half of the boat they are crossed by two stringers or keelsons of oak, 3in. wide and 31/2in. deep, running directly over the edges of the fin flanges and taking the fin bolts. Toward each end the keel is stiffened by a central keelson piece, running by and midway between the ends of the side keelsons, the mast step being on top of the forward keelson; the after one extending well aft into the counter. The cross floors and the system of center and side keelsons which top them make a very strong construction, which is improved by the system of trusses first introduced in Dacotah last year and then illustrated in the FOREST AND STREAM. The two bilge stringers are 3×31/2in., and above them, under the deck, but nearer to the center, are two stringers 3×21/2in., extending well fore and aft. The deck and bilge stringer on each side are connected by a system of struts of yellow pine, A A, each 2×21/4in., spaced about 7ft. apart, and by tie-rods of 5/16in. Tobin bronze, running through deck and bilge stringer, and set up with nuts, each rod being set in a groove in the side of its strut. The strain of the deep fin and heavy bulb is thus transmitted through the two flanges, which make the broad base of the fin, to the cross floors and frames, and then to the two trusses just over the ends of the floors, and thus to the deck; the whole hull being in effect a built girder.

The main clamps are of oak, 3×21/4in., the deck beams, spaced 16in., are moulded 21/8in., the principal ones being sided 21/8in., the others 11/4in. The hull is strapped diagonally with Tobin bronze, 3×3/16in. over the frames and 2×1/8in. over the deck beams. The inner planking is of 3/8in. cedar and the outer of 1/2in. mahogany, the topsides being bright and the bottom painted a dark green. The sheerstrake is of one thickness of oak, about 11/2in. thick where it is worked to form a beading on the upper edge, and the planksheer is also of oak. The deck is of a single thickness of 7/8in. pine, ship lapped, and the seams payed with Jeffrey's marine glue. There is a low rail of oak, with no cap. The mast partners are 101/2in. in diameter, and abreast of them are five chainplates, of bronze, on each side. Two of these on each side, the main chainplates, are backed up in a novel manner by straps of 21/4×3/8in. Tobin bronze, running as indicated by the lines BB from the keel to the deck, where they are further strengthened by chocks worked under the deck beams. Forward of the mast is a 5/8in. bronze rod, through keel and deck. The metal work is, as usual, very well done, the stem being capped by a neatly formed casting which forms the outer gammon strap. The straight brass cleats are the same as on all the Bristol yachts.

The most interesting portion of the boat is the fin construction, which deserves special description. The sheer plan shows the hull and fin very closely to scale, while the details are shown in a general way by the transverse section. The fin itself, instead of a simple plate of metal, is a complicated structure, composed of two sides and a top, the latter fitting close to the keel and garboards of the boat. The sides are each built of three plates of Tobin bronze, about 3/8in. thick, with an additional piece at each end. These plates are turned on their upper ends into a wide flange, the whole work being beautifully executed. To these two flanges the top is riveted, the whole structure being 25ft. long on the upper side, joining the boat, 12ft. 6in. long on the lower edge, where the two half-bulbs are attached, the after horn projecting 5ft.-6in. and the forward one 7ft. The upper side has a strong sweep in a fore and aft direction, and is also curved thwartships. The lower edges of the plates come together, with less than 1/2in. between them, the liners or bulkheads tapering down to that thickness. The breadth across the two flanges is 2ft. 21/2in. at the middle, tapering to 5in. at each end The depth from the upper plate to the lower edge is 7ft. 4in. at the narrowest point, in the middle of the fin. The plates are of course riveted on inside straps and there are bulkheads to stiffen the structure.

The half bulbs of lead are each 13ft. 3in. in extreme length, 2ft. 4in. deep on the inner face and 1ft. thick in the center, making the entire bulb 2ft. through. The two have a bearing of 1ft. 4in. on the fin, thus projecting 1ft. below it. They are fastened through the fin with six 1in. Tobin bronze bolts and ten smaller bolts, 1/2 and 5/8in.; while through the lower portion beneath the fin are six more 1in. and two 1/2in. bolts. Along each edge of the top are holes for 5/8in. bolts, spaced 51/2in., these bolts passing through the flange, planking, floors and side keelsons, where they are set up with nuts. Each bolt is numbered, so as to readily replace when the fin is bolted on again at London.

The rudder is of the shape shown, being 4ft. 3in. long on the top, 4ft. 10in. on the after edge, and with 1ft. 7in. projecting forward of the stock. This stock is of Tobin bronze, 2in. diameter at deck and 3in. diameter at lower end, where it goes into the body of the rudder, the forging being of a T shape. To this T are riveted the two side plates of Tobin bronze. The boat, of course, steers with a tiller.



The sail plan will measure about 2,600ft. by Y. R. A. rule, which includes the club topsail. The mainsail, as well as both headsails, is made with the cloths running at right angles to the leech. All of the sails were made at the works in Bristol. The mast is 45ft. 6in. extreme length and the boom 48ft. 9in.

From a canoeist's standpoint the accommodation of the boats is perfect; in fact, leaves nothing to be desired. After living for weeks aboard a 14×28 canoe, sleeping and cooking on board, as we have often done, we should consider Niagara or Isolde an ideal craft. There is room in abundance, of the same sort as in other canoes, fore and aft room. Considering them as yachts, however, and for the work they are intended to perform—the one in racing at Kiel and in German waters, and later sailing to Cowes and racing there, and afterward returning to her home port; the other in making the round of the English, Scotch and Irish regattas—they have everything to condemn and nothing to recommend them. The sole justification for such limited headroom, in anything claiming the name of yacht, would be the ability possessed by the old centerboard sloop, to sail in three or four feet of water and thus avoid the recognized disadvantages of great draft. When, however, these disadvantages are carried to an extreme, and with no counter advantages in the form of headroom, air space and general accommodation, it is time for yachtsmen to consider seriously the gains and losses involved in the change of type; and whether, in comparing Niagara with say Dragon I. or Dragon II., they are paying more than it is worth for speed in match-sailing.

The interior of these two yachts shows an extreme headroom of 5ft. 21/4in. from the floor to the underside of the deck plank, but the floor itself is cut up by the two side keelsons projecting 21/2in. above it and studded with the fin bolts at close intervals. This height, too, is taken at the middle of the boat; the plan shows how rapidly the height decreases both forward and aft. In the forecastle the nominal 4ft. of headroom is materially lessened by the three keelsons which come together there. The forecastle is long, that is all that can be said of it, and there are four hammock cots for the crew, besides a small pantry and a naphtha stove. At the after end of the forecastle is a w.c. opposite the stove on port side. Abaft the forward bulkhead in the middle of the boat is the main cabin, 7ft. long, with two low but fairly wide sofas, the backs turning down to make berths, and abaft the second bulkhead are two similar sofas and berths, the companion ladder coming down between them. The sunk cockpit is just abaft of the ladder, on each side, well under the deck, being a low wooden berth, which also serves as a sail bin. The run is open, a good place to stow mops, topsail yards or bamboo fishing poles.

On deck there is a small square hatch forward, a skylight over the "main saloon," then the companionway, a cockpit about 16in. deep and 5ft. long, surrounded by a bent oak coaming on the deck about 7ft. long and 5ft. across, of oval shape, and abaft this is a square hatch. It is stated that each yacht, which complies with the requirements of the Y. R. A. as to bulkheads, will accommodate twelve men, and she will probably carry half of this number regularly through the season.

Captain John Barr, who will sail Niagara, is quite as well known

NIAGARIA—APPROXMATE SECTION.

now in this country as on his native Clyde, having spent most of the time here since he came out to take command of Clara in 1885; and having made an enviable reputation in her and other yachts. His best work, however, was done about the British coast in the days of the old 10-tonners, and his local knowledge fits him admirably for the task now on hand. He has had a long and varied experience in all sorts of craft, in fishing boats, narrow cutters, such as Ulerin and Clara, centerboard sloops, such as Cinderella, the big cutter Thistle and later in Jubilee, to which he is likely to add considerably before the season is over. We wish him good luck, but we are greatly mistaken if he does not find many a crick in his stalwart back that was never there before he took to canoeing in a fin-keel 20 rater.

The yachts which Isolde will meet at the Kiel this summer are summed up by the *Field* as follows:

"The second class, corresponding with our 20-raters, is the most strongly represented, and will, from the diversity of designers and builders, give rise to a truly international contest. The new racer for the German Emporor, designed by Mr. G. L. Watson, and building at the Germania yard at Kiel, has finished being planked and is expected to be afloat in the early days of May. She is to be named Vineta, and will be under the command of Captain Arenhold, Imperial and Royal Navy. At the same yard, from German designs, another new 20-rater is being constructed for a syndicate of members of the Imperial Y.C. The yacht, which is to be christened Hertha, will be timoneered by Admiral von Diedrichs. Great things are expected of Baron von Zedwitz's new 20-rater Isolde, designed and built by Herreshoff at Bristol, R. I. The vessel, which belongs to the fin-cum-bulb type, was launched in the beginning of April, and will, as soon as completed, be shipped to Germany on the deck of a steamer. The fourth new 20-rater is building from designs by Mr. W. Fife, Jr., at Stulcken's yard, in Hamburg, to the order of Mr. Loesener, one of the partners in the big shipping firm of Robert M. Sloman. Another competitor in the same class is Colonel Douglass's centerboard Ellen, designed by Mr. G. L. Watson, and launched toward the close of last season from Adams's yard at Gourock. As there seems a likelihood of Deirdré and one or two others of the British-owned twenties being sent to Kiel, this class will undoubtedly prove the most interesting feature of the regatta."

So FAR as is known, the new challenger will be about a foot wider than the defender, and about as deep draft, probably with a smaller sail area. Both will resemble Valkyrie II. very closely in sheer plan, and both will be hollowed to an extreme degree in the floors, bringing them practically into the category of fin-keels, though the fins are not plates, but of the usual composite or metal construction.

THE most important news of the week comes from Boston, and is to the effect that Gen. Paine has at the last moment determined to alter Jubilee and race her. The yacht will be launched this week at Quincy Point and taken to the Atlantic Works, East Boston, where a new bow will be put on her, increasing the waterline to about 90ft, he will, of course, be newly rigged and put in first-class condition,

Rifle Range and Gallery.

Revolver Shooting in England.

LONDON, England, April 18.—Although there have been many competitors at the North London Rifle Club's revolver competitions during the last three weeks, no scores of any account for the revolver championship have yet been made, no scores of 40 or over having been made, and these are necessary for getting into the prize list. Below are details of scores:

April 3.—First series, 20yds. stationary target.

H Andrews	776766—39	Major Palmer	637577—35
Ricketts	776567—38	Lowe	665764—34
Major Munday	467777—38	Lieut Richardson	556737—33
Carter	777377—38	Capt Earle	775535—32
Capt Peters	575756—35	Comber	445665—30

April 10.—Similar competition.

Ricketts	777674—38	A J Comber	657557—35
F H Frost	477577—37	Clementi-Smith	575566—34
Major Munday	757774—37	Chicken	675655—34
Carter	666567—36		

April 17.—Alternate hands at 20yds. stationary target:

Carter	657757—37	Major Palmer	643575—30
Major Munday	764567—35	Howe	374475—30
Clementi-Smith	775664—35	MacKormack	434737—29
H Andrews	647477—35	Comber	636572—29
Lieut Richardson	365756—32	Knapp	545770—28
Ricketts	663755—32	Frost	545354—26
Capt Earle	664367—32	Gould	536054—23
Capt Peters	656463—30		

At the South London Rifle Club the season opened on April 4, but only three members shot and made very poor scores. Below are details:

Twenty yards, stationary target:

E Howe	767747—38	Lieut J Howard	455777—35
C F Lowe	757657—37		

Fifty yards, stationary target:

C F Lowe	656477—37	Lieut J Howard	446554—28
E Howe	443775—30		

Pacific Slope Riflemen.

SAN FRANCISCO, April 28.—Last Sunday the popular spring shooting festival of the California Schuetzen Club was held at Schuetzen Park, San Rafael. Over one hundred marksmen competed for the cash and merchandise prizes. Cash prizes were $40, $30, $20, $17, $15, etc., down to $1. Merchandise prizes, one hundred in number, consisting of numerous cases of solid silver spoons, forks, soup ladles and watches; of mantel clocks, cases of wine, whisky, etc. Tickets for cash prizes (4 shots) and for merchandise prizes (3 shots), on 25-ring target, 200yds., were sold at $1 each. About $1,000 was taken in for tickets. Shooting began at 9:30 A. M. and closed at 6 P. M. Competition waxed warm in the afternoon, and some very good shooting was done, particularly on the 4-shot targets.

Some of the highest scores in this contest were: A. Strecker, 24 25 24 24, total 97; Dr. L. O. Rodgers, 23 25 24 24, total 96; D. B. Faktor, 23 25 23 24, total 95; George Helm 93, J. Utschig 93, D. W. McLaughlin 93, H. Strecker 92, F. Kuhnle 91, Captain Kuhls 90.

Merchandise Shoot: Herman Strecker 72, J. Utschig 72, O. Bremer 71, Dr. Rodgers 71, A. Strecker 71, G. Helm 71, D. W. McLaughlin 71, R. Finking 70, F. Attinger 70, A. Myer 70, P. Jacoby 69.

The prizes were distributed at a social given by the club on Thursday evening. The dancers were much in evidence, and a merry evening was spent.

To-day Shell Mound Range was well occupied, but a fitful northwest wind made scoring very unsatisfactory at 200yds. The pistol devotees, however, did some good work.

Norddeutscher Club: First class, J. Peters 417; third class, A. Hagedorn 349, F. Rust 303.

The Red Men's Schuetzen Club had an "eagle" shoot. John Feldermann won the kingship.

Columbia Pistol and Rifle Club, target rifle, Kuhnle medal: Dr. Rodgers 83, F. O. Young 82, E. Fish 74, A. Kennedy 65, G. Schulz 65.

Military Rifle, circular Sin., bullseye: G. Filmer 45, A. Fetz 45, C. Perry 44, F. Gehret 44, L. Zimmerman 39.

Pistol, 50yds.: F. O. Young 95, C. M. Daiss 93, J. E. Gorman 91, S. Carr 86.

ROEEL.

Ross Will Meet Vandeusen.

THE following challenge, issued by Gus Zimmerman, of New York city, has been accepted by Vandeusen, but no definite date or place for the matter fixed as yet: "Having read a report recently in which A. J Vandeusen, of Winona, Minn., claims to have made 2,260 points in 100 shots, at 200 yards, off hand, and thereby claiming the record as champion of America, I do not care to allow Mr. Vandeusen's claim to pass into record without a response from the East. We have in and about New York many riflemen, some of whom, we believe, are the best in America. Now, if Mr. Vandeusen and his friends believe that Mr. Vandeusen is the champion off hand shot of America, and are prepared to back up the claim of Vandeusen in an individual match, I will make the following proposition, viz.: I will back Fred C. Ross, of Brooklyn N. Y., to shoot A. J. Vandeusen one or three matches, 100 shots per man for each match, for $1,000 or more a side. Ross to meet Vandeusen on neutral range, half way between New York and Minnesota We have in our American sports many men who make all sorts of claims for champion records. As a rifle shooter, I have a strong interest in keeping our rifle records as clean as possible, and it is my love of the sport that induces me to give Mr. Vandeusen an opportunity to show the riflemen of America upon what foundation his claim for champion is built.

"GUS ZIMMERMAN."

Vandeusen is Shooting.

IN view of the proposed match between Fred C. Ross, of Brooklyn, N. Y., and A. J. Vandeusen, of Winona, Minn., the following dispatch from that city to the Minneapolis *Journal*, dated May 3, will be read with interest by riflemen:

"WINONA, Minn., May 3.—A party of Winona sharpshooters went to Fountain City on Sunday to have a shot on the ranges. They were: A. J. Vandeusen, Edward Pelzer, William Sonnenberg, William Schelhas and Alexander Aertz. Vandeusen started out to make what would have been another world-beater of a record, but when he had completed shooting the first half of the second target he was obliged to give up on account of illness and retire to his hotel and lie down, much to the disappointment of those who had looked forward to a brilliant display of marksmanship. The first score made by Vandeusen was 225 out of a possible 250 points on the ring target. On the second ring target, the first half shot was 119 out of a possible 125, and had the last half been shot in equal style a fine score would have been made."

Trap-Shooting.

FIXTURES.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O; $200 added money, Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 15-19.—SAN ANTONIO, Texas.—Nineteenth annual meeting and tournament of the Texas Sportsmen's Association. Open to the world, $500 in cash and $500 in merchandise added to the purses. O. C. Guessaz, Sec'y.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec'y, Kansas City.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $3,000 added to the purses.

May 21-25.—HOUSTON, Texas.—Tournament of the Houston City Gun Club; live birds and targets; open to all amateurs.

May 22-24.—ROME, N. Y.—Annual tournament of the Rome Gun Club; two first day at targets, third day live birds. W. P. Rayland, Sec'y.

May 23.—WAUZEKA, Wis.—Opening shoot of the Wauzeka Gun Club.

May 23-24.—LANCASTER, Pa.—Tournament of the Fairview Gun Club; first day, targets; second day, live birds.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 29-30.—READING, Pa.—Tournament of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

May 29-31.—URBANA, Ills.—Annual tournament of the Crystal Lake Gun Club, of Urbana, Ills., $200 added money.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—MOLINE, Ill.—Tournament of the Highland Gun Club.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The Plainfield (N. J.) *Daily Press*, in its report of an entertainment given by the Euterpe Literary and Musical Society, of that place, says: "The violin solo of Master Smith gave evidence of considerable inherent talent and careful training. He played bravely enough for so young a lad before such a large audience, and well deserved the encore which his delighted hearers demanded of him. His brother's accompaniment was excellent support." The Masters Smith referred to were Oscar and George Smith, sons of "Dutchy" Smith. It is said that the boys can play on their respective instruments equally as ably as their father can touch up the risible faculties of a group of trap-shooters.

"Uncle Billy" Hughes, the veteran member of the Coney Island Rod and Gun Club, of Brooklyn, N. Y., who won the Pfænder diamond badge emblematic of the club championship of 1894, has presented a diamond badge to be competed for by the members of the club under conditions similar to those which governed the Pfænder badge contests. Frederick Pfænder (27), Hugh McLaughlin (25), W. Hughes (25), Isaac P. Hyde (27) and J. P. Voorhees (25) tied for the badge on 7 straight. Pfænder won on the shot off, killing three more birds.

F. L. Train, president of the Cobweb Gun Club, of New York city, is fast improving in his shooting. Mr. Train, who keeps tab upon his various scores, can show by those records just what practice will do for a shooter. On May 1 he shot a race with H. C. Higginson, of the West Newburgh Gun and Rifle Association, the match being at 100 live birds per man, the price of the birds being the stake. The shoot took place at Newburgh, N. Y., Train winning by the score of 87-85. The birds were good flyers.

Mr. W. H. Huck, secretary of the Boiling Springs Gun Club, of Rutherford, N. J., has sent me the following communication, which will interest New Jersey trap-shooters: "On May 16 the Boiling Springs Fish and Gun Club and the Climax Club, of Plainfield, will shoot a race for the *Shooting and Fishing* trophy on the Boiling Springs grounds. To make it interesting, we respectfully invite all clubs in the State to send a team to compete for the trophy. There is no entrance fee, only the price of targets."

The Highland Gun Club, of Moline, Ill., will hold an all-day shoot at its grounds on Decoration Day. The programme prepared is one of those varied ones that are, to my mind, always calculated to prevent any approach to monotony. The two-men team race, teams chosen by lot, is an event that should be popular in similar all-day shoots. There's a delightful element of chance about it. You may draw a good partner, or you may draw one who can't shoot; everybody enters a race of that kind.

Jack Brewer tells me that he has a big contract on hand the latter part of this week. He has been backed to kill 95 out of 100 birds, 30yds. rise, Hurlingham rules to govern. The stake that the match is to be shot for is too large for me to put down in figures. It is enough to say that it is said to be for a solid monetary consideration. It may be a good deal to say, but if Brewer is in the same form that he has been shooting in lately, 95 out of 100 is no impossibility for him if he tries hard.

Capt. A. W. du Bray, the well-known representative of Parker Bros. Meriden, Conn., will in future edit the gun department of *Rod, Gun and Kennel*, a bi-weekly paper devoted to field sports, published in Louisville, Ky. This position will not conflict in any way with his duties as representative of the firm mentioned above. Capt. du Bray will have charge of Parker Bros.' exhibit at the Sportsmen's Exhibition next week.

The Independent Gun Club, of Reading, Pa., will hold a two-days shoot at its grounds, Three-mile House, on May 29-30. These grounds have recently been much improved, and this shoot will afford an opportunity to shooters to practise on the grounds where the $1,000 shoot will be held in October next. Mr. A. Knauer is secretary of the Independent Club.

Messrs. Ford and Cunningham, who hailed recently from Fort Meade, Florida, called on FOREST AND STREAM'S trap editor on May 3. It may interest their friends in Florida to learn that, barring the loss of a little sunburn, the air of New York has not affected them. They leave for England in a few days, but it is safe to bet that the Hooker Prairie and Kissimmee Island will see them again at some future time.

A dispatch from London, England, dated May 3, says: "At the meet of the Gun Club yesterday the first prize of the handicap sweepstakes was divided between W. Rutherford, of the Westminster Kennel Club of New York, and Mr. Rishworth, of London. They killed 26 birds each. In the £3 sweepstakes, 30yds. rise, there were nine entries. B. A. R. Kittredge, of America, divided the first prize with Captain Cottrell, of the Gun Club."

From a communication published elsewhere it will be seen that the New York State shoot this year, which takes place at Saratoga, June 24-28, is to be up to its usual standard. These State shoots are always great gatherings, and this one in 1895 will be no exception. Programmes will soon be ready for distribution. This tournament will also attract outsiders, a special programme being provided for "open to all" contests.

The management of the Capital City Gun Club, of Washington, D. C., is working to revive the interest of the members of the club in trap-shooting. Club shoots will be held every Tuesday and Saturday afternoon on the club's grounds, foot of Twenty-first street, from 3 P. M. until dark. Visitors are specially invited to attend these shoots.

At the Battle Creek tournament of the Michigan State Trap-Shooters' League, the State trophy was won by Grand Rapids. At the annual meeting M. K. Walton, of Grand Rapids, was elected president, and S. A. Howes, of Battle Creek, secretary-treasurer. The meeting and tournament in 1896 will be held at Grand Rapids.

The programme of the tournament held on Thursday, Friday and Saturday of this week, May 9-11, by the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., came to hand too late for any extended notice of its contents. These tournaments, however, are so well known that they need scarcely any other notice than the mere placing of the dates chosen in FOREST AND STREAM'S "Fixtures."

Thomas Eley, of Wilkesbarre, Pa., and H. E. Buckwalter, of Philadelphia, Pa., shot a race at 50 birds per man on May 2. The match took place at West Side Park, Wilkesbarre. At the end of the first string of 25, the score was a tie with 22 each; in the second 25, Buckwalter scored 20, winning by three birds, Eley losing 8 out of his 25.

A. W. Peck, Secretary of the Kansas State Sportsmen's Association, writes: "A special rate of a fare and one-third has been secured on all railroads in the State of Kansas, and from St. Joseph, Mo., for the sixth annual tournament of the Kansas State Sportsmen's Association, which will be held at Kansas City, Kan., on May 21-23, 1895."

A new gun club was organized at Montpelier, Vt., toward the end of last month. According to a letter received by Charlie Hebbard, of the Empire Target Company, written by Chas. O. Barrett, of Montpelier, the club starts out well with a charter membership of 25.

A. D. Knapp and T. F. McKeon, both members of the Cobweb Gun Club, shot a 50-bird match on the club's grounds at West Farms, N. Y., on May 2. Knapp won by killing 37 to his opponent's 36, McKeon missing his last bird. C. M. Donnelly was referee.

The $250 deposited by J. L. Brewer with the editor of the *Canadian Sporting News*, of Toronto, Can., has been returned. Had Brewer signed the articles, the match could not have been shot off on the date fixed, as Cockburn is confined to the house with a badly sprained ankle which is liable to lay him up for some little time.

The Dupont tournament at Cincinnati this week is the first reunion of the "crackajacks" this season. Between now and the end of June they'll meet every week. These two months will be great ones from ammunition and target dealers' standpoints.

The Maplewood (N. J.) Gun Club has now won first place in two of the New Jersey Trap-Shooters' League tournaments this year. The South Side Gun Club, of Newark, N. J., has come out ahead on the other two occasions.

The first shoot of the Connecticut Trap Shooters' League for 1895 was held on the grounds of the New Haven Gun Club on May 2. In the team shoot between New Haven, Hartford and New London the home team won easily.

The Fairview Gun Club, of Lancaster, Pa., will hold a two-days' tournament on May 23 and 24. The shoot will take place at Hambright's Three-Mile House, the first day at targets, the second at live birds.

"LeRoy," if he shoots in anything like his usual form, will let the Southerners know that there are some good shots down East. There's a hot nest of trap-shooters around Boston and LeRoy's one of the best of the bunch.

A team of the Wilmington, Del., Rod and Gun Club will go to Philadelphia on May 18 to shoot a match at targets with a team consisting of members of the Forrest Gun Club of that city.

John Parker, of Detroit, Mich., known to trap-shooters as "Des-Chree-Shos-Ka Jack," will manage the Ohio State Shoot at Dayton, O., on behalf of the Buckeye Gun Club.

Lynchburg, Va., and Dayton, O., are both objective points for trap-shooters next week. After these tournaments it will be—"On to Knoxville."

Manager Shaner, of the Interstate Association, writes as follows: "The Interstate Association will give a tournament at Vicksburg, Miss., on June 26 and 27, under the auspices of the Vicksburg Gun Club."

Parties who have examined the new Forehand ejector tell me that it is a beauty and handles well, having also the advantage of very simple mechanism in its important parts.

It seems to be the thing now to permit 10 and 12 gauges to stand on the same mark. There will be several "tens" at Knoxville, if what I hear is one-half correct.

A new gun club was organized at Hallowell, Me., on April 25, with a charter membership roll of 40. Mr. W. G. Meloon is president of the new club.

The Interstate Association announces that the Grand American Handicap of 1896 will take place near New York on April 1-3.

EDWARD BANKS.

The Interstate Shoot at Lynchburg.

MR. B. G. EMPIE, on behalf of the Lynchburg, Va. Gun Club, in a letter, dated May 1, issues the following cordial invitation to shooters to attend the tournament given by the Interstate Association at Lynchburg on May 17, 18, under the auspices of his club: "A tournament will be held in this city on May 17, 18, that promises to be well attended. The tournament is given by the Interstate Association, under the auspices of the home club. The grounds of this club have been described in the columns of FOREST AND STREAM; it is therefore unnecessary to enter into details again. Suffice it to say, that they rank second to none in this country for beauty of situation and perfection of equipment. The club is composed of gentlemen of Lynchburg, who know nothing but how to make a visitor feel at home, and whose hospitality is proverbial. The time chosen for this tournament antedates the great shoot at Knoxville by only a few days, and will give all desirous of attending that event an opportunity to spend three days here in Lynchburg, practising at targets, and still leave ample time to reach Knoxville to engage in the tournament there. The railroads will allow purchasers of tickets to Knoxville to lie over in Lynchburg May 17, 18 and 19. We are in a direct line to Knoxville from the north, and this fact should insure us a great many shooters going to that place to engage in the great event. Shooters from Washington, Staunton, Greensboro, Charlotte, Winchester, Asheville, Raleigh, Charlottesville and other points will be in attendance, and we promise all who will honor us with a visit a royal time at the traps and a cordial, sincere welcome."

Meadville Gun Club.

MEADVILLE, Pa., May 1.—Twenty members of the Meadville Gun Club competed in the club shoot this afternoon. The event was at 25 targets, 15 at known traps and angles and 10 at unknown angles. The winners of the badges were all new men: Ehrgott won the Class A badge, Hayes the Class B and Prenatt the medal for Class C. Scores:

CHOKE BORE.

Syracuse Gun Club.

SYRACUSE, N. Y., May 3.—The Syracuse Gun Club held its semi-monthly medal shoot this afternoon. The shooting was lively and close. D. M. Lefever won Class A medal on a score of 41 out of 48; Hunter, of the Hunter Arms Co., carried off B Class with 36 to his credit, while Eddy captured C Class with no competition. Mr. Chas. Tuttle, of Auburn, N. Y., was a guest of the club during the afternoon. Scores:

A. R. K.

Worcester Sportsman's Club.

WORCESTER, Mass., April 30.—The Worcester Sportsman's Club held its second shoot in the Merchandise prize series this afternoon at its grounds, North Pond Park. W. L. Davis scored 43 out of 50 in the Merchandise event, A. W. Walls leading in the cash prize event with 24 out of 25. The Merchandise shoot is at 50 targets, 25 at known traps, known angles, 25 at traps in reversed order. Scores in the events were as follows:

W L Davis	20	23—43	R C Walls	20	12—32
Mascroft	23	17—40	Buck	17	15—32
A W Walls	22	17—39	Ide	16	16—32
Kennerson	20	17—37	G S Davis	17	15—32
McLellan	19	18—37	Harvey	19	11—30
Hoyle	21	15—36	C W Walls	14	13—27

In the cash prize event the table is as follows, showing each man's score, the same percentage being followed as in the Merchandise event. The event was 25 targets:

A W Walls	24	Ide	18	George S Davis	14
W L Davis	20	Mascroft	17	McLellan	13
R C Walls	19	Harvey	15½	Hoyle	12
Kennerson	19	C W Walls	15		

Vernon Gun Club.

THE members of the Vernon Gun Club, of Brooklyn, N. Y., held their monthly live bird club shoot on Saturday, May 4, at Dexter Park, L. I. Fourteen members were present and took part in the 7 bird handicap; out of this number three killed straight, six missed one bird, the remaining five shooters each scoring five birds. The scores in the handicap were as follows:

F A Thompson (28)	1221212—7	L C Emery (25)	2120212—6
W H Thompson (28)	1112122—7	J Wright (25)	1102121—6
F W Place (28)	2221111—7	Dr Little (30)	1201111—5
O J Mulcahey (28)	1222202—6	H P Fessenden (30)	0111111—5
S Remsen (28)	1111102—6	C E Pratt (25)	1102110—5
W S Spadone (25)	2022212—6	Dr Wischerth (25)	1111002—5
J L Bishop (25)	2222220—6	Dr Schauff (25)	2222100—5

Other sweeps were shot during the afternoon, Dr. Little killing 29 out of the 30 birds he shot at in the sweeps.

Ayling Defeats White.

SYRACUSE, N. Y., April 27.—Charles F. Ayling, who usually shoots under the name of "Arno," and Horace White, both attorneys of this city, shot a match at 25 birds this afternoon at Messina Springs, Ayling conceding White 3yds. At the end of the 25 the two men were tied with 23 each. On the shoot off, at 10 birds, Ayling won by killing all his birds, White losing his last bird. Score:

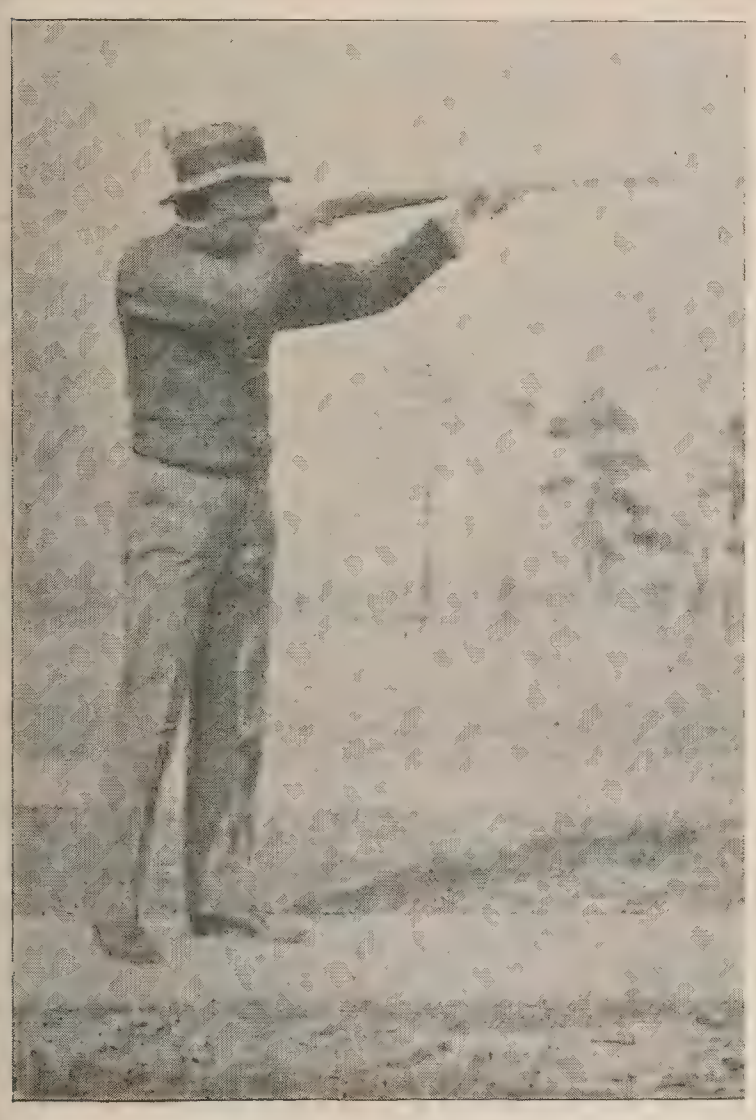
Ayling	2212202211012121212122221—23
White	2112222112011222212201222—23

Ties at 10 birds:

Ayling	2212221211—10	White	2222222220—9

American Trap-Shooters' League.

THE executive committee of the American Trap-Shooters' League met on Tuesday of this week. The chief business under consideration was the printing of the constitution and by-laws, application blanks, and all necessary stationery. The appointment of a committee on rules for live bird and target shooting was also under discussion.



"Forest and Stream" Snap Shots.

DURING the match between George Work and J. P. Knapp, which was shot on April 24 at the Westminster Kennel Club's grounds, Babylon, L. I., and details of which were given in last weeks's issue of this paper, FOREST AND STREAM'S camera got in its fine work, securing photos of the principals while at the score. George Work's photo shows plainly how the wind was blowing; the camera was snapped an instant before he fired. In Knapp's case many of his fellow club members will regret that he has seen fit to place on the shelf the old gray felt slouch hat which was so conspicuous an object at most of the important club shoots during the past winter, and which has so ably performed its share of the work. The camera was snapped unfortunately just as he fired his first barrel at a quick rising bird; hence the effects of the recoil on that portion of the photo where the gun should be. Fred G. Moore's attitude will be recognized readily by all who have seen him shoot; his photograph was snapped off during the sweep that followed the match above referred to. The other cut is an excellent likeness of George S. Mott, Superintendent of the Westminster Kennel Club's grounds. Mott's reputation for providing fast birds is very high, and, as a matter of fact, he won't own a poor bird.

The League's Problem.

THE American Trap-Shooters' League, which was organized on the night of April 3, at the Astor House, New York city, may seem to some to have what is vulgarly termed "a hard row to hoe." It will certainly, in the earlier portions of its career at least, meet with some opposition. That is the lot of everybody who sets out to alter and improve any existing condition of affairs, even when that condition is acknowledged to be in need of improvement. The Association, therefore, instead of being discouraged, will naturally consider the source whence such opposition springs, and just go right ahead with its work.

The purification of trap-shooting, and the placing of that sport upon the plane to which it rightly belongs, is not a difficult matter after all. At least it does not seem so to us. The drawing up of new sets of rules to govern inanimate, or target, shooting and pigeon shooting, making these rules as full as possible and dealing with no ambiguities, is what is needed in the first place. In the second place the Association should father and recommend for adoption some more equitable system of division of purses than that now practiced. Class shooting is good enough in its way, but any system whereby a man can win more by purposely missing a bird or a target than if he killed that bird or

J. P. KNAPP.

broke that target, is an anomaly that is not permitted in any other sport, and is only an inducement to men to "drop for place," pool or combine their winnings, and in a general way to shoot in an unsportsmanlike manner. Class shooting undoubtedly encourages the poorer shots, the 75 per cent. men, and for that reason it would be well to maintain that principle when any new system is proposed. The "jack-rabbit" system is one of the best and fairest methods of dividing purses devised up to date; but its very cumbersomeness, and the fact that no one, shoot as well as he may, can break more than even after deducting shells, expenses, etc., have dashed its popularity. For club shoots it has not altogether lost its favor.

The system copyrighted by Mr. Rose, which has been referred to several times in FOREST AND STREAM, seems to fill the bill more nearly than any other that has been called to our notice. So far as we can see, it prevents dropping for place entirely; it puts an end to combining and pooling, and it rewards every man according to his merits, so long as he gets a place. The difference between Rose's system, "straight-out," as it has been called, and the "jack-rabbit" is that whereas in the latter everybody who breaks a target or kills a bird gets back something, in the former it is class shooting pure and simple, without any of the pernicious features that are part and parcel of the system of division of purses now in vogue.

If the Association starts in by framing some set of rules that will be adopted as a standard in this country, and also obtains the adoption of some system of division of purses (whether it be Rose's or not), that will do away with all chance of unsportsmanlike conduct at the traps, by removing the opportunity for practising the same; in that case, we think, it will have removed about all the thorns that are likely to prove any serious obstacle to its further progress.

An Invitation to Americans.

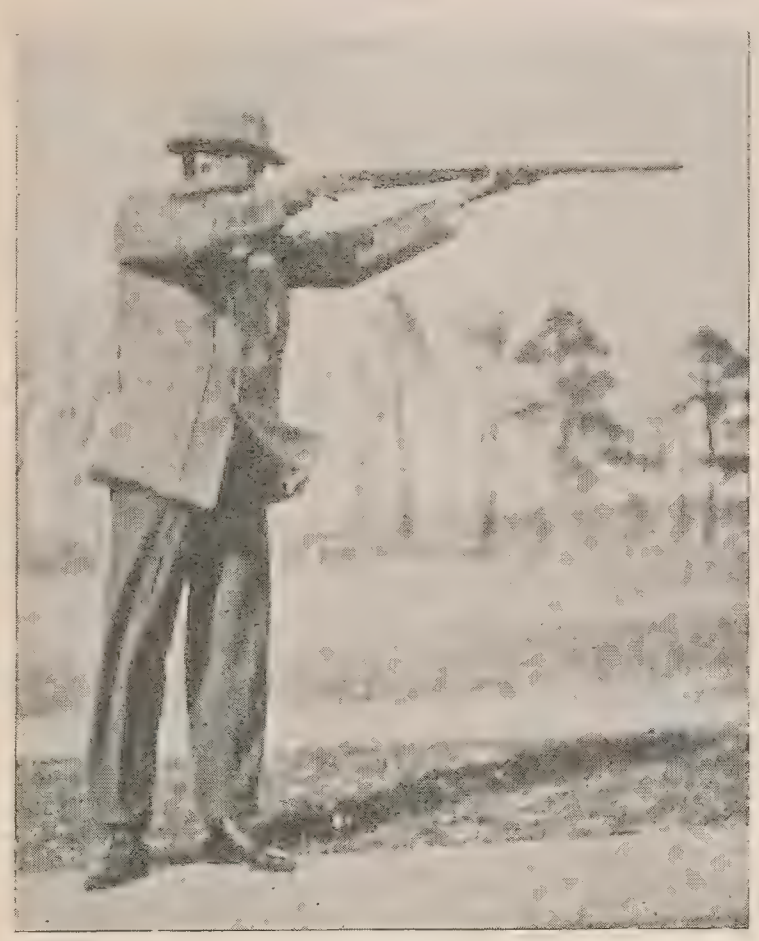
THE BRITISH INANIMATE BIRD SHOOTING ASSOCIATION, 224 Piccadilly, London, W., April 9.—*Editor Forest and Stream:* I am instructed by the governing body of the Inanimate Bird Shooting Association to inform you that at the annual meeting of the Association, held at Anderton's Hotel, Fleet street, London, on the 20th of March last, Mr. J. D. Dougall in the chair, the following resolution was moved by the chairman, seconded by Mr. A. H. Gale, and carried unanimously, viz:

"That all members of Australian, Canadian or American clubs duly accredited as amateurs be invited to shoot at the Association's annual meeting at Wembley Park, on June 6, 7 and 8 next, in all competitions except that for the championship."

The Association will be obliged if you will kindly give publicity to the communication in your columns, and hopes that it may have the pleasure of welcoming any of your countrymen who may then be in England.

E. G. MACKENZIE, Sec'y I. B. S. A.

Mechanicville Rod and Gun Club.



MECHANICVILLE, Pa., April 26.—The regular fortnightly shoot of the Mechanicville Rod and Gun Club was held to-day, the following scores being made, each member shooting at 25 targets, unknown angles:

A B Orcutt	0000111111110000011111111—16

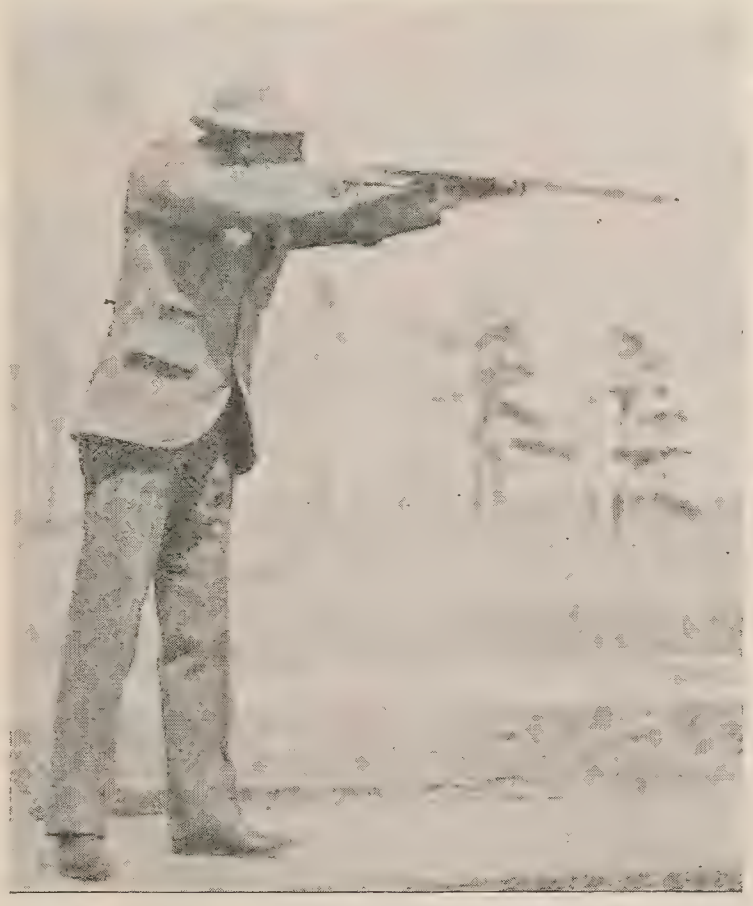
W. L. HOWLAND, Sec'y.

Knoxville's Great Shoot.

DURING the past few days the programmes of the great tournament which will be held at Knoxville, Tenn., on May 21-24, have been scattered broadcast throughout the country. Although the advance notices that have appeared from time to time in these columns have prepared shooters for the general outline of this tournament, yet these programmes have been eagerly scanned and considerable figuring done. This has been done by hundreds who won't be at Knoxville, $3,000 added money being a large amount to give away in four days, even if there are 100 shooters all anxious to get a slice. Four years ago, when the Knoxville Gun Club added $500 to the purses, its action



GEORGE WORK.

was looked upon as something extraordinary, and so it was—something out of the ordinary. But the enterprise of the club in adding that amount of hard cash had its reward. Without a doubt the adding of $1,500 by the club, and another $1,500 raised as stated later, will have its reward too. The Knoxville shoot will be a corker, and the Knoxville Gun Club will move up another big notch.

With 100 shooters to handle, the daily averages will need some figuring; the six highest averages on each day will receive the following premiums: $18, $16, $14, $12, $10 and $8 respectively, a total of $78 a day for four days. That accounts for $312. There will also be six four-day averages which will receive respectively: $20, $18, $16 $14, $10 and $10, a total of $88. The programme of events for each day consists of eight events; six 20 target events, $3 entrance, and two 25-target events, $5 entrance. It requires an outlay of $28 per day to enter through the programme, a total of $112 for the whole shoot. Each day's programme calls for 170 targets. There are, therefore, 24 20-target events and eight 25-target events programmed for the four days' tournament. To the purse in each 20-target event is added $75, a total of $1,800; to the purse in each 25-target event is added $100, a total of $800. Take these totals and add them together: daily averages, $312; four days' averages, $88; 20-target events, $1,800; 25-target events, $800. That's the way the Knoxville club's programme committee has divided up the $3,000. Simple, but effective.

Shooting begins each day at 8:30 A. M. To reach the grounds on time, shooters are to take the 7:30 electric car, "Lake Ottosee," which passes the door of the Imperial Hotel, the headquarters for shooters during the tournament. The "rules and regulations" governing the

FRED G. MOORE.

shoot are worth mentioning, as many of them will be pointers for other tournament committees to go by, although many of them will not do for ordinary tournaments. They run as follows:

"Shooting will be known traps, unknown angles, 16yds rise, rapid fire system, under latest revised A. S. A. rules to govern with few exceptions. Three sets of five bluerock expert traps, North's latest electric pulls will be used. 10 and 12-gauge guns shoot under same rules. Unknown angles, any angle outside base line of the traps, 6ft. high, any distance in flight. No contestant can shoot who does not make an all-day entry; cashier, upon due notice, will refund any entrance not contested. A contestant will be given squad card and position in squad and there shoot all day, or any squad can shoot all the meeting through in same positions. The secretary will be at Hotel Imperial at 7 P. M. on evening before the shoot to take special squad or individual place entries, otherwise they will be placed as they are entered on the grounds. The purse will be gross amount entrance and added money, less target money, three cents each, divided into 30, 25, 20, 12½, 12½. All ties divide, class shooting. A contestant, on going to the score, may have his load challenged. Any contestant found using more than 1¼oz shot—struck measure of 1106 Dixon shot measure—shall be debarred all rights and privileges of this meeting and forfeit all entrance money. Upon a challenge being issued, the secretary will take any shell from the shooter's pocket and measure it in the presence of the shooter and the executive committee. Shooters will take due notice and see that their shells are loaded properly, as this rule is going to be strictly enforced and no excuse s granted. No greater number than three extra shells can be taken to the score than any event to be shot calls for, under same penalty as section 9. All disputes or contentions shall be decided by the executive committee. All contestants, by their entry, signify their acceptance to abide by the rules and regulations and all other means necessary to insure harmony and success of this meeting."

A point well-worth noting, because of its being nearly always left out in the making up of a programme, is the instruction to shooters to send their shells in "care of George Brown, Knoxville, Tenn., who will keep them at his store until notified of their disposal." Grounds will be open for practice on Monday, May 20, at 9 A. M. Shooters will also do well to pay attention to the following, as it may save them some money: "Shooters will pay one full fare to Knoxville and get return one-third rate, provided they obtain from their local railroad agent a certificate and present it to the club secretary for proper indorsement."

Such is the Knoxville programme. Unpretentious in its make-up it is full of matters that interest shooters, and that's probably what is wanted nowadays.

The Hollywood Futurity.

THE handicaps for the Hollywood Futurity handicap, to be shot at the Hollywood (N. J.) Gun Club grounds on Saturday, July 6, have been made public by referee and handicapper John S. Hoey. There are 50 entries thus far, and the handicaps range from 25 to 31yds. The contestants, together with their handicaps, are as follows:

Thirty-one yards: Fred. Hoey.

Thirty yards: George Work, J. P. Knapp, L. S. Thompson.

Twenty-nine yards: R. A. Welch, Capt. Money, L. T. Duryea, E. G. Murphy, Chas. McAlester.

Twenty-eight yards: Fred. G. Moore, J. Seaver Page, W. Wynne, W. G. Brokaw, H. Gilbert, C. O. Iselin, Jim Jones, W. F Sykes, C A. Sykes, C. Furgueson, Jr., F. L Train, Eckert, Smith, Jordan L. Mott, Jr., Seabright.

Twenty-seven yards: E. L. Post, W. S. Edey, J. O'H. Denny, P. Daly, Jr., Hoyt, Ellison, N. E. Money, Wolstencroft, L. Finletter, Kitredge, W. P. Thomson, Jr., W. G. Murphy, Zellner.

Twenty-six yards: Watrous, W. C. Downing, Gould, W. H Mead, Edwards, Sullivan, Gilder, Harned, W. H. Stafford, E. C. Potter, C. Dolan.

Twenty-five yards: Bacon.

The conditions of the handicap are as follows: Twenty-five birds each, ties to be shot at 5 birds, $25 to be paid in on entering, which is forfeited if the subscriber is not present up to 11:30 on the morning of the contest, $25 additional for all contestants. Post entries will be

GEORGE S. MOTT.

received up to close of second round on payment of $75. Fifty per cent. and cup to the winner, 25 per cent. to the second, 10 per cent. to the third, 5 per cent. to the fourth, with 10 per cent. to the club.

Paducah Gun Club.

PADUCAH, Ky., April 30,—At the last meeting of the Paducah Gun Club it was decided to furnish FOREST AND STREAM with the scores of its shoots, and to ask you to be kind enough to publish it.

We are using five of North's traps, with electric pull attachment. The club was recently organized with the following officers: Fred Hoyer, president; W. D. Thompson, vice-president; I. Young, captain; James M. Lang, vice-captain; W. E. Cochran, treasurer; T. J. Moore, secretary.

Enclosed please find scores made over five traps, rapid firing. No. 1, 25 bluerocks each man, known traps and known angles; No. 2, 25 bluerocks each man, known traps and unknown angles. National Shooting Association rules.

Vice-president Thompson will attend next Saturday a meeting at Memphis, Tenn., to shoot with the Memphis Gun Club for four L. C. Smith guns which have been presented to the club. Scores:

No. 1, 25 targets, known angles:

W. H. HUCK.

New Jersey Trap-Shooters' League.

ELIZABETH, N. J., May 2.—The fourth tournament of the '95 series of the New Jersey Trap-Shooters' League was held on the Elizabeth Gun Club's grounds to-day. The fine weather, one of the warmest days so far this year, brought out the shooters in good force. Eight teams were entered in the League shoot, the Union Hill Club, of West Hoboken, being the only absentee. No great scores were made in this event, the veteran, Asa Whitehead, of the South Side team, being the only one to go straight. "Billy" Drake, of the Maplewoods, and Enoch Miller, of the Unions, each broke 24. The scores made by the teams were unusually close, with the exception of that made by the Riverside Club, which had a new team on this occasion. There was only a difference of 13 targets between first and seventh places! The teams finished in the following order: South Side, of Newark; Maplewood; Elizabeth; Endeavor, of Jersey City, and Union, of Springfield, a tie for fourth place; Climax, of Plainfield; Boiling Springs, of Rutherford; Riverside, of Red Bank. Seven other events were also shot off, B. "LeRoy" Woodward, of Campello, Mass., making an extremely good average, and easily carrying off premier honors. Empire targets and traps were used, this target having been adopted by the League as its standard target. The Elizabeth management as usual did its work well. The president of the club, Robert E. Chetwood, acted as squad hustler and took entries for the events, while William Parker did the dividing up of the cash with his usual ability. The other members of the club lent a hand at trapping when necessary, pulled traps, etc., while W. R. Hobart, the League's sec'y, and Drake, its manager, aided the home club very materially in running the shoot. The dinner provided by the club's caterer was of the usual high standard that prevails at all similar gatherings at Elizabeth; this department had no reason to complain of lack of patronage. Taken all in all, the League tournament at Elizabeth was one of the best that that organization has ever held. Scores were as follows, the League shoot being at 25 targets per man, unknown angles:

Southside.

Brunswick Gun Club.

NEW BRUNSWICK, N. J., April 27.—The following scores were made to-day at the regular monthly shoot of the Brunswick Gun Club. Rain prevented a large attendance Scores:

Twenty targets, known traps, unknown angles:

HHStevens	11101111111111110111—18	A L Mundy	11110111111100101011—15
R M Pettit	11111011111111011101— 17	E Reynolds	00110111010001101011—11
S Randall	11011111111011111011—17	R Nicholas	11001000001111110110—11
V Voorhees	00111111111111100111—16	H B Smith	00101001001110010101— 9
C Oakley	11110111011111010110—15	G A Strong	11100001000000010001— 6

The trophies for the best averages for the year ending May 1, 1895, were won by H. H. Stevens (Class A), 82½, and A. L. Mundy (Class B), 66⅔.

HENRY H. STEVENS, Sec'y.

Protecting the Amateur.

THE fact that the amateur trap-shooter must be protected, if the sport is to prosper, is now very generally recognized in all sections of this country. FOREST AND STREAM'S "Fixtures" column during the past few months has shown that "strictly amateur" shoots are becoming popular with gun clubs. It has been claimed over and over again that it was the regulars who made the shoot, and for a time I was unwilling to dispute that claim, although I had my doubts. But the success of purely amateur shoots, professionals barred, can be made just as certain as that of the "open to all" class. Added money and merchandise prizes will always attract shooters of even moderate caliber, who will be willing to compete against expert amateurs, but who are scared if a few well-known professional experts put in an appearance. "What would be the use of my putting in my money and shooting against those men? What show would I stand?" is a very natural remark for any 75 per cent. man to make. I've heard it hundreds of times. It is quite true that they stand almost as poor a show against the expert amateurs; still they put in their money and shoot along with the latter, going home a few dollars out of pocket, but happy all the same. Trap-shooters as a class are very even-tempered men; kickers are very scarce in their ranks; and the spending of a few dollars is a small matter compared to the fun they've had.

The question of handicaps is one that has vexed trap-shooting circles ever since a few shooters obtained a greater degree of excellence than their fellows. Efforts have been made several times to place amateurs and experts on an equality. I read a letter the other day written by Justus von Lengerke, dated as far back as '89, on this subject, the letter appearing in the colums of one of the sporting papers. At that time he favored placing the experts away back, giving the amateurs many yards the advantage. Traps and targets have altered so materially since that time that no doubt he has correspondingly altered his ideas on the subject. One of the ideas which he ventilated in that letter was in favor of making the shooting conform more nearly to field shooting, suggesting unknown angles etc. It is with the handicap question, however, in regard to professional and amateur shooters, that I want to deal.

The Interstate Association, an organization composed of manufacturers and dealers in trap-shooters' supplies, has this year still further handicapped the professionals, many, if not the most, of whom are paid representatives of some of the firms composing this association. In past years the novelty rule was the system that prevailed at the Interstate tournaments, shooters being divided into three classes—experts, semi-experts and amateurs, the men composing these classes standing at the 18, 16 and 14yds. mark respectively. This gave the amateur 4yds. start over the professional, but as the professional had as a rule shot at fully ten times as many targets from the eight traps provided for by the novelty rule as the amateur, the handicap did not amount to much; the professional also, from constant practice, shooting at least 2 or 3yds. *quicker* than his amateur competitor. The handicap, therefore, was not quite as much as it seemed.

This season the novelty rule has been done away with by the association. It is perhaps a pity, as it was the system most like field shooting of any that have as yet been devised. There were eight traps to watch and a shooter had to keep his gun to a certain extent away from his cheek. The handicap now advocated by the Interstate is: professionals shoot all the time at five unknown traps—the expert system; amateurs all shoot at known traps, unknown angles, with a graduating handicap; that is, when an amateur wins any part of first money, he shoots with the professionals in the next event he takes part in, dropping back again to unknown angles if he does not win first money when shooting at the five unknown traps. This, of course, is a very severe handicap on the professionals, and the game is one at which they will find it well-nigh impossible to break even. It is not impossible; however, and I feel confident that if professionals were to have more practice at expert rules, the difference in the two classes, so far as the money goes, would not be so much in favor of the amateurs as it is at present. In describing the situation at the Interstate tournaments of this season, a well-known shooter says: "It is not such an impossibility now for the professional to get some of the amateur's money as, under the old system, it was for the amateur to get some of the professional's money."

That's about how the matter stands at present. The Interstate Association is the leading trap shooting organization of the country. Its business is to boom trap-shooting and to advertise the wares of its members. It has done a great deal in the past toward creating an interest in trap-shooting in sections where the sport was but poorly supported. The result of the radical movement in favor of "protecting the amateur" will be watched with much interest. That it has made such a movement is proof that the association recognizes and appreciates the condition of affairs.

The situation is a ticklish one. It seems unfair to handicap experts, simply because by a natural gift, or by constant practice, they have brought themselves to a greater pitch of excellence than their brethren, and I, for one, do not advocate any such system. The idea of the Interstate seems the best at present, as it only handicaps the *paid* experts who risk practically nothing when attending shoots. The graduating handicap also spreads the money around and prevents an expert amateur from gobbling it all up. The coming tournaments of the Association at Wilmington, N. C., and at Lynchburg, Va., will show whether this system which was popular at Pittsburgh, Pa., will retain and add to its popularity. Those tournaments will practically decide whether the system will remain in operation at the Interstate tournaments this season, or whether the Association and its manager, Elmer Shaner, will have to go to work and devise some other means of "protecting the amateur."

EDWARD BANKS.

Wilmington Rod and Gun Club.

WILMINTTON, Del., April 29.—The Wilmington Rod and Gun Club held its annual spring sweepstakes shoot at its grounds, near Union Park, to-day. On account of the rain, the attendance was rather small. About thirty crack shots from Baltimore, Philadelphia and New York had signified their intention of being present, but were kept away by the rain. These men from outside the city were present: Gus Greiff, of New York; William Fieles, of Christiana, Pa.; John Evans and John Cleaver, of Camden, Del.; Eachus and De Van, of West Chester; John Creeden and Abe Williamson, of Hockessin, and W. K. Park, of Philadelphia. The dull sky made the targets easy to see, but the wind was against the shooters. The winners in the different events were as follows:

No. 1, 10 targets, unknown angles; Gaughen 9, Fieles 6

No. 2, 15 targets: Burroughs 15, Cleaver, Gaughen and Evans 12, Fieles and De Van 8.

No. 3, 7 targets: Burroughs, King and Evans 6, Fieles and Cleaver 5, Gaughen and Hartlove 3

No. 4, 10 targets, unknown angles: Cleaver, Fieles and Burroughs 9, Hartlove 8, De Van 7.

No. 5, 10 targets: Fieles 10 King 9, Evans, Hartlove and Gaughen 8.

No. 6, 7 targets, unknown angles: Cleaver, Hartlove, King and Fieles 6, De Van, Gaughen and Burroughs 5, Evans 3.

No. 7, 7 targets: Gaughen 6, Fieles and Cleaver 5, Burroughs, De Van and Evans 4.

No. 8, 10 targets: Gaughen 9, Cleaver, Fieles and De Van 8, Evans, Bilderback and Greiff 7.

No. 9, 15 targets: Fieles 12, Cleaver 11, Evans and Burroughs 10.

No. 10, 10 targets, unknown angles: De Van 9, Gaughen 7, Cleaver and Fieles 6.

No. 11, 20 targets: Cleaver 17, Burroughs and Greiff 16, De Van 14.

No. 12, 10 targets, unknown angles: Cleaver 9, Burroughs and Grieff 8, De Van and Evans 7.

No. 13, 7 targets, unknown angles: Eachus 7, Evans 6, Fieles, Hartlove, Burroughs, De Van, Cleaver, Gaughen and Jersey 5.

No. 14, 15 targets, unknown angles: Burroughs 14, Cleaver, Gaughen and Greiff 13, Hartlove 12.

No. 15, 10 targets: Greiff 10, Fieles, Gaughen, Burroughs, Eachus and Bilderback 8, De Van 7.

No 16, 7 targets, unknown angles: Burroughs 7, Greiff 5, Fieles, De Van and Jersey 5.

No. 17, same: De Van and Bilderback 7, Fieles, Hartlove, Eachus and Greiff 6, Creeden, Gaughen, Burroughs and Jersey 5.

Missoula Rod and Gun Club.

MISSOULA, Mont., April 28.—The Missoula trap-shooters evinced a lively interest to-day in their attempts at destroying bluerocks. Though the day was dark and the scores made were far from good, the shooting was continuous from 2.30 till 6 P. M. First came practice shooting, then the medal contest, and after that team shoots, individual contests and more practice followed as fast as the trappers could handle the targets. In the medal shoot, Frank Woody, just promoted from B to A class, walked off with the gold medal, while A. M. Sterling will wear the silver medal for the second week. Scores in the medal shoot were as follows:

25 targets, unknown angles:

A Class.

W H Mace	11011110111100000001—11	F P Kern	01100100100100111011—10
W Brayton	10000011011011101111—12	Lt Devol	11111111010010111010—14

WILL CAVE.

Binghamton Gun Club.

BINGHAMTON, N. Y., May 2.—With the coming of warm weather, a wonderful activity has taken hold of the shooters of this place. No doubt the date of our annual tournament being so near at hand has considerable to do with it, as a number of the boys are intending to shoot right through the programme. Right here let me say that from present indications our tournament is to be a hummer, and what we at first thought would be a great drawback will be to our advantage. That was the question of dates, as by an oversight we conflict with Knoxville, but the shooters all around us, realizing that the hard ones will be at Knoxville, a great many have signified their intention of coming to our shoot. We reasonably hope to equal if not exceed the number of entries we had last year, which was 42. Below find scores of practice shoot and sweeps of Tuesday, April 30, also club scores and sweeps shot this day:

April 30.—Practice shoot, 25 targets, unknown angles:

Brown	11110011101111111111111111—22
Kendall	10111111111111111111110111—23

No. 6, same: Hobbie 10, Waldron 10, Brown 9, Boss 8, Rose 8, McHenry 8.

H. W. B.

Missouri State Shoot.

KANSAS CITY, Mo., April 24.—The chief event in to-day's programme at the tournament of the Missouri State Fish and Game Association was the contest for the championship of the State at live birds. It was an unfortunate circumstance that no clubs from any other city than this one were entered, as their absence did away with the inter-city rivalry which has been so conspicuous a feature of these contests in the past. Out of the championship matches which have been shot since 1881, six have been won by Kansas City and four by St. Louis. This year five clubs entered teams. These were the Kansas City G. C., O. K. G. C., Stockyards G. C., Belt Line G. C. and the Forester G. C., all of Kansas City. The race between the two first-named clubs was close and exciting, the result being in doubt up to the last round, the Kansas City Gun Club's team winning by the scanty margin of one bird. The following are the scores made:

Kansas City Gun Club.

J H Durkee	2222222221222O3—14	J Underw'd	01121122022222O—12
D S Gordon	2212001122102222—12	G Schroeder	12111211121011—14—52

O K Gun Club.

The target events were well patronized on this day also, several sweeps being decided. L. C. Smith, Lou Erhardt, Trotter, Bennett, Dave Elliott, Barre and Brown made the best averages. In the 30-target event there were 18 entries; of this number four broke every target. The names of the four with straight scores were: Eberhardt, Brown, L. C. Smith and West.

New York State Shoot.

SARATOGA, N. Y., April 30.—The 1895 meeting of the New York State Sportsmen's Association promises to be the largest and most successful in the history of the organization. The manufacturers throughout the State, and even in other States, have responded liberally in the matter of merchandise prizes, and our programme will be headed in that department with four $100 guns, presented by as many of the most noted makers of this country. In addition to this there is a very large list of most desirable prizes, which will be open to competition to all shooters residing within New York State. After carefully considering the matter, the Saratoga Club have concluded that, in addition to the regular events open only to New York State shooters, a grand tournament sweepstakes will be given, open to the world, nobody barred. This will unquestionably be the largest and most attractive shoot given in the East this year, as the entries from this State alone run from 80 to 120, and we confidently expect to run events with as high as 150 entries, which will be the greatest number on record, to our knowledge. We urge every shooter within a thousand miles of Saratoga not to miss this the greatest shooting event of 1895, and assure them that they will find every possible detail going toward the making of a perfect tournament carefully and intelligently looked after. Rates on all railroads within the State are reduced to those desirous of attending, and extremely favorable rates have been made at the different hotels. Programmes will be ready for distribution by June 1. We are anxious that all shooters should receive a copy, and those with whom the club are not acquainted will confer a favor by writing for one to

W. H. GIBBS, Sec'y.

Newburgh vs. the Cobwebs.

"WE got there just the same, but it was very close." That's the way David Brown, president of the West Newburgh Gun and Rifle Association, describes the shoot between his club and the Cobwebs, of West Farms, which took place at Newburgh, N. Y., on Tuesday, April 30. It was close, only one bird separating the two teams. Mr. B. C. Everinghim acted as referee, and never a kick was heard at his decisions. After the shoot came the supper at Gedney's, paid for by the losers. The scores were as follows:

Newburgh		Cobwebs.	
J Taylor	2212222121—10	Capt Loomie	1211221222—10

Reduced Rates to Philadelphia via Pennsylvania Railroad.

ON the occasion of the dedication of the Odd Fellows' Temple at Philadelphia, May 21, 1895, the Pennsylvania Railroad Company will sell, on May 20 and 21, excursion tickets to Philadelphia and return from all points on its system east of Pittsburg and Erie, north of Quantico and south of Canandaigua, inclusive, *at a single fare for the round trip*, with minimum rate of fifty cents. Tickets will be good for return passage until May 23 inclusive.

This rate is open to the public, and offers an excellent opportunity for a visit to Philadelphia at a very small cost.

Fast and frequent express trains run from Philadelphia to all principal New Jersey seashore resorts.—*Adv.*

Sunday Trips.

SUNDAY trips will be resumed by the Fall River Line, commencing Sunday, May 5. The Priscilla and Puritan are in commission.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

Hudson's Bay Trips of 700 Miles.

We take parties from the above ALGOMA PARK resort at Sault Ste. Marie, Ontario, Canada, to James Bay and return, furnishing tents, canoes, guides, cooks, food and all that is required for the trip, for the sum of five dollars ($5.00) per day each; parties of ten or more to be guaranteed.

Taking in the north shore of Lake Superior by steamer to Jackfish Bay, thence north through numerous lakes and rivers to Albany River, down the Albany to Moose Factory, on James Bay, and return to ALGOMA PARK, the whole trip taking about thirty days, thus affording one of the finest canoe trips on the continent through this almost unknown part of the Dominion. Good trout fishing in the lakes and rivers south of the Height of Land, and on the north or James Bay side innumerable flocks of wildfowl, geese, ducks, plover, etc., make their home.

The resources of the Hudson Bay country are coal, iron, kaolin, etc., discovered by the geological surveys of Canada (see Geo. Reports), also seal and salmon fisheries, oils, otter, beaver, sable and silver fox furs, walrus ivory tusks and feathers This trip has virgin fishing and hunting grounds never fished or hunted by white man.

For further information apply to KIRKWOOD & McKINNON, Sault Ste. Marie, Ontario, Canada.

Mr. Grinnell's Indian Books.

BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author and show Indian life from the Indian point of view.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

The paper on the American Magpie printed in our Natural History columns will be read with interest by many of our readers, and especially by those who are familiar with the western half of the United States, where these birds are so abundant and so noticeable a feature of the landscape. The article is from advance sheets of Capt. Charles Bendire's superb work on "Life Histories of North American Birds, with Especial Reference to their Breeding Habits and Eggs." With the first volume of this splendid work many of our readers are familiar, and those who are not will at least remember the extracts which we published from it a short time prior to its appearance. These articles treated of the valley quail and the bald eagle. Capt. Bendire is above all things a field naturalist, and he tells of the things he has seen on plain and mountain, in the depths of the forest and along the borders of the lakes. His observations are careful and accurate and his style is charming, and we feel ourselves favored in being able to present another of his delightful papers. The cut which illustrates the article is one taken in winter in the Yellowstone Park by Mr. Elwood Hofer, whose name is so familiar to our readers. It is a beautiful picture, well taken. A piece of meat was tied to a board, which was shoved out of the window; the camera was focused on the meat, and when the birds had alighted and were hard at work filling their hungry bellies, the shutter was snapped. We venture to say that no similar picture exists to-day.

The New York Legislature promises soon to adjourn, and it is high time that it did so if the fish and game and forests of this State are to last a few years longer. It is a close race between the Game Law Committees of the Senate and the Assembly as to which is the worst. We are inclined to the belief that the Senate has done more at this session than the Assembly. On the other hand, the Game Law Committee of the Assembly has the distinguished honor, as we are informed, of having violated its written pledges. After having assured Mr. W. W. Niles, of New York, both verbally and in writing, that they would vote for the anti-hounding bill which he had introduced, at the next meeting of the committee they went back on everything that they had previously stated. The only man who kept his word is, we are told, Mr. La Fetra, of New York. Those who did not are Higbee of Suffolk, Van Amber of Lewis, Fairbrother of Queens, Rogers of Onondaga, Campbell of Kings, Burns of Westchester, and Gray of Dutchess. We should be glad to receive from any of these persons a denial of the story which comes to us from Albany, and on such excellent authority that we cannot doubt its accuracy. The anti-hounding amendment to the game law was lost in the Assembly by a vote of 90 to 30.

It is a satisfaction to learn that Commissioner Fullerton, the new executive agent of the Minnesota Fish and Game Commission, is doing good work. A St. Paul correspondent writes of him: "Our new executive agent has been in office just one month. He is a realization of a good game protector, as his work attests. He has operated and secured convictions in a dozen counties. He has confiscated and sold illegal game to the amount of $1,100, and destroyed or has in possession 11,000 feet of nets, valued at $2,500. He has not sought isolated cases, but braved the most antagonizing element in the State, the commission houses, who have sent their hordes out to prey on everything in sight."

Mr. W. W. Ellis, General Manager of the Missouri State Protective Association, has charge of the Missouri exhibit at the Sportsmen's Exhibition. This fine exhibit consists chiefly of pictures of hunting and fishing scenes, and also cover illustrations of a number of kindred sports. Mr. Ellis made the collection of fish of Missouri which appeared at the World's Fair in Chicago, and was instrumental in passing the first and only Missouri Game Warden bill.

THE SPORTSMEN'S EXPOSITION.

THE Sportsmen's Exposition in the Madison Square Garden, this city, was opened on Monday and will continue through the week. In the comprehensiveness of its scope and the very high quality of its displays it surpasses expectation. The general expression heard among those present on the opening day was of pleased surprise at the extent and the elaborate character of the affair. The Exposition is in every way a credit, both to those who have been concerned in preparing it and to the general field it represents. Such a tangible forth setting of the sportsman's interests has never before been made in this country. We are sincere in our expression of trust that every reader of the FOREST AND STREAM who can do so may visit the Madison Square Garden this week. As for the unhappy individual who is "chained to business," he should do the next best thing—read about it in next week's FOREST AND STREAM, which shall have as good a description of the Exposition as pen and camera can produce.

At the time of going to press it was easily to be seen that the Exposition was to be a success, and of an interest and excellence quite beyond the most sanguine expectations of its projectors. It could not be said that this opinion was made up from a view of a finished exposition, for much of detail still remained in process of arrangement. Though the bulk of the displays were in place, several exhibitors had not yet put all their goods in order, and a few of them had not filled their spaces at all, but were waiting for their material to arrive. This is always the case in any exposition, and take it all in all the promptness of the exhibitors was unusual. Visitors may feel sure the Exposition is a success, and will be even more of a success as the week wears on.

At the time of the hurried FOREST AND STREAM inspection of the great hall, there were sixty odd exhibits in place, and it is not too much to say that these covered almost the entire field of sporting interest. The readers of FOREST AND STREAM may perhaps not care so much for the wide, abundant display of bicycle, billiard, tennis and athletic goods as for the tools more nearly allied to their own craft of field sports; but it would go hard if any lover of a given sport of the outdoor air could not find it well exemplified and in such way as to teach him something new. Such is the proper function of the Exposition.

There were five sportsmen's journals represented by exhibits, four besides the FOREST AND STREAM. Three others were classed as trade journals in the catalogue, and two concerns showed "books and publications"—Chas. Scribner's Sons and the Natural Science Association of America. The Exposition is especially rich in paintings and pictures, and not less fortunate is it in the statuary and still life, the sculpture of the taxidermist's art. Mr. Frederic S. Webster has an excellent exhibit from his studio, and his great cycloramic groups, stretching across the full end of the hall at the Fourth avenue entrance, combine the excellencies of painting, taxidermy and patient reproduction of natural detail. Of these groups there are five; the elk hunter, the duck shooter, the trapper, the trout fisher, all being shown typically, in company with a startled shooter who has gone out for grouse and put up a deer. This latter is termed "A Lost Opportunity." Mr. Wm. W. Hart's elaborate exhibition of mounted big game deserves praise, and his tigers and lions were the talk of many, notably the caged lioness before whose bars hangs the legend "Do not feed the animals." Mr. Sauter's elaborate groups, especially his wolves and buffalo, should be noticed; and all about the great interior was repetition of much taxidermy, as in the display of Mr. Thos. W. Fraine, of Rochester; in the ornaments of the "Maine Central" cabin by S. L. Crosby; in the furnishings of the U. S. Cartridge Co.'s cabin, etc., etc. Among all the many specimens of taxidermy shown, however, there was perhaps no piece more stirring than Mr. Carl E. Akeley's buck head, "The Challenge," which was in the FOREST AND STREAM exhibit. This artistic bit of work came all the way from Milwaukee, Wis. Indeed, the entire country was put under tribute to adorn this occasion.

The out-of-doors man loves the camera. He could love it and learn of it here. Messrs. E. & H. T. Anthony show a very beautiful exhibit in this line, and the fair ladies in counterfeit which made the front of this exhibit had many admirers, who looked also beyond at the instruments which had made possible the images. Messrs. Scovill & Adams and the Obrig Camera Co. had separate displays, and several general sporting goods dealers included camera goods in their displays.

In gun implements the country was represented, as at the World's Fair, by the great case of strange and useful jewelry and furnishments prepared by the Bridgeport Gun Implement Co. The Ideal Manufacturing Co. presented a neat and attractive case of specialties also. Mr. Lyman's rifle sights scarce require comment, they are so well known. Mr. Lyman also shows the Rapid Fire targets just from the press of FOREST AND STREAM. The "Perfect Oiler" was also perfectly shown, and many other small and needful things for every one who loves a gun.

Boats and canoes can be said to be well represented, but not extensively so. One recalls but three firms making such display. The Gas Engine and Power Co. have two lovely naphthas, well shown in an advantageous spot where two aisles converge. "The Only Naphtha Launch," says the plain and simple sign. The St. Lawrence River Skiff and Canoe Co., just back of the A. G. Spalding & Bros.' exhibit, is, as usual, beautiful and instructive. The Spaldings also had a great feature of popular interest in the Layman pneumatic boat, which they displayed in a great tank of water, with a man paddling about in it to show it safe and practical, albeit odd of look. Hulbert Bros. & Co. made the third firm adding boats to their exhibit. The Meriden Britannia Co. offered something unique in the great silver trophies shown, among these the cups and plate won by the yacht Vigilant when abroad.

Fishing tackle was relatively weak compared to guns and ammunition, which were very strong. Such firms as the Spaldings, Hulbert Bros. & Co., Schoverling, Daly & Gales, Von Lengerke & Detmold, had fine displays of the most modern of fishing tackle in their exhibits, and over such places as these hung many men with gloating eyes. George Paddock exhibited a line of the U. S. Net and Twine Co.'s goods. This was a fine display, showing many of the Kosmic rods which were exhibited at the World's Fair, together with great store of fine goods of many sorts beside. Fred Divine has a fine display under the wing of the W. Fred Quimby Co. Cornwall & Jesperson show rods and fishing tackle, including the Horton steel rod. There is also shown a very complete series of the Natchaug Silk Co.'s celebrated lines.

In guns there were fifteen different exhibits, each one excellent. Not even at the World's Fair could we have seen the gun trade better in its modern development, for the Fair was two years ago, and ever since then guns have improved. Those who have not seen the guns put out this spring by such well-known firms as the Hunter Arms Co., Parker Bros., Lefever Arms Co., certainly have in store this week a duty, a pleasure, and an opportunity for knowledge. These arms all become increasingly beautiful, and they are beautifully displayed. Capt. du Bray was in charge of the handsome Parker cases, and was handling proudly some fine arms in the Sir Joseph Whitworth fluid steel barrels. The Hunter Arms Co.'s select and elegant assortment of fine guns was a delight to many. This exhibit is within the same rail with that of the W. Fred Quimby Co., but is separate of itself. Mr. McMurchy was not at hand as usual, and one missed Col. Courtney, of the Lefever gun, from among the visitors

Capt. Bartlett was absent, but the Burgess repeating shot gun was well shown and finely in evidence. Messrs. Hermann Baker & Co., Messrs. Wiebesel & Hilger, Messrs. Schoverling, Daly & Gales, Mr. H. Werleman, Messrs. Hulbert Bros. & Co., the Ivers Johnson Arms and Cycle Co., Messrs. Von Lengerke & Detmold, all had fine general gun displays in their exhibits. The last firm had fine Francottes by the window-full. The useful three-barrel Daly gun could be seen in the cases of Messrs. Schoverling, Daly & Gales. The Remington Arms Co. had four cases and two stands full of their arms. Near by them the Winchester Repeating Arms Co. showed the potential repeating shot gun, which is of late cutting so wide a swath in trap matters. Among other arms shown by the firms mentioned in this paragraph were the Syracuse Arms Co.'s hammerless guns, the Spencer repeating shotgun. The Colt's guns were shown in connection with their general display.

In rifles one of course goes to the larger cases of the great firms like the Winchester Co., the Colt's Co., the Marlin Fire Arms Co., as well as to many other firms which handle these and other goods. The Winchester exhibit is simple, comprehensive, plain, orderly, and withal beautiful, and Major Albee, who is in charge of it, can well set forth its charms. This exhibit is much as shown at the World's Fair in plan and detail. The Marlin cases contain some beautiful, richly-mounted arms, as usual. The grand and solid display of the Colt's Patent Fire Arms Manufacturing Co. is almost identically as it was at the expositions at Chicago, at Paris, at Melbourne, all over the world. It and many others must be described more fully later. Mr. Charles E. Willard, late of Chicago, but now of Hartford, tells folks about this exhibit. The Stevens Arms and Tool Co.'s arms were well displayed.

In revolvers one has the Colt's exhibit and the beautiful case also of the Smith & Wesson revolver, out of either of which one could find a six-shooter good enough for the finest shooting, and pretty enough to be cherished as a parlor ornament. The goods are also shown elsewhere.

In ammunition one surely has choice enough, and in no field will study be more profitable to the modern sportsman than in that of ammunition as it is to-day. In a fine, open, well-lighted section, surrounded on all sides by aisles, is the U. M. C. Co.'s exhibit, all carpeted with a soft, fluffy, deep-piled carpet of pleasant low tint. Here, in cones and pyramids and cases, are some very beautiful and deadly things. This exhibit is reserved, chaste, very strong and compelling in effect, and faultlessly simple and complete. The Winchester ammunition display is arranged in connection with their exhibit of arms, etc., and is very full and elaborate. Maj. Albee shows among other things the small-caliber army and navy steel-coated bullets, which go through a quarter of an inch of steel, and like to do it, it is so easy. The U. S. Cartridge Co. have planned an exhibit unique and attractive. They have a typical hunters' cabin, full of trophies, etc., and inhabited by guides of established reputation, such as Ira Dodge, of Wyoming; J. W. Schultz and W. G. Wright, of Montana; Jonathan Darling and Joe Francis, of Maine; H. H. Corey, of the Adirondacks, etc.—all mighty hunters and well-posted men. Here too are Mr. and Mrs. A. G. Wallihan, of Colorado, who have done so much at photographing wild game. The display of the U. S. Co. is put up within this open-front cabin or camp.

The modern sportsman must study modern powders. Here we can not pause to say how many new ones there are, but there are many. The observer may well spend time before the neat and orderly exhibits of the DuPont Co., the Hazard Co., etc. Mr. Quimby can show him the E. C. Smokeless, "V. L. & D." can show him the Schultze, etc., etc. If he wants Walsrode, American E. C., DuPont's Smokeless, S. S., or anything else, he can see it and be told about it understandingly. Here, too, is the newly formed American Smokeless Powder Co.

Trap-shooting is a great sport to-day, and much money is behind and before the traps, but one would hardly call the accessories to target shooting picturesque or beautiful. Yet they can be made such, as one may attest. Paul North, for the Chamberlin Cartridge and Target Co., has adopted a color scheme of black and yellow, the colors of the bluerock target. He has draped his walls and counters in yellow and black, and massed a thousand bluerock targets, black and yellow, in a flat assemblage. This one notices. But ah! when he comes near he finds a shrewd surprise. On the trap of each target is the photograph of some prominent shooter! This one must surely name as a unique and happy conceit.

The Empire Target exhibit, under the roof of the W. Fred Quimby Co., was arranged by Mr. Hebbard, and it also is very fortunate in treatment. The color scheme here is blue and white, the drapery pinned here and there with an "Empire." Here Empires grow in pyramids, with gold and silver traps about for throwing. Target shooting is quite apotheosized. In his space, which shows some canvas and leather goods, beside the angling display of Mr. Divine's factory and the display of the E. C. Smokeless, Mr. Quimby has a very neat and affective exhibit, not crowded, but catching.

Not everybody knows everything about shot. The Leroy Shot and Lead Works Co. show one a pretty thing of their's, and across the way Messrs. Tatham & Bros. will show him a complete shot tower in miniature, all in operation. This will be news to many.

Spratts Patent (America), Ltd., have a neat and well condensed display of their familiar wares over toward where one of Mr. A. B. Frost's hunters is shooting chickens over close points by dogs in a corn field full of shocked corn. Most unusual good luck he is having, to find birds lying that way in a cut field so late in the year; but let us hope his dogs ate Spratts biscuit anyhow.

Heublein & Bros., camp supplies, the Hulbert sleeping bag, and a thousand and one necessities, adjuncts and luxuries charm and bewilder the visitor.

Over toward the cyclorama side (4th avenue) is a tidy cabin labeled "Maine Central Cabin," furnished well with hide and horn and feathered trophies, devoted to the interests of the great region Maine, dear to many sportsmen's hearts. Here presides Miss Cornelia Crosby ("Fly Rod"), assisted by two of the best guides of the Maine Woods, Jas. Matheson and Ed. Grant. These features of cabins and hunters' camps are shown in unusual and pleasant abundance at this exposition, and they are homely and realistic enough to make one long to be unchained from business, and to be off and away into the free air. Indeed, that is the whole function of this unique Sportsmen's Exposition, and well indeed it fulfills it.

Sportsmen's literature is well represented. *Outing* makes an extensive showing of original drawings and sketches; *Shooting and Fishing* occupies an extremely cosy and inviting nook; *Recreation* shows a large number of game heads disposed about a rough and welcome cabin; while the extensive taxidermy display made by Mr. Sauter has overflowed into and filled the *American Field* space.

The FOREST AND STREAM has made a great hit with its life-sized oil painting of the "Chained to Business" sportsman who makes the best of it by reading FOREST AND STREAM. There is something in that picture which appeals to nine hundred and ninety-nine of those who pass through the central aisle and stop to study the picture, read the inscription and smile as they "see the point." Beneath the picture are the forty-three bound volumes of the paper, the Outdoor Scenes, books and arms and trophies. Chief in interest and honor of the weapons is Davy Crockett's rifle, kindly loaned by Col. Robt. H. Crockett, of Arkansas.

One entire side of the space is devoted to the "FOREST AND STREAM'S Exhibit of the Native American Hunter." It consists of an extensive and well arranged series of Indian arms, implements and accessories of the chase and of war, the central piece showing an illuminated robe, on which is set out in Indian art the record of Red Crane, a hunter, warrior and artist. From the primitive savage of the stone age the exhibit progresses through the period of change in the West to the advent of the first white trapper.

We have designed to mention this week all the exhibits, that some conception may be gained of what this great exposition actually is; we have made no attempt to detail the full displays made by the several exhibitors. Many firms show a variety of goods and of many classes. A full account will be given in our Special Exposition Number next week. The artistic features we have but alluded to. The spirit of the occasion, the animation of the throngs of visitors, the play of color, the brilliance of the lighted hall, all these it is impossible to describe.

The Sportsman Tourist.

UNDER THE BARK OF THE PINE-WOOD TREE.

A Chapter in Wood-lore.

BY HENRY M. KIEPPER.

SOME years ago, while trout fishing amongst the Pocono Mountains in Pennyslvania in company with a fisherman friend, whom we will call Jerry for the very good reason that that is his name, I made a singular discovery in wood-lore; at least, it was quite a new discovery to me, and I believe it will be regarded as something quite new by a majority of the readers of FOREST AND STREAM. My discovery consisted of what might be called a piece of *natural carved wood*, very curious indeed, and very much resembling a fine piece of buck-horn, only much more beautifully marked.

We had had a good half day's sport with the trout, Jerry and I. We had caught quite enough fish for one day, and were wending our way slowly homeward to a good dinner, with only such an appetite as fishermen know. As it was yet early in the day, we stopped on the edge of a dense pine forest for a rest. The day was delightful, a perfect June day amongst the mountains, and as we cast ourselves down beside an old pine log all covered over with moss, and listened to the music of the wind in the tops of the tall pine trees, and rehearsed our several adventures with the fish, we were supremely happy—happy with the happiness of good old Izaak Walton and his scholar in their wet clothes listening to the song of the milkmaid.

Whilst lying lazily there under the trees listening to Jerry rehearse the old, old story of how and why "the big fish got away," I chanced to pull out from under the log beside us a piece of a dead branch of a pine tree. It was a pine stick about four feet long, from which I began to tear away the half decayed bark. Under the bark I made my discovery. I found the surface of the wood of the pine branch most curiously and beautifully carved—carved as if by hand, and looking as if brought direct from the workshop of some South Sea Islander.

I at once saw that the carving was the work of some strange little insect, whose name and habits I did not know, not being well enough versed in entomology for that. But whether I knew his scientific name or not, it was plain that he must indeed be a very curious and cunning little workman, and capable of doing something in the way of wood-carving worth looking at, all the more so for the reason that he evidently did not work according to any set design or pattern, but made his design as he went, and therefore never produced two pieces of work exactly alike.

I need hardly say that I took my stick home with me. I placed it on my mantel, where it attracted a great deal of attention from my visitors, who almost without exception regarded it as a piece of curious hand carving, and were very much surprised to be told that it was the work of an insect.

For several years I considered my pine stick "a rare find," supposing that we could travel many days in the forest without finding the like, and not at all suspecting that the woods are full of such curious carvings, if one only knows where to look for them and has but the eyes to see them; that is to say, the pine woods and no other are full of such things. For when, several years later, I began to investigate the subject more closely, being always from boyhood fond of all manner of wood-lore, it was not long before I began to see that every pine forest simply abounds in this kind of work, if one has only the eyes to see it with. I myself have spent much time in the woods, and have been curious in all things pertaining to wood-lore for years, but I never saw this before; and the specimens, which I found I could gather almost anywhere in the pine forest here by the summer hotel where I was spending my vacation, were regarded as very great curiosities by my fellow lodgers, all of whom declared that they had never seen anything of the kind in the woods.

"And that simply shows," said I, "how easily one can walk through the woods with his eyes wide open and yet not see anything. The pine woods are everywhere full of this kind of work, if you only look for it in the right place."

For, on conducting my examination, I have found that all the various kinds of pine trees, spruce, hemlock, tamarack, fir, yellow pine, white pine and all other kinds of pine afforded varying degrees of attraction to a curious little insect with many legs and sharp jaws, having a name, no doubt, at least four times as long as his body. It was quite a while before I could succeed in finding him at home; but at last I caught him at work on a piece of hemlock, underneath the bark. And I then discovered that no sooner is a pine or hemlock blown down by the storm or felled by the woodman's ax, than multitudes of these little creatures take up their abode under the now loosening bark of the branches, from the smallest up to the largest. What they are after I do not know. Probably they live on the gum resins of the wood. They are nature's pioneer grave diggers, opening the way and assisting the elements in bringing down the mighty tree to the dust of the earth.

I found, too, that it is only in the soft white pine that they do their best work. They eat the hemlock, but usually only slightly, merely tracing a delicate design on the surface, which, though sometimes very beautifully etched, yet is not nearly so fine as the deeper and bolder carving on the white pine.

Should you be so fortunate as to spend some time among the pine forests this summer, and will go into "a chopping" about two years old, or can somewhere find a pine tree blown down by the storm, you will, I think, find something to interest you—something at least which the boys can carry home and turn to some account next winter, when the days are short and the evenings long. For these curious pieces of carved wood can be used to good effect by an ingenious boy, and in various ways. Amongst other things, they make pretty handles for paper cutters, resembling buck-horn very much, though the carvings are much more interesting in design. If treated to a coat of good paint the effect of the design is somewhat heightened. But care must be taken to select solid wood, or at least what is not too much decayed; and if a branch can be found which has been for some time exposed to the weather after having been carved and stripped of its bark, it will be found of a fine silver color.

After having made my discovery, I had the rare pleasure of conducting a party of some ten or twelve boys, who were summering at the hotel with their parents, to the woods in search of "carved wood." Under my direction they soon learned where to look, and made the woods ring with their shouts and the sound of their hatchets. What a pleasant day that was! And what a pleasing picture I carry in my mind and memory of those merry-hearted boys lugging up to the hotel armfuls of wood almost too heavy or unwieldy for them to carry, but full of prospective pleasure when safely got home.

I had thought that my discovery of this curious kind of carved wood was peculiar to myself alone, and that no one had ever given as much time to the consideration of it, when I found one day, away back in the mountains, a rival to my claims. A gentleman from Philadelphia, a retired merchant, suffering from a peculiar kind of paralysis, unable to read or write, was spending his summers regularly in a veritable "deserted village," hard by a romantic mountain stream. The old gentleman, in his rambles through the woods, had discovered this curious wood, and had taken it home with him to his cabin and spent many hours in making some of the most beautiful paper knives, match boxes, etc., etc., one could wish to see. "I can't read," he said, "and at times I can hardly talk connectedly, and working at this wood passes away the time for me." He begged me to scour the woods in my section for fine specimens, and as I bade the white-haired old gentleman good-by and rode away, I couldn't help reflecting how strange it is that you can hardly go anywhere in the world without finding some one has been there before you. You discover a continent, and a rival at once starts up to contest your honors. You make an invention, and another claims to have made it just two hours before you did, by the clock. You even take some sickness, and you find a dozen people similarly afflicted. "There is nothing new under the sun"—but natural carved wood will be new to most people.

VIEWS AFOOT.

TO GET a perfect idea of the country in detail don't rely on the railway, the traveling carriage or the wheel, but place your dependence on the legs nature gave you. Of course, the great army of wheelmen who traverse the length and breadth of the land every season will protest against the above advice, but I fail to see how any one mounted on a bicycle, flying across the country with his eyes glued to the track ahead, watching for inequalities and dodging obstacles, can derive any benefit from the scenery that stretches away in varied beauty on every side. In driving also, one must watch the horses and care for them, and the anxiety devoted to the animals detracts largely from the pleasure of the trip; but when one walks he sees it all, the smallest item does not escape him, he lounges, rests, sees and hears the birds, travels slow or fast as his feelings dictate, lunches by the wayside spring, chats with the people, and when the day's tramp is done finds his mind and note book stored with fascinating data.

Last October, when the leaves were all russet and gold, waiting for the sharper breath of November to bring them down, I had a long talk with my 12-year-old son as to the feasibility of a 50-mile walk. I was a little fearful that he might not be able to do the trip safely, but of course he thought different, and when he figured that two days out of school would follow he was positive that such a trip would be just the thing for him. So we laid out our route. We were to leave Dansville Friday morning, walk to Bert Miller's hotel, on Hemlock Lake, eighteen miles away, stay all night; walk to Livonia station, nine miles, Saturday morning, get dinner; walk to Green's hotel, on Conesus Lake, seven miles, stay over Sunday, and walk home Monday, fourteen miles.

Our preparations were simple. A couple of school bags from the store were stored with an extra pair of rubber soled shoes, night shirt, stockings, tooth brush and brush and comb. A tin box that just fitted in my side coat pocket was filled with sandwiches to beguile the interval between home and Bert Miller's. I wore my corduroys and broad easy shoes, with an old felt hat that had seen service on many a trout stream—on my head. I also carried a cane and (I blush to say it) a revolver. The lad wore his every-day knickerbockers, and with our "ditty bags" over our shoulders we bade good-by to the mother and sister at 8 A. M. and started away happy as a couple of schoolboys off for a vacation.

The weather had a sort of Friday unlucky look as we climbed the dugway road at the east of the town. In fact it threatened rain, but little we cared as we trudged along whistling and singing, taking in the beautiful view of the valley of the Genesee as it trended away to the north. At the Lackawanna Railway crossing we stopped to watch a train go by and pitied the poor deluded passengers gazing out of the windows, wondering if they really thought they were seeing the country. The rain held off nobly and the roads were fine as heart could wish. The country seemed very beautiful to us, clad in the somber stubble of October. Everything in the way of farm work was done except late potato digging and the farmer boys were throwing them out merrily as we passed along. Rounding the shoulder of each hill we were thoroughly in the country, farms and woodland on every side stretched away in pleasing variety, and after our long confinement in store and schoolhouse we seemed walking through fairyland. Crossing a little trout brook that I have whipped for thirty years, we stopped and I showed the boy the holes that had yielded tribute to my line in the past, and then pointed out the strip of woodland where once my friend W. of Salt Lake and I had chased an elusive flock of pigeons more than twenty-five years ago. Six miles on our way we entered Poke-o-moonshine gorge, and what a lovely place it seemed, with its towering steeps clothed in the reds and ambers of the season. How green the ferns were and the partridge berries how red, but the rain still threatened and we hurried on, and soon the beautiful valley of Springwater lay spread out before us like a map. To my questions the boy stoutly held to the fact that he wasn't tired, and when we walked into Springwater village, ten miles on our way, he still averred that he was fresh as a daisy, and invested in chewing gum with all the nonchalance of an old traveler. It was now noon and eight good miles to traverse before reaching Bert Miller's hotel, half-way down Hemlock Lake, so we hurried on and left the town behind us. And now the rain began coming gently down, but was so warm and meager that we minded it not a bit, and keenly relished our sandwiches taken with copious drafts of water beside a roadside stream.

Sighting the lake put fresh vigor in our legs, and as we took our way down the beautiful road skirting its eastern shore our eyes took in the familiar scenes that we had marked so well during our summer stay and we seemed to be among old friends again. The boy would go down to all the docks and peer in the cottage and boathouse windows, recognizing this boat and that barn and the other cottage; take a sip from some well-remembered spring or point out proudly where he had swam between two given points last August to the amazement and jealousy of the other fellows. At Bailey's barn we sat on an old familiar stump and rested, scaring up a trio of grouse that had come down the mountain for a quiet pick among the scattered seeds before the big rolling door. Still the rain came down softly and steadily, and we were glad when the barns and boathouses of Miller's appeared around a turn in the road. Hearty was our welcome and plenteous the feast prepared for us, and although we had walked but 18 miles, that is enough to try the muscles of untrained pedestrians, and we were early to bed.

But joy awaited us in the morning, for on awakening we found the rain had ceased and the bright sun was flooding the lake with beauty. We found ourselves a little stiff and sore, but Mrs. Miller's good breakfast was a panacea for our joints, and at 8 o'clock we were on the road again. Bert remarked as we were leaving that "perhaps this walking business was a little more stylish, he didn't know, living as he did out in the country, but stylish or no stylish, he should use a hoss and wagon awhile yet."

The shady road along the lake shore showed no traces of the rain, and was hard and smooth as macadam, and we soon covered the three and a half miles to the fort, where we stopped for a little time to watch the dredge of the Rochester Water Works Company throw up sand from the bottom of the lake and deposit it on the shore. Then we left the beautiful Hemlock behind us and struck out for Livonia station, passing through the classic streets of Slab City on our way. Fine farms were all about us, and that peculiar evidence of prosperity for which the rural districts of Livingston county are noted was evident in comfortable houses and well-filled barns along the road. Many a kindly invitation to jump in and ride was given us from passing vehicles, but we declined them all, telling the good-hearted driver that we were out for a stroll, to their unalloyed wonder.

When within about three miles of Livonia the lad's ankle began to pain him, and the balance of the distance was made by easy stages and with many rests. Arriving there we got dinner, and through the ministrations of a doctor friend we soaked the lame foot in hot brine, and at 3 P.M. we were on the road again making for Green's hotel on Conesus Lake. The afternoon was perfect, and we dawdled along like a pair of tramps, stopping now and then to make friends with some faithful collie who growled suspiciously at our outfit, or telling to some curious granger the story of our trip.

Conesus Lake looked very lovely under that bright October sun, its sloping basin tilted to the water's edge seemed so different from the steep, wooded shores of Hemlock that we had left in the morning.

It was nearly sundown when Green's welcome hostelry showed around a bend in the road, with its long pier jutting out into the water, its rows of white and green boats bottom upward on the beach, and the deserted dancing pavilion looming up like "some banquet hall deserted." The season was over, but we were given a good room, where we soon put ourselves in shape for a hearty supper with the family in the kitchen. The next morning, Sunday, was a glorious one, with the lake like a mirror. After breakfast we took a boat and rowed across to the east side, where the big excursion steamer of the Transportation Company was hauled into a little cove for the winter. The boy had a good time exploring the craft from top to bottom, and we really felt quite Crusoeish as we ransacked about reading the bills on the walls and peering into all the available cubby holes. Coming back we loafed about, enjoying every moment until dinner, after which we crossed the lake again with "Boots" and found a lot of nice belated pears and grapes. The whole day was absolutely perfect, one of those rare autumnal treats that, coming as they do so seldom in one's life, leave an impression that lasts forever.

Monday morning, what a change, the wind was blowing sharply from the north and the water was dashing over the ricketty old pier as if to demolish it. We took a run out on the wabbly structure and were glad to get back to dry land without being blown off. The lad's ankle was all right again, so we started off merrily for the home stretch. Mrs. Green gave us a supply of doughnuts and there was no immediate prospect of rain, so we walked along without a care, enjoying every step of the way and seeing new beauties at every turn. At Scottsburgh, six miles on our way, we drank pop and sat on the hotel Nerandah half an hour, watching some local craftsmen play ball. Then on again toward home. We began to know people we met now, and the farmsteads began to have a familiar look. We were entering the rim of the circle of which our home town was the center. Invitations to ride became more frequent. The Lackawanna tracks were crossed again and far away to the south the straggling west end of the town could be seen. It seemed as though we had been gone weeks when we crossed the park and came to our own street at last. We were tired and hungry, but happy, when we greeted the mother and sister again, and to this day the story of our walk is listened to with wonder and respect.

In taking an extended walking trip one wants to travel as lightly as possible; everything counts on a long tramp. Footgear must be perfect, shoes broad and easy, and stockings sound and plentiful. Wear easy clothes, not so old as to attract the attention of watch dogs or cause the suspicion of the honest farmer. Carry a good stout cane, but leave the revolver at home. Time your arrivals so as to be sure of a good bed and a square meal.

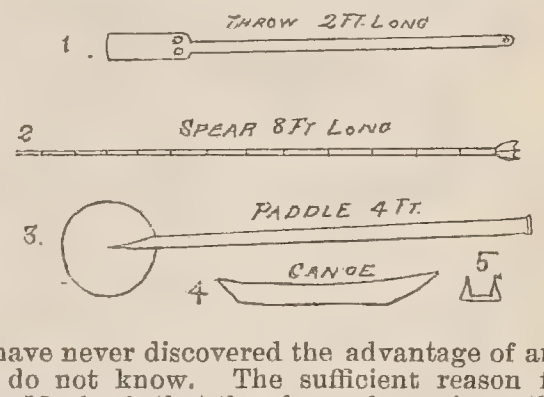
So shall you travel as nature intended, and gain health, strength and knowledge by the outing. H. W. D. L.

A PRIMITIVE DUCK HUNTER.

WHEN the kingdom of Mexico yielded to the Spanish arms there remained an extensive region in the green sierras of Michuacán still to be conquered. These sweeping, pine-covered ranges smiled then as now upon fair valleys cultivated by the sturdy Tarascos. Their capital city was Tzintzunzan, nestling just within the crescent horn of Lake Patzcuaro. It is now a miserable village, suddenly made famous again by the discovery, a few years ago, in its tumble-down parish church of a painting by a master hand—presumably that of Titian.

These Tarascan Indians have preserved their racial integrity to a greater extent than perhaps any other native tribe in Mexico. They are still very numerous. One authority estimates them at 300,000. The beautiful Sierra de Michuacán is sown thick with their villages. They lead a primitive agricultural life, a large measure of their independence and persistence being without doubt due to their land holdings in fee simple. Many of them neither speak nor understand the Spanish language, but they are exceedingly pacific, and yield for the most part ready obedience to the laws of the country and to the severer exactions of the priests.

Lake Patzcuaro is at the terminus of a branch of the Mexican National Railroad. It is at an elevation of over 7,000ft., and from this circumstance, as well as from the pine-covered hills which surround it, has a most perfect climate. Around its margin and over the rugged volcanic islands which pierce its blue waters lie a multitude of Indian villages. Their inhabitants have been fishermen and hunters from time immemorial. They have preserved their dress, utensils, language and social habits from of old and almost intact. I know of no other place so conveniently accessible where one can get a breath of so absolutely prehistoric an atmosphere.



The fishing is mostly by means of a dip-net at the end of a long pole, somewhat on the pattern of a landing-net. Some of the well-to-do have drop nets. It is said that the fish will not take a lure of any kind, though I am inclined to think the matter has not been fairly tested. The one most commonly taken reaches a length of about a foot, and is a capital table fish. I am not ichthyologist enough to identify him, but his mouth looks to me to be made for predaceous feeding. He has the general outline of the pike. I can't help thinking, every time I look on the fresh, clear water of this lake, what a fine habitat it would be for black bass. If they are ever introduced, they will be in clover.

But I was going to tell about the hunter. If the FOREST AND STREAM artist will kindly work over the inclosed rough sketches, perhaps they will help to exhibit his outfit. The margins of the lake are in many places covered with wide stretches of tule, marsh grass and lily-pads, while whole acres of the water, even where it is quite deep, are filled with algæ, etc. This makes an ideal winter home for duck, and many species of them mingle their sports and feasting upon the lake's cool waters. With them come great multitudes of that ubiquitous, awkward, noisy, useless pest, so familiar to the old hunter and such easy prey to the new hand, the mudhen or coot (*rallus crepitans*).

Our hunter's weapon is a spear (Fig. 1). It has a rude, trident head, the three points not in the same plane, but forming a triangle. The tines are of iron, some 3in. long, and with a rude inside bark. The form seems to indicate that it was once made up of bone. The staff is of the light cane common in this country and known as *carrizo*. It is some 8ft. long and not very straight.

This spear is thrown with the hand alone, or by the aid of a thrower (Fig. 2). This thrower is a flat stick some 2ft. long, having a handle at one end, with two holes for the insertion of the first and second fingers of the right hand. This gives better control of it and renders it less liable to slip from the grasp. At the smaller end it is beveled hollow to within about an inch of the point. This hollow terminates there in a little nib which fits into the hollow end of the cane. In throwing, the cane and thrower are held parallel, and the movement is a combined jerk and blow, the latter similar to that of a tennis racket. I tried to get it, but found that the nib held too persistently in the cane's point, and jerked the end of the spear out of line. This missile has quite a limited range. I suppose it might be thrown 40yds., though I did not see any cast that was more than 20 or 25. Its flight is so slow that a bird could easily dodge at the longer range.

The canoe and paddle complete our Indian's rig. The paddle is an odd-looking affair, with an almost circular blade, and a round handle about 4ft. long. It is trimmed from a solid piece of pine and neatly finished. Why these

people have never discovered the advantage of an oblong blade I do not know. The sufficient reason for most things in Mexico is that they have always been thus. No man considers himself either better or wiser than his grandfather. The canoe is a flat-bottom dugout, made from the trunk of a pine tree. It may be anywhere from 7 to 40ft. long, with a capacity of from one to thirty persons. Its usual outline is that shown in Fig. 4. There is a slight taper from bow to stern, suggested apparently by the slope of the tree trunk. But the bow is never wedge-shape, so as to cut the water. The flat bottom is carried right up to the tip of both stem and stern. Another odd thing is that it is wider at the keel—if the word may be used—than at the gunwale. This is shown in the cross-section, Fig. 5. This peculiarity of form, together with the fact that a liberal thickness of timber is allowed for both sides and bottom, makes the little craft very stanch. She has none of the trickiness of the Cajun pirogue, so feelingly described by Messrs. Hough and Waters. But another result of it is much less desirable. When a wave slaps the side, it has every encouragement to slide up and pour into the lap of the voyager who sits flat in the boat's bottom. Though both canoe and paddle are clumsy, constant practice makes the boatmen skillful, and they are absolutely tireless. When two or more paddle the same canoe, they usually sit both on the same side. But even thus they keep a remarkably steady course.

Our hunter has a patent grass coat too (only it is not patented), but he does not use it for a blind. It is his rain coat, and a very effective one, too. So the Chicago people need not have gone all the way to Japan to get that little idea.

The manner of the hunt is about as follows. Some fifty or more, all equipped as above, start out together to make a *corrida*. (Very few things a Mexican can do except by means of a *corrida*.) They inclose a corner of the lake, or surround a patch of tule. As they close in they slap the water with their paddles and ki-yi. Canvasback, sprigtail, widgeon and other aristocrats get up, fly high and depart. The shovelers fool around and bob their heads, and the teal make a break through the lines, under their usual delusion that they can make up for flying low by flying fast. Once in a long while a successful shot brings down one of these, or nails a lazy spoonbill who pretends his wife was not ready on time. There is great rejoicing when somebody gets one of these *pico-anchos*, for though nothing in the meat line comes amiss to these poor creatures, they know the difference between a decent duck and a mudhen as well as anybody. But the latter are the principal sufferers. With the howling and the slapping on all sides they get fuddled. They can neither fly nor swim nor dive. Sooner or later they are impaled on the long spear, and some Indian gleefully wrings their worthless necks. Even the grebes get chased under the water so often and so promptly that they bob up in the wrong place at last and meet a similar fate.

The admiration of these simple-hearted children of nature for a gun and its work, their wild excitement over a cripple, and the abandon with which they race for the dead, is about as much diversion for the duck hunter as the shooting itself. For a few cents a day one of them will hire himself and his canoe, and paddle miles and miles in the utmost content. They are all afraid of the lake, however, and with good reason. Sudden gales sometimes sweep over it from the surrounding hills, and it is deep and treacherous. Usually, however, its face is unwrinkled, and the white walls and red tile roofs of distant villages mingle in the blue waters with reflections of green fruit trees and barley fields, or with the deep purple of pine-clad hills. AZTEC.

IN ARMY DAYS.

WE were genuinely happy in those days. And why shouldn't we be? The garrison was just large enough for comfort and companionship, and not large enough for factions to exist. Our cozy little dinners, informal hops, with, alas, a painful scarcity of ladies, horseback rides, hunting and picnic parties, with, incidentally, attention to routine duties, kept us very busy.

True, Capt. Payne, with his "boomers," had called out more of the troops, but that made it only more incumbent on those of us who were left to double our efforts to extract pleasure from the passing hour. We forgot that we were over a hundred miles away from railroads and what is, possibly incorrectly, believed to be civilization. After all, "it is not so much where you are as who you are with."

We had just finished a dainty little lunch, hastily improvised, but such a lunch as only an army lady can get up at short notice. Cold quail, shrimp salad, Edam cheese, olives; a bottle of claret for the ladies and several bottles of Schlitz for the sterner sex. We had adjourned to the broad piazza just as the sentry at post No. 1 called out: "Eleven o'clock, and all's well." The ladies were nibbling at the box of chocolates which the party who dispensed mail, after he had finished reading the postal cards over at Evansville, had brought with him. The gentlemen lighted their cigars and all was peace.

Even Bebe felt the influence of the clear, cool atmosphere, the absolute calm that prevailed, and was perfectly quiet. And it took a good deal in those days to quiet Bebe. True, she had ridden some twenty miles on horseback that day, danced a little that evening, sang "Only a Pansy Blossom" four times to different callers, who, as is the custom in the army, had dropped in for a few moments—but all of that was not enough to appease her. Bebe was a Kentucky girl with a full 100 per cent. of effervescence and buoyant spirits. It was not necessary to make a diagram of a joke for her to see it. In fact, she could invariably see the comical aspect of a situation, as her admirers found to their cost. And then there was Mrs. K. O. (in army posts the commanding officer is known as the "K. O."), young, jolly and altogether delightful.

Our hostess was a little mite of a woman, with a disposition as sunny as her native blue grass fields, and a frank, generous, unaffected hospitality which would have betrayed her origin, even if she had not occasionally used the words "you all" and "we all." I have always been under the impression that she was a hypnotist, for, little as she was, when she commanded every one obeyed without question. Maybe it was the quality of her dinners, for no man who ever had an opportunity to test one would ever take any chances on gaining her frown.

Then there was the surgeon, a devoted admirer of our hostess, this being especially creditable to his discernment in having married her some years previously.

Then came Lieut. Waters, proud of his new marksman's button and owner of a new pup. We all knew about the pup and its pedigree. In fact, we had each of us learned it by heart. And when one of the party suggested hiring a good strong man to whom he could daily talk about that spotted dog, a subscription ample in amount was at once underwritten.

Then there was the person they all called "Cot," the "Pooh-Bah" of Evansville.

Our hostess spoke up: "Let's we all go hunting to-morrow."

It was unanimously agreed to, and sure enough next day about four in the afternoon we started out. We were not selfish in those days, and the ladies were just as much a part of a chicken hunt as our guns.

We rolled out of the post. The Doctor and his wife in his low, open rig; the Lieutenant in his cart, with the wonderful spotted pup at his feet, and Bebe acting as driver; Cot with an equally charming driver and a plain dog at his feet. Cot had out his light cart and cow-pony Billy, than whom a wiser horse never existed. To tell the truth, Cot got tired of hearing about that spotted pup just when he had a real new trick of Billy's to tell about.

It is hot on the prairies in September, but the breeze makes one forget. Snugly under the rear seat of the Doctor's surrey a big watermelon, that had been on ice for twenty-four hours, lay wrapped in its wet blanket. There was also a hamper, heavy laden, and under another wet blanket several articles which required the assistance of a corkscrew to rise to the occasion.

Two miles below the post, just across the cattle trail, we put the dogs out, and the three rigs, about five hundred feet apart, proceeded up wind, following the dogs, who were working out the ground. There were no wire fences in those days, so we went wherever the dogs chose, for Cot many years before had learned that though Custer was a dog of doubtful parentage he knew where birds were. This may be a hint for others. In an open prairie country, or when after quail, if you have a reliable dog that is experienced, you will get far more shots at birds by allowing him to hunt where he wants to than you will by compelling him to work where you think they are.

Soon a covey flushed, and we followed them until both dogs pointed staunchly. Four birds fell and the rest scattered. Now came in the advantage of having drivers along. Each hunter was followed by his vehicle, and when the last bird was put up (and missed) his rig was waiting some fifty feet away. We agreed, after getting some twenty chickens, that it was a pretty good time to investigate the watermelon and its neighbors. When taken after an hour's tramp over the prairie, iced watermelon and Mumm's are to be commended. Then the too short ride into the post under the early moon, and we arrived home shortly before tattoo, neither "cold, tired and hungry" (as your correspondents generally do), but genuinely happy.

And our hostess announced, "I think we all will go after quail Friday." Of course we went. If she had decided that we should all go jump into the Canadian, this article would never have been written. I am going to read up on hypnotism. ALGODON.

Minnesota Game and Fish Protective Association.

ST. PAUL, Minn., May 11.—The approaching State meeting to form the voluntary association is the talk among sportsmen of the entire State. The success will be great. Not in the history of Minnesota has so much interest been before taken in its wild game and fish possibilities. It is understood that Governor Clough will name the new State Commission in a few days. Who will constitute it is but a matter of conjecture. W. L. TUCKER.

Natural History.

THE AMERICAN MAGPIE.

BY CAPT. CHAS. E. BENDIRE.

From advance sheets of "Life Histories of N. A. Birds, with especial reference to their Breeding Habits and Eggs."

Pica pica hudsonica, Sabine.

Corvus hudsonicus, Sabine. Appendix Franklin's Journey, 1823, 25, 671.

Pica pica hudsonica, Jordan, Manual of Vertebrates, fourth edition, 1884, 94.

(B 432, C 233, R 286, C 347, U 475.)

GEOGRAPHICAL RANGE: Middle and western North America, from Alaska and the Alaskan Peninsula south through British Columbia, Washington, Oregon, northeastern California, northern and middle Nevada, northern Arizona and northern New Mexico. East, to eastern Colorado, western Nebraska, western South and North Dakota, and western Manitoba, as well as the intervening regions, as Utah, Wyoming, Montana and Idaho. Casually straggling in winter to western Kansas, eastern Nebraska, northwestern Iowa, Minnesota, Wisconsin, Michigan, and the Province of Ontario, Dominion of Canada.

The American or blackbilled magpie is one of the best known and most characteristic birds of our western avifauna; it is generally a resident and breeds wherever found, excepting, perhaps, in the extreme northern portions of its range in Alaska and along the eastern border, the regions of the great plains, where it occasionally wanders eastward in the late fall or winter, probably driven away from its usual haunts by scarcity of food or severe storms, which so frequently occur in these sections of country at such times.

The American magpie is a handsome and striking looking bird, certain to be noticed by any one, even if not ornithologically inclined, extremely pert in its general

THE AMERICAN MAGPIE.

From photograph by E. Hofer.

bearing and movements, both on the ground and in trees, and the strongly contrasting colors of its plumage are sure to draw attention to it at once. On the wing, however, it shows to less advantage. Its flight is slow and wavering, and in windy weather evidently laborious. The long, wedge-shaped tail seems then to be decidedly in the way and a positive disadvantage, causing it no little trouble in flying from point to point, and in such weather it will only through necessity leave the sheltered bottomlands it usually frequents.

Although more or less quarrelsome, it is social in disposition and likes to be in the company of its kind. I have frequently seen from twelve to thirty feeding together near a slaughter house, or some other locality where food was abundant; but such gatherings are oftener met with in the late fall and winter than during the season of reproduction. They are jolly, noisy scamps, nearly always chattering or scolding even when alone. Where not molested and shot at, they soon lose their usual shyness, and will frequently allow one to approach them within a few feet; but notwithstanding this seeming confidence, they are constantly on their guard against danger, and I know no bird more intelligent, cunning, impudent and saucy at the same time than our magpie. They appear to comprehend the difference between a shotgun and a stick from the day they are able to fly.

I have had many opportunities to observe these birds closely, and have long ago been forced to the conclusion that their intelligence and reasoning powers are astonishing. I will only mention one instance of their sagacity, showing how several of these birds seemingly worked in perfect accord with each other to accomplish an object which one bird could not have carried out.

While stationed at Fort Lapwai, Idaho, on the Nez Perce Indian Reservation, from 1869 to 1871, where magpies were exceedingly abundant, I possessed a fine setter dog, my constant companion in all my excursions, who assisted me in finding many rare nests, and whom I regularly fed myself, giving him, when the more liquid portion of his meal was finished, a well-boiled soup bone, with more or less meat attached, by way of dessert. I made him carry this on the lawn in front of my quarters, while I sat on the porch watching him. I soon noticed that, generally a minute or so after the dog appeared with his bone, from four to six magpies would invariably be close by, though not a single one was in sight a minute or so before. These birds placed themselves in different positions around the dog, plainly showing a preconcerted arrangement, and were ready for business at once. One stationed itself directly in front of the dog's nose and about two feet away, another behind within easy reach of the tail, and one or two by his side. As soon as the dog was busily engaged in gnawing his bone, held in place by his forepaws, the bird stationed in the rear would make a vicious dash at his tail and peck it severely, which naturally enraged Rock, who quickly wheeled round, left the bone and tried to catch the offender, who in the meantime flew slowly and leisurely away, tolling the dog after him as far as possible by fluttering almost within his reach, and while this little ruse was enacted the remaining birds promptly helped themselves. I saw this performance several times and soon noticed that the different birds forming this foraging party could be readily distinguished by the variation in size, the length of the tail, or some injury to the tail or wing feathers, etc., and this led to a still more remarkable discovery in this connection. After the dog returned to resume his interrupted meal, another bird took the position at the dog's tail, while the one occupying it previously moved to the best place, that in front of the dog's head, to enable it to get its share of the spoils. I observed this maneuver several times and it did not take the dog very long to see through it as well, so that unless I forced him to stay on the lawn he would at once carry the bone under the porch, where the birds did not dare to follow him. If this incident does not show an extraordinary amount of intelligence and reasoning power I do not know what else would. There seemed to be a perfect understanding from the start about the mode of attack by which they accomplished their purpose, which could not have been done in any other way to make it successful.

That they are most skilful thieves is well known to any one acquainted with these birds. It might puzzle a bird of another species how to manage to carry off an egg larger than it can grasp in its bill, but not the magpie. If too large to carry in the ordinary way, it simply runs its beak through the shell and carries it off in this manner. If one manages to find the entrance to a hen house, eggs will always be scarce thereafter. Aside from its thieving propensities it is also one of the most mischievous birds I know, and enjoys scaring and deceiving better behaved members of the feathered tribe. It will mimic the cry of a hawk as well as that of the jay, and seems to delight in causing the poultry to run in every direction or in imitating the cackle of a hen just after she has deposited an egg and causing the roosters to search for her; in fact, it delights in playing tricks of all kinds and seems to enjoy them thoroughly. An enumeration of the various misdeeds and laughable performances of a pet magpie belonging to one of the cavalry troops I served with would fill a fair-sized book, but would be out of place here.

Some of these birds are far more intelligent than others. Any bright, glittering object is sure to draw their attention and it is promptly picked up and secreted, it matters not how large it may be, if it is not too heavy to carry or drag away.

The Southern and Eastern range of the American magpie has become somewhat restricted within recent years, and they are no longer found in localities where thirty years ago they were reported as fairly common. It prefers rather open country, shuns the heavy forests and strictly desert regions, and in the Rocky Mountains has been observed at high altitudes. The shrubbery and undergrowth found along watercourses and springs in the foothills regions, and the cañons in the higher mountains, seem to be their favorite habitat.

The ordinary call note is a querulous *cack cack*, or *chaeck chaeck*, uttered in a high key and disagreeable to the ear, but it frequently utters also a low, garrulous gabble, intermixed with whistling notes, not at all unpleasing, as if talking to itself; while if annoyed at anything it does not hesitate to show its displeasure by scolding in the most unmistakable manner. The magpie spends considerable time on the ground in search of food, and while the walk is somewhat jerky it is graceful, and in moving about the handsome wedge-shaped tail is slightly elevated and constantly twitched; occasionally, as when in a hurry, the ordinary walk is varied to a series of hops. Their flight is never very protracted, and is only resorted to when necessary.

The general habits of the American magpie vary somewhat in different localities. In some sections, as soon as the snow disappears birds which have spent the winter months in the vicinity of farms and cattle or sheep ranches, unquestionably attracted to such places by a more abundant food supply, leave them and retire from the immediate vicinity of settlements to take up their housekeeping duties in more secluded localities; while in other places these birds remain the year round and breed in close proximity to man. At Fort Lapwai, Idaho, more than thirty pairs bred within a radius of a mile of the post, and several within a hundred yards of some of the houses in perfectly exposed situations.

Their food during the greater part of the year consists mainly of insects, especially of the large black cricket, so numerous and destructive in certain seasons in the West; grasshoppers, grubs and larvæ of different kinds, angle worms, crawfish, small mammals, birds, their young and eggs, all sorts of carrion, offal from slaughter houses and kitchen refuse generally. In the summer and fall, fruits and berries also enter, to some extent, into their bill of fare. In the winter, when food becomes scarce, they are charged with pecking holes in the backs of sore-backed horses, freshly branded cattle and scabby sheep. While this is possibly true to a limited extent in exceptionally severe winters, I have never observed it, although stationed on several Indian reservations, where sore-backed ponies were common enough; but I have seen them industriously pecking away at green hides hung out to dry. Mr. John Bucher, of Warner Valley, Ore., states that he has observed numbers of magpies on the backs of cattle in the spring eating grubs, larvæ of *Hypoderma bovis*, which infest the backs of old and thin animals, and he is likewise of the opinion that they do not confine their attention to the grubs alone, but pick at the living flesh as well.

Mr. W. G. Smith, lately of Loveland, Col., writes me:

"Among other pets I kept a tame magpie and a lot of guinea pigs, several of the latter dying from some unknown cause. One day I caught the magpie in the act of pecking out the eye of one; I then examined the dead ones and found that they all had both eyes picked out. A charge of shot soon settled the culprit."

The American magpie is undoubtedly more or less of a rowdy and scapegrace among its kind, but on the whole I think he is not quite as black as usually painted, and while it cannot be denied that he does some harm, I must admit that he also does considerable good, and the latter compensates perhaps fully for all its misdeeds.

The nesting season begins early—in Colorado, northeastern California, southern Oregon and Idaho sometimes in the first week of April, and usually by the middle of the month. In Washington and Montana a couple of weeks later, about the latter part of April or the beginning of May, and in the more northern portions of their range in

the last half of June and beginning of July. In Alaska these birds have been found almost at the borders of the Arctic circle, and on the Shumagin Islands, the Alaskan peninsula, and in the more southern portions of the Territory in the vicinity of Sitka they are not uncommon. Mr. Chase Littlejohn writes me that he found them all along the peninsula, wherever the alder bushes were large enough to afford shelter and they could place their nests out of reach of foxes.

The magpie once mated I believe remains so through life. The nest is a bulky and sometimes an elaborate affair, and is usually globular in shape. Outwardly it is constructed of sticks, some of which are occasionally 2ft. in length and nearly 1in. in diameter, the coarsest material being used for the base of the nest. The inner cup, the nest proper, resembles a robin's nest somewhat, only larger, and like it is plastered with a coating of wet mud reaching well up on the sides, but not quite to the rim. This coating is carefully lined with fine rootlets, dry grasses, inner bark of the cottonwood tree and hair, and in the vicinity of pine forests with pine needles. The nest is domed over with smaller sticks, and the sides are likewise protected by an open lattice-work of similar material, thorny twigs preferred if obtainable. The entrance hole generally opens from the main body of the tree or bush in which the nest is placed, the latter being usually found in the thickest tangle of limbs if in a bush, provided they are strong enough to support the heavy structure. On good-sized trees the nests are often placed well out on a limb, where they are not readily reached. Some nests I have seen measured nearly 3ft. in height by 2½ft. in width; others again are much smaller and more flimsily built, scarcely half as large and only moderately domed, and occasionally one is found which is almost open at the top. Mr. B. J. Bretherton writes me from Kadiak, Alaska, of finding a nest there, placed in a dense fir thicket about 10ft. from the ground, built on three saplings which grew in the shape of a triangle, the nest being built around each, the center being supported by the small branches. About 5in. from the top of the nest a roof was built open all round. He also writes: "A remarkable feature in this bird is its inability to keep dry; in the rainy winters they may be seen day after day hopping around, literally wet to the skin and looking as if they had been dipped in a bucket of water."

The inner cup of the nest measures about 6in. in width by 4in. in depth. While on the nest the tail of the bird is usually held at right angles to the body. Unless the eggs are on the point of hatching it is a difficult matter to approach close enough to see the bird on the nest, as the female is exceedingly suspicious and will try to sneak quietly away at the slightest sign of danger, generally slipping out on the side opposite the intruder, as there are usually sufficiently large openings in the sides of the nest to permit the bird to scramble through.

Not unfrequentlly two or three unoccupied nests are found in close proximity to one in use built probably by the same pair of birds, but the same nest is often made use of for several seasons in succession. Two or three pairs sometimes nest close together, but as a rule each pair of birds have their own little cañon or ravine, in which they may be found from year to year. Thorn bushes, either *Cratægus rivularis* or *douglassi*, commonly found near springy places at the heads of cañons or smaller ravines, as well as in the creek bottoms proper, were preferred as nesting sites by these birds wherever I have observed them. Willow thickets, scrubby cotton-woods, junipers, pines, alders and firs were also used in the order named; the height of nests from the ground ranged from 4 to 20ft., rarely over or under this. In Colorado, however, according to Mr. Frederick M. Dille, the magpie sometimes builds in lofty cotton-woods from 50 to 60ft. from the ground, and I have also seen it stated that occupied nests have been found on the ground, though I have never seen one so situated.

The average number of eggs to a set throughout the greater part of their range is seven; sometimes, however, eight or nine are found. At Fort Lapwai, Idaho, I found sets of nine not at all rare, and have twice taken sets of ten. An egg is deposited daily; incubation does not begin until the clutch is nearly completed and lasts from sixteen to eighteen days. The female attends to this duty almost exclusively; I rarely saw the male on the nest, but he feeds her, and is generally on the lookout in the vicinity of the nest and quite attentive. The young when first hatched are ugly-looking creatures, nearly all head, and are blind. They are fed on worms, the soft parts of insects, etc., and grow rapidly. They are able to leave the nest in about three weeks and soon learn to shift for themselves Only a single brood is raised in a season; if the first set of eggs are taken, a second and even a third is sometimes laid, frequently in the same nest or in another close by. The second set rarely numbers more than five or six eggs.

These show a great variation in shape, size, color and markings, the majority inclining to ovate, while others may be called short ovate, rounded, elliptical and elongate ovate.

The prevailing ground color is a pale or dirty gray, less often a light drab, and occasionally a set is found of a decidedly greenish tinge, but such eggs are scarce. They are generally heavily blotched with different shades of brown and ecru-drab; these markings being often confluent, almost hiding the ground color, and are usually evenly distributed over the entire egg. In some specimens the markings predominate at the upper end of the egg, more rarely at the lower end. Some also show lavender shell markings, and occasionally a specimen is found in which the markings are well defined, not confluent, and leaving the intervening ground color distinctly visible. The shell of these eggs is close grained, moderately strong, and shows little or no gloss.

The average measurement of 201 eggs in the United States National Museum collection is 32.54 by 22.86 millimeters, or 1.28 by .90 inches. The largest egg in the series measures 37.84 by 26.42 millimeters, or 1.49 by 1.04 inches, the smallest is 27.94 by 21.59 millimeters, or 1.10 by .85 inches.

New York Aquarium.

WORK is progressing on the New York Aquarium, but the opening date has not yet been announced. Much alteration of the building is called for. The public may well afford to wait. When the aquarium shall finally be ready, it will be ready to stay ready.

VERMONT RATTLESNAKES.

Editor Forest and Stream:

From your issue of April 6th I learned, for the first time, that Vermont had decided to kill off her rattlesnakes, and, with characteristic caution and conservatism, had started the experiment by offering a bounty of one dollar per snake. Of two things you may rest assured:—first, that there are rattlesnakes in Vermont; and second, that there are not very many of them, for otherwise the bounty would have been made smaller.

Even at that price, in a fairly good snake cover, a man could earn better wages than in the hay-field, and if the reward were greater there would be a scarcity of farm hands during the snake season.

You inquire what effect this bounty is likely to have on Vermonters, snakes and snake stories. It will unquestionably cause Vermonters to regret that they ever killed a rattler before this law was passed, for they thus cut off a legitimate source of revenue.

It will probably bring about an increase of snakes; for those who best know Vermonters will take it for granted that rattlesnake raising will henceforth become an acknowledged industry and a fine art. The Vermont Yankee is quick to take advantage of circumstances; and then, too, there is considerable territory in Vermont which is better adapted to snake culture than to the production of any other crop.

The commercial importance of this hitherto valueless product, and its probable increase for market purposes, will undoubtedly have the effect to multiply and enlarge snake stories, and lend a new zest to the rural newspapers. Local items of this sort may be looked for in the immediate future: "Farmer Lockwood has finished harvesting his rattlesnakes and reports that the crop was unusually large." "Joe Randall's rattlesnake incubator was broken into last night and nearly a hundred dollars' worth of eggs and young snakes were stolen." "The rattlesnake commissioner will be at the town clerk's office on Monday next to count heads and pay bounties thereon." "Enoch Smalley has been sent to jail for three months for attempting to collect a bounty on adders' heads" etc., etc.

Inasmuch as reputable newspapers will soon be refusing to accept or print Vermont snake stories, I want to get mine in now, and to substantiate it I inclose herewith a clipping from the Springfield (Vt.) *Reporter*, which kindly return, as I may need it later, when snake stories have to be accompanied by documentary evidence.

On October 9, 1891, I was hunting on Skitchewaug, a peculiarly rough and precipitous mountain in Windsor county, famous, among other things, for its rattlesnakes, although they are seldom seen so late in the season as that. The morning sun beat warmly in upon the masses of loose rock at the base of a cliff, and this I presume had brought out the snakes. Hearing a slight rustling in the leaves, I turned and saw a big rattler gliding slowly along within a dozen feet of me. I had never killed one, and rejoicing in this opportunity, I gave him a charge of No. 8 shot. The report of the gun seemed to arouse all snakedom! The air fairly vibrated with the locust-like rattle of I know not how many snakes. They were all around me, one so close that the contents of the second barrel cut him in three pieces as he lay coiled up. Some of them got away into the loose rocks, but I shot two more as soon as I could reload, and had my eye on the fifth one. He was coiled up about 20ft. away, with his head raised and his rattle in the air. I spent a few minutes in studying his habits, and am prepared to contribute something to the cause of science and rattlesnake literature. At my slightest motion the rattle buzzed and the head was thrown back as one would raise his arm to throw a ball. I had heard that a rattler would never leave his coil to come toward one, but I wish to refute that statement. Twice this one straightened out and approached me, each time returning to his coil as quick as a flash at a sudden motion on my part. Having settled this point and thinking that further inquisitiveness might not be wholesome, I put a charge of shot where I thought it would do the most good. As there was then no bounty on this sort of game, I got out of that locality as quickly as possible, after tying four of the biggest snakes together, as evidence of my sobriety. The largest was 50in. long, the next 41, and the others smaller. The odor they sent forth when the shooting began was decidedly offensive, something like that of a skunk, less powerful, but more sickening. Unless the bounty hunters happen upon that spot, I think I know where I could clear my vacation expenses in a very few hours.

ARTHUR F. RICE.

Whippoorwill in the City.

LOCKPORT, N. Y., May 5.—*Editor Forest and Stream:* As I was sitting at an open window at 7:45 o'clock this evening (which was just twenty minutes ago) my son came across the street from his house and said there was a whippoorwill singing in the back yard, and motioned for me to come out. We cautiously walked in the direction from which the song came, when it suddenly ceased; but the next moment it was heard in the rear of the second lot above us. We walked up to and through the lot to the rear end, across which is a high board fence, where we stood; all this time the bird was pouring forth its vociferous song, which my son thought came from the lot over the fence. (Of course I did not hear it, as FOREST AND STREAM well knows.) Wishing to get a sight of our rare visitor, we stepped upon the lower rail of the fence to look over, when to our surprise the bird flew from the top of the fence within 10ft. of where we stood. I say rare visitor, as this is the second time my son has ever heard the whippoorwill in this vicinity, and both times in the early time of its migration; and both times it was heard within the city, although the first time it was at the extreme limits, while we are in the center. As most of our neighbors were sitting outdoors and heard the strange music, seeing us going toward it, they came over to learn what it was, and only one acknowleged ever hearing it before.

As I came in the house and opened my desk to report this occurrence of *Anstrostomus vociferus* in our city, I was asked if we had a whippoorwill in our collection. I went to the case and took out one; it was mounted on a low block, as if sitting on the ground. Placing the block in my left hand so that it did not show, and my right hand over the back of the bird so that nothing but the head and tail showed, I went out and showed it to my neighbors, who thinking that I had caught the whippoorwill, stroked its head, and I suppose said endearing words to the poor bird. I called their attention to its small bill, which is only three eighths of an inch long, but I told them that its mouth opened to back under its eyes "as wide as a spelling book," and when I showed them that it was a stuffed bird they laughingly acknowledged the joke was on them.

J. L. DAVISON.

MICHIGAN BIRD ARRIVALS.

HOLLAND, Mich., May 8.—*Editor Forest and Stream:* Robins and bluebirds are scarce here this year, in fact I have seen but one bluebird this spring.

The warblers are as numerous as usual, and within the last week Baltimore orioles have appeared in larger numbers than I have ever observed before. As yet I have noticed but three orchard orioles.

Song sparrows are not very numerous. Meadow larks are in a little less number than usual.

My observations are nearly all made here in the center of a city of 7,000 people. We are situated in Ottawa county, on Macatawa Bay, six miles from Lake Michigan, and about 100 miles north of the Indian line. We have some fair-sized woods near and some swamp land. On this account we have a very diversified bird fauna. I have identified 135 varieties of birds occurring within six miles from town.

I cross a college campus several times each day in going to and from my office. On the campus are oak, beech, pine, poplar and cedar trees, many shrubs and a hedge. Many crow blackbirds nest in the pines, as do an occasional pair of robins. Several pairs of mourning doves breed there. One pair last year built a nest on a limb of a pine near the trunk, and about 8ft. from the ground. I tried to catch it, thinking it was wounded, and not knowing the dove would try to lead one from its nest in this manner. Of course the bird flew after leading me as far as it desired.

Several times as I went near the tree the dove did this trick. I do not know whether the male or the female, or both, did it. Once I followed slowly after one of the doves to see how far it would lead me. It led me for a couple of hundred feet, and as I neared a building I stepped back out of sight for a moment, then carefully peered around the corner. The bird was standing as erect as possible, and turning its head in every direction, wondering, I suppose, where I had disappeared to. Upon showing myself, it again commenced its fluttering tactics.

Many chipping sparrows nest in the hedge, and goldfinches in the shrubs. I once found a brown thrush's nest near an old fallen tree, but some boys destroyed the nest and took the eggs. I observed a cuckoo's nest in a maple.

This campus is much frequented by the juncos and seems to be a gathering place for the robins, vast numbers being found here a few days before leaving for the South.

An occasional golden-wing is seen, and several times this week I have heard quail whistling. Yellow-bellied woodpeckers come regularly and inspect all the trees, frequenting the poplars mostly, though.

Below I give the time of arrival for the last few years, though the list is very incomplete. Some of the birds, notably the meadow-larks, I observed outside the city, as they are not frequently seen on the campus.

ARTHUR G. BAUMGARTEL.

Mongolian Pheasant in New York.

ONEONTA, N. Y., May 3.—The *Star* of to-day says: The effort now being made by the Oneonta Fish and Game Association to stock this locality with the Mongolian pheasants should receive the hearty encouragement of every citizen, as the possibilities of their becoming extensive in this locality are very encouraging. The ten birds recently received from the West were liberated on Friday last, in an excellent locality for their making a breeding place, and they will be watched very carefully by friends near.

The birds have a beautiful plumage and are trimly built. They are very quick movers, fast flyers, and can run very rapidly. They pair off and brood two settings of eggs every year and usually hatch about twenty-five young ones to each setting. By this it will be seen that they can multiply very rapidly if unmolested. They are protected by a State law which makes it unlawful to shoot them for a period of five years, and if they can be left alone for that period, there is every reason to believe that they will be very plentiful here at the end of that time. This effort is not to be left with this one move, but if there is any indication that they can be successfully reared here, a number will be liberated each year and soon there will be no necessity of protecting them, save in their brooding season. Eggs will be secured at a very early date and the same hatched by some method.

A Robin that Sings Whip-poor-will.

PITTSFIELD, N. H.—*Editor Forest and Stream:* There is a robin in our village who every morning and night delights a crowd of listeners with his song. He perches himself upon the topmost branches of the elms and wild cherry trees, and there he sits for an hour at a time. He commences his song as robins do, but varies it from all others by introducing the notes of the whippoorwill once, twice, and even four times in succession. So plainly does he do this that many persons were attracted, at first supposing that it was a whippoorwill, which are seldom seen or heard in our immediate vicinity.

HENRY W. OSGOOD.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

Spring in the National Park.

YELLOWSTONE NATIONAL PARK.—*Editor Forest and Stream:* The season here has been a very open one, and it is at least a month more advanced than it was last year at this date. All game has wintered remarkably well, and I have no fear but the young will thrive. Elk are seen everywhere in great numbers; deer are plentiful and tame; they are increasing rapidly. The mountain sheep are still on Mt. Everts, where they wintered in large numbers for them—thirty to fifty. There were at least 800 antelope there all winter, so everything is doing well.

Of the buffalo I cannot say so much. The large herd did not winter in Hayden Valley, and no more than twenty-five to thirty were ever seen there in a single bunch. Whether this was from the scare of your party and Haynes's of the winter before, or whether it was because of the light snowfall this year, I cannot say; but it is certain that they wintered in very small bunches—five to thirty—in widely separated parts of the park.

Everything seems to be running well now, with prospects for a good season. I hope it will prove so, for last year was almost ruinous to all interests here, and they are just beginning to offer full value for tourists' money.

HOT SPRING.

The Few Song Birds.

GARDNER, Mass., May 7.—*Editor Forest and Stream:* In reply to an article by "F. C. B." in your issue of May 4, I would say that the spring birds have been very scarce in this vicinity this year, especially those that he mentions. I have seen but two bluebirds this year, one on April 21 and one on May 3. A few swallows and thrashers have arrived the past few days, and blackbirds, robins and several species of sparrows are quite numerous, but the other spring birds are quite rare. I hope to hear from other bird lovers.

WALTER E. PROCTOR.

Game Bag and Gun.

AMERICAN GAME PARKS.

The "Forest and Stream's" Third Annual Report on Game in Preserves.

Litchfield Park.

THE preserve known as Litchfield Park is the creation of Mr. Edward H. Litchfield, of New York city. Mr. Litchfield, who is an enthusiast on the subject of the preservation and propagation of the game birds, animals and fishes of this country, purchased the south third portion of township No. 25, Franklin county, N. Y., in August, 1893, for the purpose of forming it into a private park, where he could carry out his ideas on the above subject. The tract was originally supposed to cover between 8,000 and 9,000 acres, but a recent survey shows that the property purchased is six and a half miles long by two and a quarter miles wide, making the park over 9,300 acres in extent. It was also supposed at the time of purchase that Jenkins' Brook ran through a portion of the park, but this survey also showed that it only skirted the property of Mr. Litchfield. The lakes on the property are ample for all purposes of watering the game. The biggest lake is now called Lake Madeleine; formerly it was known as Jenkins' Pond. The lake is two and a quarter miles long by one mile wide. On the island that occupies a portion of the lake it is probable that Mr. Litchfield will ultimately build a summer home. Lake St. Hubert and Lake Diana are the smaller bodies of water that lie within the boundaries of the park.

As soon as Mr. Litchfield obtained possession of the property he started in to protect what game and fish were still to be found upon it. To this end he caused to be posted in conspicuous places the following notice:

"Litchfield Park.

"NOTICE.

"*Pursuant to the game laws of the State of New York:*

"Notice is hereby given that the lands and waters, the property of the undersigned, being the whole of the south third of the township No. 25, Franklin county, State of New York, including Jenkins' Lake or Pond (hereafter to be designated as Lake Madeleine), Duck Lake or Pond, Heaven Pond, Jenkins' Brook, and all lakes, ponds, streams and waters within the boundaries of said south third of township No. 25 aforesaid, are hereby reserved and will hereafter be used as a private park, to be known as Litchfield Park, for the purpose of propagating and protecting fish, birds and game. All persons are hereby warned against trespassing upon the above described tract or premises, or any part thereof. Shooting, hunting, fishing and camping within the boundaries of said tract, without the written consent of the owner, are strictly forbidden. No person will be allowed to have or use firearms or fishing tackle while on said premises, and dogs of all kinds will be excluded. Any person defacing or removing this notice, or violating any of the provisions thereof, will be prosecuted according to law.

"Dated Litchfield Park, Franklin Co., N. Y., Sept. 6, 1893. EDWARD H. LITCHFIELD, Owner."

In regard to the natural advantages of his park as a game preserve, Mr. Litchfield states that it seems to be a favorite resort for does and fawns of the white tail or Virginia deer. Although, of course, there are no means of ascertaining the actual number of deer within the boundaries of the park, the men who looked after the property estimated the number one year ago at 250. The abolishing of hounding, and the restrictions placed on firearms, have undoubtedly attracted more deer to this park, where they can now find absolute safety. During the winter four men are employed as watchers or caretakers, the number being doubled during the summer months. Although the waters of the lakes which are now a part of Litchfield Park were depleted of fish prior to Mr. Litchfield's purchase, there is every reason to believe that the quantity of brook trout which inhabit these waters is much increased. Fishing through the ice, formerly practised very extensively, is now strictly forbidden.

Mr. Litchfield's attempt to stock the park with elk is likely to prove a success, the condition of the one bull and seven cow elk which were taken to the park last year being very encouraging, although they were confined to a small paddock as it were. As soon as the fencing of this tract of land has been completed, the elk will be turned out, and will, without a doubt, do far better. It is the intention to add to the herd in the near future. The matter of fencing the park is one that needs much consideration, and was one on which Mr. Litchfield had not arrived at a decision when FOREST AND STREAM'S representative called on him. The chief difficulty to be coped with is the extremely heavy snowfalls that occur during the winter months. Drifts of 8 and 10ft. are by no means uncommon, and as these drifts become solidly crusted over an allowance must be made to prevent the animals from taking advantage of such a means of escape.

The introduction of blacktail deer and wild boars is under consideration, but in the matter of the latter animals, as in some other similar cases, Mr. Litchfield is inclined to await the results arrived at in other private parks. To add to the winged game, it is Mr. Litchfield's intention to liberate English pheasants. The possibilities of the acclimatization of the capercailzie have also been studied with a view to the importation of a few of those magnificent birds.

The following letter from Dr. C. Hart Merriam is worth reading by everybody interested in game protection:

"WASHINGTON, D. C., Feb. 20.—*Mr. Edward H. Litchfield, 59 Wall street, New York city:* Your interesting letter of the 12th inst. is before me, and I am glad to learn that you have purchased a tract of land in the Adirondacks for a private preserve and that you have stocked it with the American elk or wapiti. There is no reason why this animal should not thrive in the Adirondacks, as it did formerly. I am sorry to learn, however, that your gamekeeper is inclined to slaughter hawks and owls, on the supposition that they are very destructive to game birds. As a matter of fact, our hawks and owls are among the most useful of birds, feeding chiefly on mice and other small animals. There are two or three species, it is true, which feed largely on quail, grouse and small birds, namely, the goshawk, Cooper's hawk and the sharp-shinned hawk. With these exceptions our species are entitled to preservation. In a recent report on the 'Vole Plague in Scotland,' by a special committee of Parliament, it is stated that the enormous increase in destructive rodents was believed to be due chiefly to the fact that the birds of prey that formerly kept these animals in check had been nearly exterminated by gamekeepers. Weasels also deserve to be let alone, because they feed almost exclusively on mice and other rodents. It is exceptional for them to kill birds, though a single weasel sometimes does much injury when it has acquired the habit of killing birds. The porcupine, sometimes erroneously called 'hedgehog,' does more harm by punishing dogs that attempt to shake him than in any other way. Trusting that Litchfield Park will long remain a true haven of refuge for our native game, large and small, I remain, with best wishes, very truly yours,

"C. HART MERRIAM, Chief of Division."

The results of Mr. Litchfield's efforts to protect and propagate native game, and to introduce and acclimatize game birds and animals from other portions of the United States and foreign countries, will be watched with considerable interest. All such efforts mean a great deal for the future of the game birds, animals and fish of this continent.

The Vilas Preserve—Adirondacks.

CAMBRIDGE, Mass.—Gamekeepers are in charge all the time. The owners spend part of the summer at headquarters, and grant for the present hunting and camping permits for not less than ten days, charging $2 per day for each sportsman, but no charge is made for other members of their party—guides, women or children. Permits are to be had at Paul Smith's, Henry Phelps, Blue Mountain House, Franklin county, N. Y., and myself.

The property is held to be leased in part or as a whole to game and fish clubs.

Deer grow more plenty each year on this preserve, as all through the Adirondacks. The tract is partly in St. Lawrence county, where hounding is unlawful, and in Franklin county, where hounding is universal.

A careful study of the question has led us in the interest of the preserve to prohibit hounding, with the result of tamer deer to hunt, and having a great increase from the deer taking refuge from dogged districts. We find the methods of night hunting or "jacking" of St. Lawrence county much more painstaking and successful than those practised in Franklin county, where the habit of hounding seems to have dulled the skill of the night hunter. The observance of a few simple rules enables us to hunt within five and ten minutes of our permanent camps with as good results as three hours away.

Our brook trout range from ⅓ to ¾lb., occasionally running up to 2lbs., and many miles of our streams are never fished.

Partridges are often seen.

The trapping, which is let to our head keeper, is quite a feature. Bear have increased during the past five years. Now and then evidence of wildcat are seen in a deer slain.

For six years I have been greatly interested in the development of private game and fish preserves in the Adirondacks, and have published a reliable map of about thirty miles square in the northern Adirondacks, of which I send you a copy.

E. A. CARPENTER.

The Raquette.

WILLIAMSTOWN.—The Raquette Club is notable simply and solely for being a wonderfully perfect habitat for deer, its four ponds and large proportion of marsh, intersected by wooded ridges, making it a particularly favorable feeding ground. Unfortunately we have done almost nothing to improve it, save putting up our club buildings. Only four or five members of the club have been on the ground, and the interest is so slack that the club has been offered for sale. The result is a fine preserve, with splendid potentialities for game and fish as well as canoeing.

JOHN H. DENISON, Pres.

The Ampersand Preserve.

NEW YORK.—*Editor Forest and Stream:* The Ampersand Preserve is, we believe, surpassed by none in the Adirondacks, in point of abundance of fish and game, beauty and grandeur of scenery, and healthful surroundings. This preserve includes such well-known fish-ponds as Ampersand, Follensbee and the Preston ponds, and is beautified by Mount Seward, Mount Seymour, Ragged and Ampersand mountains, and many others of less altitude, the home of the deer.

The regulations governing the hunting and fishing are based on the State laws, but are more rigorous. The killing of does is not allowed, and hounding is only rarely permitted. The game is cared for by wardens hired by the year who prohibit poaching and hounding. Hunting and fishing are only permitted under special arrangement made with a duly authorized agent of the owners. Under these rules, and the large reduction in amount of hunting and fishing done during the past four years, marked increase is noticeable in the quantity of fish and game. Deer especially are increasing. This was shown last season, when four handsome bucks were brought into camp by three hunters on one afternoon. No exotic game birds or animals have been imported into the preserve, as the native species, properly protected, furnish all required sport. Rangeley trout have been put into Preston Ponds and are growing finely, some few being caught each season. This preserve covers 50,000 acres of land and water in a block, easily accessible from Tupper Lake, Saranac Lake and Lake Placid.

The Megantic Preserve.

BOSTON, Mass.—*Editor Forest and Stream:* We have in our Megantic Preserve the game and fish common to that section of Maine—moose, caribou, deer and the smaller animals; duck and partridges for birds; trout for fish, and we have placed in Big Ice Pond in Maine quite a number of landlocked salmon. Some were caught last summer in the fly.

On the Canadian side of the preserve we have in our lakes there black bass and lake trout, which last also are found at our Chain of Ponds in Maine.

We have under way a fish hatchery and have started it this fall with 35,000 eggs of the trout. It is doing finely now and we hope for good results. The hatchery has a capacity of 1,000,000 eggs.

L. DANA CHAPMAN, Treasurer.

The Santa Clara Preserve.

The Santa Clara Preserve contains over 60,000 acres of land and water, including such well-known ponds as McEnery, Madawaska and Train, noted for their trout and deer. In addition, the St. Regis River runs through this preserve, furnishing endless sport for both fisherman and hunter. On this river the runways all along the Sixteen-Mile and Nine-Mile levels are justly famous as the best in this section.

Lumbering is being carried on on both of these preserves, and though it may have caused greater or less injuries to other interests, the quality of the hunting and fishing has not been injured. The lumbermen are watched with the greatest vigilance and are allowed neither to fish nor hunt.

DODGE, MEIGS & CO.

The Biltmore Forest.

OFFICE OF THE BILTMORE ESTATE, Biltmore, N. C., May 11.—*Editor Forest and Stream:* Mr. Vanderbilt will doubtless stock his place with game, but no thought has been given to the matter yet, and nothing has been determined upon.

CHAS. MCNAMEE.

BRANT SHOOTING AT CAPE COD.

Spring of 1895.

BOSTON, May 6.—The work of preparation for the shooting commenced on Feb. 25, but there was so much ice on the Flats that nothing in the way of putting in boxes could be done for about two weeks. There is, however, much labor to be performed by the local members before the arrival of the non-residents. The club houses are to be put in order, 300 wood decoys are to be repaired and painted, furniture, boxes and canvas overhauled and everything put in order for housekeeping. The three clubs—Monomoy, Providence and Manchester—all run under the management of the first-named, the same as heretofore. The four boxes, South, Mudhole, West and North, are to be planted.

These watertight boxes, each containing a guide and two gunners, are about 6ft. long, 3ft. wide and deep, and as the tide has a maximum depth of about 18in., one-half of the box must be buried in the flats and sand wheeled up around it to form a natural bar and hide the box. As these bars are so easily obliterated by high wind and water, in order to save the vast amount of labor in reconstructing, a canvas cover, like a ship's sail, is thrown over it, a hole cut for the box and the edges buried in the sand to hold it in place.

The weather was so cold and severe that the first box, the South, was not in position before the 6th of March, and the last, the North, was barely in place on the 20th, on which day the first regular weekly party of eight men arrived from Boston anticipating good shooting, but alas! few birds are on the feeding ground, and what few there are, keep a good distance from the boxes. The party struggled on cheerfully through the week and came out with one brant! and retired to make room for the second party of nine men. Fresh arrivals of the migrants made them fairly plentiful, but still they kept off shore, and paid very little attention to the decoys. Buoyed up by hope and the prospects of better fortune in the near future—which was never realized—the devotees departed with a meagre bag of eight brant.

The third weekly party, April 3–10, better known as "the boys' party"—older to-day than when they received that appellation twenty years ago—full of energy and ambition, entered the field and commenced operations, but with all their enterprise they could not coax the birds within range, and the week closed with a record of only nine brant.

The fourth party, made up of selections from the Providence Club, which contains some choice specimens of sportsmen, headed by his Honor ex-Mayor Barker, turned out on this occasion but five "braves" to compete for the championship of the season. Of all the gentle spirits that participate in the sport as well as the festivities of the club, none enter with greater zest or participate more joyously than the distinguished members of the Providence Club. The shooting was quite unsatisfactory, but the brave boys struck up a cheerful note and departed with a bag of nine brant.

The fifth party was composed mostly of elderly gentlemen who have seen service and are entitled to the honor of "veterans." Their victories in the present field were somewhat like Santa Anna who alleged that Gen. Taylor "didn't know when he was whipped." Considering their

age and disabilities, the eight "veterans" did noble work, performing every duty at box and bar with equal alacrity of the younger members. But they could not perform miracles or by any mystic art restore confidence to the minds of the migrants, as each gunner present is entitled to a full share of all the birds killed, the problem of equal division of the only one brought to bag became rather serious, but was finally amicably settled by "arbitration."

On April 24, the last party of the season, consisting of eight old stayers and raw recruits, put in an appearance. The prospect was most gloomy and discouraging. What few birds were left, kept aloof and would not approach the boxes. Every day as long as there was any show for birds the boxes were faithfully manned and every artifice known to the club was resorted to without effect. Up to the morning of the departure, not a bird had fallen before any gun, but on that morning "Lou" brought in one brant, which on examination was pronounced a "wing shock" or wounded bird, that was unable to continue the journey, and worthless. So ends the most disastrous season known to branting.

The reader, if he be interested in sporting matters, may like to know why it is that a club that has for more than thirty years been in existence with an average score of about 350 birds yearly, is now so abruptly reduced to twenty-nine? We will endeavor briefly to explain. To our mind, the failure is to be assigned mostly to two causes. First, failure of food, and second, to over-shooting. The great gales and high water that some years ago swept the sand dunes of Nanuet far from their foundation, depositing the material in the channel, thereby ruining the harbor and commerce of Chatham, also destroyed the best part of the feeding ground, especially the channel and other attractive sections near the town. We have observed for several years a growing disposition in the birds to keep more and more off shore. The reasons are quite obvious. They find better feed and exemption from danger, two important factors in a bird's existence. As these birds live to a great age, it may be presumed that every spring as in their northern migration they reach Chatham Bay, where for so many years they have fared sumptuously, they must stop to rest and partake of the delicious food—*Zostera marina*—so bounteously supplied. Seemingly all the brant that went north at that period stopped here. We have often imagined what must be the surprise of the serried ranks of the veterans of many a long journey, as they wheel majestically around Morris's Island, confidently expecting the luscious feast, when, lo! only a sand flat is before them! Memory is in birds strong and it takes years to obliterate these impressions. Let him who doubts consider that the same bird that built a nest and reared its young on a particular tree by his window last year, will after an absence of many months, without a compass to guide it, or even a blazed tree to mark its way, return again, year after year, to perform the same paternal office. About half-way down from Chatham to Monomoy Point, on the westerly side, is a projection called the "inner point," and from this point a natural bar makes across to the "Common Flats." Fifteen years ago very few brant tarried there, as the water is deeper and more turbulent, but pushed on nearer the town, where there was plenty of feed and shoal water. For several years the tendency to abide south of the bar and inner point has been more pronounced, and more especially has this been the case during the present season.

The second cause of failure this year, namely, "over-shooting," is so marked as to be apparent to any observer. Some forty years ago, when we were first introduced to this shooting ground, there were but three boxes on the whole distance up and down the flats. Now there are twelve or thirteen. Then a simple sandbar, upon which stood three live brant decoys, and a box buried in the bar, completed the outfit. These primitive contrivances worked marvellously well. The birds would light in the water hard by and swim up to the bar and mingle with the decoys. It is singular how soon word is telegraphed from this bar to all the birds in the bay that all is well and it is safe for them to assemble there for a social chat or to make plans for the long journey to the north, and they spring up from various parts and straightway proceed to the bar. We have seen hundreds, nay, apparently thousands, pile on to and around the box, nearly all of them within range. It is a critical moment. The neophites become nervous, and the guide has hard work to keep them down out of sight. Each of the decoys has fetters on his legs, to which a line in the hand of a guide is attached. A gentle pull on the line reminds them that a shot is to be made and they must move to one or the other side of the bar. They seem to understand the situation and quietly obey. The first discharge is usually quite destructive, and the second, on the wing, less so. Often the slaughter was terrible, twenty, thirty, and even as high as forty-four at a shot. They did not seem so badly frightened when fired at in a sitting posture as on the wing, and the same flock would appear two or three times during a single tide upon the bars.

About fifteen years since, an innovation on this system was made by the introduction of wood decoys. Before this period the birds were rarely, if ever, shot on the wing. Since that inauspicious event most of them are shot on the wing. We do not mean to say that the birds never light with the woods. Young, inexperienced birds may approach near enough to draw fire, but as a rule, they soon discover the fraud, and skip away. It is with difficulty that mature birds are brought within range, although a pair of live birds are worked in conjunction with the woods. Later came the labor-saving system of canvas covers, as before remarked. This plan is rather against nature. With a goodly number of inanimate imitations, the shy, cunning creatures may sometimes be coaxed within fair range; but not probably a second time.

Our seasons are about six weeks long, or from March 20 to May 1. During this time the canvas becomes bleached quite white and conspicuous, and if the wild birds ever come on to it we have failed to see it; in fact, our observation leads to the conclusion that they are suspicious of that white cap surrounded by queer-looking, stiff-necked imitations, and keep shy of them, especially after one or two seasons' experience. Nor will they in any considerable numbers come on to the flats or near the boxes, but keep off in the bay or south side of the bar and inner point. We have enumerated a dozen boxes planted up and down the flats and beaches contiguous to the feeding grounds. From every one of these boxes more or less guns are fired, and every shot seems to weaken the confidence of the birds in the security, the safety of the situation.

The relative number of birds passing directly over and not stopping at all is greater this year than ever before. It is but the natural outcome of too much shooting. The law of self-preservation is strong in birds as in other creatures, and when destroyed in one location they will seek another. Very little shooting at birds on their feeding grounds will soon drive them all away, and shooting on wing while on the passage to or from the feeding places produces disastrous results. We attribute the failure of the present season more to the increase of boxes and bars, covered and uncovered, and the constant banging at all sorts of birds that come along, than to the food failure. And then there are very few young birds this season. Out of the twenty-nine birds killed only two were young. Last year our club killed 285 brant, 153 young and 132 adults.

The flight of all kinds of birds has been this spring remarkably small, we should say less than half the usual number. We hardly suppose that the swimming birds would be caught in the ice and perish, or that any, especially brant, who are bred in cold regions and are clothed with a double jacket, could hardly suffer by low temperature, and they certainly could in a few hours reach a warmer climate where food is plenty, and we are puzzled about the cause of the greatly diminished numbers. Being on the elbow of Cape Cod, most of the fowl and shore birds pass Chatham Bay, but this spring, if there are as many birds as usual, they must have taken some other road. Sea ducks, coot, geese, brant, sheldrake, black ducks, and even gulls have all been very scarce. The scarcity of song and insectivorous birds is more easily accounted for. With the mercury at 22° and 14in. of snow covering the winter home of these lovely creatures, it is a marvel that any are left to cheer the hearts of toilers upon Northern soil and aid the husbandman and horticulturist in his efforts to produce most valuable crops. The almost unparalleled cold weather at the South brought not only ruin to fruit growers and fruit, but also killed millions of small birds. The dead were strewn broadcast over the land. In a little village in North Carolina where we have often hunted partridges, the gale blew down a martin box containing twenty dead, or nearly dead, bluebirds, and seven more bodies were discovered in a hollow stump. Gunners from that section report heavy losses among the partridges (Bob White), and it must take several favorable years to overcome these deplorable losses. W. Hapgood,

Pres. Monomoy Branting Club.

CHICAGO AND THE WEST.

The Story of the Big Bear Foot.

Chicago, Ill., May 8.—A week or so ago I made mention of a very large bear paw which was sent me by our friend Mr. R. E. Bobo, the champion bear hunter of Mississippi and of the world, so far as I know. Mr. Bobo appends the story of the chase in which the big bear was killed, and from this it would seem that the bear chase had after all some revelations for him, even after so many years, experience at it. The weight of 600lbs. is very large for the black bear, though Mr. Bobo told me he once killed one that weighed 700lbs. after dressing. Forest and Stream must show this big foot, dried and shrunken as it must then be, in the exhibit at the sportsmen's exposition, and if anybody can tell any bigger true bear stories than these which have been coming from Mississippi, I reckon he will have to carry off the foot. But it will take more than 304 bears in one year to do it, and a black bear heavier than most grizzlies are thought to be will be necessary to beat the Mississippi record. Only the best of anything will get into the Forest and Stream exhibit, or get away with it. Mr. Bobo writes as below of his first spring hunt.

Big Bear on the Sunflower.

"A late hunt on the Sunflower recalls the pleasant times we had there last fall, when you were here. Our dogs being in full trim and the boys all anxious to go for a hunt, we arranged to leave Bobo station and round up at the Duncan place, that being as you know on the river at the east end of the tram road where we waited for the dogs, when you and I were out there. In our party were Messrs. J. R. Shield, Felix Payne, Mr. Heiler, Bob the Kid (my son) and Tom Sims and Sam Russell, the colored boys. We all started April 21, and met successfully at the Duncan camp. Everybody told of what sign he had seen and what we might look for on the next day.

"Early the following morning we left for the bit of country known as Hell's Hundred Acres. When we got near Mud Lake we heard Georgia Ann, Tom's favorite dog, and everybody that knew the dogs said: 'Yes, that's all right.' Then the whole pack went into cry, and away we all went. The race went far to the north and then west and south to the Pecan Bayou, then east to the river and back west again. Crack! bang! bang! we could hear the guns go along the tram road, then still for two hours and a quarter a hard race went on, Tom and Sam and Mr. Shield and everybody else getting a shot, but no meat. At last the dogs caught and killed the bear, an 80lb. cub.

"We got back as fast as we could to the starting place, knowing that the old she bear was not far away, and soon Fly, Mr. Shield's favorite dog, gave mouth and off we went again for a run of an hour and a half. We treed at last in a big hollow tree, and the boys making a fire we soon began throwing chunks at the hole, and after awhile Sam put one in the hole and out came a 300lb. bear, and was on the ground before you could say what or how. Well, you know the big knife I always carry, and this came useful, for in a moment I had killed this bear with the knife. The boys carved up the meat and we went back, on the way discussing who should be called before the Kangaroo court for doing all that shooting and missing—the penalty of the court usually consisting of a shortening of the guilty party's shirt tail by about 4in. Our court lasted till midnight, and I do not need say that some of the boys had very short shirts on by that time.

"The next morning we set out for some good grounds, and very soon my favorite—the dog we could not find when we were here—gave cry, and we knew a bear was up. We gathered up, and came to the understanding that we were to give this bear a chance for his life, and by fair means take him without a gun being fired. The chase went south a quarter of a mile and took a short turn to the north of that tram road where I stationed you so often. We heard a gun go bang! bang! and then we heard a yell. 'Now, boys,' said I, 'with forty-one dogs and no one to shoot the bear, I reckon we'll have some fun, and a little touch of high life in Mississippi bear hunting.' We all tightened up for a hard run, but we got no run. It was all a disappointment. 'What?' said I to Payne, as he came up, 'you haven't killed it?'

"'Yes,' said Payne, with that honest look we all knew so well to carry the truth with it, 'I did break the agreement. But that bear did look so black and fine that I shot and killed it before I thought—I did, honest!'

"'Have you got your sack along to put the meat in?' I asked.

"'Yes,' said he, 'I have. The bear only weighs 150lbs.'

"'Well, keep that sack,' said I, 'for before our Kangaroo Court gets done with you, you are mighty apt to need it for a shirt.'

"Well, we got back to Pecan Bayou—you know where that is—and in a moment Ronco gave tongue again. We all closed in to see the size of the track, for it was in a sort of pond, a wet place. 'Look! look!' cried Shield. 'That track is as big as my horse's track.'

"It was indeed a monstrous track, and we laid plans to make no mistake in the run. I knew it might go south to the Hushpuckany River and cross and get clear away. We rode to the front as best each could, two miles and a half to the river. At the bank I rode to the front and the bear turned back from the river and made for Hell's Hundred Acres, with me after him, and I reckon you know what that meant for followers. I rode hard a mile north and headed the pack all alone, the boys being far in the rear. Riding for the dogs, I came up with them, and at length saw a great black object going across a piece of burned cane, working hard to get to the cover a quarter of a mile away. I set spurs hard and heavy to my good horse Dan, and we closed with the bear. Holding my rifle like a pistol in my right hand and the reins in my left, I fired at the bear with the muzzle against its body, but the bear kept right on. Some of the dogs were within 5ft. of him, and there were forty-one dogs strung out behind him. Fifty yards further I rode in and again placed the gun against the bear and fired, and down he came. Off I piled on to him, and I tell you a 600lb. bear and forty-one fighting dogs is something of a contract. A third time I placed the old rifle against the great animal and so I ended the hardest and most exciting bear race of my whole life, and my experience I think justifies me in saying this was one of the most pleasant hunts of the age.

"I blew the call, and Shield and Payne, a quarter of a mile away, responded and came in. We had a general carving, for this bear was a monster indeed.

"We had not had a dog scratched, and had killed four bears in two days, one of them this huge one. We thought this was the most pleasant hunt we had ever enjoyed. We all wished several times that you had been with us. When we pulled out for camp each man took all the meat he wanted and we had some of the finest hides we ever got.

"It is useless to say that when the court convened there were some short shirt tails, and Mr. Payne, who broke the rule by firing, had very little left of his shirt but the collar.

"We are making arrangements to have everything in good shape next fall, and you know you have a standing invitation to join us, something which you know too is not given to a great many. You have our best wishes.

"R. E. Bobo."

There wasn't no Ticket.

I am in receipt, in the course of trade, of the following story from the city of Memphis, which was originally addressed to Forest and Stream Pub. Co., probably by Tom Divine or some other Memphis friend. The story may be thought by some too good to be true, but I am not saying a word about that, and all I know is that it is too good to keep. It certainly does look as though the fellow at whose expense it is told ought to buy another dinner at the hotel Luehrman, and pay for it, too. The story goes as follows:

"Memphis, Tenn., April 27.—*Editor Forest and Stream:* A series of articles commenced their appearance in Forest and Stream about Feb. 9, under the caption of "The Sunny South." These articles were very much enjoyed by friends of your paper in this country, and I feel that a great deal of good was done by the generous handling of the Southern question by your correspondent. He made a great many personal friends while in the South, and I am sure a great many friends for Forest and Stream. He has a very happy way of telling of the good things that happen to the different friends with whom he is thrown—many beautiful stories at the expense of these friends. But if you will notice, he never finds a single story to tell on himself, and we are naturally led to believe that this gentleman is so perfect that he never falls into traps or positions of embarrassment.

"Now, I am satisfied from what I have heard of this gentleman that he is courageous, that he is not afraid to face any question or position, has been tried and found equal to the occasion in all the various trials of life, but there are times when this gentleman does some pretty nice dodging; when he forgets some very rich things that happen in his company, at his expense, which would not probably appear so beautiful to him in print. If you will pardon me, I will relate just one little incident that happened at Memphis which I think should be told on him. I am told that while he was in Memphis he was very hospitably and cleverly taken care of by two of his Tennessee Club friends; that they were lavish in their efforts to make his stay pleasant; told him the club was his while he was here, and in various ways showed him that he was looked upon as a great man, and that they were proud to have the pleasure of entertaining him.

"On one occasion he was invited to dinner at the Tennessee Club, when he drew himself up, as the proud sons of the West have a way of doing, and said, 'Gentlemen, I will not eat or drink with you again until you have partaken of some of my hospitality.' No amount of protestation on the part of these friends would change his mind, so they concluded to humor him this once, and started with him for his hotel. Just as this little party of three entered the café of the hotel, they were called over to a table where two gentlemen, society men of Memphis, were dining, and together they sat down to commence their meal. This great dodger was introduced to the two gentlemen, and in the most perfect and gallant manner urged them to be his guests. Nothing was said; each ordered what he felt disposed to have for dinner, and as each course was served it was most fearfully abused by this able scribe. He said that in the course of all his expe-

rience he had never seen such a villainous dinner, that the soup seemed to have been made from the shadow of birds; that the noble shad had faded into river catfish; that the duck, the roast and everything connected with this dinner was simply abominable; when his lips touched the coffee he put the cup down with a frown and said, 'Gentlemen, I really must ask you to excuse this coffee, it is villainous.' When the feast was over, in the great high toned voice of a potentate, he said to the waiter, 'Give me my ticket.' The waiter replied, 'Thar ain't no ticket.' He took a long steady look at one of these Tennessee Club friends and said, 'Did you pay this ticket?' 'Upon my honor, I did not,' was the prompt reply. He turned on the waiter with a scrowl on his face like the demons of old and said, 'Waiter, give me that ticket.' 'Sar, thar ain't no ticket.'

"This of course caused a great deal of confusion, and, greatly to his discomfort, first one gentleman and then the other started out of the café, and out of the hotel, leaving him storming at the waiter, and from there on to the clerk. To this day he does not know who paid for the dinner, which he was serving and which he so eloquently derided, and for which somebody else paid. Now, mind you, I would not tell this face to face with this scribe for any amount of money; in fact we said nothing about it the balance of his stay here, and I imagine he will wish that he had never ordered dinner at Luehrmann's. ADAM."

Speaking of Bear.

Speaking of bear reminds me that Ira Dodge, or a part of him, has just passed through Chicago, to attend the sportsmen's exposition at New York. Ira Dodge is the old mountain man of Wyoming, who was partially eaten by a bear which he had partially killed, so all of Mr. Dodge did not go East, to be strictly truthful. The rest of him can rejoice in the fact that he got out alive from about as close a squeak as a man ever did have with a bear.

Mr. J. W. Schultz, another mountain man and guide, from Piegan, Mont., also passed East for the exposition yesterday. The exposition promises to be very notable in the attendance of guides, woodsmen and practical sportsmen of all kinds, and any sportsman of any kind who can do so should be on hand to learn the new and old things of the craft.

Mr. Colville (Dick Swiveller), long with the Baker gun, passed through Chicago this week for the West.

Interesting Test Case.

A friend points out the following from a Dubuque, Ia., paper. The question involved has for years been a much mooted one, and of late the sportsmen have been pushing it hard. It is all very well to talk of the food rights of the people in fish and game, but it has not yet been established that a few of the people have the right to forever destroy that which belongs to all the people, and which should forever be conserved for all the people. The marketmen have never been sincere. When they say the people they mean themselves. When the sportsmen speak of protecting fish and game for the people, they do not mean themselves, but all the people, now and hereafter. The sportsmen are doing the thinking for those who can not or will not think. Thought has a way of insistence and growth. That is why the idea, "Stop the Sale of Game," is bound to grow. The excerpt reads:

"At the coming session of the Supreme Court an important case will be argued, which will, in the opinion of the attorneys, settle the question. The first one will be the legal limits of the Mississippi River as far as Iowa is concerned, and the second will be the fish supply of Iowa towns. The case was commenced in Allamakee county. C. H. Haug was arrested for catching 2,500lbs. of fish with a net from Big Lake, near Lansing. He was acquitted, Judge Hoyt holding that a lake was part of the river, as it was originally formed as part of the river bed. The county authorities want the case settled and for that reason appealed it. If the Supreme Court holds that any lakes along the banks of the Mississippi River are not part of that stream as far as the fish law is concerned, it will put an end to the business of hundreds of fishermen, cut down the supply of fresh fish all over the State and incidentally make the Mississippi lakes a paradise in a few years for fishermen with the rod."

Hail.

Max Luther, of Corpus Christi, Texas, informs me that it recently hailed in that part of Columbia about 4ft. deep on the level, the hailstones running as large as watermelons. Fortunately the ducks had all gone north. It does not hail that large in the north. Texas is a great State.

Possum Club Fire Sufferers.

It is a singular fact that Mr. F. A. Place, also a member of the Possum Club party mentioned last week, and an ex-member of the executive committee of the State Association, was this morning burned out, his elaborate photograph gallery being almost totally destroyed. Mr. Place made many pictures for the sportsmen and had a large collection of negatives, most of which were lost. It is odd, but true, that this morning, when poking around among the ruins of these negatives, almost the first one he turned up was that of his friend and fellow loser by fire, Mr. Hamline. If this thing keeps up, FOREST AND STREAM will need another fire reporter out here before long to cover all the hurry calls in Chicago sportsmanship. Mr. Lester Stevens, another photographer and another sportsman, and also a Possum Club member, offers Mr. Place the use of his gallery and facilities until he gets on his feet again. Members of the sportsmen's guild are ever helpful to one another.

Car Fare.

I have discovered that, if a fellow walks down town in the morning, he can save his 5 cents car fare, and can, moreover, for the said 5 cents purchase a fine red rose and two red carnation pinks, all the same being very beautiful and fragrant. This morning, when I was eating breakfast in a restaurant where the prices are not too swift—because you know it is getting toward the middle of the week, and all good newspaper men are broke then—I was somewhat surprised to see the waiter pick up my two pinks from the table in front of me, and inhale somewhat of their fragrance. "Them's mighty nice," said he. So he got a schooner of water and put their stems in it. "That'll keep 'em fresh," he said. "I'm awfully fond of flowers. They're so sweet." Now, what could you do in a case like that, even if it was the middle of the week? Perhaps Chicago is not all Chicago, after all.

A Nebraska Pelican.

Mr. Ezra E. Howard, of Edgar, Neb., writes as below of a pelican which seems to be a little out of ordinary pelican bearings, though that bird is sometimes seen along the Platte or Arkansas rivers, and is common in many Rocky Mountain lakes:

"A white pelican was caught near here a few days ago by a young man. The bird had evidently got its right wing injured in some way. It had black feathers on its wings and a hump on its bill about the middle about ¼in. thick, 2in. long, and a little over 1in. high. Was it the common white pelican or not?

"The flight of doe birds is pretty good, and hunters are getting good bags."

It was no doubt the common white pelican, the latter having black tips to the wings. I reckon they have these horns on their noses to give them strength, because when you drop from a few hundred feet into the water you need a strong fore-runner. I am posted on pelicans, because we always see about a million of them every time we go down to Texas. E. HOUGH.

909 SECURITY BUILDING, Chicago.

"BUCK AGUE."

CINCINNATI, O.—*Editor Forest and Stream:* You gave me quite an energetic "tail twistin'" in FOREST AND STREAM of April 27, but it did not set me back much, and I still hold that the term "buck fever" is wrong, as applied to the shaking and utter helplessness of a hunter when trying to hold his gun on game and can't—Bartlett and his "Dictionary of Americanisms" to the contrary notwithstanding.

Bartlett, and Hammond, too, doubtless defined this state of the nerves to accord with what the people meant with whom they came in contact, viz., that they shook; but a misapprehension or misapplication of a term or phrase does not make it right.

I said before, and I stick to it, that fever don't shake its victim till the back teeth are about ready to drop out, or words to that effect; but that ague does; hence I claim that "buck fever," when used to mean the shaking and agitation of the nerves when coming suddenly on a deer or other game, is a misnomer; a perversion of the true meaning of the idea intended to be conveyed, which is to shake, as with a sudden fit of ague—not fever.

I don't understand why people in one locality should call this nervousness, this shaking—which is the same the world over—"buck ague," and those of another part of the country call it "buck fever;" but it only emphasizes the fact that the "agueites" had a right conception of the term and the others a wrong one.

"Buck fever" don't agree with my notions of the fitness of things. It don't describe any of the symptoms nor bear any relation that I can make out to the shaking state of the nerves under discussion, and I am going to "side with the man from Texas," and the pioneers of the Wabash bottoms, and the early dwellers along the Tippecanoe and Eel rivers, and call it "buck ague" till I can be convinced that there is any shake, quake or any other kind of a nerve-jerking attribute in a fever.

It don't seem a question to be settled by being possessed of any special knowledge of "the ways of speech of past generations." It should settle itself by the adaptability of the term to the effect produced.

Does it throw one into a fever, or into a shaky state like unto an ague fit? If a fever, I will acknowledge that I am in the wrong; if into an ague, like an old-fashioned "Wabash shake," I claim to be in the right, and I can't quite see it in the light of carping or "cantankerous criticism" to try and set the readers of FOREST AND STREAM right in a matter that seems to me a plain misconception and misuse of a term that does not express any of the symptoms or effects of the malady under consideration.

No, I have no more fathers in reserve; but from the one I used to have—the quickest with a rifle, the truest and best deer hunter I ever knew—and from other old deer hunters of the time when I was a boy, I learned to call these unaccountable attacks of "rattles" by the right name—"Buck Ague."

I have had my say, and will rest my case.

KINGFISHER.

P. S.—I have another "crow to pick" with the compositor and proofreader. On page 349, first column, ninth line from top, issue of May 4, one or both of them make me say, "white scarlet flannel," which I wrote "bright scarlet flannel." Who ever heard of "white scarlet?"

K.

NOTES OF A FLYING TRIP.

LINCOLN, Neb., May 7.—*Editor Forest and Stream:* Well, here we are again, after making a kind of double-cushion carom via Portland, and spinning half-way across the continent, ending with a graceful parachute drop down on old stamping grounds—for the present. Item—Omaha to-morrow, maybe savie Sandy Griswold, huh? Item—Chicago next week, savie Hough sure, and smoke good cigars with him (if he has any), 'cause he's one of the family, see? Several items—saw Judge Greene and his side-partner Meade in Portland. Good crowd that, know a good thing from a salted claim. Going into the Olympics, western Washington, all three of us some day. Tell you all about it when we get back. Reason, Meade wants a Dolly Varden that will weigh umpty pounds; and what Meade wants, he has to have. The Judge, being older, has given up such vanities and is contented with brook trout, and lots of them, about ten inches to a foot long.

More items—asked every man I saw coming across what the game outlook was where he lived. Here is what I found out:

GRANDE RONDE VALLEY, Ore.—Plenty of grouse and chickens, some pheasants in the valley. Mule deer and bear fairly plenty in the mountains close by.

NAMPA, Idaho—Lots of blacktail deer. Bear (big ones), sheep and goats, all you want back in the hills. Chickens, willow grouse plenty. Pheasants once a week.

GLENN'S FERRY, Idaho.—Lots of blacktail deer, some few elk, sheep, goats and bear, all in the Sawtooth Range. Lots of trout, Snake River and tributaries.

POCOTELLO, Idaho.—Blacktail deer, goats, sheep and bear in the mountains; lots of willow grouse along the streams. Plenty of trout anywhere you can find a damp place (so they tell me).

OGDEN, Utah.—Ducks and geese in season. Bear, deer and few sheep in the Uintah range. Plenty of trout in Weber and Bear rivers—salt free with water at the lake. Mosquitoes big enough to shoot.

BEAR LAKE VALLEY.—Deer, grouse, pine hens and sage hens enough to feed the whole crowd. Lots of trout and whitefish (?); both take a fly.

STAR OR SALT RIVER VALLEY, Wyo.—Best place on earth, not counting out the head waters of Green River, 100 miles from McCammon junction, sixty miles east of Montpelier on the Short Line. Good place and full of white folks clear down to Evanston. Deer, elk, bear and sheep until you get tired shooting. Grouse and sage hens plenty. Stray antelope once in a while, maybe twice in a while sometimes. Trout and whitefish sit up nights to get first chance at your fly; man who lives there told me—fact.

EASTERN WYOMING.—Turned into a sheep ranch and worked out, even jack rabbits leaving both slopes of the Continental divide. Western Nebraska—baked. Eastern Nebraska—Sandy Griswold's reservation and posted!

I heard "Arefar's" remark a few weeks ago about a trout that lives in California; but it's a different breed from my red one up in Washington. Will talk to Arefar a little later on about fish. Got other things on the reel right now.

"Von W." is o. k. about that 160-acre spear that some fellow got a patent on to "help us poor anglers out." Wish he would make a nice big one for a present. Wouldn't I like to just make a few jabs at him with it. Invention for anglers, humph!

I'll drop in again about the time roses begin to bloom, in the moon of the hatching of the birds, and tell you about that dead antelope that the eagles fought over up there in the Bad Lands. Just now I'm "tied to business" and only got here by doing a quick sneak, see? Klookwah, Tillacums. EL COMANCHO.

WEIGHTS OF MICHIGAN DEER.

Editor Forest and Stream:

I received a quaint sort of a letter a few days ago, dated April 1, from "Uncle Billy Richardson," the hermit of Hubbard Lake, near whose cabin we made our camp last summer, and I think some extracts from it may interest some of the readers of the "old paper." "Uncle Billy" is eighty years of age and lives alone—not counting his cats and chickens—in a snug cabin three and a half miles from the foot of Hubbard Lake, and during the deep snows of winter seldom sees the face of a fellow man for six and eight weeks, as there is no house nearer him than the foot of the lake. He is one of the very best of the many good neighbors and friends we have made in Michigan, and I take pleasure in "saying it to his face," for I'm going to send him a paper with these remarks in it—if you print them. KINGFISHER.

Uncle Billy writes: "I write to return thanks for the large and beautiful calendar and papers and everything else you sent me. I am told it has been a very cold winter here, but I did not feel it so much myself, for I was out but very little. We had fair weather in March, snow all went away, except in the thick woods and swamps, but I woke up this morning to find four inches of snow on the ground.

"They are cutting holes in the ice to put in 50,000 lake trout fry, as they think they will do well in Hubbard Lake. The ice is 2ft. thick, the snow has been about the same on the level. The ice goes very quick with a little fine weather. * * * I see in one of the Cincinnati *Commercials* you sent that a Mr. B. W. Campbell claims to have killed the largest deer in the Northwest, 250lbs. I think that he is away off the range in the weight and size of Michigan deer. The first deer that I killed on Hubbard Lake weighed 307lb. good weight. I weighed one for old Indian Joe of 308½lbs., and I have weighed many deer for the Indians under and over 300lbs. The hide of my 307lbs. buck weighed 7lbs. when flint dry, and 4½lbs. when tanned, which sold for $11.25.

"Many hunters about Alpena kill larger deer than 250lbs. every year. Plenty of Indians round here. Indians and deer go together. There was a party of hunters here last fall occupying your old camp ground. They killed twenty-five deer, one a little short of 270lbs., and half of them over 200lbs.; a very pretty sight to see them hung up. They got tired killing deer and went home one week before the season was out. Among them was one professor, one State representative and three farmers. Indians now making maple sugar. Best wishes to the Colonel and all the rest of the Kingfishers.

"WM. RICHARDSON."

The Canvas Hunting Boat.

MARLIN, Tex., May 4.—*Editor Forest and Stream:* We wish to take mild exceptions to the treatment "W. R. H." gives a favorite of ours, under the head of "Roughing for Ducks," in your issue of April 27—the canvas folding boat. He would give one not experienced the impression that the boat is too cranky for useful purposes. While it is true that it would not do in most instances for a ferry, nor answer a great many purposes so well as some other boat, we have never failed to find our little 12x40 the right thing in the right place. We have used it for four years on various rivers and lakes in this State, and it has never tipped over with us yet, although we use 65sq. ft. of canvas in a mainsail and jigger, and were out in one squall that broke the main stick in two.

When we first got it, the stools that came with it as seats tipped over and "spilled" us into the gunwales a couple of times, and we got some cork cushions made the proper size, which prove to be easy and comfortable seats. In case of an accident, with a person in who couldn't swim, by taking one under each arm there would be no danger of drowning. When it comes to transporting a boat to fishing or hunting grounds, it takes very little imagination to decide which boat is the handier.

Our boat seems to be just as good now as when we got it, about four years ago, and stands the wear and tear better than some of our high-grade wooden boats.

We enjoyed the article written by "W. R. H." very much, and would like to have some other brother's experience with a canvas folding boat. E. R. E.

In Eastern Oregon.

LA GRANDE, Ore., May 4.—The La Grande Rod and Gun Club is composed of men who take a deep interest in sport, and numbers among its members some trap-shooters that will rank with the best in the Northwest.

The State Sportsman's Association will hold their annual meeting in La Grande, on June 10 to 12. Our boys will do all in their power to make the meeting an interesting one to the representatives from the rod and gun clubs of the State.

The Grand Ronde Valley has been stocked with California quail and Chinese pheasants. They are doing well, and are protected until the year 1900.

Our deputy game and fish warden, Mr. A. V. Andrews, is doing good work in prosecuting all violators of any game law, and all true sportsmen will uphold him.

Some fiend in human shape scattered poison over the town about three weeks ago, resulting in the death of eight or ten valuable hunting dogs.

The lovers of the rod are having fair success luring the wily trout from the mountain streams, several having returned with full baskets. K.

Plover on Texas Prairies.

PLOVER came in here about the time the quail season closed, and for a while hunting parties were out nearly every day. From thirty to sixty was about the usual bag for half a day's shooting for two, but 124 were brought in by one couple in one afternoon.

We hunt them in vehicles altogether. They are very wild from a person on foot, but in a buggy one can drive right through a bunch of them, getting first one on the ground and second on the wing. We have frequently heard it claimed that they are hard to kill. We have come to the conclusion that the trouble arises from shooting too far. They stand up high, and their long wings in flight offer a large mark, while on the open prairie distances look short. The last time we were out we drove within shooting distance of two plover. I killed mine and my chum missed his with the first and flushed it with the second, when I killed it. I asked him to pace the distance to his, while I did the same to mine. He remarked that it was not so far as I imagined. It proved to be 43yds. to each one, but did not appear to be over 30yds. E. R. E.

The Southern Railway's New Through Sleeping Car Line to Chattanooga, Tenn.

COMMENCING Sunday, May 12, a new through Sleeping Car Line from New York to Chattanooga, Tenn., will be inaugurated over the Southern Railway, "Piedmont Air Line," going through the picturesque mountains of western North Carolina, via Asheville, Hot Springs, Paint Rock and Knoxville. The through car will leave New York via Pennsylvania Railroad at 4:30 P. M., leave Washington via Southern Railway at 10:43 P. M., and arrive at Chattanooga following evening at 6:40. This car will be operated over the Southern Railway's own lines from Washington to Chattanooga, which is an assurance of quick time, excellent connections and the best of service to be had. The country through which the new route runs is rich in magnificent scenery.—*Adv.*

Sea and River Fishing.

BOSTON AND MAINE.

BOSTON, May 9.—The ice got the advantage of the trout fishermen in going out of the Maine lakes, and for two or three days there were no parties on the move for the trout waters. But now they are starting. Mr. A. S Foster, who has for a good many years pioneered a party of sportsmen to some one of the Maine trout lakes—usually the Rangeleys—is to leave to-morrow or Monday. In his party are five or six gentlemen, including Mr. W. B. May, Mr. Rogers, Mr. B. J. Parker, Mr. J. Eaton, and probably one or two others. They go to Student Island, in Mooselucmaguntic. Mr. C. P. Stevens, of Camp Vive Vale, was one of the first to be off, having started the next day after the ice left the Rangeleys. Mr. Stevens is alone this year. Mr. E. A. Dow, with his fishing friend Mr. E. G. Place, will start for Richardson Lake Saturday. They go to Camp Stewart, with George and Will Cutting for guides. Mr. Dow has a record of a trout above 5lbs. last year, and Mr. Place is expecting a big one this year.

Mr. L. Dana Chapman, corresponding secretary and treasurer of the Megantic Club, starts to-morrow for Weld Pond, in Maine, with a party of six. They go for landlocked salmon. In the party are also Messrs. E. J. Littleton, Charles A. Kilham, Dr. W. G. Kendall, A. Bernard, and J. Harberger. They are to make a short trip, but expect great sport, as they have direct word that the fishing is good. The Stanley Minnow will be thoroughly tried and the FOREST AND STREAM is promised the results. It is also more than probable that Commissioner Henry O. Stanley will be one of the party. Mr. David H. Blanchard, well known to the readers of the FOREST AND STREAM, is soon to start for Monson, Me., with Mr. C. P. Keeler. They will fish Monson lakes for lake trout. Mr. Blanchard will visit his salmon river later.

There are reports of good landlocked salmon fishing in Sebec Lake in Maine, but the fishermen who have gone to Grand Lake and Grand Lake Stream for the same fish are not having the sport they expected, if all reports are true. Mr. G. A. Fales has started with a party for Moosehead. The Produce Party, so named from the fact that most of the fishermen making it up belong to the produce and provision trades, was one of the first to be off for Moosehead this year. But the ice went out before the party was ready, though they will make good the advantage taken of them later. In this party are mentioned Mr. Wallace F. Robinson, president of the Boston Chamber of Commerce; Mr. L. E. Pierce, Mr. Stearns R. Ellis, Mr. Conant, Mr. Smith, Mr. Powers and several others. They have the best steamer on Moosehead engaged to take them out on their fishing trips, with guides and canoes. Capt. J. B. Thomas, one of the directors of the American Sugar Refining Co., formerly a resident of Boston, but now of New York, will visit Moosehead this year with a party of friends. His party will go later for fly-fishing. Mr. Thomas was formerly the "commodore" of the Kineo Club, a party of sportsmen that annually visited Moosehead for fly-fishing for many years. In this party were such fishermen as Mr. W. S. Hills, now blind, but who kept up his love for fishing, in spite of his blindness, for a number of seasons. Last year he tried salt-water fishing when his health permitted.

The Linder party to Moosehead I will give particulars about later. Then there is the Magee party to the Rangeleys. The Camp Stewart party to the same lakes, which will go later, with numerous other fishermen ready to be noted in due season. Mr. Edgar W. Curtis, of Meriden, Conn., passed through Boston on Monday *en route* to his camp in the Pond-in-the-River, below the Middle Dam. He was accompanied by Mr. Joseph Loy, of the same place. Mr. Curtis has fished the Rangeleys for many years, and his record of trout is a remarkable one. I believe that he is a long time patron of the FOREST AND STREAM, and he is certainly a true angler.

Boston, May 10.—There are reports of good black bass fishing in Lake Cobbosseecontee, some four or five miles from Gardiner, Me., and one or two Boston parties are there, or have started. Mr. John H. Lord, of Springfield, is in Gardiner for the summer. He was accompanied on a bass fishing trip the other day by Warren Whittemore, of that vicinity. They were quartered at Camp Comfort. A fine string of bass was taken; about twenty in all. Many of the fish were returned to the water. It is noted by bass fishermen that the fishing is unusually good for so early in the season—a result of the extremely warm weather.

Still the fishermen are starting for the Maine lakes. There are reports of a party of twenty-eight from Boston for Moosehead. But such a report lacks confirmation. It is doubtless the Produce Party, already noted in this paper, that the flourishing newspaper writer has got hold of. The party goes directly to Kineo. It has the use of a private car.

Mr. C. Z. Bassett, of Appleton & Bassett, who has tended to the outfitting of a good many sportsmen this spring, is soon to start on his own annual fishing trip. He will be accompanied by G. N. Smalley and C. W. Chamberlain. Mr. Bassett and Mr. Smalley have fished together for a great many seasons, and they have a record of a couple of trout, weighing in the neighborhood of 5lbs. each, taken with the fly off the rocks, near Billy Soule's camps in Cupsuptic, at a time when every other fisherman seemed to think that trolling was the only thing to do. This year they will stop at Billy's for a while, and doubtless go to Kenebago and the other lakes.

Mr. Eugene Lynch, of 24 Broad street, with Mr. M. H. Curley, of 103 State street, is to start on his annual fishing trip to the Upper Dam on June 3. The wives of both gentlemen will accompany them. Mr. Lynch is a fly fisherman altogether. He does not care for trolling, and is willing to return all the small trout to the water. The man who fishes for count is not in good favor with him. Would that there were more sportsmen like him.

Mr. Patrick Kelley, of Cambridge, is to start for the Upper Dam the last of May or the first of June. His friend Bateman hopes to be with him, but he is not yet certain. Mr. Kelley is a fisherman with "considerable paraphernalia," but he is an expert with it. He is a fly fisherman, and one that is willing to work all day for a good rise. Last year he fished in Southern waters, where he was a good deal disgusted with the fish, and still more with the fishermen.

Boston, May 11.—There are reports of "big trout fishing" in some of the brooks in Maine. The unusually warm weather has put the water at the "trouting pitch" earlier than usual. Mr. F. B. Stevens, of the Boston *Globe*, with Dr. Hilton, of Lowell, is planning a trip to some one of the Maine brooks. Dr. Hilton is well known as owner of Hilton's Specific No. 3. There are reports of good fishing in brooks near Portland, Me. Messrs. Boyle and Earnshaw, of this city, took ninety-three trout from Worthly Brook the other day. Sorry that they fished for numbers. Lake Auburn, in Maine, continues to yield some good fishing. A gentleman, who came from Lewiston yesterday, says that Mr. H. H. Hanson, of the Lake Auburn Fish Protective Association, landed fifteen trout and a salmon from the waters of that lake on Wednesday. Another party were fishing on the lake the same day. They secured a trout weighing over 2lbs. and a landlocked salmon of 3¼lbs. weight. It must be remembered that this fishing is all the result of restocking; the fishing there having completely "played out" a few years ago.

One of the most noted of Boston fishing parties to the Rangeley Lakes is about ready to start. In this party are Mr. Edwin U. Curtis, Mayor of Boston; Col. Horace T. Rockwell, E. B. Haskell, C. H. Andrews, Henry A. Priest and Wm. T. Cushman. Col. Rockwell has pioneered this fishing party for a great many seasons. Mr. Haskell and Mr. Andrews are senior partners and founders of the Boston *Herald*. The gentlemen of the party are nearly all members of the Oquossoc Angling Association, but Mr. Haskell and Mr. Andrews also own their private camp on the east shore of Mooselucmaguntic. This party is now waiting for the return of Mr. Haskell from a journey in the Old World, where he has been with his son. He is daily expected. In this party are some of the senior anglers of Boston, and followers of the Gentle Izaak, who go afishing each season for the good they gain out of it.

SPECIAL.

BOSTON, May 11.—A letter just received from Harry Pierce, of the King and Bartlett preserves, states that the ice left the lake on May 6. He presents quite a remarkable weather record for that region, adding that the thermometer registered 90°, but a strong breeze made it pleasant and comfortable. He is building a large new family camp, which will soon be finished, and is already engaged for a party of eight, headed by Mr. Sanger, of Boston. Mr. Henry O. Stanley, Commissioner of Inland Fisheries of Maine, has just shipped a large lot of fresh-water smelt spawn to stock the lakes at King and Bartlett. Mr. Pierce also says that he expects to start in a few days with John Vilas in search of a new pond about the size of Horseshoe Pond, which Mr. Vilas discovered last winter while running lines for the Coburn heirs. It is only about 1½ miles from Horseshoe, and has never been fished to any one's knowledge. If it proves to be as productive as expected, Mr. Pierce will build a bark camp there at once for summer use, and run a trail to it.

Mr. C. F. Dowse, of the big Boston hardware house of Bigelow & Dowse, left on Monday last (May 13) for Billy Soule's camps at Indian Rock, Me. He will spend some time there enjoying the fishing and taking a well-earned rest.

Mr. A. A. Sargent, of Haverhill, Mass., will leave in a few days on a fishing trip to the Rangeleys. This gentleman has a camp near Haines's Landing, called Camp Haverhill. He has made an annual trip to this region for thirty-five successive years, and there are not many New England anglers who have so vivid a recollection of the early days at Rangeley as Mr. Sargent. His son, Mr. H. C. Sargent, has inherited the father's love for the sport, and rarely misses the spring fishing at Camp Haverhill.

Mr. J. Otis Wardwell, ex-chairman of the Republican State Committee, has just returned from a few days' fishing near Alton Bay, N. H. He fished the brooks in that vicinity, and his record for the trip was 118 nice brook trout. The party with him had good luck at Lake Winnepesaukee, and caught one landlocked salmon weighing 6lbs., the first one, I am told, that has been landed in that lake.

Mr. Moses R. Emerson, New England manager for the Home Insurance Co. of New York, in company with the president of the company, from New York, has left Boston for a two weeks' trip after trout in New Hampshire. They will enter the woods from Colebrook, N. H., near which are located a number of good ponds. For fifteen continuous years these two gentlemen have fished together, a record which leaves no doubt as to congenial companionship.

One of the best game and fish preserves to be found in the East is that of the Laurentian Club. The territory controlled by this organization lies in Canada about 120 miles northeast of Montreal. It is reached from that city by way of Three Rivers and branch of Canadian Pacific to Grandes Piles station. The club was organized in 1885, and the district originally leased or purchased extended for two miles north on the St. Maurice River, and was about ten miles wide. In 1893 and 1894 they added the Castor-Noir-Wessonneau and Pabelogenaug waters, which, added to the original grant, placed under their control about 400 square miles of as good fishing country as can be found anywhere. There are about thirty lakes on the preserve and innumerable streams, in which are found an abundance of gray trout, speckled trout, black bass, muscallonge and pickerel. Deer, bear, caribou and many game birds afford the shooter excellent sport in the open season. The main camps of the club are located at Lake La Peche, where they also have a good-sized farm. Good camps and boats are provided at all the principal lakes, and trails are cut through to most of the points of interest. It is the intention of the members to place a fish hatchery at Edouard Lake to supply these waters with salmon. When that is done very little will remain to make the Laurentian Preserve a paradise for sportsmen. Every facility is afforded for the enjoyment of members and their guests, and any one who is fortunate enough to spend a few weeks with rod and gun in this interesting country is certain to treasure it up as a pleasant reminiscence. The club membership is limited to 300. Their rolls now contain about 250, mostly living (I am informed) in New York, with a good sprinkling from New England and Canada.

E. S. Boss, Eugene Atwood and J. M. Reed, of Willimantic, Conn., and Q. A. Atwood, of Boston, have just returned from Sebec Lake, Maine, where they have had excellent luck salmon fishing. This trip only whetted their appetite for more, and at least two of the party intend leaving for Rangeley at once to try the trout fishing.

Dan Hole Pond, situated a few miles from Ossipee, N. H., promises to become quite famous among Eastern fisherman for its landlocked salmon. This little sheet of water up among the hills was stocked with salmon a number of years ago. The fish grew to large size and used to run up the brooks to spawn, where the natives used to spear them. This practice was stopped by a law enacted by the Legislature and since then more attention has been paid to fishing the pond in a legitimate manner. Very few, if any, were caught until last season, when Joseph Murphy, the actor of "Kerry Gow" fame, succeeded in landing a few lusty specimens. This started the ball rolling, and many efforts were made during the balance of the season to duplicate Mr. Murphy's work, with varying success. This year a number of good fishermen used to salmon trolling have visited the place and as far as I can learn all have done well. One gentleman captured a string of eleven fish (all salmon) weighing 104lbs., and Dan Hole can now be classed among the more prominent places in New England for salmon.

W. S. Johnson and James A. Nichols, of Putnam, Conn., stopped off in Boston only long enough to replenish their stock of fishing tackle en route to Grand Lake, Me. They will be gone about ten days and will stop at Thomas Calligan's.

Dr. Heber Bishop, John W. Duncklee, Myron W. Whitney and others leave next Friday for a two week's trip to the Megantic Preserve. Dr. Bishop is one of the best posted men in the club on the resources of this region for sport and those who accompany him are assured of a good time in advance.

A letter received from Boardman Hunt, of Greenfield, N. S., states that fly fishing at Indian Gardens on the Liverpool River was excellent during the first part of May. The warm days coming so soon after the ice went out brought the trout to the surface in a hurry.

An acquaintance, who has spent much time in Newfoundland, describes the resources of that country for sportsmen in language that would fire the heart of any man who loves the rod and gun. He says the country actually abounds with trout, and during the open season has seen boys endeavoring to sell them to passengers on the train at a price per dozen so low that I dare not mention it. Fifty miles from St. John, at Salmonier, he had some very fine grilse fishing. The run of salmon had not begun, but he was promised the very best of sport a little later. From there he went to Placentia Bay, where he had some splendid sea trout fishing. There is good fishing to be had very near St. John, and he also mentions the Terra Nova River country in highest terms. Considering that one can reach St. John within three days from Boston, it is surprising that more Eastern sportsmen do not take the trip. There are points in the Maine wilderness which require two or three days to reach, so that Newfoundland, although further away, is quite accessible.

The Megantic Club have just published an illustrated and descriptive report in pamphlet form, containing 96 pages, which will be of great use to members and guests while on the preserve. It contains a description of all the different camps, giving distances from point to point, the names of all the different waters, a list of guides, routes, rates of fares, board, etc.; in fact, everything of interest. A number of handsome illustrations grace its pages, and the book is decidedly a credit to the club. HACKLE.

LAKE SUPERIOR "ROCK TROUT."

ATLANTA, April 29.—*Editor Forest and Stream:* In FOREST AND STREAM of April 20, '95, Mr. Hough, in speaking of the elegant little booklet issued by the C. & N. W. Ry., quotes the following passage: "There is in Lake Superior a species of fish called rock trout, which are similar in appearance to brook trout but grow to much larger size. The smaller ones are often shipped as brook trout," etc. I had read that passage in the booklet and wondered, with Mr. Hough, what sort of fish was meant.

The residents along the shores of Lake Superior on the Keweenaw Peninsula (the upper peninsula of Michigan) catch, in the autumn, many large trout which they call reef trout. They are taken in gillnets and pound nets, and about Sept. 25, they begin to take the trolling spoon when trolling for them along the reefs, near the surface. Hence reef trout. The residents there consider them a distinct fish from the lake trout (*Salvelinus namaycush*), but in reality they are one and the same. They have the peculiar high color of a trout in a gravid state, quite different from that of the lake trout in summer. The fins, part of the head and sometimes the entire belly are a bright crimson, giving them almost as brilliant an appearance as a brook trout. With these highly colored lake trout there will be taken (in the nets) other lake trout whose appearance does not differ from those taken during the summer in, say, Lake Keuka, N. Y. With them are also taken a few very large brook trout, the true *fontinalis*. He would have to be a tyro in the fish business who could not instantly distinguish the highly colored lake trout from the brook trout. There is no resemblance between them, except that both look like trout. I have tried to convince the residents there that the reef trout is the lake trout, but they insist they are distinct species. It is possible that the rock trout spoken of in the C. & N. W. booklet is this reef trout.

[I fear I can throw little light on the identification of the "rock trout" of Lake Superior except by stating that only the lake trout, siscowet and brook trout are native to its waters as far as known. If the "rock trout" is similar in appearance to the brook trout it probably has red spots and a square tail. The other two species (if they really can be called distinct species) have large pale spots and a forked tail.

Lake trout run into many varieties and have received many names. The earliest eggs taken in the fall are obtained from the so-called "shoal trout" which is merely the *namaycush* with shore-spawning or reef-spawning habits.—T. H. BEAN.]

SALMON CHAT.—V.

IN my last chat I think we had our fish fast, and supposed to be foul hooked (*i. e.*, hook caught outside, not in mouth) from his actions; our canoe is holding its ground against the current by the guides, the fish directly opposite goes to bottom, either on a sulking fit or he don't yet realize anything wrong (I opine a fish is not susceptible to a hook or wound). At once drop your canoe fair below the fish, put on him all the strain your rod or tackle will bear. It is just possible he may hold five minutes; one or less may suffice.

Now he is off with a rush, away across the river and up stream; away he goes faster yet. Paddle, boys, paddle; follow the line across and up. The idea and properly so is to prevent if possible the great extra strain the line must carry when across the strong current. When your line is in this position and the fish at the end of 100yds. of line leaps clear of the water (as common), the quick extra strain against the current is almost sure to release the fish, either by tearing out the hook hold or breaking the leader. Now, your men can't paddle one-third as fast as your fish is going. You have 100yds. of line out, the reel now revolving more rapidly than ever. "Oh! will he never stop? Paddle, boys!" This, if you can speak, is all you can say.

Ah, here he is! Up he comes fine; it may be 2, 3 or 5ft., turning a somersault. Perhaps he may come on top of the water slashing it with his tail in his anger; take a run to the opposite side of the stream; perhaps away straight up with another leap. Such a fish will soon exhaust himself. Or he may go to bottom to rest, or to try to release the nasty thing holding him by rubbing. All you can do in such cases is to follow; keep as close as possible; never give him an inch of slack line or ease. Fight him from the start. No armistice. Don't hold him up against the current; that is only resting him. Get below him. Give him butt (strain your tackle all it will bear). Remember, the hotter the war, the sooner the fight will end.

Hello, our fish is gone, line all slack! "Now reel up; down stream with canoe, boys; I fear he is gone." Now look well how you are putting that line on the reel. Don't look at the water. Guide it properly. Many a good fish is lost by an overlap hurriedly reeling up. At last you feel something. The fish is going down river as fast as you are. Probably he feels your check; turns like a flash, and is away up again at a 2:40 gait.

"Check, boys." They are watching, and if bottom with pole can be had will soon follow. After running 60 or 80yds. or more he finds the drag of the line heavy, and tries bottom for a rest. It won't do. Between your strain on him and the current also he must move on. The great secret to kill is to keep your fish moving.

Now the fish makes shorter runs, you can check him very soon. In fifteen minutes or less you should be able to lead him. Make him follow toward shore. He may take a few extra yards on a run or two as he finds himself gradually coming toward shore; but you have mastered him, and he should be your fish, unless the hold of the hook gives out. As you are aware, every pull and jerk the fish gives is weakening and extending that portion of the mouth which the hook holds.

Select deep water, if possible, at the shore or bank where you intend landing your fish. If water is shoal he will fight wickedly before coming in. At last we can sight him as we quietly work toward the shore. Try now and lift his head up. While dropping your point to the water take all the slack line in you can get. Hold your reel and lift on the rod. See, he comes. Don't like it. Makes a little run. Just what we want. Make him do it again. Keep him at it. Now, if the river bank is fairly good you can step out. In any case, have the canoe handy to follow, if needed. But you should hold a fish at this stage of exhaustion and turn him after a 30 or 40-yard run, if he does get so far as that. Such a run will advance your interests more than his, and you can bring him probably to gaff on his return. Your gaffer may stoop down perhaps in a foot or more of water nearly in front of you. Your fish, when he comes within a few feet of shore turns to go out; but you are now able to hold him from doing so, and he will fight to get his head out. Your strain upon him stops that, consequently he swims parallel with the shore. When he gets a yard or two above or below the gaffer, you can turn him about, coming closer to shore every turn, at last coming inside of the gaff hook. A quick draw is made, and our first fish is caught. In gaffing a fish I always run out the gaff, resting it on the bottom, it having an 8ft. handle. The fish will soon lead so as to come over or rather inside of the gaff hook, and if not caught it is the gaffer's fault. Some follow the fish along shore and when they think it within reach strike over the top of the fish. Often the result of this mode is a broken leader and a lost fish.

"One point,—in landing your fish, never have too short a line; always have two, three or more yards clear of your cast; keep back a little from the water, so that, if necessary, you can give line if needed by stepping toward your fish a yard or two. I have seen on some rods 18ft. casts; they, however, were not for novices. I use a very fine linen line with 80ft. of heavy silk spliced for casting with. The finer the line the less resistance it has in the current. A heavy long line getting across a strong current is the principal reason why so many salmon are lost."

As to gaffing I prefer to do it from the boat or canoe, only if the gaffer don't know how, better not try, as the rod may go down one side of the canoe and up on the other. The easiest mode to do it (if you have a good smooth pebbly shore with room behind to walk back) is, when you have got your fish under control, so you can lead him and get him well in sight, to drop your point, hold your reel, and race back. If your tackle is good as it should be, you will find your fish, his length or more, on the shore. The point is to take him so rapidly he can't turn. To do this you need a leader to stand a good 10lbs. pull.

I. MOWAT.

TROUT FISHING AT NIGHT.

IN over-fished waters trout may be more chary or fewer in number. I hate to write about the voracious rascals. Often, when a salmon smolt or parr will take your salmon fly, and you are drawing the little fellow in to give him a chance to go and grow bigger, a rascally 2lbs. trout will grab him, sure to kill him and often get caught himself. Our small red squirrel is fond of the water. Often you will see him crossing the river with his tail up over his back. Woe be to him, though, if a large trout should spy him. Down he would go like a flash.

In our river there are many places where the refuse of the lumbermen, supplemented by fallen trees undermined by the water, make lodgments on the heads of islands and other places, nearly always having a good depth of water under the debris. All anglers know just what such a spot means in a river where trout are plenty. Here they lie during the day. They are out, though, when night comes, prowling close to shore. Woe be to a mouse after a drink of water; in fact, if you draw an artificial one past one of those places, you are sure of a big fellow. Probably a half-dozen will chase the trout you have hooked! Take an imitation grasshopper and walk along shore, drawing it within a foot or two of the shore. No difference how dark it may be, you can catch them here on our river until satiated.

Better sport, though, you may find. Locate a salmon lay. There are such spots. You may have had him show himself to your fly, perhaps in your morning and evening fishing. Mark the spot well so that you can place your canoe just right for a nice drop over his lay. Take a light-colored fly, either a miller or a silver doctor; a pure white wing with a silver body is good. I have taken fish with all three of those flies after 11 o'clock. Of course you run the risk of losing leader and fish if you rise him and hook, but I tell you the fight is grand. The uncertainty of what is coming is worth half a dozen of hooks and lines.

Trout! Bah! I hate the look of one, a ravenous brute (although not bad for the pan). JOHN MOWAT.

DEEP-WATER TARPON FISHING.

MR. E. VOM HOFE, who has just returned from his annual Florida fishing trip, reports that he has brought to a successful termination experiments for catching tarpon in deep water, and that he will bring out tackle next season that will enable the fisherman to duplicate his success. Mr. vom Hofe fished in tidal passes where the current ran all the way from three to five miles an hour, and at various depths ranging up to 28ft. In such waters the tarpon is at its best and invariably makes a gamy fight, for it has plenty of sea room and a strong current in its favor. The angler who brings one to gaff under such circumstances may well be proud of his skill.

Mr. vom Hofe's party consisted of Joseph Mitchell, of Kansas City; Wm. Hazlewood, of Brooklyn, and Joseph Fredricks, of New York. They chartered a schooner from Ball Brothers, of Tampa, and cruised south from Punta Gorda. Their supplies were sent direct from New York. They fished two days at Peace River, where Mr. Hazlewood took a fish weighing 84lbs. Then they worked down the coast by Punta Rossa, St. Carlos Pass and Little Marco, fishing at the two latter places without success. They took the inside course to Big Marco Pass, where they found tarpon in great numbers. At this point they fished in company with the Snyder and St. Clair party, of Kansas City. At Big Marco Mr. St. Clair hung a fish March 29 that weighed 135lbs., and the same day Mr. vom Hofe caught two, one weighing 106 and the other 86lbs.

Two days later Mr. vom Hofe caught another weighing 110lbs. As Mr. Mitchell had a hundred-pound fish to his credit, this made the record for the party five tarpon. This record was increased to six a few days later at Myers, where Mr. Fredricks had the luck to secure a fish weighing 135lbs. Later the party put in three days' fishing at Captiva Pass, where Mr. vom Hofe hung four fish and Mr. Fredricks two, all of which, however, were lost.

Messrs. Hazlewood and Mitchell had meanwhile gone north. At Captiva the two remaining members of the party had great sport with the king fish, which at times were very plentiful.

The Pennsylvania Fish Protective Association.

A WELL attended meeting of the Pennsylvania Fish Protective Association was held on Saturday evening, May 11, at the rooms, 1020 Arch street, Philadelphia.

The legislative committee submitted a lengthly report, having, according to instructions, again proceeded to Harrisburg to present to the Legislature the several resolutions of the association urging the defeat of the bill legalizing fish baskets in the streams of this commonwealth, and in connection with the Commissioners of Fisheries prevailed upon the Senate committee to withdraw the bill, which they did. With assurance of the success of a similar effort in the House, the result practically destroys any attempt at this inimical legislation this year.

The report of the executive committee announced the following bills as having passed the Senate and before the House: Bill 271. This provides for making penalties mandatory, limits black bass taken to 9in. or over in length, and is an interstate bill, the same having passed both Houses of the New Jersey Legislature and was signed by the Governor of that State.

Bill 268. This bill as amended provides for the appointment of thirty wardens at $300 per year, all at large and under orders of the Fish Commissioners. The original bill asked for thirty wardens at $500 a year; and, as previously reported by the Legislative Committee, it was impossible to secure its passage in that form.

House bill 382 is before the House on second reading; provides for the use of eel pots, a substitute for eel weirs, and not destructive to other fish.

Another bill before the House, reported favorably by the House Committee for second reading, provides for abolishing certain pollution in various streams.

Reported infractions of the fishing laws were considered and referred to the executive committee for investigation.

Suitable resolutions of condolence were presented and adopted at the death of Frederick W. Brown, one of the most active and zealous members of the Association.

Many interesting communications from non-resident members and others were read, containing favorable reports of the early fishing, the success attending the planting of fish and fry, and the general good condition of the same when received from the several hatcheries of the State, a conspicuous feature of this correspondence being universal assurance that the laws regulating their protection would be rigidly enforced.

Many requests for fish wardens have been received, and Warden William Bruce has secured the arrest and conviction of two violators of the laws at Easton, Pa.

Mr. Edw. A. Selliers was elected to the vacancy in the executive committee.

Interesting communications were considered from the Game and Fish Association of Baltimore, and Hon. John L. Sudler, of the Maryland Fish Commission, in regard to a movement inaugurated by the Association to secure their coöperation in having the Maryland laws amended to better provide for the protection of fish in the lower Susquehanna River.

M. G. SELLERS, Sec'y.

PHILADELPHIA.

James River Black Bass.

LYNCHBURG, Va., May 8.—*Editor Forest and Stream:* The catch of bass in the James River here at the city this season has been unusually large; and it is a great shame that there are no State laws protecting these waters above Richmond. Between this point and Richmond, 120 miles, there are no obstructions over which game fish cannot readily pass. The river here is 900ft. wide, and there are no narrower points east of here; it is abundantly supplied with food, has excellent bottom, and if properly protected by the State would be one of the finest fishing waters in the United States. Being a mountain stream and fed by cool spring water, it runs fresh at all seasons of the year. I don't know of a stream in this whole country so badly taken care of and so much abused by the "fish-hogs" as is this same James River. It seems that the members of the Legislature are so afraid of not being re-elected that they are willing to bury themselves in the woods and turn a deaf ear to the appeals of the true lovers of the rod and gun for fish and game protection; and wink at the depredation of the pot-hunter and the net-fisherman, which class seem to be largely in the majority on election day at the county polls. For all this, a great number of fine bass has been taken by hook and line, which goes to show a greater want of good laws well carried out.

F. M. D.

Grayling, Brook and California Trout.

SAGINAW, Mich., May 9.—The Pere Marquette River and Baldwin Creek were years ago stocked with rainbow trout. Ever since we have heard of good, big fellows being taken, but they must be increasing finely, for the first few days after the season opened this year the anglers had great luck. I have heard of a number of these trout having been taken running all the way from 2 to 4lbs. in weight. A party of Detroit fishermen there one day last week got grayling, brook trout and California trout, all out of the same stream, getting ten fine fish of the latter variety.

W. B. M.

New York Game Law.

THE Donaldson game bill passed both houses last week and was sent to the Governor. At the time of going to press it had not yet been signed. It makes these close seasons for the State at large: Deer, Nov. 1 to Aug. 15 inclusive (hounding forbidden except Sept. 10 to Oct. 10); wildfowl, May 1 to Sept. 1; quail, Jan. 1 to Nov. 1 (protected in Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Onondaga, Ontario, Steuben, Cortland and Otsego counties to 1898); woodcock and ruffed grouse (partridge), Jan. 1 to Aug. 15; snipe, plover, etc., May 1 to Sept. 1; meadow lark at all times; Mongolian pheasant to 1897. Fish close seasons: "Trout of any kind," Sept. 1 to April 15, lawful length 6in.; salmon trout, landlocked salmon, Oct. 1 to May 1; black bass, Oswego bass, except May 30 to Dec 31 inclusive (in Lake George except Aug. 1 to Dec. 31); pickerel, pike, wall-eyed pike, Feb. 1 to May 1. Lawful length of bass, 8in. Muskallonge, March 1 to May 30; salmon, Aug. 15 to March 10. Long Island close seasons: Wildfowl, May 1 to Sept. 30; snipe, plover, etc., Jan 1 to June 30; woodcock, Jan. 1 to July 31; ruffed grouse, partridges, Jan. 1 to Oct. 30. Fish—Trout, except March 29 to Aug. 31; salmon trout, landlocked salmon, except April 1 to Sept. 30; black bass, except May 30 to Dec. 31. Deer, protected for two years; hares, rabbits, except Nov. 1 to Dec. 31; black and gray squirrels, except Nov. 1 to Dec. 31.

Salmon Fishing For Sale.

FREEHOLD, on the best fishing waters of the Southwest Miramichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York City.—*Adv.*

Fishculture.

Michigan Fisheries.

THE eleventh biennial report of the Michigan State Board of Fish Commissioners has been put in the hands of the printer, and will soon be distributed for the benefit of the public. Advance sheets containing a vast amount of interesting matter on the subject of fish propagation by artificial methods enables us to present to readers of FOREST AND STREAM information in regard to the operations of the Commission and the results of their labors. The volume also contains the results of a biological examination of Lake St. Clair, undertaken for the State Board of Fish Commissioners in the summer of 1893 under the supervision of J. E. Reighard, comprising sixty pages, including valuable maps and statistical tables.

The report upon the commercial fisheries is especially interesting, and states that as early as 1885 the work of gathering statistics relating to the commercial fisheries was begun. The work of gathering the statistics has been done by the agent for the past three years, and familiarity with the work, gained by experience, gives to this work greater value than if it had been done by different individuals. The principal fish to receive attention in the artificial propagation are the whitefish, lake trout, wall-eyed pike, black bass, brook trout and rainbow trout. The only plants of the latter were in Baldwin's Creek, Lake county, in 1893, and in Big Creek, Crawford county, and Pere Marquette River, Newaygo county, in 1894, the total being 21,000 in two years. Of whitefish in the two years there were planted 290,900, and there were placed in the waters of Detroit River, Lake St. Clair, Lake Michigan, Saginaw Bay, Straits of Mackinaw, Lake Huron, Sault St. Marie River, Lake Erie, Lake Superior and some of the smaller waters within the State. Of brook trout plants 2,741,000 were made in 1893 and 2,853,000 in 1894; these were distributed well over the State in all streams which were regarded as suitable for the purpose, nearly every county in the State coming in for a share. Of brown trout plants 444,000 were made in 1893 and about 350,000 in 1894. Of lake trout about 585,000 were planted in the two years. Of wall-eyed pike about 35,500,000. Of carp about 8,250 and of black bass about 53,500 in 1894, the first year it has been extensively tried.

The overseer of Cascade Springs Station, C. F. Holt, says of this experiment: "Late in the spring of 1893 we decided to find some suitable place where could be carried on operations for the artificial propagation of black bass. We believed that with a small outlay of money experiments might be made to determine the practicability of hatching the black bass for stocking on inland lakes, and if these operations were successful we should be justified in entering upon that work in the near future upon a scale sufficient to meet the wants of the State for this fish. We wished to find some suitable water in which the parent fish could be held under domestication, and a place where suitable ponds might be constructed in which to hold them." * * * Cascade Springs in Kent county was selected as offering advantages greater than any other locality examined. A beginning was made with 250 small-mouthed black bass in the fall of 1893, which wintered well in the ponds, with no loss. Early in May, 1894, a close surveillance of the fish in the ponds was begun, in order to be able to take the ova as soon as the spawning period arrived. This supervision extended over a period of several weeks, and during this time several hundred eggs were taken and fertilized. The result of the season's operation demonstrated that the artificial propagation of the black bass promises to become successful and important. Over 50,000 fry of the small-mouthed black bass were hatched at this station in 1894 and distributed in the inland lakes of Allegan, Barry, Berrien, Calhoun, Cass, Charleroix, Eaton, Emmet, Grand Traverse, Jackson, Kent, Oakland, Otsego and Washtenaw counties. The probabilities are that there will be several hundred thousand distributed each season. Certainly no other branch of the new work of the board in recent years is calculated to meet the public demand more fully than this.

At the Paris Station, in Mecosta county, the principal work of hatching trout is carried on. There are raised at this station brook trout, rainbow trout and the brown trout of Europe. The culture of trout calls for a different class of operations than those used in connection with the hatching of whitefish and pike-perch. The ova of the whitefish is taken from the wild fish, and with favorable conditions and an ample supply of parent fish, a sufficient quantity of fry can be obtained each season. But with the brook trout and the other varieties of trout named a different state of affairs obtains, and the stock fish needed for trout work must be obtained from parent fish held under domestication throughout the entire year.

From 10,000 to 12,000 adult brook trout are carried in the ponds from which the eggs are taken for the hatchery, and the output of the brook trout for the last two years has been in 1893, 2,626,000, and in 1894, 2,788,000. The hatchery at Sault Ste. Marie Station produces both whitefish and brook trout; its capacity is 30,000,000 whitefish and 500,000 brook trout. A large addition to this hatchery was completed in 1894, and will give a further capacity of 40,000,000 whitefish and sufficient brook trout to supply the upper peninsular streams for many years.

At Glenwood the culture of carp is carried on. This is not a popular fish with our people; it is coarse, strong and vastly inferior to all of our native fish. Just why it should be propagated is a mystery unless it is intended as a medium for cleaning out the ponds and small lakes of other fish and all the aquatic vegetation that flourishes in them. It is justly entitled to the name given to it in Germany, the "hog-fish"—for no porker loves to "root" in the mud better than a carp.

Charleroix is the seat of the largest salmon trout fisheries now conducted upon the lakes. The time has arrived, the commissioners say, when the artificial breeding of salmon trout should be entered upon by the State, and no more convenient point could be selected for the purpose than this. The salmon trout is only second to the whitefish in importance of the commercial fish of the lakes, and it is hoped that the work will be begun at once.

The whitefish hatching operations for the past four years have assumed such large proportions that it has been found impossible even with the aid of two cars in constant service to get the young fish into the great lakes soon enough to prevent considerable loss by overcrowding in the tanks at the Detroit hatchery.

These fish lose their food sac in from ten to fifteen days after they are hatched, and should be liberated in the great lakes, where they might find their natural food before that period terminates.

The report makes interesting statements relative to the stocking of the streams of the State with brook trout, brown trout and rainbow trout. In the Lower Peninsula, where until within recent years the stocking has been principally done, the trout plants have been phenomenally successful. Streams in more than fifty counties in the State have been successfully planted, and in every instance where the waters have been suitable and the fish properly planted the success has been unqualified. The full measure of this success can be more adequately appreciated when it is known that before the introduction of the artificial propagation of the fish none of the streams of the Lower Peninsula, with the possible exception of one or two small river basins, contained brook trout. By a careful and liberal stocking of these waters with fry this has all been changed, and now it can be said that nearly all these streams rank with any of the country in the superior trout fishing they afford. It has been a commonly accepted notion that brook trout will not thrive in many of the streams of the Lower Peninsula because of the latitude in which they lie, and the height to which the temperatare rises in many of these waters. But the abundance and size of the artificially bred trout in the streams of Calhoun, Barry, Kalamazoo and other counties in the southern portion of the State have upset this theory. The natural condition of these streams is such that the fish take kindly to their new environments. Nearly all the streams in Michigan which are fed from spring water sources are filled with the natural food of the trout, such as the caddis, fresh-water shrimp and other crustacea. A valuable chapter on the Lake Erie food fish is a feature of the report, and presents a statement of facts and figures which leaves no doubt that the present system of pound and gill net fishing is a vicious and utterly destructive one. The cause of the enormous decrease in the number of fish caught seems to be "due to the systematic efforts of the net fishermen to get the greatest amount of fish possible regardless of future consequences."

The pound netters with their inside nets catch great numbers of the small fry not large enough for food, and in Sandusky alone, a year ago, it has been stated, thousands of tons of these small fish were ground up for fertilizers. Then the gill netters cover the entire lake, going across from one side to the other. These with their powerful tugs and immense nets intercept the fish and break them up into groups, which are practically valueless so far as spawning is concerned. The commissioners recommend that the present session of the Legislature authorize the imposing of a license fee upon all nets which may hereafter be fished in the great lakes and their connecting waters, and that the fund so obtained from licenses shall be used in the propagation of food fish, by the Board of Commissioners, for stocking the great lakes of this State. The achievements up to date, by this Board of Fish Commissioners, are notable examples of what can be accomplished by intelligent and persistent efforts in the right direction, and no praise can be too great to bestow upon the glorious peninsular State for work already accomplished and the encouraging outlook for the future. KENKA.

DETROIT, April 27.

New York Aquarium.

THE questions prepared by the Civil Service Commission for applicants for the post of Superintendent of the New York Aquarium were these:

1. What is the object of an aquarium?
2. When and by whom was the first fresh-water aquarium on the compensating principle established?
3. When and where was the first public aquarium opened?
4. How can the aquarium aid scientific research?
5. How should an aquarium be decorated?
6. How should aquarium accounts be kept?
7. What experience have you had in aquarium management?
8. What experience have you had in general administration duties?
9. What is the strength of glass?
10. Name the constituents of a good aquarium cement.
11. Describe the methods of circulating water in the "reservoir system" employed in many aquaria.
12. What materials are used for sea-water pumps and pipes?
13. How is the alkali of some cements in aquaria rendered harmless?
14. How can salt water in the New York aquarium be kept suitably warm in winter and cool in summer?
15. How is water filtered for the aquarium?
16. Describe the methods of aeration in aquaria.
17. What is the composition of sea water?
18. To what are the saline and bitter tastes of sea water due?
19. What ranges of temperature are found in the salt water off Battery Park approximately?
20. What salt can be used in solution for making up the waste of natural sea water?
21. When does sea water retain most oxygen?
22. What is the cause of the yellowish discoloration of sea water in spring and summer?
23. How many pounds of sea water can be contained in a tank 6ft. long, 5ft. wide and 3ft. deep?
24. How thick should the glass be in a tank of the above dimensions?
25. With 1ft. head how much water will flow through a 1in. pipe, 1ft. long, in one minute?
26. With 9ft. head how much water will flow through a 1in. pipe, 100ft. long, in one minute?
27. What advantage have shallow tanks and pools over deep ones for fresh-water animals?
28. How should daylight be admitted into an aquarium?
29. What are the best aquarium plants?
30. Name some hardy aquarium animals.
31. What marine fishes will live in fresh water?
32. Name some fishes that will spawn in aquaria.
33. How should living fish and other animals be transported?
34. When and how can the eggs of the *Salmonidæ* be safely transported?
35. Name the fishes of the salmon family and state their natural distribution.
36. Name the North American fishes of the cod family and state their distribution.
37. Describe the method of taking, shipping and hatching eggs of the shad.
38. What uncommon kinds of fishes can be found in coast waters of New York and New Jersey?
39. What are the principal families of fishes represented in fresh waters of New York?
40. Can salmon be raised in the aquarium?
41. How and what are sea anemones fed?
42. What is the treatment of fish affected by fungus or parasites?
43. Will fungus attack healthy fish?
44. What parasite has been especially fatal to trout and other fresh-water fish, and how may it be destroyed?
45. What foods are used for aquarium animals?
46. Has your experience been with large or small aquaria?
47. Have you had experience in transporting fish for long distances?
48. State how you propose to secure specimens for the aquarium if appointed superintendent.
49. What varieties of fresh-water fish thrive best is captivity?
50. What varieties of salt-water fish thrive best in captivity?
51. What varieties, either fresh or salt water, will not live in captivity?
52. Will the shad live in captivity?
53. What conditions are necessary for the whitefish of the great lakes to live in captivity?

53a. Explain your method of taking away injurious matter thrown off by fish in respiration.

54. What system will you have for aerating the water in tanks?
55. What system of filtration have you adopted?
56. Will you vary the temperature of the water in your tanks to conform with the habits of different fishes?
57. What average temperature is required for the trout family?
58. Will the natural temperature of New York Bay, salt water, suit the fishes of the Gulf of Mexico or fishes whose habitat is north of Cape Cod?
59. Do you believe that the water in tanks should be constantly changed, or that its purity should be dependent on constant aeration?
60. Will you rely in any degree upon vegetable growth to purify the water in your tanks?

Game and Fish Protection.

Hawn vs. Hawn.

Editor Forest and Stream:

The Fisheries and Forestry Commission is beginning early to show its control by politicians. No game and fish protector in the State has shown greater fidelity and efficiency than Harrison Hawn; he has for a long time had the full confidence of the friends of protection throughout central New York, and they, without reference to political lines, petitioned and prayed for his reappointment; and at the first meeting of the Commission he was reappointed. But he was a Democrat! So at the next meeting his appointment was revoked, and his brother, Spencer Hawn, a Republican, appointed in his place. There is not a true protectionist in central New York, Republican or Democrat, who indorses the appointment. More than this, there is not one who does not believe that the cause of protection in this locality has received a severe blow by the change; that one of the most serious consequences will be the reopening of Oneida Lake to a multitude of seines, the undoing of the excellent work which has been done.

It is discouraging to men who work and spend their money for the propagation and protection of fish to see the State itself opposing their efforts and wasting the large appropriations which are made for a good purpose, but really prostituted to politics.

A majority of the present Commission was selected by Thomas C. Platt weeks before the law authorizing its appointment was passed. It was intended that it should have political force, the needs of protection being a wholly secondary matter. President Davis was appointed at the request of Lieut. Gov. Saxton solely because of his political influence; he has never been known as having the slightest acquaintance with the work which he is appointed to perform at an annual salary of $5,000. Commissioner Weed was recommended by ex-Senator Miller. He is a lumberman and is to have special charge of forest preservation.

It is not too much to say that the Commission is unfortunately constituted if there was any desire in the making of it to have it popular with the friends of protection. They had hoped for better things, and still hope that politics shall not bury its work out of sight, but at the same time fear that such will be the case.

The appointment of Mr. Cheney as fishculturist and Mr. Annin assistant, are worthy of strong commendation; their work will be faithfully and well performed, that of propagation, but with little or no protection propagation cannot accomplish much. But let us wait and see what we shall see. H.

SYRACUSE, May 10.

Michigan Laws Enforced.

DETROIT, Mich., May 7.—When it was announced, at the time of the appointment of Mr. Osborne, of Sault Ste. Marie, as State Game and Fish Warden, that there would be a rigorous enforcement of the game and fish laws, and prompt prosecution of any violations thereof, there was a strong conviction in the minds of those who know Mr. Osborn that this was no idle claim. Results have justified this conviction. From the State Game Warden's report for the month of April, it appears that there were fifty-five arrests and forty-two convictions; ten cases were continued for further hearing, and in one the jury disagreed. Out of the whole number there were but two acquittals, while the amounts collected in fines and costs was $507.35.

Ten of the arrests were for violation of the game laws, and forty-five for violation of the fish laws. This seems to be the kind of prosecution that prosecutes, and if there is any virtue in the application of the provisions of the law for the punishment of evil-doers, we ought to see some benefit upon this excellent enforcement of these laws. There is no doubt that it is badly needed in Michigan, and even now fishermen who ought to have more regard for the decencies, let alone the majesty, of the law, boldly assert that they will fish with nets when and how they please, regardless of game and fish laws or the wardens. Well, they would do wisely if they obeyed the old German's advice and "look a leedle oudt alreddy." F. H.

Ontario Game Laws.

BELLEVILLE, April 29.—The following amendments were made to the Game Law at the last session of the Legislature:

The prohibition against killing or taking moose, elk, reindeer and caribou has been extended five years longer, namely, until November 1, 1900.

The open season for deer has been changed. It is limited to the first fifteen days of November.

The limit as to number of ducks that one person may kill in a season has been abolished.

Sportsmen from the United States who pay the $25 license will be, so far as the power of the Legislature extends, allowed to take home with them the two deer each which they are allowed by law to kill. The Dominion authorities, however, control the export of game, and the law at present forbids it.

The Deputy Game Wardens have been given power to act as constables.

Mr. Edward Tinsley, of Hamilton, has been appointed Chief Game Warden for the province. R. S. B.

That Maine Game Law Bungle.

AUGUSTA, Me., May 4.—*Editor Forest and Stream:* In your last issue you seem to have considerable misgiving regarding the manner the Legislature framed their game laws. Without question, the law relating to close time on partridges could have been worded better. Still the effect would, I have no doubt, have been the same. As the law reads, "between the first days of December and September twentieth," it must mean and be so construed, between the first day of December, for the "first days" of December can be none other than the two days commencings the month. I have no fear as to the construction the court would put upon it if the question comes before them.

Under the head of "Another Bungle" you refer to the "moose law," which says that "forfeits not less than one hundred dollars and be imprisoned thirty days." The penalty is, "forfeits not less than one hundred nor more than three hundred dollars"—"and be imprisoned thirty days." If the word "shall" had been used as suggested, it would have been imprisonment at the discretion of the court—"shall'

and "may" meaning the same in law. May it not be possible that the "Maine Solons" have fixed the law so that imprisonment *must* be a part of the penalty? In the first instance the law reads, "between the first days of December and September," and in amending the "s" was not dropped from the word "days," still we have no fear of the result; if the two days commencing December are not the "first days" of that month, pray tell us why not.

We like your paper very much and get great help from it, but let me whisper to you "not to advise your friends to try to get round the penalties for violation of the laws referred to by trying the issue before the courts of Maine."

E. C. FARRINGTON.

[It is not worth while quibbling about this. The language of the new law is slovenly and the construction ambiguous. It should be neither.]

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

Nov. 28.—U. S. F. T. Club Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

A. K. C. MEETING.

THE regular quarterly meeting of the Executive Committee of the American Kennel Club was held on May 9, at 55 Liberty street.

There were present E. M. Oldham (American Spaniel Club), H. H. Hunnewell, Jr., Dr. H. T. Foote and A. C. Wilmerding (Association Fanciers), L. A. Burritt (Boston Terrier Club), E. Willard Roby (Bulldog Club), Geo. Jarvis (Pointer Club of America), G. E. Sears (Danbury Agricultural Society), James B. Blossom (Gordon Setter Club), C. F. R. Drake (Mascoutah Kennel Club), Edw. Brooks (New England Kennel Club), E. H. Morris (N. J. Kennel League), James Watson (So. Cal. Kennel Club), T. H. Terry (Westminster Kennel Club).

The minutes of the previous meeting were accepted. The secretary-treasurer's reports were read and accepted. There is a balance of $1,645.78. Eight clubs were reported in arrears. They were given to July 1 to pay dues or to be dropped. The case of Morris vs. Preston was referred back to the Advisory Committee. The Springside Kennels' protest in the matter of special prizes at Boston was disallowed. The secretary was instructed to prepare resolutions on the death of the late E. Bardoe Elliott. An investigation was ordered in the matter of the alleged act of the Netherwood Farm Kennels in substituting a dog for a bitch in the puppy class at the Hempstead Farm Show. John Jarvis was suspended for giving a fraudulent beagle pedigree. Carried, that a proviso be added to Sec. 1, Rule 14, as follows: "The stipulation calling for 500 entries does not apply to shows held west of 110° west longitude." In regard to organizations which are non-members the regulations now read as follows: "Any club or association, a member of or licensed by the American Kennel Club," etc. Notice was given of an amendment to the constitution, by which all amendments of which thirty days' notice is given can be carried by the votes of the delegates present at the meeting when the amendments are voted upon; this was owing to the failure of many delegates to vote by mail.

Notice also was given of an amendment that a motion would be made at the next meeting to stop the cropping of ears, the date not to be later than Jan. 1, 1896. The club desires an expression of opinion of members on the same. The advisability of corresponding with the Pacific Kennel Clubs, with the view of appointing a committee of club representatives to investigate cases in their territory and forward their conclusions to the A. K. C., was suggested. This was in consequence of the difficulty the club encountered in handling Pacific Coast cases direct. Prefixes and affixes can be used without further registration. The matter of Boston terrier pedigrees was disposed of in a general way as follows: Wins prior to the recognition of any breed are not to be recognized as qualification for registration.

The American Scottish Terrier Club was admitted to membership. The credentials of Clifford Wood, delegate of the Great Dane Club; Geo. Jarvis, Pointer Club, and Dr. A. F. Stahl, English Bloodhound Club, were accepted. E. R. Hollander, Madison, N. J., was granted the prefix Randolph.

Mr. T. H. Terry made an informal explanation in behalf of the Westminster Kennel Club, in respect to Mr. James Taylor's charge in the *Stock-Keeper*, after his return to England. In substance Mr. Terry stated that, in attempting to refer to the judge's book used by Mr. Taylor, which is the official record of the club in the matter of his awards, it was found that Mr. Taylor had taken it with him to England, although he had been requested not to do so. It was noticed that he was using the club's book both for recording his awards and making his personal memoranda for his report. Mr. Terry further stated that when it came to the club's knowledge that the Messrs. Woodiwiss' dogs had been judged and given prizes, it was decided that the awards could not stand for the reason that the dogs mentioned were ineligible under the club's Rule I., which reads: "No dogs will be received before Monday, Feb. 18, or after 8 A. M. Tuesday, Feb. 19." To have permitted the awards to stand would have been a bad precedent, for any exhibitor who was late from any cause would have that precedent to refer to. But the club wished to treat with every courtesy the strangers who had come so far, and it decided to give their winning dogs extra prizes. The ineligibility of the Messrs. Woodiwiss' dogs was the sole reason for the change.

Mr. Taylor's version, published in the *Stock-Keeper* (May 8) on his return to England, is as follows: "Collies were judged and placed in the order as appears in our prize list. The executive committee afterward altered the awards in certain classes." The generous action of the club in making extra awards and thus doubling its prize list in that connection, for no reason other than a kind feeling for the visitors, is given an entirely different construction by Mr. Taylor's insufficient statement or too much statement, as the case may be. He implies an unwarranted meddling with the awards. The Messrs. Woodiwiss preferred a piece of plate to the money won, and it will be sent to them.

POINTS AND FLUSHES.

Registrations and Disqualifications.

Under this captain I made some comments on a recent ruling of the A. K. C., in FOREST AND STREAM of April 13.

By way of reply, Mr. James Watson has done me the distinguished honor of devoting over a column of space in the *Kennel News*, which reply seems to be from a misapprehension of the issue, inasmuch as he struggles not so much to prove that the A. K. C.'s interpretation of its laws in this instance is correct, as that I do not know much about the matter; or, to be more precise, that I have "very little knowledge of the subjects and customs attending rulings of a similar nature in sporting domains."

In respect to that remark, I will concede that ignorance of the "subjects and customs," etc., which he has in mind, is cause for just reproach, considering the many times that Mr. Watson has referred to the Jockey Club's rulings for precedent and argument in A. K. C. affairs in years past. They are not new "subjects," etc.

But I had considered that the A. K. C. had laws and rules of its own; that it had not recognized the doings of a jockey club or rowing association as a substitute for its own rules of action; and that it had common sense and force of character enough without borrowing ideas from others. I believe so now.

Mr. Watson does not in his uncompromising zeal—a zeal which, on the affirmative side of A. K. C. matters now, is only equaled by his zeal on the negative side prior to his sudden acrobatic flop of recent memory—take the trouble to show that the jockey club rulings are wise ones for the A. K. C. to adopt, and good also for the dog interests of the country. There may be such a difference in the *personnel*, industrial and financial interests, nature and support of the competitions, and fancy, that what is good for the Jockey Club might not be equally good for the A. K. C., or *vice versa*.

He has been pleased, in his gracious and sprightly manner, to garble what I wrote, whereof I make no complaint, since to garble the matter is an admission of inability to deal with it successfully as it rightly stood.

That the reader may have a correct understanding of the contention, I will quote the subject matter, which was a query and reply in the March number of the *American Kennel Gazette*, as follows:

O. P. H., Boston, Mass.—If I purchase a dog from a man who has been disqualified, and the pedigree is a straight one, can I have the dog registered? I have heard that registrations as above have been refused, and would like to know positively, as I have an opportunity to get a great bargain.

Answer.—A dog transferred by gift or sale, by a disqualified person, subsequent to his or her disqualification, cannot be registered. Rule XVII., Rules Governing Clubs, and Rule XXIII., Rules Governing Dog Shows, both provide that "The disqualification of an owner shall apply to all dogs owned by him." At a meeting of the club held Feb. 23, 1893, it was "Resolved, that the secretary be directed to refuse the privileges of the Stud Book to all persons under the penalties of suspension or disqualification."

In this connection Mr. Watson says:

I suppose it will be news to Mr. Waters to know that this rule is exactly that of the Jockey Club, and that Mr. Shields, who was disqualified for inexplicable running of his horse Logan last July at Brighton Beach, could not sell one of his horses because the club refused applications sent in by *bona fide* buyers asking that they be allowed to enter them at licensed tracks. It was not until his own reinstatement last December that Mr. Shields had the penalty removed from his horses.

Frankly, I will confess that it is news to me, as I believe it will be to many others, that "this rule is exactly that of the Jockey Club," etc. Here is the case of Mr. Shields:

"The stewards of the Jockey Club, after a thorough investigation of the evidence submitted to them by the stewards of the Brighton Beach Racing Association respecting the running of the horse Logan on July 23, and after hearing the evidence of Alexander Shields in his own behalf, find that he has violated Section 5 of Rule 161 of the Rules of Racing, and in accordance therewith he is hereby ruled off, and the stewards call attention of all owners and racing associations to Rule 163."

Now the Jockey Club rules specifically define what is a misdemeanor and its punishment. Section 5 of Rule 161 reads as follows:

(V.) If any person be guilty of, or shall conspire with any other person for the commission of, or shall connive at any other person being guilty of any other corrupt or fraudulent practice in relation to racing in this or any other country;

Every person so offending shall be ruled off.

To show the two rules which are "exactly" alike, it may the better show the likeness claimed with such cocksureness by Mr. Watson if they are run in parallel columns, thus:

Exactly Alike.

A. K. C. Rules.	*Jockey Club Rules.*
The disqualification of an owner shall apply to all dogs owned by him. Resolved, that the secretary be directed to refuse the privileges of the Stud Book to all persons under the penalties of suspension or disqualification.	When a person is ruled off, and so long as his exclusion continues, he shall not be qualified, whether acting as agent or otherwise, to subscribe for or enter or to run any horse for any race, either in his own name or that of any other person, and any horse of which he is the nominator, or is *or was* at the time of entry wholly or partly the owner, or which after one month from his exclusion shall be proved to the satisfaction of the stewards to be, or to have been directly or indirectly, under his care, training, management or superintendence, shall be disqualified.

Here is a specific statement, in the Jockey Club rules, of every phase of the disqualification of the owner and *horse*. The rule covers more than the mere matter of ownership, for it is far more explicit than the A. K. C. rule; it mentions also "care, training, management or superintendence."

It will also be noted that the Jockey Club's rule applies to entering the horse in a competition and not to matters of registration, wherein again they are exactly unlike. The Jockey Club's law is clear, specific and mandatory; the A. K. C's interpretation is largely constructive if not forced.

The case which Mr. Watson cites, accepts and advocates as a precedent is here set forth in full. His precedent is irrelevant and immaterial. The Jockey Club rule sharply states the penalty to the man and the penalty to the horse. The A. K. C. rules do not do so fully concerning the dog. He has made an awkward attempt to prove his case.

Concerning the query and reply hereinbefore mentioned Mr. Watson says:

To support this the *Gazette* quoted two rules as follows: "The disqualification of an owner shall apply to all dogs owned by him," and "the secretary be directed to refuse the privileges of the Stud Book to all persons under the penalties of suspension or disqualification."

Mr. Waters starts off by saying that the last citation is unnecessary and is not pertinent. This blunder is but the introduction to some of the most extraordinary and illogical reasoning I have read for a long time. If Mr. Waters had held that the first citation was unnecessary there might be something to say on that side, but the refusal to receive entries is only to be based upon the citation Mr. Waters says is irrelevant.

Now what is there in the A. K. C. resolution, "the secretary be directed," etc., which is applicable to the case? The man who wished to purchase the dog was not disqualified. The secretary was "directed to refuse the privileges of the Stud Book to all persons under the penalties of suspension or disqualification." What could be more specific concerning a disqualified man, or more irrelevant when applied to a man who was under *no* penalties?

It is also surely a feeble bolstering of a ruling when a precedent is cited which does not fit the case at all.

Now, "the disqualification of an owner shall apply to all dogs owned by him" certainly does not apply to dogs which are not owned by him. I can readily understand Mr. Watson's flippant, off-hand interpretation that the dogs are disqualified present and future, but he cannot detach the disqualification of the dogs from its limitation, namely, "owned by him." If the dog or dogs are not owned "by him," what then? There is nothing in the law which carries the disqualification over to a new ownership.

The reader will note the specific wording of the Jockey Club's rule, and its direct fitness to the Shields case, and then note the forced construction used in defining the A. K. C. rules to fit the supposed case. One is in harmony with the letter and spirit of the rules, and the other is not.

I trust that Mr. Watson will make a better showing in his next attempt.

Now, a word concerning a bit of fallacy which Mr. Watson attempts to work off as genuine argument. He says:

He then proceeds to say, notwithstanding his admission just quoted, that the rule applying to dogs "is reasonable and proper," that the disqualification of the man was a punishment, but to carry it so far as to interfere with his business, or way of earning a livelihood, is on the borderland of vindictiveness. That is erratic enough in all conscience. We must not imprison a thief or a forger because it will interfere with his business!

The laws of the land define the punishment of a thief or a forger. The laws of the land further guarantee that a man can follow his business without being molested; also that he can live; also several other alsos. An offense against the A. K. C. is not necessarily an offense against society. As fallacy, his remark is irrelevant fallacy.

The Field Trial Outlook.

Prosperity seems to have again favored field trial affairs and their supporters should be correspondingly pleased. The interest in the dog and field trial competition has for a while been narrowed and hampered somewhat by hard times and circumstances, but the interest in itself has not lessened.

The trials this year, in the matter of location and expense, have been arranged with a view to especially favor the attendance of the handlers. Two strong clubs, the Eastern Field Trials Club and the Continental Field Trials Club, will hold their trials at Newton, N. C., the latter club commencing its trials immediately after the close of those of the former club. With such exceptional inducements—good grounds, plenty of birds, good stakes and honor in winning—there are good reasons why these trials should equal if not surpass the best previous events. The United States Field Trials Club will hold its trials at or near Newton, though I think it has not yet definitely determined on grounds. Those will be three trials which the handlers can attend with no more transportation expense than is incidental to one trial. Hotel accommodations are ample, though the matter of rates I think could be improved.

At Morris, Manitoba, two trials, those of the Manitoba and Continental clubs, will be run on chickens, and again the owners and handlers have the advantage of one transportation expense sufficing for two trials, besides the gain which comes from a mutual broadening of the events when two clubs run in conjunction.

Business matters are improving and there should be a corresponding improvement in canine matters. As the hard times go, the interest which they suppressed, freed from the sympathetic stringency, will come again into action.

Hotel Rates.

In this connection it is fit to mention the matter of hotel rates. Last year, at Newton, it was said that the proprietor of the leading hotel was assured that all the field trials party would be satisfied to pay full day rates. Of course, therefore, full day rates were charged; and this in face of the fact that the proprietor had weekly rates. There was thus the sportsman, who loved the dog and the competition, in the anomolous position of paying $14 per week for what the resident guest paid $5 or $6 for, though the nominal weekly rate was $10.

The sportsman's free-handed generosity in money matters seems often to result in gross imposition. At field trials in particular they are often the victims of exorbitant charges. One instance, which occurred last winter at West Point, Miss., was unique. Briefly sketched, it was as follows: Several of the handlers stopped at a private house. Two fires served for all. Two dollars per week was a liberal rate for the fire, but each of the twelve handlers was charged $2 for the same fire, the full charge being $24 per week for two fires. Before the week was quite ended the house was nearly without boarders. This was an exceptional circumstance, it is true, but the same intent to overcharge often crops up in a modified form.

Now, the secretaries of clubs could do much to make reasonable rates for all concerned, and this too with very little effort. Instead of assuring the good landlord that he can charge his utmost, would it not be well to secure

for its patrons the same advantages gladly conceded to dramatic troupes, or conventions, etc.? This is a subject of great importance to those who do not attend for pleasure.

Field Trials in Manitoba.

Under date of May 9, Mr. Thomas Johnson writes me the following interesting information:

"We asked the farmers from whom the Northwestern Field Trials Club had permission to sign the following petition: 'We, the undersigned, owners or occupiers of lands in the vicinity of Morris, grant to the Continental Field Trials Club the privilege of running their trials over our farms, and that we will not permit any one to shoot or hunt dogs over our lands until after the trials of the Continental Field Trials Club.'

"This petition is already signed by ten of the principal and largest land owners in Morris municipality, quite enough to hold trials on; but so there will not be the slightest chance of the Continental Club being put to any annoyance, I will promise to have enough land secured to hold a half dozen trials.

"I think I have now shown the most pessimistic that, so far as Manitoba is concerned, all difficulties and doubts are removed."

Canadian Customs.

For the information of those who contemplate attending the Continental and Manitoba chicken trials at Morris, it may be timely to mention that, before they can cross the Canadian boundary, American visitors with dogs in charge will have to make satisfactory arrangement with the customs officials. The dogs while in Canada will be in bond, and it will be necessary to furnish a satisfactory bondsman. I presume, though, that Mr. Madison, the secretary, will make all necessary arrangements, so that those who attend will be subjected to no annoyance or trouble on that score.

B. WATERS.

Beagle Trial Glintings.

Editor Forest and Stream:

We are now just about midway between past and coming beagle field trials. Those who have participated will always do so, and those who have not as yet are probably now giving the matter an occasional thought, with a strong tendency toward making calendar for first weeks in November "no business engagements." Then you take a critical look at your dog and say, "Will he be good enough?" or, "I know I can win with him."

At bench shows an exhibitor has one of two objects in view when making his entries. It is either to win the prizes or to dispose of the dog. At field trials but one motive prompts one in making entries, and that is to win. Every dog has a chance at the game, if he has the merit; from my own observation, I will base the statement that, at beagle field trials, the dog who has the merit wins the money. Yet the sport is not altogether devoid of chances and circumstances, as so many phases of merit are known to exist among the beagles.

Some come out and start in their heat with a snap and a dash that keys up one's nerves at once, while another opens more modestly and eyes so many strange figures rather suspiciously.

The judges order "Dogs down," and then all is anxiety for a start. At this stage the question is, "Will he be good enough to-day to win?" Finally, after the first series has been gone through and the judges announce the names and order of running for the second round, then the sport begins in earnest and every point begins to count. I tell you quietly your dog is in it and you do the same for me, and both of us intently trying to pick out the dark (horse) dog. About this time we begin to watch our dog's condition, avoid barb wire fences and draughts and local curs, and other little things that may act as a detriment to our dog's chances to win.

We have reached the end of second round, and now the wind-up among the winners. This particular act has alway been disappointing to spectators, as it will be found that rules and formalities are being carried out, and before you really comprehend it you find yourself in a group facing the judges and their note books, and in another minute up goes your cap, hands and feet in an honest and sincere cheer for the winners.

After a while you quietly light your pipe and say to yourself, "I am very glad I came to the trials, as I now see how it is done and what is wanted, and next year I propose to be right in it."

At the hotel in the evening, after an enjoyable dinner and a cigar, you begin to enter into the real sport by taking part in the discussions to be heard on all sides about breeding "field trial winners." Here is where the bench show winner that is not a hunter is not in it.

One would imagine that, among so many, cards or games, etc., would be indulged in in the evening, but not so. It is hunting rabbits with beagles from the first run the puppy had to the run to death with a pack of twenty couples.

These animated evening discussions are, however, not altogether carried on with parliamentary rules, as you will find that the hounds are frequently called in with horns, whose history is told in many ways and whose music is second in sweetness only to the merry blending of the cry of the eager pack.

When finally the talk and noise have stopped, you are gradually lulled to sleep by the voices of the little hounds dying away in the distance, only to be sharply awakened a few hours hence with the pack in full cry again, and the second day at the trials has begun.

This continues until the last day, when the order is given to break camp and march. This is really the only unpleasant feature of the week's sport.

It is simply wonderful to note the sincere ties of friendship that are created among beagle lovers in a short week at the trials. Strong, matured men actually have been seen to embrace each other at the last moment in saying good-by, and large, honest tears seen trickling down their cheeks.

This is no idle talk, but actual facts, as I have myself witnessed it, and furthermore been personally afflicted.

H. L. KREUDER,
President National Beagle Club of America.

NANUET, N. Y.

Mr. A. MacKenzie Hughes has received an appointment as keeper of the Shelter for Animals, Brooklyn, L. I., a branch shelter in charge of the Society for the Prevention of Cruelty to Animals. He commenced his duties on the 13th inst.

Northwestern Field Trials.

Editor Forest and Stream:

The Continental Field Trials Club, having decided to run their trials at Morris, Manitoba, and some misapprehension existing in reference particularly to Canada custom and game laws, I would like, with your permission, to give what knowledge I possess on the subject, and to try and remove any doubts regarding the many imaginary difficulties that seem to exist in the minds of Mr. Titus and others, as expressed in his letter in your issue of May 4, when he says: "The law passed compelling visiting sportsmen to pay a license of $25 to shoot in the State is having some influence in deterring some from going."

Manitoba's game law says: "No person can shoot prairie chicken between the 1st day of December and the 15th day of September following." The trials take place on the 2d of September, so that the game laws prevent any shooting previous to the trials, and consequently you don't have to pay a license of $25. Mr. Avent and other American trainers, when here, located a few miles from the boundary line dividing Canada from the United States. The Dakota and Minnesota law permitted chicken to be shot, I think, Aug. 15. Anyway, American handlers would take their dogs over the line for a few days' shooting, so their dogs would get accustomed to the gun, etc. The above facts will, I hope, remove any doubts *re* license, etc.

Another difficulty has been mentioned, and while at first this may seem a more serious one, yet at the worst it is only a slight inconvenience, and even that can be easily moved away. I now refer to passing dogs in and out through the Customs Department. The law on the subject says: "Animals can be brought into Canada temporarily free and for a period not exceeding three months, for the purpose of competition for prizes offered by any association."

But a bond shall first be given in accordance with regulations prescribed by the Controller of Customs, with the condition that the full duty, to which such animals would otherwise be liable, shall be paid in case of their sale in Canada, or if not re-exported within the time specified in such bond.

The Northwestern Field Trials Club gave a bond covering all dogs of which handlers sent particulars, but that organization this season being dormant, I have no doubt the Manitoba Field Trials Club will give a similar bond, as all dogs coming in will, no doubt, run in their trials also. If this is not done, the next simplest plan is for the trainer to write to a customs broker at Winnipeg—Mr. S. Handscomb is a reliable one—saying when he expects to arrive and by what route, and also give number and particulars of dogs; that is, breed, sex, color and name of person bringing them in—and he will do the work for a trifle. The customs usually accept the personal bond of the person in charge of the dogs. The following letter shows that the customs authorities are kindly inclined:

"MY DEAR JOHNSON: We shall be pleased to do everything possible toward assisting your American friends, and you might explain to them that they would find little difficulty in clearing their dogs if they would take the trouble to send to you or a broker, at as early a date as possible, the name and full description of each animal to be imported for the field trials.

"They would find it more convenient to have their papers filled up by a customs broker, and I shall tell Handscomb to call on you in this connection.

"W. H. THOMPSON, Chief Clerk."

I think I have shown all the difficulties that exist, and I know that our club and the Manitoba Club, also the farmers in the vicinity of Morris, will do all they know to make the initial trial of the Continental field trial a huge success.

THOS. JOHNSON.

WINNEPEG, May 9.

N. G. C. Meeting.

A MEETING of the National Greyhound Club was held in the Grand Union Hotel, April 26, 8 P. M. A full quorum was present. The following gentlemen were elected members: A. C. Bradbury, Jersey City; R. L. Lee, New York; J. L. Kernochan, Hempstead, L. I.; C. R. Huntley; F. C. Coyne, Huron, S. D.; Mr. Whiting, Minneapolis, Minn., and Mr. Waters, New York city. The meeting was adjourned to Oct. 6, 1895, at 4 P. M., at Huron, S. D. The following is a list of the temporary officers, elected to hold office to Oct. 6, 1895: President, F. C. Coyne; Vice-President, J. L. Kernochan; Secretary, H. W. Huntington; Treasurer, Roger Williams. The chairman appointed Messrs. Roger Williams, J. L. Kernochan and Dr. N. Rowe a committee to redraw the by-laws of the club in accordance with the following plan: Two regular meetings to be held a year, one in Huron and one in New York. Not over one-half the assets of the club available for prizes to be devoted for prizes at either bench shows or coursing meetings. Members to be allowed to vote by proxy at all meetings, and such other concessions to be made as shall carry out the view of the great body of men interested in greyhounds in the United States, so far as they may be expressed directly or indirectly to the committee. On motion the by-laws were suspended and the treasurer was given full power to pass upon all applications for membership in the club without further action on the part of the club. On motion of Mr. Bradbury, it was moved that the chairman appoint a committee of three to see if some arrangement could not be made for an Eastern coursing meeting. Appointed C. F. Lewis, chairman; N. Q. Pope, A. C. Bradbury.

H. W. HUNTINGTON, Sec'y pro tem.

United States Field Trials Club Meeting.

THE board of governers of the United States Field Trials Club met at Louisville, Ky., on May 6 last, Vice-Pres. Norvin C. Harris presiding. A majority of the board were in attendance. Considerable routine business was attended to. Letters from Dr. Rowe, president of the club, were read, stating his views as to the club's future actions in regard to the season's field trials. A number of letters were read by the secretary from prominent owners and handlers in regard to their support of the Indiana field trial, and after considerable discussion by the members of the board a motion was made and seconded to abandon the Indiana field trials. The motion prevailed, Mr. Adams being the only member who voted against the resolution. Mr Adams then moved to abandon the North Carolina event. As the motion was not seconded, the chair declared it lost. Upon resolution, the date of the North Carolina trials was changed from Nov. 28 to Nov. 7, entries to close on June 10 next. Letters were read from the president of the Eastern Field Trial Club, advising the club to hold their meeting at Newton, on the grounds the committee had selected on the opposite side of the town from the Eastern F. T. Club's grounds. The secretary reported that there had been fifteen new members admitted since the last meeting of the board. Mr. J. L. Adams was unanimously elected second vice-president of the club. There being three vacancies on the board of fifteen governers of the club, Mr. T. T. Ashford, Birmingham, Ala., Mr. W. S. Bell, Pittsburg, Pa., and Mr. T. G. Barstow, St. Louis, were elected to fill such vacancies. The secretary reported that he had made arrangements with the owners of the lands at West Point, Miss., upon which the U. S. Club hold their trials, to allow the Southern Club to run their trials upon the same grounds, trials commencing Feb. 2, 1896.

W. B. STAFFORD, Sec'y-Treas.

New Field Trial Rules.

AS THERE is a radical departure in the standard of work as set forth in the rules of the Continental Field Trials Club, it will interest all admirers of the dog and gun to read it. The departure is decidedly for the better. Actual field work is taken for the standard, and the handler's scope is restricted to legitimate handling. Under the title "Instruction to Competitors" is the following: Pointing fur, feather, reptile or scent of game birds, if the judge or judges deem the same excusable, shall not be considered a false point. A dog which points, discovers that it is an error and moves on, shall not be considered as having false pointed; but repetitions of the act shall be considered as lowering the grade of his work. Assisting a dog to determine whether he is on a true or false point shall also lower the grade of the dog's work at the discretion of the judges.

When a dog points, the judge or judges shall not permit the opposing handler to whistle or call his dog in loud tones. If a dog is turned or balked to a harmful extent by the whistle of the opposing handler, such dog shall afterward be run alone.

The number of times a dog points, backs, etc., shall not necessarily give him the preference, but the judge or judges shall consider the quality of the performance rather than the frequency of the occurrence.

The standard of work shall be a well-balanced performance; that is to say, the judge or judges will consider the quality commonly called "bird sense;" the intelligent and useful beating out of the ground within proper limits; the roading and pointing; ability to find; obedience and work to the gun. This is intended to include all the details, such as backing, general training, etc. As to ranging, the judge or judges will consider long, straight-away casts as faulty work, if there are available sections left unworked, and if the casts mentioned are habitual. This shall not apply to a long cast taken intelligently betimes to work out a likely place when the ground is unfavorable near at hand, providing the dog's habitual range is good. Swinging habitually around behind the handler at the end of a cast, working the same ground over repeatedly leaving repeatedly good ground unworked, frittering away time on bare, unpromising ground, running with no purpose of finding, and much looking after the handler are faulty methods of ranging. Continual whistling and assisting on the part of the trainer will also lower the dog's performance. As to obedience, the dog is required to obey with reasonable promptness. Loud or continuous whistling or shouting will seriously impair a dog's standing in the competition. As to pointing, roading and drawing, a distinction will be made between what the dog does himself and what his handler does for him. Coaching and helping a dog in general when he is on the scent of birds will lower the grade of his performance at the discretion of the judge or judges. Where through the marking of birds one handler has succeeded in more points for his dog than his competitors, the judge or judges will consider the merit of the dog independently of his handler's assistance. Working to the gun is of the first consideration. Faults of puppies in this respect may be treated more leniently than similar faults in the aged stakes. It is impossible for the judges to determine which dogs have the best natural qualities and are the best field dogs, but to determine the best natural qualities they must be properly applied.

New Jersey Kennel League.

THE third annual meeting of this club was held at Molter's Hotel, Newark, N. J., May 8, at 8 P. M. The treasurer's report showed a substantial balance on hand, and a still larger amount to come from those members who have not paid dues. The treasurer was requested to send applications to all delinquent members. The committee appointed to report on the prospects for another show being given in the fall reported that the hall, occupied on the former occasion, was not in a satisfactory state for another such exhibition, wherein so many valuable dogs were intrusted to the safe-keeping of the club, but recommended that a show be given if a suitable building could be procured.

The election of officers resulted as follows: President, Miles A. Hanchett, Orange, N. J.; first vice-president, Walter Browe, Newark, N. J.; second vice-president, Dr. E. Guenther; third vice-president, August Halm; treasurer, Frank Linck, Newark; secretary, Edwin H. Morris. Christian Feigenspan was chosen chairman of the executive, with Dr. W. F. Seidler, W. J. Whelan, John Brett, Carl Brandt, Dr. F. W. Thum, Otto Heintz, J. B. Conover and Chris Kirschler as his associates.

Edwin H. Morris was unanimously elected delegate to the American Kennel Club.

It was the sense of the new committee that another show be given, and Messrs. Halm, Linck, Kuebler and Browe were made a committee to endeavor to secure the spacious new building lately erected near the Oranges, and in the fashionable residential part of Newark, and to report at a special general meeting of the members, to be called by the secretary for Monday, June 3, next.

EDWIN H. MORRIS, Sec'y.

Messrs. Bell, Wells and Freeman have been invited to judge the Continental Field Trials Club's trials on quail at Newton, N. C.

The Bull-Terrier Club.

PITTSBURG, Pa.—*Editor Forest and Stream:* In a recent *Kennel News* Mr. James Watson, writing about the Bull-Terrier Club, refers derogatorily to some persons comprising a "gang." As secretary of the club, I should deem it a favor were he to inform me of whom the "gang" consists. Does he refer to the gentlemen breeders, of whom Mr. Dole was considered one, who called the meeting, and upon the motion of whom Mr. Dole was elected president?

As Mr. Watson has kindly offered his friendly criticism on the composition and motives of the organization of the previous bull-terrier clubs, we will forward him at our earliest opportunity a copy of the rules and by-laws of the Bull-Terrier Club of America, and trust that he will oblige us with any further suggestions toward saving it from the untimely fate which he deplores having overtaken its predecessors. From the inside knowledge which his article would indicate he possesses, his suggestions will undoubtedly prove of great value. W. D. BRERETON,

Sec'y Bull-Terrier Club of America.

DOG CHAT.

There is no one who will not regret the serious accident to Mr. A. D. Lewis and his mother and sister. While out driving on the 8th inst in Hempstead, L. I., his horse bolted and the carriage struck a gate post. All were thrown to the ground. Mr. Lewis's leg was broken near the ankle, Mrs. Lewis was severely injured internally and her collar-bone was broken, and Miss Lewis sustained a compound fracture of the right arm.

The Montreal Kennel Association added twenty-six new members to its roll at its meeting on May 7. The special committee reported the receipt of $250 for special prizes. Sir Donald A. Smith, the club's patron, sent in a $100 check, and will be pleased to offer a cup to be placed at the club's discretion. The show will be held on May 31 and June 1. Entry blanks can be obtained of the secretary.

Mr. C. M. Rounds, Elmendorf, Tex., writes us that the field trial winner, Manitoba Frisk, died recently. Manitoba Frisk won the Manitoba Field Trials Club's Derby when but a year old, and afterward in Texas in 1892 won second in the All-Age stake, and in 1893 won first in the same stake, Bexar field trials. Mr. Rounds adds: "He was as near perfect as it is possible for a dog to be, with a disposition that was faithfulness itself. In fact, he was a dog that one meets in a lifetime. He seemed to be afflicted with consumption and gradually wasted away. I never expect to own his equal. Some of the happiest moments of my life have been spent in company with others behind Tobe, as he was called—watching him make his wonderful casts in search of game—and he was somehow always the lucky dog; happened to go right where the birds were. We are all in mourning here at the ranch, where he was the favorite of all."

The Bulldog Club of America announces the opening of its second Produce Stakes, for thoroughbred bull bitches, bred between Jan. 1 and July 1, 1895. The stakes are open to all comers, whether members of the club or not. Fees, $5 for each bitch nominated, $5 for each puppy entered. All arrangements can be made with the secretary, Mr. E. A. Woodward, 60 Wabash avenue, Chicago.

Preparing for the Chicken Trials.

MILWAUKEE, Wis., April 30.—*Editor Forest and Stream:* I have recently returned from San Antonio, Tex., where I spent the greater part of the winter. I was fortunate in having some excellent redhead shooting on the coast, and the bluebills were also very abundant. I called on Mr. Hough in Chicago last week and we had a pleasant time together talking over reminiscences of our Southern trip.

I expect to have some very promising entries of both setters and pointers for the coming trials next fall, and intend to have my dogs in good shape for the Continental trials in September. My dogs are in charge of Thomas Richards, a brother of Frank and George, and he will start for North Dakota early in the summer and begin work. I expect to send up at least eight of my own dogs and will take six outside dogs for gentlemen to be conditioned and broken for field shooting.

We intend locating where the birds are plentiful and also where there is a good water supply. We already have a very desirable location in view, and, from recent reports, it will afford an excellent locality for working our dogs.

I have a very promising Derby pointer entry in a Strideaway ex Hops II. dog pup; two fine pointer bitches by Rip Rap ex Lady Peg she by King of Kent ex Lass of Bloomo. I now own the pointer bitch Lady Peg, she having been placed in last fall's U. S. Derby and All-Age Stake. I have also three very promising puppies for the Derbies by Paul Bo ex Tube Rose.

All my young dogs were taken down with distemper last January, and Richards had a tough time of it, although he did remarkably well in pulling them all through the sickness except two inferior pups, which succumbed to the disease. They are all in excellent health now, and one would not think to look at them that they had been so sick.

RICHARD MERRILL.

An Unfavorable Training Season.

CHARLOTTESVILLE, Va., April 30.—*Editor Forest and Stream:* This has been the most unfavorable training season I ever experienced in the South. The heavy snowstorm that commenced shortly after Christmas was followed by severe frosts and every sort of objectionable weather. On our training grounds several coveys disappeared entirely, which I have good reason for believing was due more to pot hunters shooting the birds on the ground, and scattering others so that they froze to death before they could get together again, than to the severe weather or want of food.

Still, plenty of birds were left for breeding. I was told that very little shooting had been allowed on the old club grounds at Lexington, and that there were plenty of birds left for seed there too.

C. E. MCMURDO.

Brighton Tobe's Pedigree.

CHATHAM, Ont.—*Editor Forest and Stream:* With regard to Brighton Tobe's pedigree, I beg to say I have no desire to injure either the dog or his owners. Before breeding to him I had not his extended pedigree. When I got it, I found the breeding of Hall's Lucy was not given, so I wrote Mr. Davey twice for it; but without reply. I then wrote a friend in Hamilton to see Mr. John Hall, of that place, and find out if he knew anything about her, with the result as given.

The breeding of a public stud dog is public property. Breeders who care for pedigree (and what breeder of any consequence does not?) are entitled to have all the light possible thrown on the pedigrees of such dogs. The breeding of Hall's Lucy does not yet appear to have been clearly ascertained. Perhaps some Toronto sportsman could throw light on the subject.

Mr. Davidson is no doubt right when he says very little was thought of pedigrees in the old days. Those were the days before public trials, when every sportsman owned the best dog in the world, and English, Irish and Gordon were mixed indiscriminately. W. B. WELLS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

C. T. Brownell claims the name Angenett for Gordon setter bitch, whelped Oct. 1, 1894, by Gordon Grouse—Little Girl.

Also the name Star of the East for Gordon setter dog, whelped March 12, 1894, by Murkland Ranger, Jr.—Blossom.

Also the name Ben Butler, Jr., for Gordon setter dog, whelped April 25, 1894, by Tyrus—Magne.

BRED.

Fred. Bredel's dachshund bitch Witch, March 31, to Hundesport's Bergmann.

Rochelle Kennels' black and tan terrier bitch champion Gypsy Girl, April 21, to champion Broomfield Sultan.

S. H. Seaman's dachshund bitch Hexe Arnstadt, March 3, to Unser Fritz.

Dr. H. M. Quimby's English setter bitch Natell II., Feb. 23, to Kent III.

Rochelle Kennels' wire fox-terrier bitch Brittle Brush, March 14, to White Topper.

J. D. Bush's bull bitch Careless, April 4, to King Lud.

G. W. Patterson's St. Bernard bitch Eulalie II., April 9, to champion Melrose King.

Smith Penfield's bull-terrier bitch Pricilla, April 4, to Gully the Great.

Fred. Bredel's dachshund bitch Mirsa IV., March 20, to Diamond Joe.

Dr. H. W. Lincoln's black and tan terrier bitch Broomfield Madge, April 2, to Broomfield Sultan.

John E. Jewett's bull bitch Pathos, March 19, to Webb's Monarch.

John E. Jewett's bull bitch Jane, April 3, to Webb's Monarch.

John E Jewett's Boston terrier bitch Gloriana, April 9, to Pilot.

P. T. Madison's liver and white pointer bitch Hops II., Nov. 4, to Strideaway.

John S. Wise's liver and white pointer bitch Peggy G., Jan. 13, to Strideaway.

Geo. E. Gray's liver and white pointer bitch La Belle, Jan. 7, to Strideaway.

Chas. A. Paetzel's liver and white pointer bitch Clip of Kent, March 13, to Strideaway.

Meadow City Kennels' liver and white bitch Ightfield Teign, Feb. 11, to Strideaway.

Meadow City Kennels' setter bitch Becky Noble, March 7, to Rodfield.

Meadow City Kennels' liver and white bitch Ightfield Dove, Feb. 15, to Ightfield Upton.

Fred. Bredel's dachshund bitch Mirsa IV., March 20, to Hundesport's Bergmann.

WHELPS.

Edward Watts's English setter bitch Breene, April 19, seven (five dogs), by Kent III.

Herbert Bruso's English setter bitch White Lady, May 2, seven (five dogs), by Kent III.

The Horst Kennels' dachshund bitch Red Riding Hood, Feb. 19, four (one dog), by Hundesport's Bergmann.

Rochelle Kennels' wire fox-terrier bitch Brittle Broom, March 28, five (one dog), by White Topper.

Rochelle Kennels' black and tan terrier bitch champion Meersbrook Maiden, March 29, four (two dogs), by champion Broomfield Sultan.

Smith Penfield's bull-terrier bitch Chatham Kit, April 1, six (three dogs), by Ben Caunt.

Edwin A Perry's St. Bernard bitch Lady Anna, March 23, ten (seven dogs), by Counch.

J. F. Stoddard's beagle bitch Standard Perfection, March 27, four (two dogs), by champion Tricotrin.

Standard Kennels' beagle bitch Velvet, March 30, five (three dogs), by champion Tricotrin.

A. E. Guy's fox-terrier bitch Julip, April 20, seven (three dogs), by Hopbloom Dusky.

SALES.

F. F. Dole has sold Bashful Maid, bull-terrier bitch, whelped May 24, 1893, by Streatham Wonder—Merritt, to Smith Penfield.

H. Fred Church has sold Pricella, bull-terrier bitch, by Streatham Wonder—Merritt, to Smith Penfield.

Eberhart Pug Kennels have sold Port Wine, pug dog, whelped July 8, 1893, by Spokane—East Lake Virgie, to F. B. Threadgold.

Eberhart Pug Kennels have sold The Major, fox-terrier dog, to C. B. Adams.

Eberhart Pug Kennels have sold Juliet, pug bitch, whelped Jan. 18, 1894, by Eberhart's Cashier—Cute Lady, to F. B. Threadgold.

J. Danforth Bush has sold a bulldog and bitch puppy, whelped Dec. 2, 1894, by King Lud—Careless, to Frank F. Dole.

Wm. Loeffler has sold Pearl, dachshund bitch, whelped Dec. 8, 1894, by Hundesport's Bergmann—Lina K., to B. Wilhelm.

Else, same litter, to Chas. T. Limberg.

Argyle Kennels have sold Alton II. and Lady Adelaide II., St. Bernards, to Dudley E. Waters. Price, $1,000.

Also a smooth-coated dog puppy, by Alton II.—Judith's Rachel, to Samuel Dodd.

Also a litter brother to E. E. Towle.

Also a litter brother, rough-coated, to Mr. Powers.

Also rough-coated puppy, by Alton II.—Queen, to J. W. McNair.

PRESENTATIONS.

Wm. Loeffler has presented Black Sepp, dachshund dog, whelped Dec. 8, 1894, by Hundesport's Bergmann—Lina K., to Richard Loeffler.

TO GET IN TRAINING for a shoot or a trip, to reduce superfluous flesh, and to put the system in perfect order, try the old and famous French Lick and West Baden Springs of Lower Indiana, reached by the Monon Route. Visited and praised by hundreds of sportsmen. Send for pamphlet and analysis to Frank J. Reed, G. P. A., Monon Route, Chicago.—*Adv.*

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

MAY.

24. Royal St. Lawrence, opening and squadron sail, Montreal.
25. New Rochelle special, cabin cats, New Rochelle, Sound.
25-26. San Francisco cruise to Goat Island.
26. California annual regatta, San Francisco Bay.
26. Williamsburg opening sail, Sound.
30. Atlantic opening race, New York Bay.
30. Harlem annual, Sound.
30. Brooklyn opening, Gravesend Bay.
30. Audubon annual, Hudson River.
30. Cor., San Francisco race, San Francisco Bay.
30. San Francisco cruise, San Francisco Bay.
30. New Jersey annual, Hoboken, New York Bay.
30. Fall River open, Fall River, Mount Hope Bay.
30. South Boston open, South Boston, Boston Harbor.
30. Plymouth opening, Plymouth.
30. Southwork annual, Philadelphia, Delaware River.
30. Cleveland squad sail, Lake Erie.

If the report is true that the new steam yacht Giralda is coming to America this year, American builders will need to look to their laurels, as they have thus far turned out nothing that can compare with her in either speed or appearance. The business of designing and building steam yachts is in about the same condition to-day in America that the building of sailing yachts was in about fifteen years since, and it needs just such a shaking up from a first-class British steam yacht as Madge and Bedouin gave to the old sloops. There may be some American designers who are capable of turning out a large steam yacht of handsome appearance, good accommodation and more than a very moderate speed; but there are none who as yet have done so. The latest and most ambitious attempts in this line have resulted in miserable failures.

A VAGUE story is afloat of a projected Cup defender of 80ft. l.w.l., to be designed and built by Arthur Dyer, designer of the very successful Onawa, for a syndicate. Whatever foundation may exist for the rumor, no such boat will be built this year.

JUBILEE has been hauled out at the Atlantic Works, East Boston, and proves to have sustained no more damage than a slight bending of the fin in the recent rough launching. Her bow plating has been stripped, and the new bow will be hurried as rapidly as possible. The deck will be unchanged, but the bow near the water will be lowered and lengthened, making the waterline between 88 and 89ft., or about 4ft. longer than before. The same spars and sails will be tried when the yacht is again afloat, and in any event no material change will be made in the sail plan. The alteration is anything but a radical one, and will leave Jubilee still well under the limit of 90ft. Where Vigilant will come out is as yet uncertain, as there is now nothing to stop her from shipping more lead and lengthening her waterline should it seem desirable to do so, making her nearly or quite as long as Jubilee. Both will of course receive time from the new defender.

WE have frequently spoken of the absurd practice which maintains in this country of misusing the English term "rater" as synonymous with "racing length;" yachts which if they are in any sense "raters" should be called 2½-raters being termed "25-raters." The new Larchmont class is commonly known as the "34-rater class," regardless of the fact that the big Queen Mab is of but 40-rating. The Larchmont Y. C. has coined a name for the class, "34ft. raters," which is both clumsy and inaccurate.

The words "rating" and "rater" possess each a definite meaning, established by continued use in connection with the rule of the Yacht Racing Association. This original meaning is very different from that attributed in this country, and the further use of the double meaning must result in continued misunderstanding. If American yachtsmen feel that they really must use the English term, then they should be fair and consistent, and adopt the form of rule to which the term properly applies. If they prefer their own form of rule, which there is good reason for their doing, then they should coin some new term that would be exact and distinctive, and prevent all mistakes as to its real meaning.

ON Friday of this week the racing season of the large yachts opens in British waters with the match of the New Thames Y. C., on the Thames. The Royal Thames follows on Saturday; and on Saturday May 25, comes the New Thames match from Southend to Harwich. The Nore to Dover race will be sailed on June 8. Both Britannia and Ailsa will be ready for these races after some alterations made on their return from the Mediterranean.

Modern Construction.

THE following "syndicate" stories from Bristol have appeared in a number of daily papers within the past week. We publish them with no guarantee of their accuracy, but merely as giving some interesting hints on up-to-date racing construction.

BRISTOL, R. I., May 7.—It makes no difference what the yacht costs, is practically what the Vanderbilt-Morgan-Iselin syndicate said to the Herreshoffs when they instructed the latter to design and build a boat to defend successfully the America's Cup against Valkyrie III. As a result, the defender if likely to cost quite a little more than $200,000 rather than anything less at the starting line. Speed is naturally the first and chief requirement. To secure this the boat will carry such a spread of canvas as never before was heard of. To balance this, there must be the greatest possible strength throughout the yacht and greatest possible absence of weight above the waterline. This led to the adoption of the costly aluminum plates at 75 cents per pound for the sides of the yacht above the water line and the use of aluminum deck beams, both of which give the greatest possible strength with the least possible weight.

Precisely the same policy is being carried out in respect to the blocks for the defender, which are not only to be marvels of cost, but are to be far and away the strongest and the lightest ever constructed for any boat of any description, the extremes of each being unprecedented and marvelous. Early in the planning of the yacht Mr. Herreshoff decided that the blocks must not weigh more than one ton, and at the same time they must withstand a strain of anywhere from ten to twenty-eight tons because of the immense spread of canvas which it was designed that the boat should carry and the consequent tremendous strain upon the blocks.

When, however, he presented these specifications to the manufacturers of blocks, with a single exception they held up their hands and cried, "Impossible." Privately they said the great yacht designer must be insane. He simply replied that these were specifications for the defender, and they must be and would be met. The one exception was Edward J. F. Coleman, of the firm of Walter Coleman & Sons, who made blocks for Navahoe and Vigilant which never showed even the suspicion of a strain or weakening. The proposition, it is said, somewhat staggered Mr. Coleman at first, but he had much of the same determination and fondness of overcoming seemingly insurmountable obstacles which characterize Mr. Herreshoff, and after some careful figuring he declared himself prepared to undertake the contract, which was given to the firm soon afterward. To secure these remarkable and altogether unprecedented and supposedly impossible extremes of lightness and strength, no lignum-vitæ will be used in the manufacture of the blocks, which will consist only of steel, bronze and ash. Every block will be strengthened by brass screw wires, run through the two sides of the shell, binding them together, and also through each side of the shell laterally, the latter to prevent their splitting; and tests which have already been made show that this process, patented by Mr. E. J. F. Coleman, will produce blocks which simply cannot even be wedged apart by any strain which it has been possible to subject them to.

The blocks are more than one hundred in number and vary in size from four to fourteen inches in length, and the steel hooks which will be made for use with them are correspondingly larger than any ever before used for such a purpose. The mast preventer runner blocks will be tested by a strain of twenty-two tons, and the throat halyard blocks will be submitted to a test of twenty-eight tons, something that has been said by some boat builders to be simply preposterous; but the policy of the Herreshoffs has been from the very first in every minutest detail to take no chances whatever, and the intention is to have blocks of such strength that by no possibility whatever can any mishap occur in that direction, which it will be remembered was one of the greatest misfortunes of Jubilee two years ago. This matter of strength, however, is almost unimportant in a sense, when it is known what a marvellous gain has been made in the matter of weight by the methods of construction to be employed by the Colemans.

Such blocks as Mr. Herreshoff said that he must have, which should be capable of withstanding a strain varying with the different parts of rigging from ten to twenty-eight tons, if made under ordinary conditions, when the matter of cost was considered at all and the blocks were made by the usual methods, of the usual materials and on the ordinary lines, would weigh not less than five tons, which would render their use on the defender far out of all question. Mr. Herreshoff determined that they must not weigh more than one ton, but the Colemans have agreed that they shall not exceed 1,000 pounds in weight, and it is said would not be surprised if they should succeed in getting them out at 800 or 900 pounds. This will render the blocks of the defender quite as marvellous and unprecedented as any feature of this marvellous yacht, the cost of which is to be equally so, and in this tremendous cost these blocks will figure to no slight degree.

All the blocks made by the Colemans will be tested at their shops up to fifteen tons, but, as they have no machinery for testing above that point, all the others will have to be sent to the United States arsenal, at Watertown, Mass., for the tests. The construction of the blocks has been under way about a week, and they will probably be delivered about June 15.

Despite all reports to the contrary, the halyards will not be run down through metal tubes, through the deck, and then be handled by winches between decks. That scheme will not be carried out, as it has been shown that the winch purchase would be altogether too slow for the purpose, and the scheme is otherwise impracticable. There will, however, be certain marked and exceedingly ingenious innovations in the matter of rigging, upon which Mr. Herreshoff is now at work, and which he has not altogether perfected, which will secure greater facility and convenience and other advantages in the handling of the sails and sheets and halyards. It is also practically settled that the boat will not be steered by tiller, although certain authorities still insist that such will be the case.

Fully ninety-five per cent. of the men that are employed on the defender are of English birth, and, although they are doing a fine piece of work, it is but natural to suppose they have some feeling for their own countrymen and what they are striving to do. What would the Englishmen say if they had to employ Americans to build a challenging yacht? It is to be regretted that the builders of this country are hampered by workmen who, if they have any heart and sympathy at all, must be for their native soil and the efforts of their own people.

Three gangs of riveters are now working on the defender, and great progress is now being made as compared with that of a week ago The men find the aluminum not hard to work. It is, of course, very light to handle and to cut, shear and punch, but it is found that the deck beams are not so easily bent as those of steel or bronze. Not that aluminum is any stiffer than the other metals, but it seems to give up suddenly when pressure is put on it, and sets again in a position beyond that which was expected. This property is one that will soon be learned and the men will be able to handle it as easily and as satisfactorily as steel

Some slight idea of the advantages of using aluminum because of its lightness, as well as its greater cost, may be had from the comparisons given herewith. The cost of the plates of which the defender is built may be better understood by the cost per square foot than by the rate per pound. The thickness of the plates used varies from 9-32 of an inch to 11-32 of an inch. Taking a plate of 10-32 of an inch as the mean, a square foot of steel of that thickness would weigh twelve pounds and a half, and cost about thirty-five cents, or little less than three cents a pound.

An equal size of manganese bronze would weigh about fourteen pounds, and cost at about the rate of sixteen cents a pound, or $2.24.

A plate of aluminum of the same dimensions would weigh about five pounds, or maybe a little less, depending on the amount of added metals to give it the desired strength. As the Herreshoffs have not submitted the bill of the Pittsburg manufacturers for inspection, it is not known what the exact cost of the aluminum plates and deck beams is, but it cannot be less than fifty cents a pound, and is more likely to be seventy-five cents a pound. At the lesser value the plates would cost $2.50 a foot and at the higher $3.75 a foot. We can take our choice between the two extremes.

A glance at the difference of weight of the upper row of plates on the defender when made of aluminum may be seen by the calculations given. The row of plates at the gunwale is 2 feet wide and 270 feet long, all around the ship, counting in the butting pieces, so it has then 540 square feet. Of manganese bronze this row of plates would weigh 540 multiplied by 14, which gives 7,560 pounds. Of steel they would weigh 540 multiplied by 12½, which gives 6,750 pounds; and in the case of aluminum, which is the metal used on the defender, then multiply 540 by 5, which gives 2,700 pounds.

Thus it is seen that the saving in weight is immense, and when the deck beams and other deck work are considered a saving of at least five tons will be made in the high weights of the new yacht. It is a cause of deep regret that aluminum cannot be used for standing rigging and masthead work, but, alas! it is not strong enough, and nothing but the best steel can be used where weights tell enormously, and strength must be had.

The Cup Defender.

From the Boston Globe.

WITH the leading American yacht designer pinning his faith on the keel type of boat, and turning out a narrower and deeper one at that than his British competitors, American yachtsmen who believe in the centerboard and in beam rather than draft may well ask, "Where are we at?" That the defender is a narrower and deeper boat than Ailsa has been certain for some time, and now it is also certain she is narrower and deeper than Valkyrie III. Herreshoff has gone to draft and Fife and Watson to beam. The conclusion which most yachtsmen would draw from the racing of 1893, would be that Fife and Watson had properly appreciated the lesson of international racing, while Herreshoff had not; but the latter is not yet beaten, and until he is, it is not fair to say that in keel boats the type which the defender illustrates may not be the best. The centerboard is out of the argument, and the contest is between the keels.

It is also far from reasonable to say that Herreshoff has gone to Watson in designing the defender, that in taking draft instead of beam he is any way copying past British ideas or diminishing his chances of turning out a winner.

So far as can be learned, the defender has about the beam of Valkyrie II., but at least a foot and a half more draft. This extra draft would alone give her more power, and would enable her to carry a sufficiently greater sail spread to defeat even an improved Valkyrie; but besides this, she is a vastly different boat in model and shape of hull. In place of the rather straight sides, low bilge and comparatively sharp floor and full garboards of Valkyrie II. is found the high bilge, flatter floor and sharply hollowed garboards of the fin keel type, with its canoe form of body. Much useless displacement is done away with, and a faster all-round boat obtained.

This will show that Herreshoff is not copying Watson, but that he has struck out along the lines of speed shown by his small fin-keels, and having also in mind the defects of Navahoe, Colonia and Vigilant. In the shape of her lateral plane alone will the defender resemble Valkyrie II., and this, as has been explained in this column, is due to the fact that such a lateral plane is one eminently better fitted than any other to secure quickness in stays, and that any designer seeking such quality in a yacht must of necessity have a lateral plane of somewhat similar outline.

To put the matter concisely, the defender is a copy of no existing boat, nor even an approach to one. She is an up-to date keel boat in which are embodied what her designer believes to be the best ideas to be obtained from previous keel and fin-keel boats. In the working out of these ideas resemblances should not be taken for copies.

And in this connection it is interesting to note that Watson's ideas of what should be done in the improvement of keel boats, as shown in Valkyrie III., are very close to those of Herreshoff. There are, indeed, differences in beam and draft, but in form of hull and other essentials the designers are working along the same lines. Watson may just as well be accused of copying as Herreshoff, but as a matter of fact both are but embodying the results of their experience.

The best available information of Valkyrie III. shows a beam of about 25ft. and a draft of 17½ to 18, as against a little over 23 in the defender, with a draft of 18½ to 19. But with this comes information of a very similar form of hull to that of the defender, and the adoption by Watson of the fin keel ideas which have shown such speed. Which designer has secured the best proportions of draft and beam time and racing alone will show, but there is nothing discouraging in the mere fact that the American boat is narrower. She will have an easier form to drive because of it, as well as some other advantages, and it should be remembered that she is in no sense a narrower boat except as compared with Vigilant. Probably Colonia's beam would have been deemed the best by many yachtsmen, but the defender is not far away, and too much beam combined with too much draft would be likely to prove a stumbling block.

Another thing which should be counted in the defender's favor is the great saving in weight in her construction. Given boats of equally good model and rig, and the lightest one should win. In this case it is the defender which is the most lightly built.

In sail area the boats will apparently not be far out of the way, both carrying about 1,000ft. more than the Vigilant, which is a much greater increase on Watson's part than on Herreshoff's.

Yachtsmen, as well as deep sea sailors, like to spin yarns, and they are always willing to spin them for the *Globe*. They say in the spinning:

That a scribing board, as used at the Herreshoffs', is a board on which the body plan of a boat is laid down to full size, so that the frames may be bent from the lines shown.

That a scribing board for the defender was built only 25ft wide, so that a beam of 27ft. was a rank impossibility.

That the defender's beam on the scribing board was 23ft. 2in.

That the plan on the scribing board had no load-waterline, so that the draft of the boat could not be told exactly, but could only be estimated from the depth of the boat.

That the draft is believed to be between 18ft. 6in. and 19ft., but that on this, as well as on beam, there is a possibility of mistake, except for those who are in the confidence of the designer.

That, although it is known that there are 72 frames in the boat, spaced 20¼in. on centers, no one not in the confidence of the designer can tell the over-all length of the boat until it is seen whether the stern is finished with a transom, or is extended till plating and deck meet, as in Colonia and the other big ones.

That the chances are that the stern will be extended, and that, in such a case, the Herreshoffs will add one more to the list of non-essential things in which they have fooled the newspaper men.

That, after all, the exact over-all length is not very important, since the boat is certain to have the customary long overhangs.

That the *Globe's* estimate of $200,000 for building and running the defender is more likely to be exceeded than otherwise.

That the question of the wisdom of such expense is still a moot one, but that it will probably result in the successful defense of the cup.

That the dredger now at work at Bristol could keep on dredging until 25 feet of water is had for launching the defender, but that she will not, for the launch will be made on a high course of tides.

That a fairly high course of tides comes from Thursday, June 6, to Monday, June 10, but that another high course does not come until Saturday, June 22.

That every effort will be made to get the defender overboard between the first named dates, in which case there is a fighting chance to save that $1,000 forfeit with its $100 a day aftermath

The past week has been one of great progress on the defender.

Busy indeed have been the platers and riveters. Plate after plate has been put in place and fitted and held there by bolts until the riveters were ready to commence their work. On the underbody the riveters have done considerable work in the past few days, and that part of the boat forward of the sternpost is now covered in and being caulked.

Above the waterline the aluminum plating is being put on. When the plates are fitted they are held in place by nutted bolts. In riveting the workmen use a rivet about ⅝in. in diameter. A particular feature of this rivet is that it is worked cold, and not heated as is the case with the rivets used on the manganese bronze plating. The rivets are also of a reddish color resembling copper, but what the real composition of the metal is could not be ascertained.

The forward section of the boat, near the waterline, is nearly covered with the aluminum plating. The sheer strake is not as yet, and in all probability will not be until the deck beams are all in.

The steel plates which are to be used on each side of the boat at the chainplates were taken from their positions this week, and workmen were busy on the floor of the shop in fitting them and drilling the holes for the rivets that will go through the aluminum plating which will be outside of and cover them. These pieces of steel are about 6ft. in length and nearly 2ft. in width. They will give great strength where it is needed so much and where the strain of the rigging is greatest.

A particular feature in the construction of this boat, and one that has been looked for considerably, is the absence of the sternpiece. This piece is generally set up with the frames, but as yet nothing has showed up in that quarter. This has been a source of trouble to those who have seen the boat to see the shape of her stern, and also to determine whether or not it was to resemble those of the 20-raters Isolde and Niagara, or was to run out like those of Colonia and Vigilant. It has also been a difficult matter to determine her exact length over all owing to this fact.

There is a large force of men now at work on the defender. The increase in wages made by the Herreshoffs to their workmen without being asked for it, has been appreciated by the men and they are doing good work to reciprocate.

Workmen are engaged in punching holes in the aluminum plating. The manganese bronze plating is being rolled so that any dent or other injury might be removed, and the rivet holes are also being punched in that metal.

During the week a large force of workmen have been busy on the aluminum deck beams for the defender. These beams, which were nearly the required lengths when they came from Pittsburg, have been trued up at the shops, and the ends fitted for their places on the boat. The steel braces which are to aid in supporting the lighter metal are being made. During the past few days some of the deck beams have been put in position, and the end of next week will see the greatest part of them in and ready for the deck. No material for the deck has arrived as yet. It is reported that it will be of white pine, 2½in. in thickness.

At the Herreshoffs' marine railway, at Walker's Cove, are hauled out the big spars for the defender. Workmen are busy around them putting them in shape for the new boat. They are being shortened a trifle, and the lower mast when finished will have about 3ft. taken off, which would leave the over-all length of the mast 99ft. With a masthead about 19 to 20ft. in length from hounds to cap, and a length of 9ft. from step to partners, it would give the length from deck to hounds at about 71ft. There will not be a great deal taken from the length of the boom, and it will measure when finished about 100ft.

The big lower mast made for Colonia in 1893 was towed here from Brooklyn on Wednesday last, and has been hauled out with the other spars at Walker's Cove. What is to be done with the big spar could not be learned, but it was thought that it would be used in case of an accident to the new one, being about the same size.

The new mainmast was weighed Friday by Nat Herreshoff, but its weight has not been given out.

Among the spars that came from Boston last week was one which was not rounded off, but was left squared. In the shops yesterday the sparmakers had sawed the stick in two lengthways, and were engaged in hollowing the stick with their adzes. This spar when finished is to be the hollow gaff. It is about 55ft. in length, and is a very handsome stick.

The steam dredge Yankee Notion, from Newport, arrived here on May 9, and on Friday began the work of deepening the harbor in the vicinity of the piers at the Herreshoffs'. There is a hard bottom, which was very apparent when the slip was being dredged for the launching of Colonia and Vigilant. At that time Colonia, which drew 15ft., was launched in about 18ft. of water. It is thought the hard bottom will hinder the work of going very deep, but the dredge made several trips down the bay with her loads of mud from the bottom and returned to fill up again.

The Herreshoffs are to lengthen the ways about 40ft. When the Colonia was launched the ways were lengthened about 70ft., and this addition to them will bring the end of the ways out to about the head of the piers. There will be plenty of water for her to float at that distance from the shops. There is every indication that the defender will be ready to go overboard the first week in June.

At the sail loft at the factory of the National India Rubber Company there are nine men at present at work day and night on the sails for the defender. It is said that the men are working on a suit of sails for the Vigilant. A mainsail has been nearly finished, and the men are working on the headsails of one of the suits. It was reported here to-day that the dimensions of the mainsail would be 65ft. hoist, 54ft. gaff and 95ft. boom.

The dozen coils of rigging which arrived here a short time ago for the defender have not been disturbed since they arrived. Riggers from Billman's of Boston are expected here to prepare the rigging, with Rigger Chase of the Herreshoffs.

Colonia, with Capt. "Hank" Haff and 25 of the defender's crew on board, arrived here last evening from New Rochelle, N. Y., and anchored off the Herreshoffs. She is out for practice for the crew, and is cruising from one place to another along the coast.

Vigilant, which is being fitted out at Tebo's dock, in Brooklyn, is expected here very soon. She will take her new centerboard, which was made at the Herreshoffs', and will also, in all probability, be overhauled some here, as Nat Herreshoff made a visit to her at Brooklyn this week.

The 30-footer for George Owens, Jr., of Boston, is nearly ready to be launched, the hull being finished. The lead bulbs for the fin were run Thursday, and Friday the workmen were engaged in fitting the fin to the hull. She is painted white above the the waterline and a dark green below. The sails and spars for the boat are ready for her as soon as she is overboard.

The mahogany 2½-rater in the north shop is all planked, and was turned over on Friday for her inside and deck work. The moulds for the half-rater for Vice-Com. Rouse, of the Seawanhaka of New York, are ready, and the frames are being bent.

The British 20-Raters.

APROPOS of the two American 20-raters described last week we quote, from the *Sporting and Dramatic News*, the following notes on the British boats of the same class, by Mr. Arthur E. Payne, the well-known designer;

With the 20-raters we shall be treated to very interesting racing, having a dash of the international character about it, such as was last year experienced with the 10-raters on the Clyde. The foreign invader will again hail from the land of the Stars and Stripes, but additional interest and more satisfaction will be felt, as the vessel will be owned by an American, and manned by a crew of the same nationality. To meet Mr. Gould's new "20," which has been named Niagara, we shall have the new 20-rater which Mr. Willie Fife has just been commissioned to design. The boat is being built at the famous Fairlie yard, and by working day and night shifts it is expected that she will be ready for racing before the season is very far advanced. The name of the owner is still a secret.

The other new boat is the Audrey, which has a thoroughbred look and will doubtless prove a fast vessel. Designed by Lord Dunraven, she is the most up-to-date 20-rater yet built in England, being a light displacement boat of the pure fin type. She is about 45 feet on the l. l.w.l. (which is also the published l. w. l. length of the Niagara), and of medium beam; she is fitted with a bronze fin of considerable depth having attached to its lower edge lead bulbs of about three times the weight of the fin itself. The lines of the boat are very sweet, and she looks equal to any speed that can be got out of a 45 feet waterline. She is perhaps a bit too flat in section in the after body for extreme liveliness in light winds, and this is a quality we are likely to see in Niagara, judging from the small raters hitherto imported into the Solent from Yankee land The hull of the Audrey is of extreme lightness, and probably no 20-rater previously built in England would compare with her in that respect. Her planking is of two thicknesses, or perhaps more correctly described as thinnesses of mahogany, and she is stayed and braced together with steel tubing and straps of the same material. She will be in charge of Charlie Bevis, her last year's skipper, and one of the most promising men, who is sure not to spare either time or pains in tuning his charge up to the best possible fighting trim.

Besides Audrey we have figuring in the class the Luna, a splendid performer when the wind pipes up. She is being very carefully prepared for the fray, and her owner, Mr. F. B. Jameson, can be trusted to put her round the buoys in faultless style. Luna is a real good sensible type of boat, and if the Y. R. A. length and S. A. rule could be depended on to continue to produce such racing craft, there would be little need to look out for another. That it would be futile to put such trust in it, however, no one is more convinced than Luna's clever designer, Mr. Willie Fife, Jr. Albert Turner is in charge of Luna, and although hailing from the Colne, is well known and respected in the Solent. Dragon III. is to again swell the ranks, and in the hands of W. Parker and the crew who last year sailed the Deirdre so well will always be there or thereabouts when the winning gun is fired, that is, if there is any strength in the wind Dragon does not require a gale to set her going, but also she is not at her best in a calm. On the calm days we must put our trust in Inyoni, Lord Dudley's 20, which wound up last season in a very successful manner by scooping most of the prizes in the western regattas where the winds happened to blow softly.

The Stephanie is to be at once fitted out for racing, and will be in charge of Lemon Cranfield. She will no doubt make the best of the fleet sit up when she gets a day to her liking. On several occasions last year her big mainsail shoved her to windward in a style that was a bit too good for the best in the class. Although not at all suitable for Clyde racing, Stephanie's "Decima rig" has something to recommend it for Solent work.

At present the vessels mentioned seem to complete the class, as, unless sold, it is unlikely that the Thelma will be fitted out, and the Deirdre will also likely remain high and dry. This will be a great pity, as Deirdre is a great performer in moderate winds, and G. L. Watson's sole representative in the class. Not a bad little lot, however, for Niagara to tackle, and taking one day with another Herreshoff's latest creation will have to be exceptionally good if she is to lead the fleet home. The ball is to open this year on the Thames, when it is hoped that a good muster will be made, but it is rather doubtful if the whole fleet will be under the starters' orders until the Solent matches commence at the Castle Y. C. on June 10.

Larchmont Y. C.

THE Larchmont Y. C. has arranged a very long programme of sport for the summer, which is announced in full as follows:—The trustees announce that the club house will be opened on Saturday, May 25, for the yachting season of 1895. The flag will be formally hoisted and saluted at 4 P. M., on the arrival of the 3.06 train from New York. Other trains leave New York at 1.03, 2.02, 4.08, 4.33, and 5.30 P. M. Members desiring to return to New York the same evening can do so by the 9.00 and 11.20 P. M. trains. Dinner will be served from 6 until 8 o'clock The rules respecting the introduction of visitors will be so far modified on this occasion as to limit each member to the introduction of a single guest. Com. Gillig has appointed Mr. Geo. A. Cormack Fleet Captain.

The programme of the combined cruise with the Atlantic Y. C. is as follows; The squadron will rendezvous at Larchmont, Friday, July 12. A captains' meeting will be held on board the flagship that evening at nine o'clock. Saturday, July 13, squadron will proceed from Larchmont to Black Rock. Sunday, July 14, divine services will be held on board the steam yacht Kanapaha, Rev. Mr. Moore, owner, at ten A. M. After services, squadron will get under way for Morris Cove. Monday, July 15, Morris Cove to New London. Tuesday, July 16, squadron will remain at anchor. Wednesday, July 17, from New London to Shelter Island. Thursday, July 18, squadron will remain at anchor. Friday, July 19.

Gig and Dingey Races at Shelter Island, and further action relative to cruise, to be determined.

FRED'K T. ADAMS,
AUGUSTIN MONROE,
JOHN L. BLISS,
JOHN F. LOVEJOY,
GEORGE A. CORMACK, } Committee.

The Racing Programme is a lenghthy one, as follows:

An invitation to participate in the races of the club is extended to the following yacht clubs: New York, Eastern, Seawanhaka Corinthian, Atlantic, American, Indian Harbor, Riverside, New Rochelle, New Haven, New Bedford, Shelter Island, Horse Shoe Harbor, Corinthian of Marblehead, Hull, Douglaston, and the New York Corinthian Yacht Clubs.

Prizes will be awarded in each class, and when four or more yachts start in any one class, with full intention of completing the course, a second prize will be awarded.

Saturday, June 15.—Spring regatta, open to all classes.

Thursday, July 4.—Annual regatta, open to all classes; Colt cup, open to Class B. of schooners.

Friday, July 12.—Special race for first-class sloops and cutters; special race for schooners for the Drexel cup, presented by Mr. J. R Drexel; special race for 34-raters; special race for 21-footers; rendezvous of the combined squadron at nine o'clock P. M. on board flagship Ramona.

Saturday, July 13.—First race of combined squadron, Larchmont to Black Rock.

Monday, July 15.—Second race of combined squadron, Morris Cove to New London.

Tuesday, July 16.—Special race given by combined squadron for first-class sloops and cutters, off New London.

Wednesday, July 17.—Third race of combined squadron, New London to Shelter Island.

Saturday, Aug. 31.—Special race for 34-raters; special race for 21-footers; special race for cabin cats for cups presented by Mr. F. W. Flint.

Monday, Sept. 2 (Labor Day).—Fall regatta, open to all classes.

Thursday, Sept. 5.—Special race for 34 raters; special race for 21-footers.

Saturday, Sept. 7.—Special race for 34-raters; special race for 21-footers.

Saturday, Sept. 14.—Schooner race for Larchmont cup; special race for 34-raters; special race for 21-footers.

Thursday, Sept. 19.—Special race for 34-raters; special race for 21-footers.

Saturday, Sept. 21.—Schooner race for cup presented by Miss Beach; special race for 34-raters; special race for 21-footers.

The dates selected in September are subject to change should the dates for the trial or America Cup races make such change necessary.

Entry blanks will be mailed upon application at Larchmont Y. C., Larchmont, N. Y., or John F. Lovejoy, Chairman Regatta Committee, Havemeyer Building, New York city.

The Clapham Sharpies in South America.

BUENOS AIRES, April 2.—*Editor Forest and Stream:* In your issue of Feb 9 I notice a description of one of Mr. Thomas Clapham's nonpareil sharpies in which incidental reference is made to a sister yacht sent out to this place some years ago.

As owner of the craft referred to I would like to say that six years' experience enables me to report her an unqualified success in every respect, whether for racing or cruising, and possessing qualities never found combined in one vessel.

In bad weather she faces what no other craft of her size will do, notwithstanding her shallow draft of 22in. (board up), and is, moreover, as dry as a bone, whilst in sailing close hauled, she creeps to windward of any other craft.

She is a sister ship to one built for the late Mr. E. S. Auchincloss, whose courteous report to me foreshadowed the good qualities I am so well able to confirm.

The new boat described seems to be a further improvement in having a leaded keel and somewhat more draft, which will tend to make her stiffer in a sea way.

So recognized here are the excellent qualities of the type that an order is going forward to Mr. Clapham by this mail for working plans and estimates for a similar craft of 45ft. over all, to give sleeping room for six in the cabin and two in the forecastle, and I doubt not she will prove a greater success than my own. GLADYS.

Corinthian Y. C. of Atlantic City.

THE Corinthian Y. C. of Atlantic City at its last meeting on Saturday evening, May 4, took the initiative in yacht club circles by adopting specific rules for the measurement for time allowance for small yachts, and the percentage of allowance for differences in rig.

"Cat-yawls shall be rated at 92 per cent. of their sailing length as compared with cat-rigged yachts and sloops. The sailing length of cats and cat-yawls shall be determined by the square root of the actual sail area, plus the l.w.l. divided by 2, the result being the sailing length."

The Corinthian Y. C. is entirely free from debt and has a gratifying balance of cash in bank. The club has continued to increase in membership, until at present it has 175 names all told on its roll.

The percentages will now be as follows for mixed rig races: Schooners rated 85 per cent. of racing length; yawls, 93 per cent.; cat-yawls, 23 per cent.

YACHTING NEWS NOTES.

The Royal Hamilton Y. C. has arranged the following events for the season: May 24—22 and 27-footers, skiffs and fishing smacks. June 8—22 and 27ft. and skiff classes. June 15—32ft. and 37-42ft. classes. June 22—Cruising handicap, 27-32 and 37-42ft. classes. June 29—Marguerite cup, 27ft. class; Greening cup, 22ft. class. July 1—Queen's cup, 32ft. class and under. July 6—White Wings cup, all classes. July 13—32ft. and 37-42ft classes. July 15 to 20—L. Y. R. A. rendezvous. July 27—22 and 27ft. classes. Aug. 10 or 17—Cruising handicap, 27-32 and 37-42ft. classes. Aug. 24—32ft. and 37-42ft. classes. Sept. 7—22ft., 27ft., skiff and fishing smack classes. Sept. 14—Monck cup, 37-42ft. classes; Lucas cup, 32ft. class. Sept. 21—Cruising handicap, 27-32ft. and 37-42ft. classes.

The Beverly Y. C. will open the season on Buzzard's Bay with a handsome new house, erected at a cost of $3,000, on Wing's Neck.

Zelma, cutter, has been sold by the estate of the late Norman B. Dick to Com. R. A. Lucas, Royal Hamilton Y. C.

Eleanor, steam yacht, was at Nagasaki on May 6.

A special meeting of the Indian Harbor Y. C., to act upon certain amendments to the constitution and racing rules was held at the Arena on May 8. In the absence of the flag officers the senior captain, Mr. F. B. Jones, presided. The amendments to the constitution giving the trustees power to suspend or expel members for non-payment of indebtedness, increasing the number of members of the regatta committee from three to five, and fixing the regular meetings to be held in January and July, were adopted. The racing rules were amended to conform to the changes recommended by the Yacht Racing Union of Long Island Sound. A new rule was adopted that every yacht of 43ft. racing length, except open yachts in shiftable ballast classes, be steered by an amateur. Messrs. Ed. H. Burtis and Chas. E. McManus were appointed members of the regatta committee. It was announced that Aug. 29 had been selected as the date for a race for special classes of small yachts, and that the Tyson cup would probably be offered for the 20ft. racing length class (or 1-raters) to be sailed for on July 1.

The Winchester Arms Co., makers of the Lavigne yacht cannon, have lately had one of these guns returned as unsatisfactory, the cause of complaint being that the gun—a 32in. one—made too much noise; a 24in. gun has been ordered to replace it. The firm is now making two guns for a steam yacht, the understanding being that they will make more noise than the muzzleloaders now used; these latter being loaded half way to the muzzle and kicking all over the deck when fired.

The Douglaston Y. C. held a meeting on May 7 and ratified the action of its delegates in joining the Y. R. U. Com. C. A. Gould will be absent for a time in Europe, but he has offered two cups of $100 each as prizes in the 21ft. class. Mr. F. E. Barnes has also offered a cup for the 34ft. class. The club has decided to offer prizes to the amount of $250 for its ladies' regatta, as well as a prize for the new dinghy class, recently described in the FOREST AND STREAM.

A steam yacht, to be named Laura S., is building for M. J. Steffens, of Chicago, by E. W. Heath, Benton Harbor, to take the place of an older yacht of the same name. She will be 100ft. over all, 76ft. l.w.l., 14ft. beam. The cooking, as well as the lighting, will be done by electricity.

Salmon is the name of the new Dyer boat owned by Mr. W. E. C. Eustis. Mr. H. J. Burton and his son, Ward Burton, were recently at Buzzard's Bay for the purpose of trying the boat. She will make her first appearance in the Fall River Y. C. regatta of May 30.

The Rhode Island Y. C. has announced the following fixtures:—June 22, annual regatta, ladies' day; July 15, annual cup regatta; Aug. 26, annual open regatta.

Free Lance is the name of the steam yacht building from A. Cary Smith's designs at the Crescent Shipyard, Elizabethport, by Lewis Nixon.

Nautilus, cutter, owned by Capt. W. B Dickey, superintendent of the Erie Basin, is fitting out in fine shape, having been scraped and painted white.

Lasca, schr., J. E. Brooks, was at Lisbon on May 6.

Steam Launches.

MARINE IRON WORKS, Chicago, have just issued their 1895 catalogue mailed free.—*Adv.*

Canoeing.

FIXTURES.

MAY.

25. New York, Bensonhurst.
30. New York, Bensonhurst.

JUNE.

15. Red Dragon spring regatta, Delaware River.
15. New York spring regatta, Bensonhurst.
22. New York chal. cup, first trial race.
29. New York chal. cup, second trial race.
29. Marine and Field club annual, Bath Beach.

JULY.

6-20. W. C. A., 10th annual meeting, Ballast Island, Lake Erie.
4. New York chal. cup, International races.

AUGUST.

3-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

14. Red Dragon fall regatta, Delaware River.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'y-Treas., Chas. E. Cragg, Port Henry, New York.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. W. Cutler, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

A SUMMER CRUISE ALONG THE CHESAPEAKE.

BY ABEL BOWEN NORRIS.

ONE morning, as I sat in my office dreamily wondering where I should spend my summer, my thoughts went back to my old home, far down on that western peninsula of Southern Maryland. The old house, still bearing the impress of slavery days, amid fields of fragrant heather and acres of salt marshes, brought to my mind visions of youthful days and the placid memories of early canoe life.

I am still an enthusiastic canoeist, and why should I not spend my summer there, I queried. Its lowlands will live forever in history, and the region is redolent with romance. In my fancy I could see myself as a little boy paddling around the shores of the St. Mary's in search of the wary bait, while straight across the broad Potomac you can look into Virginia and beyond the wooded hills around the mouths of Coan and Yocomico.

I thought, too, of the old mammy in the kitchen, of buckwheat cakes and country sausage, of her voice bawling out in negro dialect:

"Come outen dat pantry, you aurdacious white trash"—to say nothing of the dim visions of "corn pone" and "johnnycake."

I could see the old homestead nestling among the cool trees, its lawns and its gardens, its fruits and its flowers, the perfumes of which were like incense to my tired soul.

With each throb of my pulse my desire grew stronger, for the air without was heavy and the heat oppressive, and I longed to throw aside the cares of the world, the swish and swirl of the great metropolis, steal away and find myself among the cool glades and along the pearly shores of my native heath.

I was rudely awakened from my reverie by a voice saying:

"Hello, old fellow! I am off for the Thousand Islands to-morrow, will you be with us this season?"

"No," I answered.

"Why, I surely counted on you. The meet promises to be unusually large and there will be lots of sport."

"I know it, but I have changed my plans."

"You won't think me presumptuous if I ask why?"

"Certainly not, my dear boy. The fact is I have been nearly all over the world and I haven't seen my old home for years. It occurred to me this morning that I would like to see the old place again,"

"Oh," he said.

"Yes," I continued, "and when I come to think of it, there is no region so glorious for a summer cruise—along the Chesapeake—deep water, a 'Per Coastin,' superb fishing and plenty of oysters. Won't you join me?"

"Nothing would give me greater pleasure, old fellow, but you are too late."

"Ah, well, I too am off to-morrow."

Boarding an express train the next morning, I was soon speeding away South. Precisely at 4 P. M. we ran into the big depot, Sixth street and Pennsylvania avenue, and a welcome voice shouted through the car, "All out for Washington!"

I made close connection with the "Potomac Transportation Co.'s" steamer, which plies between Washington and Norfolk, and at 12 o'clock midnight stepped ashore at Piney Point, the watering place *par excellence* of southern Maryland.

Merry voices and familiar faces were around me. I was nearly home and once more in old St. Mary's—

"That dear old land where the beautiful rivers flow."

As I strode up the board walk to the hotel entrance I could see the tall pines, which abound in this place, and from which the point takes its name, nodding gracefully in the moonlight; and from the lighthouse on the beach a beacon burned strong and bright its cheerful ever welcome glare. I felt a boy again and opened wide my mouth and filled my lungs with the pure, refreshing air.

I did not stay long here, however. I crossed over to the island (St. George's) the next morning and found my old friend Captain C., who greeted me cordially, pottering among his canoes and overhauling his oystering material.

Captain C., or Capt. Eph, as he is euphoniously called by the Islanders, is a character, one of the oldest inhabitants, an authority on local affairs and the richest man in the little community of three hundred souls that comprise the population of St. George's Island. Bluff and hearty, with a handshake to be remembered, a level head for business, and one of the most hospitable men I ever met, as indeed all of these people are whom I had the pleasure of meeting.

There is nothing luxurious around the home of Capt. Eph, but his pungeys, bugeyes and canoes are miracles of beauty and workmanship.

I was soon looking over his splendid fleet, and a large 33 foot "Per Coastin" with tall tapering spars and a spread of sail that would have done credit to a Marblehead yacht, particularly took my fancy. I closed with him at once as to price, and immediately began preparations for my cruise.

All of these canoes are built on the Per Coastin River, in a remote section of Virginia, and about 150 miles from St. George's Island in Maryland, hence the name "Per Coastin." They are built of heart pine, and usually require in construction six trees, which, when hewn out, are joined together so accurately that caulking is never necessary. The freeboard is low and they are sharp at both ends, yet their carrying capacity is great, for I have seen sixty bushels of oysters taken out of my boat. The foot-wide wash boards extend from stem to stern, and the canoe is long and narrow; their lines being exceedingly fine and graceful.

At a casual glance one would think from their extreme length and meager beam the Chesapeake Bay canoes to be cranky. As a fact they are not, for I have often worked to windward with three whole sails while heavy fore-and-aft schooners were reefed down. All sheets are rigged to work aft, and the man at the tiller has absolute control of the boat either to trim or ease sail without leaving his seat.

I had a locker put in forward which extended about 1ft. abaft the foremast, water-tight, in which I stowed my gun, blankets, hammocks, clothing, food, etc., in wet weather, and the one aft contained my fishing tackle, frying-pan, coffee pot, scoop, oyster knife, culling hammer, and the numerous other accessories necessary for such a trip. My small 8ft. oyster nippers I easily placed under the washboard, and the five-gallon water cask was securely fastened between two 150lbs. sand bags just forward of the mainmast, which was ample ballast for me at any time.

I should like to tell of Cherry Fields, my home, which lies between the mouths of St. Mary's and St. George's rivers, of the early pilgrims that sailed up the beautiful St. Mary's, charmed with its placid surface and verdant shores, and founded the second settlement in Maryland, but space does not permit; however, an institution of learning, a church and a seminary for young ladies, endowed by the State and the county of St. Mary's, mark the spot where they landed, and an old decayed mulberry tree is still pointed out to the curious as the spot where, beneath its then luxuriant branches, they held their first service. This beautiful place, with its giant locusts and wavy cedars, overlooking the historic stream, is now a rural cemetery, and many friends of former days are resting, reposing in peaceful sleep, beneath its hallowed ground.

The lamented poet, Kirke White, has painted for us the beauties of memory in these lines:

"Pictured in memory's mellowing glass how sweet
Our infant days, our infant joys to greet;
To roam in fancy each cherished scene,
The village churchyard and the village green;
The woodland walk remote, the woodland glade,
The mossy seat beneath the hawthorn's shade;
The whitewashed cottage where the woodbine grew,
And all the favorite haunts our childhood knew!
How sweet, while all the evil shuns the gaze,
To view th' unclouded skies of former days."

On July 5, after bidding all adieu at Cherry Fields, I sprang aboard the Scud, the name chosen for my canoe, and with my young friend Tom, who had rather fish and cruise than eat, sprited out the foresail and mainsail, ran up the jib, and began working out to the Potomac.

We soon passed the tall spar buoy that marks the end of St. George's Island, and shaping our course due southeast bore away for Point Lookout, the destination for that day's run.

With a free wind, the Scud made fast time; and early in the afternoon we made Cornfield Harbor, ran into the mouth of Point Lookout Creek, an excellent anchorage for canoes, and tied up for the night.

Point Lookout is an historic spot, the extreme portion of Southwestern Maryland, and the bleakest place in all creation with the wind at any quarter. During the war it was the Southern supply station of the Union forces and prison for captured Confederates. Thousands of brave men died here of disease and pestilence for the "lost cause."

At the close of the war the county of St. Mary's purchased a part of the point and re-interred all they could find of both sides, who lay in the horrible trenches. A single granite shaft marks the place now grown with weeds, and the wind sighs dismally through the scraggy pines on the beach as a lonely requiem over the sleep of the brave. Traces of breastworks can be seen, and some of the old barracks still remain; the charred timbers of a hotel destroyed by fire lay half buried in the sand. Out on the point stands the lighthouse, and the Government still uses a long, low building filled with big, red can buoys.

This is all of Point Lookout, once so famous in war, now so still in peace; and that night as I lay in my hammock beneath the southern cross gleaming in a cloudless sky, and the twinkling stars shining brightly, lulled to rest by the gentle surf, I dreamed of cantonments of artillery, the swoop of cavalry, the clanging of the sabres and the last reveille—all stirring some years ago when I was a little boy, but—

The distant crowing of a cock, presumably the light keeper's, and the chirping of birds around caused me to tumble out of my hammock. It was broad daylight, the sun nearly up. I called to Tom to "turn out" and start the fire, while I proceeded to make the coffee and prepare the bacon and eggs. How that early morning breakfast reached the spot! With the keenest of appetites, the nectar of splendid health and the elixir of life, my cheeks began to glow, my limbs grow strong, my whole being filled with pure air, the balmy essence of the spring time of a joyous season. Tom used a tin plate, while I monopolized the frying-pan.

The day promised to be excellent, a moderate breeze blew from the west, which made a lee shore for the western side of the bay, and, desirous of pushing on, we soon had everything stowed and sails sprited. Shoving out into deep water, Tom ran up the jib, and laying our course south by east, we stood for Smith's Point.

This was my first long reach, it being quite twenty-five miles across the mouth of the Potomac to the sandy promontory on the Virginia shore; but with bellying sails and a breeze heeling us delightfully the Scud danced along like a thing of life, gracefully parting the waves from her sharp prow and leaving far behind in her wake the numerous craft bound out.

One big three-masted schooner which we overhauled and passed close to windward hailed us, and the captain being on the quarterdeck with his family, laughingly implored us to take a line and give them a tow, but we merrily waved him adieu with the request to report the Scud, owner aboard, safe and well, as he passed out the Capes. Later in the day, as the breeze freshened, I could see our large friend away to lee'ard, every stitch of canvas drawing, and a big white bone in her mouth, plowing down the ship channel.

As we crossed the Mason and Dixon Line and the sand hills around the tall tower of Smith's Point Lighthouse began to loom up, a big bull porpoise raised to blow 10ft. to windward on our quarter. He was so near I could see the barnacles all over his back, proclaiming him a veteran, and the noise and splash made as he sprang out of the water caused Tom, who was dozing, to spill himself in the bottom of the boat, while I myself was so startled that my pipe, which I was lazily puffing, came near falling overboard.

Tom hastily scrambled to his feet, and with eyes big as saucers blurted out:

"Shades of Neptune! what was that?"

"A big bull porpoise," I said, "a gamy old chap. There he is now," pointing to the water on our starboard quarter 8ft. away.

And sure enough there he was, keeping perfect distance, his majesty skimming along with great ease at an 8-knot gait, not a quiver of his 6-foot body nor the movement of a fin could be seen, and his green eyes seemed to twinkle and say "what fun;" yet when raising to the surface to get air his nose cut the water like a knife. Unlike the shark, they are perfectly harmless, and I have often wondered how they propelled themselves so swiftly through the water, frequently darting in sport across the bows of a speeding steamer with the utmost abandon. We saw many on our cruise, great shoals of them, but none so sporty as this old fellow.

"Well, I'll be dingswiddled," said Tom, "I'll give him a shot."

"Don't," I quickly said, showing a sailor's superstition that a porpoise brought good luck and a breeze, while a shark in the wake of a vessel invariably is the warning of death and disaster. I felt grateful to our fishy friend for his good-natured companionship and was content to let him alone. We finally lost him in crossing the bar of Smith's Point, the water becoming shoal.

(TO BE CONCLUDED NEXT WEEK.)

Rifle Range and Gallery.

Revolver Shooting in England.

AT the North London Rifle Club there are now two shooting days a week. The result of the last two days is below:

April 20.—20yds., stationary target:

Capt Evans	347777—35	Hore	477463—31
Capt Earle	647573—32		

April 24.—Disappearing target, 20yds.

Major Munday	775677—39	MacKormack	664444—28
Comber	774776—38	Capt Earle	745055—26
Carter	676477—37	Lieut Richardson	444545—26
Major Palmer	666465—33	Capt Evans	254255—23
Howe	476465—32		

This score of Major Munday at the disappearing target ought to get into the prize list.

At the South London Rifle Club hardly any one has shot yet in the revolver competitions. Capt. Heath nearly made a highest possible score, but spoiled it at the last shot. Details below:

April 18—20yds., stationary target:

Capt T W Heath	777773—38	E Howe	557756—35

Rapid-Fire Rifle Target.

WE have prepared and can supply targets specially designed by Mr. William Lyman for his rapid-fire system of shooting. They will be sent postpaid, the 25yd. size for 15 cents a dozen; the 50yd. size for 25 cents a dozen. We shall say more about them next week.

Cincinnati Riflemen.

CINCINNATI, O., May 5.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, at the standard target (7 ring black):

Gindele	9	9	10	10	10	7	10	8	8	8—89

D. F. MACDONALD.

Rifle at Haverstraw.

HAVERSTRAW, N. Y., May 7.—The first of a series of weekly tournaments at the Woodvale Rifle Range, of Haverstraw, N. Y., closed on the evening of May 4. The prize, a .22cal. Winchester repeating rifle, was won by Percy Jersey, who scored 23 out of a possible 30. His score was tied by W. D. Lincoln. In the shoot-off Jersey beat Lincoln one point, he making 13 to Lincoln's 12. Conditions of the shoot were as follows: 5 shots, off-hand, distance 12yds., 9-16in. bullseye counting 5, and 22-100in. center counting 6, Creedmoor count.

G. S. MEST.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 15-19.—SAN ANTONIO, Texas.—Ninteenth annual meeting and tournament of the Texas Sportsmen's Association. Open to the world. $500 in cash and $500 in merchandise added to the purses. O. C. Guessaz, Sec'y.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec'y, Kansas City.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $3,000 added to the purses.

May 21-25.—HOUSTON, Texas.—Tournament of the Houston City Gun Club; live birds and targets; open to all amateurs.

May 22-24.—ROME, N. Y.—Annual tournament of the Rome Gun Club; two first day at targets, third day live birds. W. P. Rayland, Sec'y.

May 23.—WAUZEKA, Wis.—Opening shoot of the Wauzeka Gun Club.

May 23-24.—LANCASTER, Pa.—Tournament of the Fairview Gun Club; first day, targets; second day, live birds.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 29-30.—READING, Pa.—Tournament of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

May 29-30.—JANESVILLE, Wis.—Fifth annual shoot of the Janesville Shooting Club; live birds and targets. H. H. McKenney, Sec'y.

May 29-31.—URBANA, Ills.—Annual tournament of the Crystal Lake Gun Club, of Urbana, Ills., $200 added money.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—MOLINE, Ill.—Tournament of the Highland Gun Club.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec'y.

May 30.—ALTOONA, Pa.—All-day shoot of the Altoona Rod and Gun Club at Wopsononock.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual ournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith, Sec'y.

June 13-15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 13-15.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 14.—WORCESTER, Mass.—Seventh and closing tournament of the New England Shooting Association, under the auspices of the Worcester Gun Club.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19-21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26-27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

1896.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Paul R. Litzke, of Little Rock, Ark., writes under date of May 9 as follows: "Please announce in the next issue of your paper, that the Arkansas State Sportsmen's Association will add $300 in cash to the purses at their coming tournament to be held here May 28 to 30. Owing to unavoidable delay caused by some parties neglecting to send in their advertising matter, we have been unable to get the programme out as soon as we expected, but it will positively be out not later than the 11th. This will be the most elaborate programme ever gotten out by the Association, and will contain many items of interest to the sportsman, one of which will be a copy of our game laws. Anyone desiring a copy can obtain the same by sending me their name and address."

Writing to me in regard to the Altoona (Pa.) Rod and Gun Club's tournament, which will be held at Wopsononock on July 10-12, Professor Zeth says: "'Wopsy' is beginning to look quite old-fashioned again, having pretty well recovered from the effects of the winter. The depot shed was blown away by the storm, and the wildcat, foxes, etc., were frozen. Game seems to have been damaged to some extent, but we know of two turkey hens hatching within a short distance from Point Lookout. It was very cold and snowed up there yesterday." The letter was dated May 12, and, among other things, intimated that the first medal shoot of the season "was shot off yesterday." Nice weather for a shoot in the middle of May."

The Baltimore Trap-Shooting Association held a meeting on May 3, and, according to the Baltimore *News*, the following business was transacted: "Mr. H. A. Penrose, the president, was empowered to appoint a tournament, classification and handicap committee, and a committee of six to secure prizes. It was decided that the men using black powder should shoot in squads, thus doing away with any interference with those using nitro powder. Ten-gauge guns were barred in target shooting. It will be the policy of the Association not to accept or make challenges or shoot any team races."

Under date of May 4 Mr. J. Emmett Haney, manager of the Houston (Tex.) City Gun Club tournament, writes as follows: "There is being quite an interest manifested here by local sportsmen, and a great many are joining the gun clubs here in anticipation of the big shoot. We will probably have the biggest attendance ever had at any tournament in the State. Please add to your notice of our shoot that programmes are ready and will be sent to all writing for them. Long life to the FOREST AND STREAM."

The programme for the tournament of the Crystal Lake Gun Club, of Urbana, Ill., is a good one, and has taken a great deal of time and trouble to compile. Cash and merchandise prizes to the value of $400 will be given away during the tournament, which lasts three days, May 29-31. The Crystal Lake Gun Club issues a special invitation to professionals and representatives of sporting goods dealers, and promises a good time to all who attend its tournament.

The programme for the tournament of the Houston City Gun Club, of Houston, Texas, is to hand. The shoot commences on May 21 and lasts four days. The programme for each day consists of six target events and one event at live birds. Merchandise prizes are offered for competition, many of them of considerable value. Mr. J. H. Nason, secretary of the club, will no doubt be glad to furnish any information in regard to the tournament.

Mr. Willard L. Simpson, secretary of the San Antonio (Texas) Gun Club, writes to correct an error in the notice of the Texas State shoot which appeared in the FOREST AND STREAM of May 4. Mr. Simpson states that the tournament will not be held under the auspices of the San Antonio Gun Club, as that organization is not a member of the State Association.

The "circuit" had a great send-off last week, the DuPont tournament at Cincinnati proving a regular corker, both as regards number of shooters and the scores made. If that is a fair sample of what one will meet at Knoxville, Memphis, Cleveland, etc., it's going to be warm work for a short time to come.

Mr. W. F. Brown, secretary of the New England Shooting Association, writes that the "seventh and closing tournament of the New England Shooting Association will take place at Worcester, Mass., Friday, June 14, under the auspices of the Worcester Gun Club."

The next shoot of the New Jersey Trap-Shooters' League will be held at the grounds of the Endeavor Gun Club, Marion, N. J., on Saturday, June 29. Sweepstake shooting will commence at 9:30, the League team race being set for 2 P. M.

Next Tuesday, May 21, there will be a 50-bird race, $25 entrance, birds extra, $50 added, at Frank Class's grounds, Morristown, N. J., Driving Park. Entries must be made to Jas. Timmons or Frank Class before May 18.

And next week it's to be Knoxville. One hundred shooters in line and all previous records smashed! That's what the Knoxville boys said last fall, and it looks as if their prophecy was coming true.

The Home City Gun Club, of Springfield, O., will hold their opening shoot on Decoration Day (May 30), commencing at 9 o'clock A. M. They will offer over twenty prizes and some added money.

The system in the cashier's department at the DuPont tournament appears to have been about perfect, judging from the sample blanks sent me by R. S. Waddell.

Brewer has been doing some very big work lately: 100 straight and 98 out of 100 (two dead out of bounds) is something in the neighborhood of a record.

The Altoona Rod and Gun Club will hold an all-day shoot at Wopsononock on Decoration Day.

EDWARD BANKS.

Programme of the Illinois State Shoot.

THE programme of the Illinois State Sportsmen's Association, which is ready for distribution, commences briefly with the following note: "The convention will be held at the Sherman House on Monday and Tuesday evenings, June 3 and 4, at 8 o'clock. The association's events will be held at Watson's Park, Burnside, Ill., commencing at 10 o'clock A. M., June 3, and continue until programme is completed."

The first State event is the contest for the Board of Trade diamond badge, value $500, entrance $10, 10 live birds per man. Then follows the L. C. Smith cup contest, 20 empires per man, $5 entrance; this cup is emblematic of the individual championship of the State at inanimates. The third event is the four-men team championship, teams to be composed of men who are members of the same club and who are members of the State Association. The prize is a silver trophy, valued at $50. There are, of course, other prizes for second, third and fourth clubs, besides special prizes.

Then follows the programme of the "Open Shoot," described as a "Sweepstakes tournament, open to all." The introductory matter starts as follows:

"The management reserves the right to bar objectionable entries, but no reputable man of any rank or any nationality will be barred. Open tournament is governed by the laws of the Illinois State Sportsmen's Association rules, excepting the position of holding gun, which will be left to choice of shooter. In all contests after the second in the open tournament the moneys will be divided as follows: In seven-bird contests, under twenty entries, 50, 30 and 20 per cent.; over twenty entries, 40, 30, 20 and 10 per cent.; in ten, or more, bird or target contests, under ten entries, 50, 30 and 20 per cent.; ten to twenty entries, 40, 30, 20 and 10 per cent.; over twenty entries, 30, 25, 20, 15 and 10 per cent.

"Dropping for place: Any shooter found dropping for place in any event shall be debarred from all further interest in that event in case of the first offense. Upon detection a second time in a similar offense he shall be ruled off the grounds."

The events in this portion of the tournament number eleven. Of this number, four are at live birds, the other seven being at empire targets.

The trophies presented by Montgomery Ward & Co. are remarkably handsome. The conditions governing these trophies are described as follows: "The conditions of Montgomery Ward & Co.'s diamond trophies for live bird and target contests shall be 15 live birds and 25 targets, the highest scores in 1894 to shoot off with the highest in 1895, to determine ownership, ties to be shot off at 5 birds." The winner of the medal for live birds in 1894 was J. J. Smith, of Evanston, Ill. Dr. H. H. Frothingham, of the Audubon Gun Club, Chicago, won the target trophy. Cuts of the two shooters above-named, together with cuts of Henry Ehlers and W. H. Skinner, appear on page 5 of the programme. Mr. Ehlers won the Board of Trade diamond badge last year, Mr. Skinner carrying off the L. C. Smith cup.

The full text of the Association's rules for live-bird and target-shooting is given in the programme, together with a list of "officers and members of sportsmen's clubs, members of the Illinois State Sportsmen's Association."

From the above review of the programme it will be gathered that the production is as complete as possible. This Association's shoots in the past have been remarkably successful, and this, its twenty-first or "coming of age" tournament, will hardly be likely to fail in any respect. The preparations, which it is promised shall be made, looking to the comfort of the shooters, apparently leave nothing to be desired.

Brewer Kills 98.

MORRISTOWN, N. J., May 8.—Brewer to-day made another great record with his gun, killing 98 out of 100 within bounds, the two that he failed to score dropping dead outside the 50yds. boundary. The match was made for $250 a side, Brewer being backed to kill 95 out of 100; as above stated he won by 3 birds. Some idea of the rapidity with which the match was shot may be gained from the fact that the whole match only took 49 minutes. The first series of 25 was shot in 13 minutes; second series in 12 minutes; third series in 12 minutes, and the last series also in 12 minutes. The wind was fresh and blew strongly directly across the traps; the birds were an excellent lot of flyers, which makes Brewer's work all the more notable. His best kills were made on his 33d, 62d, 92d and 96th birds. Score:

Trap Score Type—Copyright 1895 by Forest and Stream Publishing Co.

The Philadelphians Won.

PHILADELPHIA, Pa., May 11.—Teams of four men representing the Philadelphia Gun Club, the Racquet Club and the Rittenhouse Club, shot a match to-day on the grounds of the former club at Eddington. The Philadelphians won by two birds, their nearest opponents being the Racquet Club team, which numbered among its party George Work and Edgar Murphy. Murphy made the high score of the match, but Work slipped up badly, losing 7 out of his 25 birds. The scores were as follows:

Philadelphia Gun Club.

Missoula Rod and Gun Club.

MISSOULA, Mont., May 5.—A fair proportion of the club's members appeared on deck and proceeded with apparently unanimous consent to miss about as many of the wingless birds as was possible to-day. In justice to the shooters, however, it might be mentioned that the "rocky" work shown up was perhaps due more to atmospherical than other conditions. The day was one of those dark ones which make following the targets very difficult sport. Three of the gold medal gang tied with the score of 15 each, and, in the shoot off, W. P. Brayton pulled out ahead, and will consequently be a pronounced gold bug for a week to come. Addie Sterling of the B class has again demonstrated that he is a staunch friend of the white metal, and will carry the medal of that quality and color for the third successive week as a result of his score of 13 to-day.

Weekly medal contest, 20 targets or birds, unknown angles:

A Class		B Class	
W H Mace	00101011101010100101—10	J P Menard	00111110111110011111—15

Shoot of ties for gold medal, 10 birds: R. Rogers 3 withdrew, W. P. Brayton 7, J. P. Menard 6.

Worcester, Mass., May 7.

THE second shoot of the Worcester Sportsmen's Club for the Forehand Arms Co. trophy was held to-day, and brought out some of the old timers. Eliot Smith, who has not been able to attend a shoot for three months on account of sickness, shot in good form; other old time cracks were E. S. Knowles, M. D. Gilman, A. B. F. Kinney and C. B. Claflin. The shooting is as difficult as it can be made, the targets are thrown very swift and low, and if any shooter ever breaks 100 straight on the grounds he will break the world's record. Following are the scores:

Fifty targets, 25 regular keystone and 25 reversed keystone:

	Regular.	Reversed.	Total.		Regular.	Reversed.	Total.
A N Walls	22	20	42	Hoyle	20	14	34
R C Walls	21	19	40	Roach	16	17	33

Mascroft	18	19	37	C W Walls	6	12	18
Kinney	20	16	36				

Lynchburg Trap Matters.

LYNCHBURG, Va., May 8.—A heavy rain prevented the Gun Club shooting yesterday. The club held its annual meeting last night and elected the following officers for the ensuing year: Pres., R. S. Terry (fourth term); Vice-Pres., W. L. Moorman; Captains, W. W. Dornin and J. M. Cleland; Treas., Thos. F. Nelson (Mr. Nelson has been treasurer ever since the organization of the club); Sec'y, Geo. L. Fleming; Executive Committee, E. P. Miller, C. W. Scott, W. P. Clark, Gen. J. H. Smith, B. G. Empie; Scorer, W. N. Welford; Surgeon, Dr. Samuel P. Preston.

Surgeon to a gun club is a funny idea, but it goes. There was quite a full attendance, and much interest was manifested in the coming interstate shoot. Arrangements have been made with the railroads concerning lay-overs for shooters *en route* to Knoxville, and reduced rates for those who come only to this point. Lunches will be served on the grounds, and they will be lunches worth the money, and will be for eating purposes as well as for sale. Headquarters for shooters and the Gun Club will be at the Norvell-Arlington Hotel. The club will endeavor to make all visitors feel perfectly at home. F. M. D.

A New Gun Club.

INDIANAPOLIS, Ind.—The Limited Gun Club of Indianapolis has incorporated under the laws of the State of Indiana, with a capital of $4,000, divided into shares of $50 each.

Five and one-half acres of land have been purchased, which are now being fenced, while an architect is preparing plans for the club house and other improvements.

The determination of the management is to make of this a model shooting ground, with all the comforts and conveniences that experience and good taste suggest.

We want the address of every club in the State, as we have something of interest to say to them. ROYAL ROBINSON, Sec'y.

The DuPont Tournament.

CINCINNATI, O., May 11.—On Monday, May 6, the contestants who were ambitious to meet and overcome all competitors assembled at Old Avenue Ball Park to practise for the following day, when the DuPont tournament proper would open. This park had been the scene of many great contests in the line of athletics The famous Red Stockings had in the early history of professional ball playing covered themselves with glory and won laurel against the world on this ground. Now the most expert marksmen of America were to match their skill, and under equal conditions, each burning DuPont smokeless powder, were to decide the honors, share the liberal cash prizes offered by Messrs. DuPont, and attest the value of this new powder of American production. The sky looked ominous of an approaching storm, but threats from the weather did not prevent Upson, of Cleveland, from breaking 128 out of 130; Budd 154 out of 160, and others nearly as large a percentage at a few less targets.

About 8,400sq.ft. of tents and awnings were spread to protect sportsmen, spectators and trappers from sun or rain, and on the morning of the 7th "Old Glory" was run up the mast and spread out at full length by the gentle breeze that cooled the air and refreshed the aspirants who were eager for the contest. Mill Creek Valley never looked lovelier, but it is not an ideal place for big records. The park lies in a valley between high hills and is surrounded by houses, trees and other obstructions to a clear view. There is one point where for a width of 20 to 50ft. there is a clear horizon above a high board fence, and occasionally a target will skip across this clear space to take friendly shelter behind the foliage of trees from the destructive weapons in the hands of the determined man who faced the traps. It did not take the sportsmen, who have reduced target smashing to a fine art, long to size up the location, and they were unanimous in the opinion that it was necessary to keep the eye on the target; for they could expect no favors from the grounds, the management or surroundings, that would help them to make big records. It matters little what the surroundings are when Merrill, Van Dyke, Fulford, Heikes, Upson, Budd, Grimm, Ruble, Connor, Worthington, Dando, Young, Easton, Trimble, Elliott, Hill, Alkire, Bartlett, Shorty, Meaders, Rike, Woodworth, Hoffman, Gay, Raymond, and others equally as good, are to match skill.

The manager, R. S. Waddell, had planned every detail, and it worked out to perfection. All calculations were made prior to the tournament, so that within five minutes after an event was closed the office force was ready to present every winner with an envelope containing his share of the purse and added money. It was the universal opinion of those present that the DuPont tournament was the finest equipped and most excellently managed tournament ever given in this country, and it was a marvel how this could be accomplished with a combination of experts and amateurs.

In contesting for DuPont cash prizes for highest averages, according to the programme, contestants must participate in both events 4 and 6 each and every day at either traps for experts or amateurs, and must burn only DuPont smokeless powder. To avoid all unfairness, the shells used in these events were examined by R S. Waddell, manager, and each shell was stamped with the name "Dupont." The scores in events 4 and 6 will disclose the results.

THE WORLD'S RECORD BROKEN.

On the first day in event 6 with DuPont smokeless a most remarkable record was made by squad No. 3, composed of John Connor, of Knoxville, Tenn.; E. D. Fulford, of Utica, N. Y.; F. V. Van Dyke, of New York city; S. Glover, of Rochester, N. Y.; H. Dando, of Dayton, O., and Charley Young, of Springfield, O. Under the severest shooting conditions this squad, each man shooting at 20 targets, broke 119 out of a possible 120 The firing pins in the gun used by Charley Young were out of order, and he snapped two shells without firing, and this caused him to be a little careless when trying for the third time, and he lost his fourteenth bird. There were 39 entries in this event, and every participant distinguished himself by good work. The gentlemen who in this event broke the world's record in a contest in which the purse and added money aggregated $132 and for which $300 prize money awaited them at the close for highest averages, were not making an exhibition record for pastime, but were under pressure. They had been advocates of other powders and some of them interested in the use of other brands, but they manifested their ability to quickly judge the merits of DuPont smokeless, and none of them embarrassed the referee by a doubtful break. It was good, clean work, and the manager was so elated over the result that he called in the services of a photographer and preserved the record by a good picture of the contestants, using the blackboard with their score thereon as a background. Another squad equalled any past record that has been claimed: No. 1 in event No. 4, also using DuPont smokeless. This squad was composed of the following sportsmen, with number of targets broken by each: Alkire 20, Upson 19, Raymond 19, Heikes 19, Rike 20, Bartlett 19; total, 116 out of 120.

The winners of DuPont cash prizes for highest averages made with DuPont smokeless were:

In expert class:

Merrill, of Milwaukee, first, 116 out of 120	$90 00
Van Dyke, of New York, second, 115 out of 120	75 00
Upson, of Cleveland, O., Glover, of New York, } divided third, 113 out of 120	60 00
Heikes, of Ohio, Fulford, of New York, } divided fourth, 112 out of 120	45 00
Grimm, of Iowa, Hoffman, of New Jersey, R. Trimble, of Kentucky, } divided fifth, 111 out of 120	30 00

The winners of DuPont cash prizes for highest averages in the amateur class were as follows:

Cherry, Murphy, } divided first, 80 out of 90	$60 00
Grube, second, 79 out of 90	50 00
Gambell, third, 78 out of 90	40 00
Partington, Harry, } divided fourth, 77 out of 90	30 00
Forrester, fifth, 76 out of 90	20 00

In all the programme events making a total of 480 targets the highest number, 454, were broken by D. A. Upson, of Cleveland, O., who made an average of 947/12. He was followed by Heikes with 453 or 94 3/8; Fulford and Bartlett, 447 or 93 1/8; Merrill, 444 or 92 1/2; Van Dyke, 441 or 91 7/8; Glover, 440 or 91 2/3; Le Roy, 437 or 91 1/2; Budd, 435 or 90 5/8; Meaders, 420 or 87 1/2; Grimm, 419 or 87 7/24.

The following contestants did not shoot in all the events, but made a good percentage at a less number of targets: Shorty Bacon at 460 targets broke 425 or 92 1/2; Hoffman at 420 targets broke 393 or 93 4/7; R. Trimble at 300 targets broke 278 or 92 2/3.

The weather throughout the tournament was superb, excepting a light wind that occasionally cut down the totals. The scores made by the experts in the various events programmed for the three days are given in tabulated form below. Nos. 1-8 were shot on the first day, 9-16 on the second day, and 17-24 on the third day:

Experts.

The Wilmington Tournament.

THAT a large entry is not always a necessary portion of a pleasant tournament was very plainly shown by the net result of the Wilmington (N. C.) Interstate Association shoot held on May 9-10, Thursday and Friday of last week. The largest number of entries is any one event was 16—not quite three full squads! Yet the tournament was by no means a failure. The experience gained by the club will be of great use to it in the future; the interest displayed by the citizens of Wilmington must be very grateful to the members of the home club and will encourage them to give another tournament next year. Under the circumstances, the counter-attraction at Cincinnati, O., being taken into consideration, the Eastern Dog and Game Protective Association may have cause for regret, but it has nothing wherewith to reproach itself. The added money at the Dupont tournament and the low cut rates to Cincinnati were greater inducements than Wilmington could offer; hence the absence of so many shooters whom one had confidently expected to meet there; notably Messrs. Bicaise, Post, Worthen, Steck, Peterman, etc., of Charleston, S. C., all good shots and good companions; Col. J. T. Anthony, Major Todd, etc., of Charlotte, N. C., and several others, most of whom I understood were either at Cincinnati or else were lying by waiting for the double event of Lynchburg and Knoxville.

From New York to Wilmington, N. C., is only a short trip, train No. 23, on the Atlantic Coast Line schedule, leaving New York at 9 P. M., and landing one at Wilmington just twenty-one hours later. At this season of the year the change in the appearance of the country is more startling than at any other time. When I left the Empire State on the night of May 7 spring had just gotten a good start and summer was apparently not so very far away. At Wilmington it was summer in every respect: foliage, flowers and fruit, not to mention the heat, which was intense on both days of the tournament. "U. M. C." Thomas was my companion from New York, and as usual Thomas and myself got along all right. We've made several similar trips together and are therefore acquainted with each other's weaknesses—and we have some of them, too. This trip to Wilmington, however, was one of the most enjoyable of the lot. The country south of Richmond, Va., was just beginning to recover from a ten days' rain; rivers and creeks were full of muddy water, but the bright sunshine of May 8, the fresh green of the fields and forests, the dogwood and wild honeysuckle blooms, and the total absence of dust, made the trip a treat. The only disagreeable part was the change from our sleeper "Moselle" to a day coach at Wilson, N. C., Wilmington being in a kind of a way sidetracked by the cut-off from Wilson to Florence, S. C. Once the change was made, the ride of 108 miles was pleasant enough. The whole of that 100 and odd miles is one big truck farm. Acres and acres of strawberries are just now being made to yield up their fruits for the benefit of the North, not by quarts or crates, but by whole carloads. At each station (and we stopped at an awful lot), everything was strawberry. Peas, snap beans and "Virginia" asparagus are also shipped at this time, I was told, but all I saw was "strawberries to the right," etc. Negro women and children of all shades, shapes and sizes were to be seen in

EASTERN DOG AND GAME PROTECTIVE ASSOCIATION, WILMINGTON, N. C.

the fields gathering strawberries. It was an interesting sight, but I'm glad now that I don't see my strawberries picked. On our way North on Saturday morning, May 11, we passed at Rocky Point, a station a few miles from Wilmington, a solid train of seventeen refrigerator cars; these cars would be full of strawberries by the time they reached Wilson. Wilmington papers said it was the first train of its kind to leave that section, and added that the value of its freight would amount to over $30,000. Truck farming on the present large scale which prevails in that section of the Tarheel State is scarcely more than a decade old. Watermelons, cotton and peanuts about make up the sum of the products of this little, but important, slice of North Carolina.

It was not my intention to make this a treatise on agriculture or geography; but as I did not know where a large portion of our strawberries came from, I thought there might be some others in a similar fix who would perhaps like to know.

At Goldsboro, N. C., about twenty-five miles south of Wilson, J. L. Fonda, of Greensboro, N. C., and H. C. Bridgers, of Tarboro, N. C., joined us. Both were bound for Wilmington and, both being well acquainted with the road, they were able to point out all the objects of interest and to answer many of my numerous questions. I forgot to mention that while Thomas and I were just going to demolish our dinner at South Rocky Mount, "Tom" Collins, of the DuPont Powder Company, hove in sight. He had joined our train at Weldon, N. C., where the Atlantic Coast Line and Seaboard Air Line come together. Collins and his DuPont powder were much in evidence at the tournament, although he doesn't shoot a gun. By the way, talking about South Rocky Mount; whence came the name? There isn't a hill in sight from the railroad, and it is a hard matter to find a rock of the most diminutive proportions in and around the station; and apparently the same conditions prevail at Rocky Mount, a mile or so north of South Rocky Mount.

In Wilmington we found Elmer Shaner, of Pittsburg, Pa., and E. L. Gilmer, of Greensboro, N. C., registered at The Orton. Shaner was slightly blue about the prospects for a good tournament. Telegrams had been received from Charleston and elsewhere, all telling of Cincinnati as the objective point of the senders. After events showed that Shaner was correct in his diagnosis of the case, the attendance being light.

Thursday, May 9, was a lovely day, a typical summer day, a trifle too warm perhaps in the sun, but still very pleasant in the shade. The grounds of the Eastern Dog and Game Protective Association are located at the end of the electric street car line that runs to Hilton Park, a pleasure resort that overlooks the Cape Fear River. The trip by car from the center of the city is made in about eight minutes, so the grounds may be classed as easily accessible. The streets of Wilmington, too, through which these cars run are well shaded; live oaks, chinaberry trees, elms, etc., line both sides of the sandy streets, and give a very grateful shade to those who walk, and also add greatly to the picturesqueness of the city itself. After breakfast on Thursday morning, while we were getting ready to go out to the grounds, we suddenly discovered that there was another shooter added to the ranks. This was Mr. August Schmitt, of New York, president of the New York German Gun Club, and a good shot too, notwithstanding the fact that he has to shoot one-handed, owing to the loss of his left hand. Coming as a stranger among us all, Mr. Schmitt soon made a lot of friends, and was probably the most popular visitor at the shoot. His prowess with the gun on the second day may be traced by examining Rienzi's scores, Mr. Schmitt choosing that title from the label on bottles of beer supplied by the Rochester Brewing Company, for which company Mr. Schmitt acts as manager of the New York branch. The funny thing was that Mr. Schmitt had actually come all the way from New York in the same car with Thomas and myself without our being aware that he was "one of us."

As for the shooting at this tournament, the less said about it the better. Something, I don't know what exactly, made everybody's scores run low. Strange to say, the only 15 straight in the two days was made by "U. M. C." Thomas in the first programmed event of the meeting. Rienzi got the only 10 straight made in all the 10-target races of the shoot; he did not secure this until the last event but two of the meeting! The general low averages are ridiculous, but I think they were the cause of a great deal of the fun we had. The number of targets thrown during the tournament was 5,070—2,265 on the first day, 2,805 on the second day—not a large number. Still, there ought to have been more straights with such men as Fonda, Gilmer and Thomas among the visitors.

The members of the home club looked after us in a truly Southern style; while, at the request of Mr. E. Savage Latimer, the members of the Cape Fear Club received all the visitors as their guests during the tournament. This was an attention on the part of the citizens of Wilmington for which I have been asked by those to whom this courtesy was extended to return formal, but hearty, thanks.

Among the members of the home club who shot along with the boys were: H. McL. Green, president of the club, E. Savage Latimer, J. O. Wise, R. H. Grant, S. W. Sanders, L. L. Pritchard, D. M. McEachern, J. H. Beery, J. R. Williams, R. H. Pickett, and Stuart Heinsberger. In the matter of preparations for the shoot Manager Shaner had everything in first-rate style. The large tent of the Interstate Association, with its gun racks, coat racks, etc., is a vast improvement over the small tents of the individual members of the association that have been used at those tournaments for the past three years. As for the trappers—in Harkness the club has a colored jewel. He is easily *facile princeps* in his line; as a trapper, and boss of the other trappers, Harkness not only attends strictly to business, but displays considerable ability in making those under him keep up to the mark. A notable feature was the absolute disregard of these five trappers of the perpendicular rays of a sun that ran the mercury of the thermometer away up in the nineties. Without a particle of cover to protect them from the sun, Harkness and his troupe never left the trench from start to finish, except when an adjournment was made for lunch. During the two days of the tournament a good number of members of the gentler sex graced the proceedings with their presence, while there was always an interested crowd of on-lookers of the male persuasion who kept tab on the scores very closely.

First Day's Scores.

The following are the scores made on the first day, the asterisk after a shooter's name denoting that he shot in the expert class in that event:

No. 1, 15 targets, unknown angles, $1.50, $5 added by the club:

Fonda	011100110000011—7	Bridgers	110111110111000—10

NOTES OF THE SHOOT.

H. C. Bridgers, of Tarboro, N. C., is only a beginner so far as attending tournaments goes, but his work equaled that of any shooter present, Fonda and "U. M. C." not excepted.

S. W. Sanders, a member of the home club, shot from under the shade of an inverted basket that gave him the appearance of a veteran African explorer. The *soubriquet* of "Stanley" stuck to him through the shoot.

Some exciting games of pool helped to pass the evenings at The Orton, "Tom" Collins, Elmer Shaner, "Stanley" and McEachern distinguishing themselves in that line.

"Rastus," a name which appears frequently in the scores of the second day, was a disguise adopted by E. L. Gilmer to conceal his records from his friends.

When August Schmitt broke his 10 straight, three cheers were given for "Rienzi."

The Wilmington Street Car Company believes in encouraging the gun club. It donates free transportation over its lines for one week to the shooter who makes the highest score at the club's weekly shoot. Grant has won the honor eight times in succession; he says that it saves shoe-leather wonderfully.

In the picture of some of the members of the Eastern Dog and Game Protective Association, the gentleman on the extreme right, holding the two setters, is J. C. Wise; next to him comes "Stanley" Sanders; the next pair are L. L. Pritchard (pipe in his mouth) and J. C. Lodor. At the table sits Jas. H. Taylor, while H. McL. Green, president of the association, stands with his back to Mr. Taylor. E. Savage Latimer is preparing to receive cavalry, and looks in earnest about it too. With his back to the flagstaff stands J. H. Beery; the other four to his left are respectively J. G. Trent, S. Heinsberger, E. G. Polly and Wm. H. Bernard.

The scoring, pulling and cashier's departments were all filled with capable officials, Mr. Green bearing the burden of the unsatisfactory position of referee. In fact, everything was all right—all that was needed was another dozen shooters.

EDWARD BANKS.

Wilmerding Gun Club.

WILMERDING, Pa., May 4.—The Wilmerding Gun Club held its regular practice shoot this afternoon. The day being pleasant, the scores made by the participants were fair. The attendance was not as large as usual, but it is a little early for our practice shoot. All the events were shot at bluerocks, known traps and known angles. The scores are as follows:

J Gelm (100)	0111111101111111111001111111111011110110011011010111111011101011011101111011111011111101111101111—73

Growth of Target Shooting in England.

THE invitation issued by the Inanimate Bird Shooting Association of Great Britain, which was published last week in these columns, was one which many Americans would be pleased to accept; it is to be hoped that one or two citizens of this republic, out of the vast crowds who go to Europe every year, will find it possible to put in an appearance at Wembley Park on June 6-8. We may then be able to form some opinion as to the condition of trap shooting affairs in England, at least in so far as it relates to what we term "target" or "clay-bird" shooting. The progress made in this line of sport in England during the past few years has been considerable, and it is pleasant to note from the following extract from the London *Field* that it is likely to become one of the "permanent outdoor recreations" of the old country:

"Since the formation of the Inanimate Bird Shooting Association in the year 1892, clay-bird shooting has made considerable progress in this country, and clubs have sprung up in various parts of the kingdom. Whether its popularity here is destined to equal that attained in America may perhaps be open to question; but that shooting at inanimate objects has taken a firm foothold among our permanent outdoor recreations appears now to be beyond dispute.

"One of the principal reasons conducing to this is no doubt the improvement that has taken place in the manufacture of the traps. The birds thrown from the traps formerly in use had an apex or culminating point that was well within the range of the gun; and when proficiency was attained in finding this point, the whole affair resolved itself more or less into a kind of trick shooting.

"Now, however, this condition of things has been done away with, and the artifical bird soars away in one long sweep that renders breaking with a waiting shot, very much a matter of chance; and it is a golden rule with the present-day clay-bird shooter that to be successful one must not only have correct alignment, but, what is equally important, must be quickly on the bird. So that now, while the pastime cannot be said to provide an equivalent for game shooting, still there is no doubt that anyone who had attained proficiency at clay birds would, unless suffering from nervousness, acquit himself creditably even on his first day's shooting at game.

"The association has spent much time in framing rules under which club shooting can be carried on, and also in devising an efficient system of putting the inferior shot on a fair footing with the expert. In doing this they had to decide between the two general systems of handicapping in use, viz., that by distance, where the individual judgment of the handicapper is called into play, and he places shooters tothe best of his ability, at distances to put them on an equality; and the other, in which the best shots have to concede points, based upon the results of previous performances—that is to say, that if A shoots at fifty birds and kills thirty-five, and B shoots at fifty and kills thirty, A should give B one bird in every ten-bird competition. Round this latter principle the association have organized a system of handicapping that appears to work well and give general satisfaction, though doubtless further experience will suggest improvements and modifications.

"Handicapping by distance would also have the serious objection that it would be impossible to shoot in teams. There are now five traps used, numbered 1 to 5; No. 1 being on the extreme left, and No. 5 on the extreme right; to these traps there are six shooters, No. 6 standing behind No. 1, waiting his turn. After the first round, No. 5 takes the place of No. 6 shooter, and becomes the man in waiting, the remainder each moving down one trap, and so on, until every shooter has fired at five birds. Team shooting has proved so popular with clay-bird clubs, that it may be said practically to be the only one now in use.

"In addition to framing rules and a system of handicapping, the association also instituted a clay-bird championship, and undertook to hold a yearly meeting for that purpose. The first meeting, held at Wimbledon Park in 1892, was of modest dimensions; the number of competitors only reached a total of sixty-six, and the whole proceedings lasted but a few hours. For the succeeding meeting Wembley Park was secured, and the pastime had then so developed that two days barely sufficed for getting through the advertised events, and shooting had to be carried on from 10 o'clock until dusk. The number of entries, moreover, went up to 333. For the third annual reunion (which has been fixed for June 6, 7 and 8) Wembley Park has again been secured, and, in addition to prizes amounting to several hundred pounds being offered for competition, the association have added an International Shield, for the possession of which teams from England, Scotland and Irelaud will compete; and it looks as though that meeting will show a rate of increase even greater than the former one.

"Any club of ten members and upward can become affiliated upon the payment of 1s. per member, and, in addition to the members being eligible to enter for all prizes at the championship meeting, the club has presented to it the Association Jewel for competition amongst its members. The Challenge Shield (which is at present in the possession of the Wealdstone Club) can also be competed for by all affiliated clubs. This trophy, in the course of its wanderings from one club to another, has been the means of creating intercourse between clay-bird shooters and promoting an *esprit de corps* which has done much toward raising inanimate bird shooting to its present popularity. The association hope very shortly to be able to divide the United Kingdom into districts, and to present to each its own particular challenge shield. The conditions are, that a club must hold the shield for twelve months for it to become its absolute property. The address of the association, we may add, is 224 Piccadilly, London, W., where further particulars as to the objects and rules of the association can be obtained."

From the above it will be seen that trap-shooters in the British Isles have not been idle during the past three years. The institution of a "clay-bird championship" is an important feature of the work of the Inanimate Bird Shooting Association, as it thereby does away with all chance of that country being saddled with a dozen champions, after the manner of the United States. The wording of the paragraph which tells of this championship is somewhat ambiguous from an American point of view. Are we to understand that there were 66 competitors for championship honors in '92, and 333 entries for the same event in the succeeding contest? "The first meeting, held at Wimbledon Park in 1892, was of modest dimensions; the number of competitors only reached a total of 66, and the whole proceedings lasted but a few hours." "Sixty-six competitors" is looked upon here as something decidedly of the common. It is true that at the Atchison, Kan., shoot of a fortnight or so ago there was an average entry of almost 70 competitors in the 17 events programmed for the tournament. The Knoxville, Tenn., shoot, which will take place on May 21-24, will surpass the above in number of entries, while it is confidently expected that the tournament to be given by the Memphis, Tenn., Gun Club, on June 11-13, will give the Atchison shoot a close rub. But such shoots are rare exceptions, and "target" or "clay-bird" shooters in this country outnumber their brethren in the old conntry by possibly 500 or 1,000 to 1! Over here the sport is in its prime; in England it is in its very infancy. It would be interesting, therefore, to know whether there were actually 66 competitors for championship honors in '92, or whether the total number of entries in all events "only reached a total of 66."

The system of handicapping adopted by the British organization is one which it is well nigh impossible to carry out in this country, except in club competitions for club prizes. Where the number of devotees of the sport is comparatively limited, it is possible to keep track of each man's record. Where the number runs into the hundreds of thousands, as in the United States, such a system is absolutely impossible.

THE CHALLENGE SHIELDS AND THE ASSOCIATION.

Jewels are capital ideas and will unquestionably foster the growth of the sport in a satisfactory manner. There are one or two points in the article quoted above which are commended to the notice of the newly-organized American Trap-Shooters' League, particularly the regulating of championships. The plethora of live-bird champions floating around the United States at the present moment is calculated to produce "that tired feeling" in any well-regulated mind.

EDWARD BANKS.

Trenton Gun Club.

TRENTON, N. J., May 9.—*Editor Forest and Stream:* The regular monthly shoot of the Trenton Gun Club was held at its grounds today. Shooting all done from five traps; the club contest was for two badges—first and second. The conditions were 30 targets per man, each man first shooting at 15 for place, the men breaking 11 and over being in the first class, the men breaking under 11 in the second class. C. H. Allen, the only one breaking over 11, won the gold badge; Hicks and Hutchinson tied for second badge; they shot the tie off at 10 targets each and Hutchinson won.

Thomas, who won the gold badge last month, was very much disappointed, as he had made several bets that he would win it again this month.

After the regular shoot a team shoot took place; one side, captained by Hutchinson, won over the team under Hicks by a score of 43 to 36. Conditions: 10 targets per man.

CHOKE BORE.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

on the water. The finish cannot be broken. Those who have used them will have no others. cents for samples and prices and pamphlet containing our awards of prizes for last season and for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field.*
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

EXPOSITION NUMBER—40 PAGES.

AN INIQUITOUS MEASURE.

THE Donaldson game bill as sent to Gov. Morton incorporates the provisions of the Wilks bill in this new Section 249:

Section 249. No person or persons shall be deemed to have violated any law or ordinance by reason of his or their selling, exposing for sale, transporting or possessing, or attempting so to do, the body or a part of the body of any wild animal or bird in the close season for such animal or bird, provided it be proved by him or them, by production of proper invoices and freight or express receipts, that such wild animal or bird was shipped from a point at least three hundred miles distant from the State of New York. For the purpose of the proper enforcement of this section the package containing this wild animal or bird shall be marked plainly "game," and the place of shipment and destination shall also be plainly marked. All transportation companies which shall transport the same shall keep books plainly showing the receipt and delivery of such packages of game, and dealers in the same shall keep books of account showing the number of birds or animals received, sold or delivered by them, and shall, at all times, permit any authorized agent of the Commissioners of Fisheries, Game and Forest to examine their books of record for purpose of establishing the right of such possession or transportation in close season.

Such a provision, if it should become a law, would go far to undo the work of game protection in the State. It would be a backward step. It would be such a blow to the interests of protection as we have not had in a quarter-century. It would mean for New York State a retrogression all the more marked and disgraceful because in direct and glaring contrast with the new laws of almost every State and Territory where game protective legislation has been enacted this year. Everywhere the lines are being drawn more and more strictly against the market consumption, for in that sordid, unsparing, greedy, all-consuming agency is seen the most destructive factor of the times.

That the sale of game must be prohibited in the close season, if the laws are to amount to anything, has been demonstrated by experience so abundantly, so forcibly and so beyond questioning that the principle of no sale of game in close season is embodied in the game laws of every State in the Union, with the exception of Massachusetts. And because it is wanting in the Massachusetts statutes, the city of Boston has long been the "dumping ground" for game illicitly killed in Massachusetts and for the surplus of game killed in other States.

With a market the year around game will be killed the year around. This is not theory; it is fact established by costly experience. To open the markets, as is contemplated in this measure, is to put a premium upon chicken grouse, upon immature woodcock, upon our deer in close time. Where there is a market, there is a constant, steady, never-ceasing operation of the agencies of game destruction for the supply of that market. With such a system as is contemplated by the Wilks-Donaldson measure, the State Game Protectors would be powerless to stop unlawful market-hunting; it never has been done; it cannot be done now.

There is no reputable advocacy of this Wilks-Donaldson scheme to open the game market. There is not a single game protective club, not a citizen who honestly wishes protection for our diminishing game, but is indignant at this proposition.

In the name of game protection, in the name of the true interests of the citizens of New York, we protest against the Executive's approval of the Donaldson bill. There is nothing of merit in that measure to counterbalance the evil of this Section 249. The men who are asking for this law, and the interests demanding it, are the marketmen and the commission interests. They ask for the law in order that they may dispose of more game. That is all they want, but that in itself is the sufficient answer to the demand. The New York game supply cannot stand the increased drain upon it provided by an open market. The game of our sister States cannot stand the drain. In very many States the exportation of game to the markets is forbidden. By opening her own markets the year around New York would be putting a premium upon the unlawful shipment of game from other States. In the name of the citizens of other States, as well as of our own, we urge Gov. Morton to veto the Donaldson bill.

THE FESTIVAL OF DIANA.

NEW YORK is the heart of America. The lovely little Madison Square, a tiny green bit of priceless earth showing alike the pulse of nature and the pulse of the most highly differentiated civilization, may well be called the heart of New York. A jewel upon the heart of this *cor cordium*, this heart of hearts, is the vast but exquisite building known as the Madison Square Garden, the very spot of all in the country best known and most suitable as an auditorium and spectaculum for vast entertainments. Above the plain but spacious bounds of this great amphitheater, like tender chains suspending it from the sky, rise floating bands of exquisitely handled stone, so light, so airy, so beautiful and fragile, that they seem not columns, but ribbons—not resting, but depending. And on above, pinning daintily together all these airy flauntings, the central gem of the jewel on this heart of hearts, rests, or rather poises, the golden statue of Diana, beyond all question the best known and best beloved of all American statuary, no matter by what hand or of what material. How many millions have looked on that splendid, dainty, matchless figure of grace, bending her golden bow above the throbbing heart of the great city of New York, no one can tell. How many millions saw this same figure poise the same shaft above the great and now vanished White City at Chicago, no one can tell. But there, as here, even among crowds of the most ambitious sculptures, Diana of the golden bow was the most beloved. It is not recorded that ever a word of criticism was heard let fall regarding this one figure. Beyond reproach was this one thing. Great was Diana of the Ephesians. Beloved is Diana of America.

Diana was the goddess of the chase. Is this the reason that in the heart of Americans, the greatest race of sportsmen on the globe, where every man may bear arms and set free foot upon soil free forever—is this the reason Diana is beloved? Is this the reason that under Diana's bended bow there was held a gathering of the ideas of the chase such as in their fullness and perfection surprised as though it had been inspiration the founders of this Exposition? Truly it would seem so. As all America loves Diana, all America seemed under levy to bring her tribute. From the far mountains of the West, from the salt sea of the Pacific, from the cold corners of old Maine to the hot plains of Texas, all Americans rose and brought spoils of the chase and material of the hunt as tribute to Diana of the Americans. And Diana of the golden bow, exultant and gracious to her children, poised tiptoe on her pleasant pinnacle and turned her face to the North, to the South, to the East and to the West, and said, "Thank you, my subjects and my children."

The Sportsmen's Exposition was American, and representatively so. Many may have thought it was to be local, but in no way could they have been more wrong. It was national, and a nation of sportsmen will be proud of it. Many may have thought it was merely a trade display. In no way could they have erred more palpably, and in no way could the daily press of New York city have showed better an unaccountable lack of perspicacity in news seeking. Some may have thought the Exposition was only a showing of modern sporting methods. They were wrong. It was a showing and a glorification of the methods and material of the sportsmen of all times. The ancient hunter of other lands, the primitive red hunter of our own land, the hunter of the far past, the passing and of the present, all these had their meeting place, their tryst of the undying brotherhood of sport, under the bow of the goddess of the chase, who knows no times nor nationalities.

The pages of this journal, which is devoted to the purer doctrines of the goddess of the chase, contain descriptions of the Exposition in particulars. In the general comment but one conclusion can be expressed. The Sportsmen's Exposition was a national success. Even success may grow, and it is an easy prediction that still greater success will fall next spring, when the Exposition will be held again, and when again the sportsmen of America will meet and bring their yearly tribute to heap up at the feet of Diana of America.

SNAP SHOTS.

THE fraternal spirit of angling sometimes does not work. It has not done so on the St. Lawrence River. Last year, without any warning or any special reason that has ever been disclosed, the Minister of Marine and Fisheries caused the adoption of a regulation imposing a license fee of five dollars on non-resident anglers. This barred out St. Lawrence River fishermen; and then for retaliation a boycott was put upon the Canadian boatmen and the alien labor laws were put in operation against them. The law and these results of it bred bad feeling all around, irritated the Americans and robbed the boatmen of their earnings. The Anglers' Association of the St. Lawrence River has been active in its efforts to secure the abrogation of the obnoxious regulation, and last week a committee went before the Minister of Fisheries and made a strong plea for a restoration of the old-time harmonious relations. They promised that if the license requirement should be removed from American anglers in Canadian waters, Canadian boatmen would once more be given employment in American waters. The proposal was met with a rebuff. The Minister of Fisheries offers as a reason for not complying with the Association's request the principle that his Government cannot take cognizance of unofficial representations in an international affiair—a sound position surely, and not a whit less tenable than that of the stickler for etiquette who refused to rescue from drowning a young lady to whom he had not been introduced.

We print to-day the first part of the story of "The Museum Caribou," by the late Rev. A. H. Gesner, so long known to readers of these pages as "Stillaboy." The sketches written by Mr. Gesner have added interest because in them is illustrated so well the abiding values of a woodland outing; these long-ago expeditions into Canadian wilds were not alone joys in themselves and for the time being, but furnished abundant material for reminiscent review, at a time when to recall them in memory was to renew in a way and partake again of their pleasures. The satisfaction and benefit of the camp in the wilderness, who can measure them?

THE organization of a Game and Fish Protective Association in Minnesota affords ground for believing that the interests concerned will be given material advancement. The new society is a direct achievement of Mr. W. L. Tucker, whose pen has been indefatigable in the preliminary work of organization. We trust that we may have occasion to record for the association an active and useful life.

Among Adirondack veterans is Orson S. Phelps, the fisherman and trapper of Keene Valley, familiarly known throughout the North Woods as "Old Mountain Phelps." He is now in his eightieth year, and never wants for an indulgent hearing when advancing his claim that he has taken as many trout as any other man in the Adirondacks.

The Sportsman Tourist.

NOTES FROM CAMP NESSMUK.

II.—House-Building.

ORDINARILY a hollow makes a poor camp ground, for currents of cold air sweep down it at night, on the same principle that water runs down hill. Spook Hollow ran from north to south, with a steep and heavily-timbered ridge closing it on the south. The sides were precipitous hills rising two or three hundred feet, with ledges of exposed rock about half way up, which were honey-combed with crannies and fox dens. The sun was not visible from my camp until 9 A. M., and retired from the hollow promptly at 5 P. M., leaving little or no twilight. In an average season such a place would be damp, and in case of a hard rain might be unpleasant. But last year was an uncommonly dry one with us, and it was the drought that settled my choice of a camp site—that and the diabolical protection previously alluded to. For there was only one spring in the neighborhood that had not run dry—Pompernickle Spring, as Barnes had named it in one of his inspired moods, and any one who knows Mincke will forgive me for not wanting to carry water up those hills.

Probably there is not another spot on earth within twenty miles of a city of half a million inhabitants that is quite so wild as Mincke. From the crest of the ridge southeast of Camp Nessmuk one can look for miles and miles and see nothing but sharp ridges densely covered with scrubby oaks and hickories, steep hollows gloomy with a richer vegetation, bare ledges, and occasionally a glade from which peeps a negro cabin. Animal life is not very abundant, but there are coons and possums, skunks and foxes, squirrels, woodchucks, hawks, buzzards, owls, doves and lesser creatures of earth or air, with occasionally a flock of wild turkeys. Reptilian life is fairly abundant. Venomous snakes are rather scarce, but scorpions, tarantulas and centipedes may be found almost any day under flat stones, and nimble little lizards are darting everywhere. Song birds are not plentiful, and their absence adds to the true wilderness effect of Mincke. The wild hog, that pest of the Missouri woods, is also absent; but O the chigres! My friend, take my advice, and keep out of the Mincke grass in summer. The first frost drives these microscopic fiends into winter quarters.

Within a few rods of Pompernickle I cleared some high ground of roots and stones, got out the double-bitted hatchet, and proceeded to erect the framework of my house. Except for the abundance of provisions, a two weeks' supply, the outfit for this camp was mostly copied from "Nessmuk's" "Woodcraft." There are many who smile at the idea of learning anything about woodcraft from books, and their scorn is, in a measure, justified by the fact that most works on the art of camping are disappointing. Englishmen are the greatest sinners in this respect, and there is one work in particular that will afford you many a chuckle—a ponderous octavo entitled "Shifts and Expedients of Camp Life," which tells you how to explore a bit of wild country with the aid of a company of servants and a baggage train inproportion. But there are books and books. It would be hard to name a subject that has not at least its one good book, which will save the beginner many a tedious failure, and can even teach the old-timer something that he did not know before. Of such is "Woodcraft."

"Nessmuk" wrote, of course, with a particular locality in mind—the Northeastern wilderness, with its waterways and balsams—and some of his advice would be of slight value in Southern swamps or on Western plains, in the Rockies or among the wastes of the Far North. Moreover, he wrote for the lone camper, who goes, as a wise man, light. And let it be said right here that any one can camp with a wagon, but that the man who can carry on his own back all that he requires for a sojourn in the wilderness is a scholar and a king by comparison. "Nessmuk" was past master of the craft, and I am proud to acknowledge that, after doing my fair share of experimenting, I have found most of his wrinkles to be the very best for the service they are intended to perform.

My shanty tent had seen service before. It was a trifle larger than "Nesmuk's," as the drilling was 3in. wider than his, and it had a front door, the roof being continued to form a flap that can be tacked down in front, thus leaving the outfit securely housed from tempest and vermin during its owner's absence. The flap was never closed at night when the tent was occupied, for a shanty tent is intended to let in pure air and the glow of a well-built camp fire. The flap thrown back over the roof gives additional protection against rain and sparks. The lime-and-alum process of waterproofing was tried with some misgivings when the tent was made, misgivings which were justified on first trial, and I came back from that expedition resolved to find something better than oxide of alumina to keep me dry. Nobody but a sportsman and a brother would excuse the trouble I took to solve that problem. A tent of thin drilling, with a shed roof pitched at a moderate angle, is no easy thing to waterproof. Rubber solution or boiled oil will do it after a fashion, but they are heavy, and either rot or crack, or develop some other bad trick. The process finally adopted was original and gave complete satisfaction, rendering the tent permanently waterproof and mildew proof, so that moist earth from the drain trench may be heaped against the lower edge without rotting the fiber. But it is somewhat dangerous to apply, as it obliges one to use a very inflammable liquid raised about to its boiling point. I hope to overcome this objection, and so will say no more about the process at present.

The shanty tent has one disadvantage: it is hard to set up in some localities. To cut posts, poles, head and foot logs, is easy when saplings are near, but to measure and shape them, drive the posts to exactly the same depth, and allow for the thickness of roof poles—this takes time, especially when you are working in stony ground. Of course it can be set up quickly by the one-pole method but then it is no longer a shanty tent, and makes rather cramped quarters. For trips in which camp must be struck and made anew every day, an ordinary wagon sheet or square of waterproofed drilling is tent enough for anybody to bother with. But when spending a week or so in one place, in the woods, the shanty tent is the most comfortable and healthful abode that I ever tried. Mine has sheltered three. The tent, blanket and rubber poncho 4×6ft., together weigh less than the sheepskin-and-canvas sleeping bags so much recommended for cold weather, and instead of a mere cocoon they afford a home where courtesies can be extended to a brother wanderer.

My camp ground being in the Ozark region, it goes without saying that there was plenty of flint and no browse. Alas, no browse! The drought had been so severe that the fallen leaves and twigs were dangerously inflammable, so I swept the ground carefully, cleared away the stones, smoothed the floor, dug hollows for hips and shoulders, raised a little mound of earth to supplement the diminutive pillow, and spread the poncho on the bare earth. Then came the army blanket, converted into a bag of double thickness by lapping it and securing the free side with strong safety pins. The pillow came next; and that was all there was to the bed making.

As the hollow was likely to prove a cold and draughty place to camp in, with only a fold of blanket between me and the bare ground, there was need of a good fireplace and plenty of night wood. Fortunately there was an axe in camp. In describing how to build a camp-fire, "Nessmuk" relates with gusto how he and a companion felled a 10in. butternut with their hatchets and logged it up. The thing can be done by one man if necessary. The double-bitted hatchet, when made of surgical instrument steel, is indeed a marvel. It will bite deeper and hold an edge longer than any one would believe who has not handled the cunning little tool. But when backlogs are to be cut, most of us would prefer more weight and a full length halve.

The art of building a camp-fire has been expounded so well in "Woodcraft" that you would think nobody could blunder in it Yet I have known two college graduates to follow the directions religiously, and, misled by the woodcut in the little volume, plant their logs 9ft. in front of the tent. The fire was all right, but somehow those campers nearly froze. So it may not be out of place to give a few details, for every season a swarm of city boys makes for the woods who never spent a night in camp.

My backlogs were cut to 6ft. lengths from a butternut 12in. at the butt. The stakes were driven 5½ft. from the footlog of the tent. The fire dogs or hand junks were bedded 3½ft. apart, and I dug an oven 2½×2½×2ft. deep between them, letting it fill with ashes and embers for the morrow's baking. The forestick was matched to the dogs, which, together with the chinks between the backlogs, were plastered with mud. A small pile of dry splinters and bark from a dead oak would soon yield coals for cooking supper.

The knack of fire-building consists, first, in selecting proper materials; second, in placing them so that air can circulate freely beneath and through them; and third, in not heaping on too much fuel at a time. For a cooking fire nothing is better than the sound and perfectly dry bark from a tree that has died on its stump. Moist or decayed stuff makes a smudge. For a quick meal, pluck a handful or so of dry twigs no thicker than your little finger from dead limbs or standing shoots. In winter, when all the boughs were wet, I have boiled water for tea with the dead stalks of weeds that stick up through the snow. A good camp cook will seldom smut the bottom of a kettle.

For a reliable camp-fire you must have some kind of backing to reflect the heat forward, and the higher it is the better. A big boulder or ledge of rock makes capital backing, for it retains heat and does not require rebuilding; but be careful to avoid calcareous rock, as it may burst and knock your head off. Get as close to the fire as you can with safety. My forestick was only 3ft. in front of the tent, the roof of which was entirely unprotected, but by selecting such wood as did not crackle much I burned only one small hole in the roof in two weeks. Soft wood, or dry hard wood, makes poor fuel for the night, as it burns too fiercely, sends out showers of sparks and is soon spent. "Nessmuk" says: "The sweetest and wholesomest woods of the forest are in this order: black birch, hickory, sugar maple, yellow birch, red birch" (I quote from memory). To which it may be added that some woods, like cedar, poplar and gum, will scarcely burn at all when green.

It was late when I lugged the last stick to camp and stood my axe up against a tree. Shadows had fallen in Spook Hollow, and with them came a chill. The fun of outdoor life vanished with the sun. Night brought cold, dampness, loneliness, mystery, strange sounds and stranger silences.

Then came the miracle.

A match was struck. Up went a little puff of smoke, then a tongue of flame, presently a blaze. The phantoms vanished. There was light, warmth, cheer—the glorious comradry of fire.

The bark quickly burned to coals. I fried some ham, boiled coffee, and got out the bread and butter. It was a simple meal, but I lingered over it like a gourmet. What an appetite the woods life gives one!

Now to slick up. Dish washing is a nuisance, but even scullionry may be reduced to an art. The art is this: Throw away nearly all your dishes and keep the rest of them clean. A frying-pan, quart pail, hunting knife and spoon were all the utensils that figured at this meal, and the spoon was a superfluity—you can whittle out just as good a one in two minutes, and can throw it away when done with it. This latter attribute places the wooden spoon at the very head of camp luxuries.

I put a dry stick or two over the dogs, got them going and topped them off with a couple of green hickories. Then out came the calumet. It was a seasoned Missouri meerschaum, that is to say, a cob—best and sweetest of pipes, unbreakable, light and suggestively bucolic. Lolling back on the blanket, with the bright warmth flooding the tent, I worshipped the fire like any Parsee of old. Flames leaped up the backlogs and scales of bark burst away in miniature bombardments. The sap boiled out of the wood and sang merrily as it changed to steam. Now and then a sweet tremulo would come from some night bird in the dark thicket. The owls set up their screeching and faint rustlings in the leaves told of sharp eyes reconnoitering from the ledges above. I was alone with my fire and the gnomes of the woods. Fancy began to play. Time rolled back. Blessed be the magic that makes us boys again! Jolly old friends clustered round, each in his jolliest mood. We reviewed it all: the pranks and follies, the struggles and rebuffs, the fierce joys of peril by land and sea.

The pipe went out. I turned in. The fire died down until the little tent showed only a ghostly outline against the surrounding blackness. If some belated Mincke nigger, plodding homeward along the crest of the ridge, caught a glimpse of Camp Nessmuk through the trees, it is small wonder if he broke into a run and panted to himself, "'Fo' God, I shuah done seed de ha'nt!'

HORACE KEPHART.

CAMP NESSMUK.

Mink, October, 1894.

THE MUSEUM CARIBOU.

BY "STILLABOY."

"HE! he! Doc'or. How you do? Me is here. Shake um han'."

This was Nuel's address as he walked into our little dining-room and sat himself at the table.

"Why! is it you, Nuel? I am glad to see you."

"Yees, an' me'es glad too. You wan' um calleboo, I s'pose. Good time for dis if it done snow more 'fore we get camp."

"Yes, I want a caribou—a good one. I want only a bull—a stag. And if you get me a good one I will give you the same as last year—half a crown every day while you hunt, and five more crowns if you get it with blankets and cloth for squaw, and I find the things to eat. Do you understand that, Nuel?"

"Yees. Me glad. Me do it. Nice time w'en we eat um. Pancake an' coffee. He! he! Make um me feel good to t'ink of um."

The following day found Nuel and myself going up stream, to what might be called the lower end of a bog. We expected to reach this in two days and commence our hunt at once. But this up stream was not so pleasant as I had anticipated. For some distance we were hardly above the banks, and that muddy part of the way. There was little or nothing to interest me. We saw plenty of muskrat holes along the stream. Several times we had to get out so as to keep the cance from chafing the bottom, and in only one place was required real steady poling. Of course there was little to be seen in the way of animal life and the region was extremely dreary. Above my head I saw several crows, two bluejays, a troop of chickadees and one downy woodpecker. We heard two or three partridges as we passed upward, and a muskrat was seen under water as he made awake as he hurried toward his hole. It was not until 2 o'clock that Nuel suggested: "Now, Doc'or, look out. P'raps partries fly. You shoot um if you can. Hard to shoot on canoe."

But I could shoot, and two old cocks, a hen and a rabbit—hare—when we camped, were handed over to the spoils.

About 4 o'clock Nuel said, "Doc'or, dis good place for camp."

"Why, what place is this, Nuel? You said there was no barn nor house here. What is it?"

"Oh, only fool house. I tell you all 'bout it when we clean out skunk, if dey let us."

The skunks let us. At least, we saw none around, nor was there anything offensive. But I noticed two holes under the foundation of the house, and close beside was a little pile of excrement. The small bones and wings of beetles had not been washed away yet. Then I noticed several holes by the floor that looked as though the place had been occupied quite recently. Nuel was very careful to block up these decaying places with stones, as the habitation appeared to be still occupied.

The house had never been a good log one, and there were several places where the light could be seen through the shingles. These shingles had been manufactured here on the spot.

But we must let Nuel tell the story. He commenced our meal: "Have blenty pancake. You want to know 'bout de 'fool house.' Me tell um you. A Englis'man used to lib here two year ago. He goin' to do great t'ings; build house, big barn, cut down trees, make um wat he call clearin', an' in winter catch um skin."

"Well, that is not a large clearing, Nuel."

"Me guess not, 'bout as big you call door-yard; p'haps half acre. An' he most starb last year; rabbit scarce, no moose, trout mose frees in. Only he eat um skrils an' one porkapine."

"Why, didn't he catch any animals?"

"Oh yes, he caught in fall 'bout dozen muskquash, two mink, one otter. Mose caught his own bear trap. Gabrel had to send him an' bring him to camp, fifteen miles away, an' de foolish man caught cole. He gone to Lun'en now an' sell his gun an' tings. But hush! Hark! What dat?"

We listen for a few moments and directly a screech owl was heard. At this Nuel said, "Oh, I sorry, I sorry."

"Why?" said I.

"Ah, means bad luck. Never like to hear *ke yo he e* [low, high sound]; wan' to hear *hoo, hoo, o* first."

"I guess it will make no difference, Nuel. Why should it?"

"Ugh! A Irishman used to say he a *bankee*, an' I notice his pappoose die an' he man cut he foot an' his cow got sick."

"Well, did he and the cow get well, Nuel?"

"Oh, yees; he got well. His squaw have two nice pappoose, an' he cow can eat as good as any one. But I t'ink it mean bad luck. Goin' rain morrow."

Before we sat down Nuel relaid the old hearth and braced up the falling door so that it would stand against intruders. Of course we could see out of the chimney, and there were many cracks and places where the light was visible. A rickety bench served as a table, and my seat was an old shingle block. Before 7 o'clock I saw that Nuel was tired. He hardly smoked his pipe out before I saw his lids closing, nor could I get more than a monosyllable from him before he was asleep.

Left to myself, I had time to reflect. Perhaps I soliloquized. I wish that screech owl would stop his howling. Of course I do not believe in signs, but I am sorry Nuel mentioned it. I wonder is there a vein of superstition among men. Now what is that scratching at one of the holes, something as though a cat were jumping up? And a rat or a mouse is climbing over the roof. But we hear a squak, and something like a flap of a bird is heard, and he screeching ceases at once.

Now I hear only the sound of *hoo-hoo*, and the snapping of the fire and the sizzling of green wood, and the report of *push*, as though gas was trying to force steam out of the heated bark. But I sleep, and not until I awoke did I perceive that something had run over my face. It is totally dark here, except in just one live spark; and as I began to realize to myself, I hear that pushing or jumping under the floor. At once I feel for the hearth and push aside the ashes, and then I hear the hurrying away of mice and see a long-tailed one close under my bed. I have to awake Nuel and tell him "The mice are eating up our breakfast." It was not difficult to arouse him. He simply said:

"Um, ha. Injin had good sleep. W'at you wan', Doc'or? Skunk can't get in here."

"No, but the mice will eat up all our provisions."

"Dat so? Mus' keep fire blaze. Me sleep. Me forget."

I looked at the watch. It was 2:30, and in a little time we were asleep again, nor did I awake until Nuel said, "Doc'or, you need not fear dis time about mouse or skunk. Mose breakfas'. Sorry—rain hard "

It was raining hard, but not a cold rain. This led Nuel to say, "Maybe stop soon." But it did not cease until after 12, too late to start for our voyage.

Meanwhile we had breakfast, the last of our partridges, while Nuel had to satisfy himself with the hindlegs and back of a rabbit. One of his remarks was singular, "Mus' hab somefin better for dinner dan dis."

"Why, don't you like rabbit, Nuel?"

"Like it? Ugh! No—only fit for squaw or pappoose. I wan' bear or calleboo."

However, there was nothing but bacon for dinner. He deplored it, but added, "Never mind, Doc'or, me have more partrie after rain stop."

When the trees had somewhat dried off, with my shot and gun, he started off for partridges, first around the clearing and then a little to the left of some low bushes. But not a feather could he raise. He had passed around the edge of the clearing, I watching the new farm, and not a sign of life there. When he got through he said, "Me done understan' dis, Doc'or. To't we fine some 'round dis. Oh, yees [an afterthought], me know w'at to do. You not mine me go 'way—two hour—maybe more. Mus' go to beech—w'at you call ridge. Dat best place for partrie at dis time. Will kill anyt'ing for eat? W'at you say? Shall do?"

"Oh yes, moose or caribou or bear."

For a time I amused myself in chopping down a tree and closing up the skunk holes under the floor. I had noticed that a second growth had sprung up around the clearing. This made the place appear all the more desolate. A few raspberry canes lying near the ground and broken-down ferns near the house; then some scrub oaks, with two or three short beeches, with the leaves brown and bleached still on them. There was no need of fences—the clearing was defined well enough—a gap in the woods, with plenty of leaning trees—just behind the little river, and now the most forlorn house that some one had hoped for so much.

The afternoon was lovely. It was as pleasant as it could be. The sun shone out almost like an early summer day. I saw three or four wood flies buzzing around the doorstep and a red-looking butterfly flew across the clearing. Of course there were no summer birds—not even a hermit thrush—but in the distance I heard a bluejay, and six or seven chickadees came along, and several squirrels chippered at me. One even presumed to mount upon the roof—tail up—and snicker at my loss. Yes, the afternoon was perfect. It was perfectly quiet. We could hear even a leaf falling near, and the noise of the nuthatches and the downy woodpeckers could be heard a long way off. I thought I heard Nuel's shots, too; and so it proved. He returned at 3:30 with a bunch of nine partridges, the fattest I had ever seen or tasted. His remark was: "Got some fat partrie, an' scare a bear. Me not expect him. He smell me. He was on top hill. I lookin' for brush near foot of hill. Dey fill belly wid beechnut on hill an' walk down an' wait till belly get empty. Dat de time me kill dem an' bear get away. Goin' to be fine morrow. We mus' start early."

Neither skunk nor mice disturbed us much. From time o time Nuel threw some dried spruce on the fire and it ept up such a snapping as to alarm the intruders. It was hardly light enough to see clearly when we left one of the most dreary places I had ever seen. A wigwam in the midst of a forest was a palace to this place. Gray and weather-beaten and dilapidated hardly describes it. The only thing I could conceive of it was, a lone barred owl standing alone, a type of his desolation.

The stream narrowed as we came up, but while it was narrow it was deeper and had not so much current. I could see we were drawing toward a bog somewhere. From time to time it twisted and turned. Sometimes it seemed to me we did not make a mile in a straight line, when we had traveled two hours. Alders and yellow birches, and occasionally a large spruce hemmed us in. No duck nor even a muskrat, except one that dove near the canoe. For several hours we saw nothing at all of note. It was as poky as we could conceive. Even the beauty of an Indian summer with all its lovely haze could not enliven the birds. And if there were any beaver or otter in this vicinity we did not see them. A solitary moose bird (meat-hawk, Canada jay) passed over and the squirrels were too far to be heard. The high grounds and spruce trees were too far away. I looked for some life—chickadee or nuthatch—but missed it this time. May be we only happened to escape them. Well, we did escape them until nearly 12 o'clock. But the air and haze and quiet were pleasant, and the indescribable smell of dying leaves cannot be surpassed.

But now a change; a kind of point projecting amid the flat level gave us some chance to stretch our legs, and a bright squirrel at once challenged me with a pile of spruce corn husks to tell us how busy he had been. But the afternoon was as eventless as the morning. The squirrel challenge was the end of animate life, except a few chickadees and a bluejay. We noticed the trees got shorter and the stream contracted as we paddled up.

About 3 o'clock I saw we were nearing to the higher ground. A rounded point amid the lower level seemed to approach. It did until Nuel said: "Now Doc'or we mus' stay here. Can land here. Not get wet." Indeed that seemed to be quite a bank, as the stream touched the edge, and then branched away to what it seemed to me was a bog or barren, four or five miles away.

"You not mine sleep uner canoe dis time, will you Doc'or. Goin' to be fine. We make some branch for me. We wan' to hunt 'morrow mornin'."

The boughs were secured as Nuel proposed, and in early morning we were off. But no luck. We searched the neighborhood of our place, then two miles away to a smaller indentation, as though there was once a large lake and here was a bay. There was no trace of caribou. Only the track of a large moose was seen, and this made some days before. We could see this; the rain of Tuesday told us; it was nearly washed away.

Nuel's remark was characteristic. He ate his supper in comparative quiet. "Me don't understand Doc'or. No sign ob calleboo. I know he wander around an' trabble all time from place to place. Dat de kine of he. I t'ink we better go to other place. Hard trabble too. Can you stan' um? Have to walk more 'an ten. Can't walk short cross. Bog not frozen at all."

Next morning found us on our way and it was as difficult as Nuel said. But we need not speak of this. About 10:30 we laid down our packs. Nuel's first exclamation was. "Ugha! Oha! wigwam blown down. Win' blow him down. Me 'fraid he spoil um. Break de back. An' I 'fraid it goin' to rain enight. If he only wait um until afternoon, me fix um."

Meanwhile, after Nuel went back for his second load, I busied myself in repairing the camp. It was indeed badly injured on one side, but by wrapping my fly tent around the bark and covering it with branches, it was not so bad. And so it proved.

The camp was well protected. I could not see how in the world wind could possibly have blown it down. It was protected on every side but one and the injured side was not the one we would expect to be injured. In our rear was quite a high rock and above it a dozen or more large spruces. One of these trees was intended as a "look out" for caribou. We could see some distance from this place.

But the camp was made as comfortable as I could make it. All the old brush was cleared away and a trench made, except in front. If it should rain I did not want our beds to be flooded. And I set a flat stone for a hearth with sides to protect the fire. I know of nothing much worse than to be aroused in the night by fire, when our beds were blazing and our provisions perishing. Or having our hearth sinking down and down until the turf is a foot and a half below the fireplace. I would rather run the risk of snapping stones to a hole below the surface. But we suffered very little from this.

Of course we had to use billets for wood. We could not burn large sticks. My fear was that we could not keep warm should cold rains or a storm come on.

However, the camp was a great success, nor did I wonder at Nuel's remark on his return at 3 o'clock: "Mose so good as me could do."

He could not bring everything, but he had the flour and the "hardtack." The first time we had brought the bacon and the coffee and the sugar with the utensils. The next day Nuel brought my shotgun, my snowshoes (we thought they might be necessary), my heavy coat with two comfortables. That I knew Nuel and myself would require.

Nuel's special charge on his last trip was this: "Doc'or, you watch um from dis tree. You can see um long way ober de bog an' barn [barren] too. Look for what you call um islan' an' small wood an' edge ob barn. Calleboo hard to see. Look mose like dead leaves hang, like oak or beech tree. Watch him, if som'fin move an' hark when you hear like leaves move."

I attended most carefully to Nuel's directions. I only came down three times from my perch. However, I saw nothing, search as I did. I thought for certain I must find something. Again and again I was sure I saw a caribou. But no hallucination could deceive me. There was not a bird—not even a crow nor a bluejay. Out in the bog and opposite the barren was as lifeless as a waste. What a dreary, lonesome place it was! We looked upon a bog and beyond it a barren, and some miles away the coniferous hills. Here and there you would see a thread of water. Choked up it appears, with little pools that shimmered in my eye. There appeared to be a line of dead cattails in some places, and alder bushes and a growth of birches. There were some dwarfed spruces, and a mile or more large boulders, with dead trees—with beeches and oaks interspersed. Some of these places looked li... little islands amid the bog. But the barren was not so very unlike the bog itself. The barren rose up slowly from the lower level. The only thing that distinguished it was that there was usually a fringe of bushes that defined the edges of the barren growth.

But on the barren we could see the turf through the dead blueberry bushes, and pieces of rock were scattered around, as if they had dropped down. This was the sight I saw from my "watch tree," so far as I can describe it, when Nuel called me at noon to inquire, "Well, Doc'or. Me here. You see some calleboo?"

"No, Nuel, not one."

"Den we mus' eat an' go right off."

Our preparations were soon made. As we started Nuel said, "Now, Doc'or, mus' not shoot 'roun' here except for calleboo. Not for partrie or rabbit. Me set snare for rabbit right near here. It good for rabbit. Me eat um if me have. Me hate squaw food. But me hope me find calleboo. You save two partrie."

Meanwhile Nuel set five snares. I could see, too, on very good paths. They were well defined. A mile away Nuel stationed me. He said, "Doc'or, you see calleboo come 'roun' here—two—five—six—maybe. Good place. You watch um. You know—climb up tree. Can see pretty long place."

Nuel had left me near a spur of the mountain. It was almost as good a place as above the camp. But I waited and I waited, and not a sign of anything did I see but squirrels and spruce partridges, and three or four moose birds—Canada jays—with some golden-crowned wrens, attended by a few chickadees. It seemed to me that I had waited a half day for the caribou to come, but I found it was only 3 o'clock. At this time I heard Nuel coming along and muttering as he came. He had on his back a load of birch bark. But he was in great excitement, I could see. His words were: "Doc'or, me is awful mad. Want to say cuss words all de time. Feel like to kill dat man."

"Why! I am surprised to hear you say this, Nuel."

"Umph! You would not be s'prised if you knew w'at dat liar do."

"Come, there; tell me about it."

"Me tell you when we get home. Mus' fix wigwam first. We make um all right; but me awful mad."

I said no more until we got home and the crushed bark was repaired, Nuel saying hardly a word except to mutter to himself. My idea was that plenty of pancakes and coffee would restore him. But you could see a scowl on his face. At last he said, "Me tell you why me so mad, Doc'or. Dat, dat [mus' say dis time] he, dat Yangee, Melicetes (he no Micmac) been lyin', an' he soger officer, too. Say he not go to our place, but way off near big bar'n; two day away. An' I believe he was de one dat threw down the wigwam. Dat not win'."

"But what makes you think so, Nuel?"

"Oho, me know Paul. You know he my uncle son. You call 'im cousin. All de same. He big liar. He say he not come my way, an' he gone 'sackly [exactly] dat way an' cross to udder bar'n, big one, me tole you."

"But how do you know? Tell me about it."

"Well den, you see we hunt um t'ree day now. Watch you place firs'—den watch big tree, twice every mornin'. You not see only ole track, two day ole. No sign. While me was goin' on very careful—creep under broken twig an' knot—me see berry little wool'n hair on knot. He what you call um homespun jacket. He had dat on him. Den Paul he loss him small toe an' de nex' to it. Small dent not on in moccasin on right side. Me saw dat place in mud t'ree time. He no cheat me.

"An' he soger capt'n with him. He good hunter, too. Me know him. He stan' berry sideway. Like to hab his footstep berry stiff—what you call reg'lar. An' w'en he creep his knee make um large dent in moss an' mud—larger dan Injun make. Soger fell in mud hole. Me see de place. Me guess he not look wait to see, an' han's an' gun fall into hole! Uch! uch! make him say cuss words, me guess, he! he!

"But now we better get ready, me t'ink. Maybe we hab to wait sometime for calleboos. Day come back affer few day. Maybe week. We wan' to fix up good wigwam. He better than shanty. Wigwam more warm."

This was very disappointing to me, but there was no help, and I had no doubt about Nuel's truth. The last three days had been very pleasant—as fine as summer, only cooler, with a heavy air, though not like October. It was as Nuel said, "berry fine," and had been for three weeks, off and on. But now a change was approaching. I noticed my watch at 3 o'clock, and I saw that the night was very dark, and a little sprinkle of rain had commenced. And soon after this we heard a hoo-hoo. For Nuel's sake I was glad we heard this. He noticed it, too. "We not hear any *ke-yo-kee* first. Me glad. Mean 'good luck' all same."

But Nuel was mistaken, as you will see. It was pouring at morning, nor did it stop until late in the afternoon.

(TO BE CONCLUDED NEXT WEEK.)

Expensive Robins.

PORT RICHMOND, N. Y., May 18.—*Editor Forest and Stream:* At the last circuit court held by Justice Gaynor for the county of Richmond two Italians were arraigned, tried and convicted for the offense of shooting robins.

One of the men was unfortunate enough to have destroyed 59 birds and the other had killed 13. The former paid $1,475 for his day's sport and the latter $325. The man who was responsible for the capture of these two pot-hunting Italians was John Fisk, who had gained fame previously by arresting the Rev. Dr. Dixon for a like offense. EDWARD SIDNEY RAWSON.

New York State Association.

ROCHESTER, N. Y., May 16.—*Editor Forest and Stream:* There will be a meeting of the Executive Committee of the New York Association for the Protection of Fish and Game, at Buffalo, Tuesday, May 28, 3 P. M., at the Broezel House, to consider our finances and other matters that may be brought up. FRANK J. AMSDEN, Pres.

Caspian Tern in Michigan.

HOLLAND, Mich., May 16.—A fine Caspian tern in elegant plumage was shot here Monday, May 13. I have secured it and will mount it for my own collection. It was pretty badly shot, one wing being nearly severed from the body, but by working carefully a very nice specimen was made from it. ARTHUR G. BAUMGARTEL.

WILD-BOAR HUNTING IN THE HARTZ.

IT was in the Hartz Mountains, in Germany. The snow had been falling for a couple of days, and a slight frost had set in early in the morning, when word was brought to us by a Government keeper that he had located a large boar in one part of the forest near the "Silver Eel"—a silver and lead mine. As soon as this could be communicated to the few of us entitled to shoot there by virtue of being Government officials and representative men of the village, we gathered at the chief forester's house and had to undergo an examination of rifles, cartridges and hunting knife before we were allowed to start. Two large boar-hounds were lashed together and taken by a keeper, and a deer-hound was taken by another to follow the scent.

After a hearty breakfast we started out, eight hunters and twenty odd beaters, and after an hour's hard climbing reached the trail on which the scent had been found. The chief forester and one of his men soon located the piece of forest where the boar had gone in, and we were posted around three sides of it while the beaters went in with the dogs on the fourth one. Mr. W., the bookkeeper of the Government mining store, was posted about 40yds. to the left of me on the off side of the trail (it is an old German custom to post the shooters that way), and hid behind a fir tree, just as I had done, after having let him know where I was located.

After a short while we began to hear the hounds "hallohoo" and the forester's horn sounded the warning. My rifle began to shake in my hands and I knew I had the gun fever pretty bad. The underbrush began to creak and I said to myself, "I hope it won't be the boar, I would miss him sure." It was only a red fox, a fine fellow at that, whom I would have liked to bag any other time, but we were out for nobler game.

Then all a sudden began a great cracking of twigs to the left ahead of me and suddenly a big black mass, that looked to me like an elephant, broke over the trail. I shot my right barrel, but at the same time Mr. W. shot and the boar went for him. He had only a single muzzle-loading rifle, so he threw it away and took his hunting knife out, singing out, "Huss, huss, sow!" The boar went straight for him and I could not shoot for fear of hurting the man. He had kneeled down and put the handle of his hunting knife to the right knee to steady the shock. The boar went at him blindly and received the knife between both forelegs right into the heart, but such was the shock that both tumbled over in a heap. When I came up, the boar was slashing still at the man and had hurt him somewhat, so I took my left barrel and gave it to him in the ear, which ended the job.

We had a jolly supper that night, and the boar's head, presented to me by Mr. W., adorns my brother's house at home. GLOBE TROTTER.

Natural History.

SKIING FOR LIVE ELK.

Editor Forest and Stream:

For more than ten years I have been a devoted supporter of the principles set forth in FOREST AND STREAM—long may it continue a champion of the cause of fairness for the game, and to offer wise counsel and joyous companionship among all true sportsmen.

I have never before asked for space in your columns, but beg that you will let me share with my fellow readers this letter, just received from a typical hunting ranchman and genuine good fellow who lives in one of the most charming valleys along the great continental backbone and near the last retreats of the disappearing big game. Although his methods in this case may be a little irregular—perhaps unlawful—his motives are all right. This is a region where game laws are almost unknown and entirely disregarded. The captured elk now have the run of a small but well fitted up park, and under the care of this enthusiastic and "gritty" game-preserver, or rather relic-preserver—for a fenced elk is no more game than a Jersey cow—they will, without doubt, prove the nucleus of a very interesting band. The letter, with a few omissions, is as follows:

"MARCH 31, 1895.—*Dear Cousin Jac:* Your letter of Feb. 26 came to hand in due time. I was in the mountains at the time, but it reached me early in March, and glad I was to hear from you.

"I will begin at the beginning and give you a rough sketch of the past up to the present date. * * * That same month (October, 1892) Andy, Jack, George and I took a goat hunt up the Middle Fork. We were to get some specimens for Mr. Miller. He wanted some goat to mount to take to the World's Fair with his other specimens. Well, we got five goats; Andy, the tenderfoot of the party, got four of them. We went to Nyack by train, then took packs on our backs and went to the left of old St. Nicholas; was gone eight days; packed the heads, hides, etc., out on our backs, and then Miller did not want them; they made good floor cover in the cabin, though.

"The winter of '93 and '94 I had Charley C. with me (Ernest C. wintered up South Fork trapping). Well, along in January Charley wanted to go trapping up the Middle Fork. He did not do very well at it and came down the last of March, and laid a scheme before me to catch some elk alive; said there was quite a number around there. I could not grab the idea at first, but as the only outlay (outside of the work) would be but $10, thought I would try it. The C. boys can handle Norwegian snowshoes, or 'skis' (some call them), to perfection. His idea was to run the elk down on *skis*, rope them and then haul them out to the railroad on a toboggan. Now, I never had a pair of *skis* on my feet except them things John Riley Adams made. It has been a wonder to me lately that we did not improve on them and learn to use them; we could have had more fun than we have ever had since. But to return, Charley made me a pair out of white birch (the best *ski* timber we have here), 8ft. long, 4½in. wide, ¾in. thick in the middle to ⅜in. thick at the ends. Then we went to Essex and trouble commenced. The first week they nearly killed me; I got some awful falls and bangs against the trees, but 'staid with 'em,' and now I can run them down steep mountains and almost anywhere through the timber without any trouble.

"Well, we caught six yearling elk in two weeks. We turned three of them loose and kept two heifers and one bull. Just before we came down the bull got killed accidentally. It was too late to get another, so we put the other two in a car and came down. We led them from town down to the ranch (they will halter-break just like a cayuse) and put them on picket ropes. The fourth day one of them ran on the rope and broke its neck; the other we put in the big corral and have got it yet.

"During the summer Charley went back to Wisconsin, but Ernest and his younger brother (one who just came out last fall) and I thought we would have to try the elk again, so we went up to Essex in February last. The snowfall was very light, 3ft. at the most, and everything was against us, weather included. But we stayed with it and after two weeks' hard rustling came to the conclusion that there was but one yearling in that part of the country. I think the hard spring of '94 must have killed all the calves. We got sort of riled up, so to speak, and made a break at the old ones, and before we got through we had four three-year-old cows, one three-year-old bull and one yearling heifer. We then hired a car and put them in with our effects and landed here two weeks ago. The yearling got its back hurt and died since. One of the cows has sore feet. Outside of that 'everything is lovely and the goose hangs high.'

"*April 1.*—While the bread is baking I will try to give you some idea of how we worked it. We would strike out in the morning and go until we found some tracks, then follow them up the side of a mountain, and get above them if possible; if not, follow them to the top. Then they had to go down somewhere, and we could go down as fast as they could. If they tried to side-hill and tack back, we would cut the angles and naturally force them to the bottom. We could be there as soon as they, and aim to strike the bottom of the gulch above them, so they would not start up again. Then down the gulch we go, and if they don't get played out before they reach the railroad tracks, why make a spurt, overtake them, throw a rope on the one wanted and snub to a tree. Then trouble commences. They will fight like demons, and are awful sudden with their feet—all four of them. The next thing is to throw another rope on the beast and get it down, then put a hackamore on and two ropes—one fore and the other aft—so one man can keep the elk off of the other. Generally in about two hours it will lead fairly well. If not, throw the elk, hog-tie it, put it on a toboggan, and haul out to the railroad track. There the footing is good, and the animal can be untied and worked along all right.

"All this work required from one to four days according to luck. We did this in 3ft. of snow, in some places but 2ft. This was harder on us because so many windfalls were sticking up above the snow, which made the shoeing bad. In '94 there was from six to ten feet of snow in the same. It was packed so hard that the elk ran on the top, but everything was covered up, which made the shoeing better.

"Well, I have given you all there is of interest about the elk. What I regret most is, we did not have a camera; for we could have taken some pictures worth looking at.

"The old rifle is still bringing in meat when needed. I went to work and cut off the barrel (.38-55) so it is 22½in. long, and she gets there just the same. Then the gunsmith took 5in. of the piece he cut off, turned it down and put it in a Colt's six-shooter frame, put on a .41cal. cylinder, and say, mister! look out! she is a peach!

"The white-tail are not so plentiful as of yore, but can get meat yet all right.

"No, I don't take the FOREST AND STREAM, but wish you would send me their address. We are working into the tourist trade and without the paper are too far behind the times. From indications I think this will be a good season for the 'trade.'

"We are now enclosing about eight acres for the elk, the fence is 8½ft. high. That will hold them, I guess. Am going to put in twelve acres of grain for hay and lots of rutabagas and carrots for them.

"I would like to take the trip South you proposed, but can't leave the ranch so far this year. But don't let that hinder your coming out whenever you get ready; we will manage to go somewhere.

"I can take a solemn oath that this is the longest letter I ever wrote in my life. Now sit down, fill your pipe and read it over again and write me one on the same plan. Yours, BERT."

Mr. Hough, of the charming Southern articles in FOREST AND STREAM, will appreciate Bert's trials with the *skis* and elk hunting, for the noted winter trip of the venturesome newspaper man was almost identical with that described above, except that to the stalking by Hough's party was added (in Bert's case) the terrible work and excitement of the capture. And also, that the worst snowhoeing encountered in Yellowstone Park was a fair ample of the best "up the Middle Fork," where the use of *skis* instead of the regular web-shoes has always been thought impossible. JAC.

STARLINGS IN AMERICA.

Editor Forest and Stream:

I read with great interest the controversy, in regard to the European starlings, in your columns. Some of the writers use the term English starling; they fancy, I presume, that everything of European origin must be English. Hence we meet the term English sparrow instead of house or common sparrow, English pheasant instead of common or Bohemian pheasant, etc.

The communication of Mrs. Kate R. Styer has somewhat surprised and amused me. The lady is certainly not well versed on ornithological matters, or she would not say "our bird life is the most varied and fascinating of any country." This is only half true. We have a great variety of birds, but, compared with European birds, very few good singers. If the lady could be here just now and listen to the bird concert one can hear in a German forest, grove or field, she would probably change her opinion.

I do not classify the starling very high as a singer, but it is an interesting bird all the same and one which, when kept in confinement, will afford its keeper a great deal of pleasure. They are very active and command great skill or talent in acquiring men's speech, and have in this respect much in common with the parrot. They feed principally on insects and are thus useful birds. Their love for sweet grapes is their only fault. Mrs. Styer need not fear that they will disturb any of her native feathered pets The starlings live in harmony with other birds.

The absence of singing birds in American parks and gardens is not solely due to the European sparrow. While I admit that the sparrow displays a marked degree of rowdyism in America, and to some extent proves the correctness of the theory of the survival of the fittest and strongest, this naturalized feathered citizen is not the only and worst enemy of the American singing birds. The pot-hunter, our Young America, is the principal destroyer of birds. I had occasion last fall to witness the wholesale slaughter of robins on the hills in East New York during the migrating period of these birds. Such a sad spectacle is impossible in Germany, where children are taught to love and protect birds instead of killing them, and where the laws passed for the protection of birds are enforced regardless of rank, race or color.

C. B. gives Mr. James M. Morris good advice in regard to the proper food for young starlings. Young starlings are easily reared in captivity. In the absence of the white larvæ of the common black ant, mill worms or other small worms can be substituted, but the former should be killed before being given to the bird, and preferably cut in small pieces.

It is not unusual that young birds will not take their food voluntarily. In this case their beaks must be opened and the food forced down in their throats. In conclusion, I express my regret that Mrs. Styer cannot be with me just now to listen to the heavenly concert I enjoy from the nightingales, chaffinches and numerous other excellent singing birds inhabiting the Botanical Garden in close proximity of my home, and located in a densely populated part of Berlin. ARMIN TENNER.

Where Quail Nest in Town.

WINDSOR, N. C., May 13.—*Editor Forest and Stream:* While I was at dinner this afternoon a nice fat cock quail flew against my office window. It was picked up by a boy and was quite dead. There are several pair nesting in town this season.

Had hoped to attend the Sportsman's Exposition in your city this week, but am "chained to business" and can't get away. A. S. R.

Game Bag and Gun.

WEST VIRGINIA DEER.

GLADY, Randolph County, W. Va.—Toward the close of the open season for deer I determined to make a few more efforts to secure some venison, so crossing the Glady Fork I ascended the Beech Mountain, crossed to the eastward of the top, and wending my way along under the top, I concluded to go out to several large briar thickets and fire-brakes which the deer use, particularly in stormy and bad weather. There had been an additional fall of snow, rendering travel both slow and laborious, as it lay about 18in. deep on a level. I had not proceeded far on this course till I struck the trail of two large bucks that had passed to my right, making toward the top of the main ridge. Now, on top of the ridge was an old fire-brake, most of the fire-killed timber blown down and the whole place grown with briars, bunches of scrub beech brush, interlacing the lap of the fallen hemlocks, spruces and other timber. The snow combined with this groundwork barricade, rendered the place nearly impenetrable and inaccessible to the hunter; as for the Virginia deer, I never saw a place so thick but what they would go through, and seem to enjoy it, too. The trail soon brought me to the edge of this thicket, into which they had gone with many a devious wind and turn, seemingly selecting the very worst spots in their browsing around. After some circling they took along under the steep top of the ridge right in the edge of the fire-brake, where the blown down timber lay cross-hobbled in all conceivable shapes. Crawling under barricades that I with great labor was obliged to climb over, I finally made up through a particularly bad cluster of uprooted trees to the main top. Immediately at the edge of the top was a small cliff of rock with overhanging fallen tree tops. Heading through this both deer had lunged or crept, while I, suddenly arrested, was compelled to make a difficult climb and a short detour to surmount the same place. Reaching the top, however, I came upon two beds on the level space surrounding, but the game had left. No doubt they had discovered my approach by the breaking of the branches of some of that last tree top through which I was obliged to climb. They had stepped around a few steps in their beds and from the vantage ground they occupied could observe me, and wind me, too, for that matter. I being completely hidden under the crest, could not possibly see them. With long leaps they had run out along the top, the snow being so deep every jump showed an impression larger than the entire bulk of their bodies. Soon they turned off to the left, leaving the main ridge and passing to the eastward.

I concluded to go on out the main top to the further end of the thicket and look for other deer that I had trailed in there several days before; but not striking any sign I made my way out of the break to the open timber to the eastward. I had not proceeded far when I again struck the trail of the same two I had scared. Following on a short distance they had settled down to a walk, the trail leading down a small open we call the "salt place ridge," crossed a small branch of a run to the opposite open and passed up into a thicket of laurel abutting and joining another large fire break. I had jumped deer out of this place before, knew every foot of the ground with all its difficulties, so I determined to make a circuit of the laurel, it being a favorite spot for deer to hide and lie. Clambering cautiously on around I scanned every perceptible opening in this jungle of laurel and overhanging spruce, but no sight of the deer rewarded my anxious gaze. It began to be pretty evident they were still in there, for I had nearly completed the circle, only a few hundred yards further to go; had come to an anchor, as it were, in a particularly difficult spot, my whole attention at that moment concentrated in forcing my passage through, when, whew! with a snort that almost made my hair stand on end, directly to my right, from the borders of the thickest of the jungle, came this sudden challenge. Hastily looking in that direction and grasping my gun with a firmer grip I pushed my way in that direction, but the buck after his one whiff of disgust had merely left a trail where he had loped back into the darkest recesses of the laurel.

The sun had declined in the west and was then hidden

behind the peaks of the main ridge. It was about a mile and a half to the shelter of my roof in the most direct line. I took that line and made a grim resolve to try them another day with reinforcements.

The second day after that, in company with my two eldest boys, we wended our way back into that "patch." Deer had not stirred much; we struck no tracks that looked promisingly fresh. We separated on the run south of the big brier patch. I took down the run skirting the borders of the briers, the boys concluding to hunt the ridge. They started a small buck out of a thicket; it ran down, crossing the run a short distance ahead of me, but I was not quite in time to see it or get a shot. Arriving close to the lower end of the briers I came to where two deer had passed up the ridge running, evidently quite fresh. Noticing the direction from which they came it was also evident their alarm was not caused by me; so following, just before they reached the top their gait had settled to a walk; passing off of this ridge the trail led into a rather open cove when, suddenly turning square about, they came on their back track some twenty-five or thirty paces, and again ascended the ridge into the briers. On they went, the general course being rather quartering down the side of that ridge toward the run down which I had come. Ever and anon with the most cunning instinct would they select some vantage spot, turning square about, take an observation on their back track for pursuers; they could get a good squint with little show for the hunter seeing them.

Although I constantly kept the brightest kind of a lookout, I failed to catch any sight of them. They could not be far ahead. We had reached a point now about 100yds. from the run and nearly half the length of the big brier patch, when the trail suddenly turned nearly at right angles and quartered up the ridge. Still, the gait was a walk; apparently, the change of course was not caused by any alarm.

I had made a momentary pause in deciphering this last move, when the sound of a whistle came to my ears from toward the head of the run; another whistle. I replied. Soon the boys appeared on the run below. I indicated to them the direction the deer had taken, and it was hastily arranged that I continue the pursuit, slowly and cautiously, after giving them a few minutes' start, to take stations at the head of the brier patch, at points we knew they would be most apt to cross.

I consult my watch and impatiently wait for the minutes to elapse. Their youthful legs, on an errand of this kind, have taken them there by this time. I follow the trail with a brighter hope. Here both deer dive right through a formidable tangle of scrub and green briers; looks as though a deer jumping through that would tear the hide right off him. Bah! Who ever saw the hide taken off a deer in that way? I walk around it of course. We are nearly to the end of the big brier ridge; boys are close, I know; in fact, this hunt is drawing to a focus. We are there, deer and all. Right here deer have gone through an ugly, horny, fallen spruce top with an entwining bunch of scrub laurel and green briers, emerging upon a small mound where some former monarch of the forest had been uprooted. Look at their footprints on this mound; turned and took another safe squint on the back track for pursuers. Talk of the ingenuity of the hunter! Can you beat that? Very seldom! Every sense is now on the tingle and alert. A turn almost squarely to the left. I have a momentary fear they will cross the main run to the opposite ridge and perhaps too far off, or so hidden by the thicket the boys will fail to get a shot. I keep my own gun at a ready, to fire instanter upon first sight. The sharp crack of George's rifle rings out upon the clear air. A momentary pause, and four more shots in rapid succession salute my ears. I keep my gaze fixed on the opposite ridge and press forward. A mistake! Had I at that moment chanced to look squarely to my left, I would have been rewarded by a shot at the buck, cavorting around in the briers and around woods at about 40 or 50yds. A few steps more. I see George climbing up the hill toward me, and there lay the doe, dead. His first shot had gone through her neck close to the head, severing the jugular vein.

The pause in the shooting was caused by a snap, the primer probably not being solidly into its seat in the shell. George says, "I would have killed that buck too had my gun not snapped. The snap was the only fair pull I had at him, standing broadside. The four shots I put at him so rapidly was as he jumped this way and that way, mostly hidden by the brush and logs." What a caper they can cut when thus suddenly surprised by a new danger in front.

We got together, exchanged congratulations, hung our doe up conveniently by and started in pursuit of the buck. We followed until near the close of the day and jumped him out of a bed where he had lain down under the crest of a spruce point, but got no shot. Having barely time to get home ere nightfall, we skipped to the warm shelter of our roof.

Some two or three weeks ago two men by the name of Arbogast, residing in the adjoining county of Pendleton, went out on a hunt in the spurs of the Alleghanies. They were overtaken with a snowstorm, accompanied with a rapid lowering of the temperature; night was coming on, several miles from home and from any place of shelter, overcome with fatigue and the severity of the cold, one dropped dead in his tracks. His comrade, with the utmost difficulty, frozen nearly stiff, succeeded in crawling to the shelter of an old barn, which stood some distance from a house, which the unfortunate man did not find in his perishing condition. When found, shortly after, he was still alive, but he had to be carried home in a terribly frozen condition, the help also going out and bringing in his dead comrade. It was thought at first that the life of the one might possibly be saved by amputating the extremities. Several days elapsed before competent surgical aid could be obtained in that out-of-the-way locality, and the doctors found upon examination mortification had spread so badly in the frozen parts that death was inevitable. No operation was performed; next day the poor fellow died. Both were quite poor men and had families. The intensity of the cold on this occasion was phenomenal for this place, for next morning, after this horror, the thermometer at my house stood at 30° below zero.

I learn from one of my genial sportsmen acquaintances in Pendleton county that wild turkeys were quite numerous there. Quite a number of them were bagged by those fortunate enough to enjoy a hunt in that vicinity. Gray squirrels also plenty.

BACKWOODS.

MICHIGAN'S PROPOSED LICENSE.

PORTLAND, Ind.—*Editor Forest and Stream:* We of this section who take advantage of the hunting season in Michigan and Wisconsin to recreate in that pine-laden atmosphere are interested in the proposed revision of the game laws of those States. It seems to us that the proposition to license non-residents is an ultra selfish one.

The writer has in the last eight years made seven trips, six of them to the Upper Peninsula of Michigan and one to northern Wisconsin. I have been accompanied by some of the foremost business and professional men of our city, few of them classed as hunters.

These trips were made almost solely for the benefit of our health. A few of us—sons of pioneer hunters—were successful with the Winchester, and by still hunting supplied our camp with venison, while others spent their time fishing and attending to camp duties. The distance to where we usually camp is 525 miles, and by a careful estimate I find the deer we have taken have cost us about $80 per deer.

Rather than add to our expense account, the good citizens of those States should feel complimented that they can furnish us entertainment we prize so highly. The clause in the present law providing a penalty for shipping or attempting to ship any part of a deer out of the State should, we think, be modified. It seems to us to be unconstitutional, and is certainly unjust. It could be changed so as to limit and yet not prevent a hunter from taking a few pounds of venison home to his family, many of whom never tasted venison. I am convinced that reasonable inducements can be held out to non-residents to visit the game regions of the various States, without materially decreasing the supply of game, if only the settlers of those States were prevented from violating the game laws. I know to a certainty that local white hunters and Indians kill deer the year round in northern Wisconsin and Michigan. It looks to us unnecessary, and not only unnecessary, but un-American, for a State to so discriminate between her own citizens and those of sister States.

Wild game and fowl are migratory and in reality belong to no individual nor State. If a State adopts a law prohibiting the killing of game within her borders, let that law apply to every person, whether a citizen or not, while within the State. As far as my observation goes deer are as plentiful in the Lake Superior region to-day as they were eight years ago, and if the open season of three or four weeks was the only time in which deer were killed, hunters might come from far or near in the usual numbers, and not only kill but take home what they did not eat, and yet deer will increase in numbers annually in that region of birch thicket and cedar and tamarack swamp.

G. W. CUNNINGHAM.

Sea and River Fishing.

ANGLING NOTES.

Lake Trout Fishing.

WHEN Harry Brown of the New York *Herald* wrote me that, pursuant to previous agreement, he and Ed. Mott, the "Old Settler" of the New York *Sun*, would come up from Albany the morning of May 3, expecting that I would meet them at the railroad station and go on to Lake George for a couple of days' trout fishing, I was for the first time in many years wholly unprepared to go fishing. I had not opened my tackle trunk this year, and my rods were as I put them away last fall, and furthermore I had no opportunity to make any preparations before the morning of the 3d.

There is a heap of pleasure in getting one's tackle in perfect order before the fishing season opens, and it was with some misgivings that I put my tackle trunk and a couple of rods, just as I brought them from Canada last September, into a cab and started for the railroad station. My friends were prepared for good or bad luck so far as fish were concerned, as the pleasure of being away from their desks was sufficient pleasure unto itself. This, by the way, is the proper frame of mind in which to start on a fishing trip. The fishing had opened legally two days before, and owing to a misapprehension as to the language of the law there had been considerable fishing for a week or more, but all reports said the trout were not yet at the surface. Col. Tippetts, editor of the Lake George *Mirror*, had wired me from New York to take his steam yacht, the Mirror, if it was ready, but it was not and would not be until evening; therefore upon arrival at Caldwell, the head of the lake, we dined and drove ten miles to Bolton under a broiling sun and through clouds of dust. Fortunately the Bolton road is provided at convenient distances with clear, cold springs of water, and we did not pass a spring without a halt to test its purity and temperature. At Bolton, where I had arranged for men and boats by telegraph, we found that but two men had been engaged, and they, thinking we were not coming, had gone out fishing. I attributed every delay and every disappointment to my starting unprepared for fishing, although I am not superstitious, simply as a proper punishment for the offense.

After all the tackle trunk panned out all right, and as I was putting an Archer spinner on my leader the "Old Settler" got very gay at the thought of impaling a whitefish on the spindle and sticking the bait full of hooks with which to catch trout. He said: "I'll name no names, but I have a friend who does not fish for trout with bait, and when a trout is properly cooked and served he can tell from the flavor of it whether it was caught with bait or fly." The Lake George air and things were getting in their deadly work, and the larval bear hunter was developing into the imago or perfect fish sharp.

A man from the hotel took us all in one boat and we set out in search of our boatmen, and after chasing half a dozen who turned out to be the wrong men, we finally found the right ones, and I found a third man who sent his companion back in the hotel boat. It was after 4 o'clock in the afternoon, and the reports of the fishing was not encouraging, as the trout were not "up" and few were biting—so the men said.

I adhered to a declaration made some years ago that I would catch them at the top or not at all, and so my Archer spinner was innocent of lead, while every other man was trolling with more or less of a sinker. Harry Brown was the first to draw blood, a handsome 6lbs. trout falling to his rod. He is not particular about the size of his fish, but he is filled full of red sportsmen's blood and wishes to kill his fish with his own tackle, although he is willing that the boatman should use his gaff to take the fish in; and "that reminds me—"

I was one day talking to Harry Brown about a pair of shoes which, fortunately or unfortunately, just as one looks at it, I possess. They have long slender toes, slightly turned up, and I was kicking because any shoemaker should send me at my time of life such a giddy pair of shoes, and that I should be weak enough to wear them. Harry remarked: "The shoes are all right and the shoemaker knew what you wanted better than you do yourself, and your native modesty should not be shocked at the shape of those fashionable toes, for they are useful if not ornamental; and if you will always wear them when you go fishing you will have a pair of gaff hooks on your feet and be prepared for the largest fish of any species."

Ed Mott caught two trout of 2¼lbs. each, and I brought up the tail end with a 2-pounder, but it was caught on the surface. The next day the lake was still and the sky was cloudless, and if the trout had not been at the surface before they were that day, as they were breaking all over the lake before night. Years ago, in this lake, if I could see a trout break ahead of the boat within a reasonable distance, I felt as sure of him, four times out of five, as though I had him in the boat. It is not so now. Their food was scarcer than now, the trout were not in as good condition, and if a bait were trolled within their sight they were pretty sure to take it. When the lake was restocked with trout, hundreds of thousands of whitefish were also planted, and now the lake is full of whitefish that serve only as food for the trout, as they cannot be taken with a net, legally, except for bait, and they will not bite a hook. The trout are now very fat, and the food so abundant that a few whitefish at the end of a troll are lost in the great multitude of whitefish that have formed no alliance with a gang of hooks or spinner.

Saturday morning we trolled through and around rising trout that rarely noticed our baited gangs. Harry Brown was unfortunate with the few trout that did strike him, for they ripped his whitefish and entirely missed the hooks. Ed Mott nailed a 4-pounder, and I was fortunate enough to hook and kill two of 7 and 13lbs. respectively. Our fishing practically ended at noon, for soon after we had beached on one of the islands a storm came out of the northeast which drove us to cover, and it was late before we were again on the water. Sunday we rowed across the lake and dined at Pearl Point and returned in the afternoon in quite a blow. In the forenoon it seemed to be perfect for fishing, but we learned that eleven boats that went out caught but two trout. A drive to Caldwell in the evening, the sleep of the tired but contented fishermen, and the railroad train the next morning ended our "outing," as a friend calls a fishing trip when he gets few or no fish. Late that afternoon Lieut. Gov. Saxton told me that lake trout from Lake George, fresh out of the water and properly cooked, were good enough for him; and in the evening Col. Ashley W. Cole said to me in confidence that while he enjoyed Lake George trout on the table, there was one thing lacking to complete his satisfaction, and that was the pleasure of catching the fish before it was cooked.

Dominion Fishery Commission.

A review of the Report of the Dominion Fishery Commission by the veteran Superintendent of Fisheries (now retired) Samuel Wilmot, who was chairman of the Commission, has been received. The report is full of interesting and valuable data, particularly as one of the chief objects of the Commission was to obtain information and testimony direct from practical fishermen and others interested regarding the spawning periods of the more important kinds of fishes. As a result a close season is recommended for brook trout from Sept. 15 to March 31; for lake trout, from Oct. 15 to Nov. 30; for doré (pike-perch), from April 1 to May 31; for beach bass, from May 10 to June 30; for mascalonge, from April 1 to June 15; and for bullheads and catfish, from May 1 to Aug. 31. In some instances more than one hundred fishermen gave testimony before the Commission regarding the spawning season of some of the fishes mentioned.

Every investigation that has ever been instituted to determine the spawning season of black bass has resulted in showing conclusively that black bass, whether in Long Island waters of New York, or the waters of Canada, spawn all during the month of June, and yet New York State adheres to an open season for this fish which begins on May 30.

The Canadian Commission gathered information as to the nets used by commercial fishermen, and in summing up the result of the inquiry Mr. Wilmot says that the prime causes for the depletion of the fisheries are: Fishing in the spawning season and while fish are congregating for that purpose. The great destruction of immature fish in pound and gill nets and seines. Waste of great quantities of fish in the use of unlimited lengths of gill nets. The use of too small meshes in all nets, etc.

The waters covered by the inquiry are those which lie between Canada and the United States, and the entire report may be read with profit by fishermen on this side of the line. Riding down on the Champlain Division of the D. & H. R. R. a few days ago, the conductor complained to me of the net fishing in the lake and said that in the express car of his train there were twelve barrels of pike-perch taken on at two stations, and probably they represented but a small proportion of the catch of the day before. I have seen bunches of little pike-perch 6 or 7in. long offered for sale in the towns near by Lake Champlain, because, as I supposed, they were too small to market elsewhere. New York and Vermont have complained of the ravages of Canadian net fishermen in boundary waters, but if the suggestions of the Canadian Commissioners are carried out the north wind may blow some complaints in from the Dominion.

Fire-Fishing.

Fire-hunting is an old practice, and so, too, is a certain style of fire-fishing; but I believe that fly-fishing by firelight is not common. Five or six years ago I first heard of it and it was recalled to me by a friend to-day. Pharaoh Lake, east of Schroon Lake, in the Adirondacks, contains what I contend are the most beautiful of all brook or speckled trout that I have ever seen. There was a legend at one time that these trout would not rise to the

fly, and to take them at all they must be fished for with bait, and about the best bait for them was a piece of sunfish. I cannot at this moment recall just how it came about, that it was discovered that when a fire was lighted on the shore at night the trout would come into the firelight near the shore, and would then take the fly readily. I have heard that Dayton Ball, of Albany—a well-known angler who haunts Pharaoh at certain seasons—was the man who patented fly-fishing by firelight, but there are other legends about the trout and trout fishing of Pharaoh, and I may have the matter wrong in my mind.

A friend has just returned from Pharaoh, and he tells me that during the day bait-fishing was poor except by trolling a small spoon with a worm on the hook—a mode of fishing introduced by Aleck Taylor, a professional fisherman from Lake George. This is a modification of the method of fishing for lake trout when they are 20 to 30ft. below the surface, for that is the distance below the surface at which Pharaoh trout are usually caught with bait.

My friend says that it was far too early for fly-fishing, as the ice was only recently out of the lake and the water was high and clouded. Upon failing to take during the day, except as stated, by trolling below the surface, a fire was lighted at night on a big rock sloping into the water. This attracted the fish, and by fishing where the fire was reflected on the water he caught trout, suckers, bullheads and sunfish. The bait was angle worms, and he could not tell the species of fish hooked until it was landed. Had he tried a fly, I presume he would have taken trout as readily as with bait, as the fish came into water that was not more than 5 or 6ft. deep. The Pharaoh trout are covered with a sheen of purple, as sea-run trout take on a silver coating, which shines in the sun as no royal purple ever did. In some fish the red spots are almost entirely absent, and in others but few red spots show. They have been famous for their beauty and flavor as long as I can remember, and were once thought to be a different species from the *fontinalis*.

New Woods for Rods.

The last issue of *Fishing Gazette*, London, mentions two new woods used in making fish rods. One is called pangord, and a correspondent says that he considers it superior to any other wood and fully equal to split-bamboo, at about one-half the price, and that it will cast a longer line than the correspondent's split-bamboo. The editor is not as enthusiastic about the new wood as the correspondent seems to be, for he says: "That it supersedes everything yet introduced in the manufacture of fishing rods for strength, lightness and durability combined—supersedes split cane and greenheart. Well, all we can say is that we heartily wish anglers had at their service such an extraordinary wood for rods."

The other wood is called steelwood, and is highly recommended by Lieut.-Col. Hitcheson, who says: "It is lighter, I think stronger, and more resilient than greenheart or any other wood. I have frequently put a strain on the smaller rod when taking a big fish in an awkward place, when I thought something must go—but no; and as soon as the strain was off, straight as an arrow again." The editor speaks highly of this wood, and of a sample in the rough says: "It seems to us to be of an extraordinary nature, for when broken, after standing a very severe strain, it is just as if you had broken a dozen strands of very tough fiber which had been cemented together. Steelwood rods seem to have a good future before them." There is nothing to show in either article the specific name of the wood; more's the pity.

A. N. CHENEY.

DO FISH SLEEP?

Editor Forest and Stream:

I saw an article sometime ago in FOREST AND STREAM asking for some light on the subject of fish sleeping, and if you will allow me space, I feel satisfied that I can convince your readers that not only fish but all the rest of God's creation that has blood requires sleep.

During my long journey through life, I have spent much of my time in learning the character and habits of the dumb creation. I have frequently caught asleep many different families of fish that inhabit our waters, but as for shell fish that have no blood I know very little about them, although I have watched crabs and lobsters for hours at a time, and have never yet caught one asleep.

I have learned that a crab that inhabits the water and a spider that inhabits the land, are possessed with more natural instinct than any of the dumb creatures that have come under my notice, neither of which has blood or brains; if they have, I have never been able to discover it.

I have discovered that large fish, as a general rule, sleep much sounder than small ones.

I will tell you a good joke. A few years ago, one beautiful calm morning about the first of September, I got in my little skiff and started out on the Susquehanna flats to see if there were any bluewing ducks about, and, while standing up in my skiff, pushing her along in shoal water as clear as a crystal, I happened to cast my eyes down, and, to my utter astonishment I saw a very large rock fish which I suppose would have weighed all of thirty pounds, lying on his right side on the bottom. I concluded as he was so quiet that he was dead, I gave him a punch with my paddle, which woke him up and frightened him so bad that he came mighty near capsizing my skiff. I was so certain that he was dead before I struck him that I guess I was frightened as bad as he was. I soon learned that there was a whole school of them around me, and I judge that they were all asleep, but they were not long in finding the deep water.

After I arrived home, I told one of our fishermen of what I had seen and wished for him to have been there with his buck net and laid around them as he might have captured them all.

"Oh no," he said. "My friend, I have had an apple out of that bag and once is quite sufficient for me."

Said I, "What do you mean? I don't understand you."

"Well," he said, "if you won't say anything about it, I will tell you."

He then told me that he once found a school of rock fish in shoal water asleep, and very quietly laid his buck net around them and, after he got them surrounded, he sent one of his men with a pair of long gum boots on, with an oar to splash in the water to wake them up and drive them into his net. When they woke up it was a sight. They were frightened so bad that they were like a flock of sheep when frightened. They made a rush at his net that cost him over two hundred dollars, and tore it all in threads. They never stopped until they reached deep water. They tripped up three or four times the fellow that had on the gum boots, and he was frightened a sight worse than the fish. This is no fish story but the truth.

HAVE DE GRACE. E. B. GALLUP.

BOSTON AND MAINE.

BOSTON, May 16.—Reports from the early fishermen who have gone to Maine are not yet very flattering. Mr. F. P. Stevens writes that he has caught a few trout at the Narrows, Richardson Lake; one weighing 3½ lbs. Unexpectedly he found the water low in that lake, but within a day or two Metalic Brook began to come down "with a perfect roar;" the result of melting snows. Since that time the lake has been rising at the rate of two inches a day. A Lewiston gentleman writes me that the fishing has continued very good indeed in Lake Auburn. H. H. Hanson, president of the Lake Auburn Fish Protective Association, took another big salmon from that lake the other day. P. G. Buckland and Charles Bolster, of Lewiston, took nine trout and one salmon the same day.

Mr. Walter F. Perkins, of Wakefield, well known in the Boston shoe trade, will leave Sunday night for Spencer Bay, Moosehead Lake. At Oldtown, Me., he will be joined by Capt. Frank Delaney, Henry Portier and Frank J. Perkins. They will be quartered at Camp Easy. They go for fishing, and expect to find it good, as some of the gentlemen are experts in that direction. Mr. Harry B. Moore, with his cousin George C. Moore, the North Chelmsford manufacturer, will hardly go to the Inglewood preserve for fishing this spring. They sail for Europe on the 25th of May. They will visit Scotland, where Mr. George C. Moore will look up some manufacturing interests, and where the gentlemen both have invitations to fish some of the celebrated Scotch Locks. It will be remembered that they have fished the Maine resorts together for many seasons.

Mr. L. Dana Chapman has just returned from his trip for landlocked salmon. Five of the party of seven came home to-day. They have visited Weld Pond, where they fished for salmon, in company with Fish Commissioner Henry O. Stanley, a part of the time. They struck most terrible weather. Sunday it rained, and Monday it rained—rained in fact about every day they were absent. They got only a salmon or two at Weld Pond, and after a day or two with but little success they gave up and went by rail to Mechanic Falls, after being delayed one train at Dixfield by a river full of logs, and seeing the train they intended to take whiz by without them. At Mechanic Falls they went across the country with teams to Sebago, "for landlocked salmon fully bent." They had a glorious ride across the country. But at Sebago the water was high and the weather was cold and rainy, and the "first run of salmon" was over. In all, the party had four salmon when the five broke camp—leaving two men to try their luck still further. The largest salmon taken weighed 3½lbs. They also got six red-spot trout. Mr. Chapman did not get a single salmon, and has the courage to say so. About the only strike he got, however, was on the Stanley Smelt he was trying.

Dr. Jefferson Scales, of New Brighton, S. I., called on me yesterday. He is on his way to some fishing resort in Maine; thinks strongly of going to Round Mountain Lake. He is troubled with asthma, and, as of old, he expects relief from the higher altitudes of Maine. He is alone this time. His old friend Hempstead, with whom he fished so many years at the Middle Dam, is at home sick with rheumatism. Mr. Hempstead visited the Middle Dam annually for a good many years, and was always one of the most genial and companionable of anglers. At that time there were several records and diagrams of the big trout he had caught on the inner walls of the Middle Dam camp.

Mr. F. B. Stevens, of Boston, and Dr. Hilton, of Lowell, have made a fishing trip to a protected brook on the Cape, in the vicinity of Marshpee River. They found fair fishing. Mr. Stevens mentions landing eight trout from under one bank. But he is not pleased with "bog wading" for trout fishing, though the trout that come up from the salt water are gamy and nice. One fish of good size was taken. Later they intend to make a genuine trout fishing trip and will doubtless try some of the brooks on the line of the Phillips and Rangeley Railroad, where the little train very kindly stops for the trout fishermen to get on and off.

May 17.—The latest reports from the Maine trout lakes speak of more high water, with the streams very full. The last rain seems to have been a regular downpour in the vicinity of the Rangeleys. Brook fishing has been a failure for several days; but not so some of the lake fishing. Reports begin to be better. A special to the Boston *Herald* yesterday, from Haines's Landing, Mooselucmaguntic Lake, says that the fishing is the best for years. Miss Grace Hobart, daughter of Henry Hobart, of East Bridgewater, Mass., in two hours from the Mooselucmaguntic House yesterday took five trout, weighing respectively 6lbs., 4¼lbs., 3½lbs., 2lbs. and 1½lbs. Mr. E. B. Whorff, proprietor of the Mooselucmaguntic House, is much pleased with this record, and doubtless the young lady is also pleased. Mr. Hobart is a veteran fisherman at the Rangeleys.

Mr. Clarence Hayes and wife are at the Upper Dam on a fishing trip. A card from Mr. Hayes yesterday says that the fishing is good. Mr. Hayes is manager of the Atlas Insurance Co. here. While mentioning the insurance people it is in order to say that the "Insurance Party" of former seasons to the Upper Dam is badly broken up. Mr. George H. Gerard, of Brooklyn, N. Y., who accompanied Mr. C. E. Ackerman, of the same city, for a number of seasons, seems to have given up the Rangeleys. He is now on a trip to Port Medway, Nova Scotia. He is accompanied by Mrs. Gerard, his physician and lady, and a Mrs. Meserole, all of Brooklyn. Later the ladies are coming home—after the trout and salmon fishing season is over at that point—and Mr. Gerard is to be joined by Mr. E. E. Patridge, vice-president of the North American Insurance Co., this city. They will go to a salmon river in New Brunswick, in which Mr. Gerard is interested. Mr. Ackerman will not be with them this year. He also has tired of the Rangeleys, or has found better fishing. He is interested in his cottage on the shores of Lake George, where he can have his horses and carriages and more of the comforts of life. His early success at the Upper Dam was phenomenal, as well as that of Mrs. Ackerman. But later the trout seemed to go back on them.

Mr. Gerard is a great lover of fishing, and his outfit of salmon flies is something to delight the heart of the devotee of that sport. His book boasts many a fly that cost much money, time, patience and skill. He also wears a charm that was truly made for an angler. On one side there is a perfect fac-simile of a Jock Scot salmon fly cut in enamel. The workmanship is perfect. On the other side, in raised gold, is a representation of water, and, just leaping to the fly, is a trout done in colors. Anglers here, who have seen the charm, are "wild over it." It was done by Tiffany, of New York, though designed by an angler.

Mr. E. E. Patridge, with Mr. Wm. G. Peck, president of the Arlington Savings Bank, and one of the directors of the North American Insurance Co., and Mr. H. S. Paine, another director, is about starting on a trout fishing trip to Passaconaway, N. H. They know of some good fishing in the Conway region. Doubtless it is the brooks that are to be fished.

Another party of fishermen from the leather trade is off for the Rangeleys. In the party are Messrs. H. A. Phinney, Harry H. Baldwin, Warren Page and James Gormley. They left Boston last evening by boat for Portland, thence to Rumford Falls by rail, where they will be met by J. A. French's teams and carried to the South Arm. From thence Tom French's steamer will carry them to the Upper Dam. Mr. Phinney says that the first trout he ever caught at the Upper Dam, on his first trip there, weighed six pounds. That made him a convert, and he has visited that resort regularly about every year since.

Mr. J. Parker Whitney, owner of those beautiful camps at Mosquito Brook, who has written so instructively concerning salmon fishing in salt water in the winter in the FOREST AND STREAM, is still at his other home in California. He is expected some time next month, however, on his way to his home at Richardson Lake. He calls his camp his home, and a most delightful one it is. He will doubtless spend the most of the summer and autumn there.

May 18.—More reports of better fishing at the Rangeleys are coming in. A private letter from Mr. E. A. Dow, dated at Camp Stewart, Tuesday evening, says that Mr. Dow caught trout weighing 4½lbs. that morning. Doubtless he has obtained many smaller ones. Mr. Harry Dutton, with a younger Mr. Houghton, of the celebrated Boston dry goods house, are now at Mr. Dutton's camp on the island in Lake Cupsuptic. They are reported to have taken several large trout. Mr. Morrison, of Boston, has taken six good trout from the Big Lake: one of 4½lbs., one of 4, 3½, 3, 1¾ and 1½lbs., with a lot of smaller ones. Some of the sportsmen put those little fellows back into the lake. Another party has taken twelve trout from the Big Lake, weighing 24lbs. Judge Whitehouse, of Augusta, Me., is reported to be on his usual spring fishing trip. He is the guest of his friend, Mr. Wilbur, at Camp Chatauqua.

Another sporting paper is talked of in Maine. It is hinted that it will be published at Rangeley. It is one thing to go a-fishing and another thing to tell of it. How would it do to fit a small printing office right in the boat?

SPECIAL.

BOSTON, May 18.—A Boston man lately removed to Calais, Me., tells me that the fishing at Grand Lake this year has been exceptionally good. Many salmon have been caught, quite a number over 6lbs. in weight. This little city (by the way) is one of the most accessible places in the State to a good fishing country. It is only 20 miles to Princeton, then a very short distance to Big Lake, and from there but 2¼ miles of that noted Grand Lake Stream to Grand Lake itself. Across the St. Croix River lies that noted sporting county, New Brunswick. A short journey on the Shore Line Railroad from St. Stephens brings one to the celebrated MacDougall and Didgeguash lakes, and Bonney River region, all a splendid section for trout. Tom Sullivan's house at Bonney River, and his camps at the other interesting points, are the main stopping places for sportsmen, and the worthy Thomas is noted far and wide for his genial hospitality. Few men are better acquainted with this region than Charles F. Beard, of St. Stephens, N. B. This gentleman will leave with quite a party on May 25, to spend two or three weeks in the vicinity of Mr. Sullivan's domain. Another party, some of whom have visited the Bonney River region before, will leave Boston on May 19 to spend four weeks there. The gentlemen who will go are H. F. Hanson, John A. Ordway, Jr., Frank H. Babcock, George D. Loud and Frederick Parker, of Boston, and James H. Higgins and Mr. Jacoby, of Newburyport, Mass. FOREST AND STREAM is promised some of the results of the trip on their return. Mr. Edward Boynton, of Boston, owner of the yacht Magnolia, with quite a party of others, has just returned from Grand Lake. They report a good time and splendid fishing.

O. A. Benoit, Mr. Pierce, Harry Morse and Mr. Sibley, all of Worcester, and known to sportsmen of that city as the Nessmuk Club, brought in twenty nice trout as the result of an afternoon's fishing at Bumbo Brook. This stream was recently mentioned in FOREST AND STREAM as one of the brooks near Worcester on which very good fishing could be obtained by those who knew how. That the "Nessmuks" are posted in this respect is certain. Messrs. Benoit and Morse are particularly expert at brook fishing, and can generally get trout where none are supposed to be. O. A. Benoit's knowledge is not confined to fishing alone, but extends to the manufacture of rods and even reels made strictly for his own use, and occasionally for an intimate friend. Although engaged in another business, and in a sense but an amateur in tackle making, some of his split bamboo rods are marvels in construction and equal to any I have seen.

Dr. Greene, his brother from New York city, and one other gentleman, will on Monday next go to Long Island, Lake Winnepesaukee, N. H., to spend a week at trout fishing. Dr. Greene has a summer home on Long Island, where he spends much time during the fishing season. He is especially fond of black bass fishing, and generally has some friends up from the city to help him enjoy the sport. A number of heavy lakers have been caught this spring almost from the piazza of his house, so near the water is it situated.

Mr. Archibald Mitchell, of Norwich, Conn., stopped over in Boston for a few hours last week on his way home from Bangor, where he has been devoting a few days to salmon fishing. He succeeded in capturing two fish, one weighing 28lbs. and the other about 21lbs. The large one was unusually heavy for a Penobscot salmon, the average of these fish generally scoring much less than that figure. Mr. Mitchell has been an annual visitor at the Bangor pool for some years, and has also enjoyed some

very fine salmon fishing in the provinces. He is an adept at the art and dearly loves the sport, but this year will deny himself the annual trip to the provinces, as he intends shortly to sail for Scotland, where he intends spending the summer. He will devote himself over there to grouse shooting, etc., and expects to have some good sport of that kind. Another Norwich man, who is generally found at the Bangor pool in Mr. Mitchell's company, is J. M. Johnson. He is also a persistent angler and gets his share if there are any fish in the river. It seems to be the opinion of nearly all the men who have fished at this pool for a few years that the salmon are growing more scarce each successive season, and if the present state of affairs continues it will not be long before this celebrated water as a salmon fishing resort will be only a reminiscence. I sincerely hope with many others that these fears will prove groundless.

Quite a wonderful record was made this year at Moosehead Lake by a party of Bangor men, who took, only two days after the ice went out, about 300 trout, all with the fly. This is very unusual and worthy of comment. The fishing was done off John Ross's wharf at Williams's Stream and one other point, and the party consisted of Dr. Stetson, Mr. Walker, Ezra Stearns, Dr. Gibson, F. H. Small and Mr. Arnold.

That great New Brunswick salmon stream, the Grand Cascapedia, is reported to be full of water, owing to the heavy melting snows up in the hills among which it takes its source. A number of Boston men are only waiting for word to come that the stream is in good condition to make a start. Mr. C. B. Barnes is one of the old veterans of this water, and has fished the Marquis of Lorne pool for some years with great success. Mr. Lyman Nichols will probably accompany him this year, and they hope to be on the stream early in June. Mr. F. B. Greene will also fish the Cascapedia pools further down the river. In addition to salmon, splendid sea trout fishing can be had on this stream, and there rarely comes a time when one cannot obtain either.

Judge A. C. Stone and E. F. Coburn, of Lawrence, Mass., left on Saturday last for Moosehead Lake, where they will stop at "Capens," on Deer Island, for one week, to enjoy the fishing. From there they will go to Mr. Coburn's camp, situated on Russell Stream, about one and a half days' journey in from Northeast Carry. This camp is located in a great game and fish country, and the trophies annually secured by Mr. Coburn in this region are very numerous. Another Lawrence party who left last week for the Maine woods are Dr. C. W. Partridge and Clarence M. Dyer. They went in from Eustis's and will stop two weeks at the Blakeslee camps.

E. O. Noyes and J. Chipman, of Brockton, have just returned from Weld Pond, where they have been stopping for a few days at Pine Point Camps. They had excellent luck fishing, catching five landlocked salmon and fourteen lakers during the three or four days of their stay.

J. E. Gallier, F. A. Keith and Dr. Hall, of Boston, have returned from a trip to Newfound Lake, N. H. They were very fortunate, catching a number of lake trout and salmon, the largest of which tipped the scales at 15lbs. There were many fishermen at the lake during their stay, and most of them were doing well. Mr. Gallier, Col. Benson, William G. Read and others left on Friday last for a ten days' trip to Moosehead. They will stop at the Kineo House and fish the lake and streams near by. Frank Harrison and Mr. Heinisch, both connected with the Heinisch Shear Concern, of Newark, N. J., have also gone to Moosehead for a ten days' fishing trip. They will stop at the Deer Island House. Mr. Harrison is a veteran in Moosehead fishing, and knows every nook and corner where the trout hide.

The shoe manufacturing business of Lynn is heavily represented in the Grover and Swain party, the first section of which (consisting of C. S. Grover, J. F. Swain and W. S. Hixon) left Lynn on May 14 for a two weeks' stay at Capt. Fred Barker's Camp Bemis, Rangeley Lakes. The rest of the party, Mr. Frank T. Arnold, wife and daughter, of Peabody, Mass., and Willis W. George and wife, of Lynn, left on May 17 to join the others. I believe this is Mr. Hixon's first trip, but he certainly could not have placed himself in the hands of better teachers than Messrs. Grover and Swain will prove to be.

W. G. Russell, one of Boston's most prominent lawyers, his son and Rev. John Cuckson will leave in a few days for Canada on quite an extended fishing trip. Mr. Stevens, a gentleman very prominent in Canadian politics, will join the party at Montreal. They are going after large fish, and, judging from the past record of the Messrs. Russell, will succeed in getting them. HACKLE.

The Kingfish.

ASBURY PARK, N. J., May 16.—Here is a bit of news which will be welcomed by all lovers of salt-water fishing. I have visited the markets of both Philadelphia and New York the present week, and learn that kingfish are coming in in unusual abundance from the coasts of the Carolinas. If the weather holds good this should give us fine sport by Decoration Day. These fish have been very scarce during the past three years, and unless the entire run is taken in by the pounds, we have some sport near at hand. To the angler who has never taken this supremely game and toothsome fish a few points may be of assistance. The tackle should be much the same as that ordinarily used for weakfish, except the hook, which should not be larger than 3-0. (I have always found the Chestertown admirable.) The bait either shedder-crab or blood-worm, and always presented to them at or very near the bottom. Of course, if fishing in the surf, bottom fishing has to be practised; but this can be modified a little, and greatly to the advantage of the angler, by placing a small piece of cork midway the length of the leader. This will buoy the bait a few inches from the bottom and be much more readily seen, besides keeping it free from the annoying sea-spider. When fishing in an estuary a float can be used to advantage, having the line well leaded, and paying off with the tide. And by all means fish the flood tide, as that appears to be the only time at which they feed. Again, the instant the bite is felt, strike firmly, but not too hard, for the alertness with which the kingfish can steal a bait often proves a surprise to the novice. When hooked the kingfish offers as fine play and strong resistance, weight considered, as any fish I have ever taken. LEONARD HULIT.

"GUNNERY" TALES.

Editor Forest and Stream:

It was several years ago that I used to catch black bass in Waramaug Lake, near Washington, Litchfield county, Conn. In fact, to be correct, it was thirty-one years ago that I went fishing up there with Ol Gunn, and had such a nice time that I have often thought of it since then at night when I was alone in camp among the whispering pines away up on the slopes of the Rocky Mountains, or down on the big prairies, where many a night, behind some little bank that answered as a windbreak, I have lain and the past has unrolled itself before me like a panorama, and "the cares that infest the day have folded their tents like the Arabs and silently stole away."

And now I'll tell you about it as well as I can.

One noon in '64, Ol Gunn, a cousin of F. W. Gunn, was tired of resting and wanted a change, so he asked me if I wanted to go fishing. It was Friday. Waramaug Lake was four and one-half miles away, and I used to take a blanket, some grub, my rod and creel, walk up there, pass the night in a barn on the shore of the lake, cook an early breakfast, get a boat, fish all day and return home at night generally well loaded with black bass, and so tired that I couldn't cut up any of my usual monkey shines for one Sunday anyhow.

Ol Gunn was a soldier home on furlough. He had been a prisoner, and when he was exchanged he was so weak that he got a furlough and came home to recruit up. He was about thirty-five years old and was one of my ideals of a soldier. Tough as a pine knot, open and simple as a child, a good talker and companion, never out of temper; but he would fight a circular saw if the saw seemed to want to fight real bad.

"Do you want to go up to the lake fishing, Dick?"

"Why yes, of course I do, if F. W. will let me. But he may refuse me. You ask him and he will probably let me go."

I knew I was, or ought to be, on the black list with F. W., for I had—well, yes, I'll tell you what I had done. I had greased the lowest step of Miss Mary O'Halloran's private staircase with lard—Miss O'H. was the cook. She weighed 250lbs., and when she hit the step she sat down hard, then told F. W. about it and said she knew I had done it, for that I was the "manest" boy in the wide world.

Poor F. W. had called me before him and lectured me a little, and then said, "Dixon, I don't know what to do with you," sighed, smiled and turned me loose. But I knew he couldn't refuse Ol anything, and, as I anticipated, I was shortly called up and F. W. said: "Dixon, Ol wants you to go fishing with him. You can go, but get back by 9 o'clock to-morrow night, or you will hear from me." I was sixteen years old, 5ft. 11in., weighed 115lbs., could eat 2lbs. of beef at a sitting; light hair, blue eyes, pale and looked very delicate, but was as tough and tireless as a black snake. So at 4:30 off we went on foot, my creel packed full of food prepared by the fair hands of Miss Mary O'H., who had recovered from her jar, and who couldn't ever stay angry with me more than half an hour at a time.

The road is very hilly, but we made it in an hour. I once more looked at that beautiful sheet of water and was glad that I was alive. Six miles long or more; crystal, cool water, surrounded by green hills covered with big trees. Mysterious bays indent its coast. Little sandy beaches are at the heads of the bays that were made on purpose to beach a boat on. One or two rocky ledges run down into the water, where big bass lie like tigers to catch the unwary minnow as he comes past. And the birds! Oh, the birds! they sing all day, and at night the whippoorwill whistles his mournful, creepy cry; and it is a relief when a big owl says boomingly, Who-who, who, and from far up the mountain side rolls down the reply of his mate.

We sat and feasted our eyes, and then we rented a boat from Sherman, who kept a little office on the shore, where he rented boats and sold soda pop and other beverages. It took us but a short time to catch a pail full of minnows, for I had a bait net hidden in Sherman's barn and long before dark we had four 1lb. bass sputtering in the frying pan. I can smell those fried fish and that coffee yet. Ol smoked his pipe after supper and I set a line or two for eels and soon caught and skinned enough for breakfast. There was no moon. Ol went to sleep and I tried to, but I couldn't, so I slipped out and sat on the wharf and caught more eels. It was very dark, but it was nice. A mink crept up on the wharf while I went up to the barn for some lunch from the basket and commenced lunching on one of my eels. When I came back he jumped into the water off the wharf with a great splash and startled me.

Finally I quieted down, crawled in beside Ol and went to sleep, with an owl, whippoorwill and bullfrog chorus sounding fainter as I passed away.

It's hard for me to go to bed and just as hard to get up, and so Ol pulled down the blanket and threw some water on me when he had my eels cooked brown. I'll give him credit, though; he called me about six times first. Whew! how good eels fried and new potatoes boiled are outdoors.

Then up the lake in a rowboat, Ol managing our two poles, 50yds. of line out and a spoon hook for bait. Before we had got well started, bang! here comes a savage bite. Up goes a 2lb. bass into the air, and the day is commenced. By noon we had more than we could carry home; by night we had given Sherman all he could carry, and two men who passed when we were getting dinner all they cared to take home.

At about 6 o'clock Maj. Burnham (a cousin of Ol), who was home on a furlough and lived near the lake, invited us to stay over night. I was afraid to, but Ol said he would fix F. W. when we got home, so up we went in Burnham's carriage, with 60lbs. of fish to carry home and a big string for Burnham.

He lived in a pretty cottage, half a mile from the lake, midway between the lake and the village of New Preston, a mill town with power furnished by water from the lake.

After supper we men went to a Second Advent camp meeting, where about 500 were camped, and attended services in a big grove lit up by torches and large fires.

Next morning I got home at about 11 o'clock. Ol fixed F. W. so that he did not say anything to me that would hurt my feelings, and sixty people had fresh fish for breakfast Monday morning. I can't or will not tell about any fish we caught, but we caught them with a spoon, with live bait, with a big fly, and with worms and grasshoppers. They would bite anything, but they bit live bait best. Sherman now has a hotel on the bank of the lake, and I hope to fish there again with some Gunnery boys before I stop fishing. W. J. DIXON.

THE "SAGINAW CROWD'S" CAR.

SAGINAW, Mich.—*Editor Forest and Stream:* I enclose herewith a couple of circulars describing our car. The floor plan might be of interest to sportsmen so that they may know what a hunting car is like.

In the parlor end, the chiffoniers are mighty handy, for each man can have a drawer with his own lock and key, to carry all his clothing. They hold as much as an ordinary sized trunk, and thus obviate the necessity of taking trunks or any other baggage, and there are enough of the drawers to accommodate a party of 12 or 15 very nicely.

Facing the passageway are the gun racks which can be locked up, are dust tight, and are lined with plush so that there is no danger of marring the guns.

Underneath each berth is a large drawer containing the car linen. The bathroom is a great feature. After one has been away from the car for a few days on a hunting trip, this feature is appreciated.

Then we have a nice large kitchen with a refrigerator in the corner which is big enough to hold all the supplies wanted for several days. We also have a charcoal broiler in addition to the range.

From the side view of the car proper you will notice the locker arrangement underneath, being the same on each side. The large locker we use for carrying a Bond portable boat in which we can put a folding camp stove, two tents, tent pins, etc., besides leaving room for decoys. Then fastened alongside of this locker are the long poles belonging to the tent, together with a light ladder which we find mighty convenient to have along. The other locker is divided so that one side of the car, opened by three doors, is a fine refrigerator. Putting ice in the center compartment leaves two cold storage compartments in which you can carry no end of perishable supplies, or keep fish and game if needed. In the opposite side is simply dry storage for carrying non-perishable articles.

Our tanks are arranged to carry lots of water, 500 gallons or more. This is something which is appreciated by those who have been side-tracked at little stations in the western prairie country where it has been difficult to get water. A great thing to have lots of it on hand.

On the rear platform, the kitchen end, one side is without steps, and serves to hold a large chest that we can use for carrying an extra supply of coal, or it is lined for an ice box.

The weight of the car is 86,000 lbs., and it has six-wheel trucks with outside bearings, everything strong and modern, making us feel that we are as safe as can be, and are in no more danger of being jammed up than the strongest car on the train. Plates of iron are bolted on the sills of the car, running the whole length. We have steam heat, which is also arranged so that we can heat ourselves when we are not on roads that heat by steam, couplers that will connect with cars on any road fix us so that we can go anywhere that railroad cars can be run.

We take along a cook and porter and aim never to overcrowd the car. Too large a party spoils the fun.

The question is often asked, "What does it cost to have a car pulled?" This is easily answered. The majority of the roads require eighteen tickets, some of them require but fifteen. It makes no difference how large the party is, provided it does not exceed the number of tickets. If it does, then you have to buy a ticket for each passenger in addition. Taking everything into consideration, we find that with a party of six or ten, it doesn't cost us as much to go off on a three weeks' trip in the far West as it would if we went without the car and paid for sleeping cars, dining cars, hotel bills, etc. W. B. MERSHON.

DETROIT FISHING NOTES.

IT is reported that fish in Flint River, Genessee county, Mich., are dying by hundreds from some unexplained cause. Large fine fish can be seen swimming along the stream near the shore in a lifeless, half-unconscious condition, and can almost be taken from the water by the hands.

There have been discovered upon some of those thus taken small ulcers, a peculiarity never observed in this locality before, and it is feared that some disease is affecting the fish in these waters.

A black bass similarly affected was seen by a gentleman who had been at the St. Clair Flats this season. The fish, which was a large fine-looking fish, was swimming lazily about in the water, and manifested no alarm upon the approach of the visitor. After watching him for some time, the gentleman quietly bent over, and, putting his hands slowly under the fish, lifted him out bodily, the bass making no struggle to escape. The back and sides of the bass were covered with a deep green slime, and what appeared like the barnacles that are found on the hulls of vessels. After examining the fellow for a few moments he returned him to the water, and shortly after again took him out with his hands as before. The fish was undoubtedly sick, but no dead fish nor any other affected like this one were seen in the vicinity.

Fishing in Lake Michigan on the west coast of Michigan, in the vicinity of St. Joseph, is the poorest in years this spring, so much so that the fishing tugs Hahn, Sanford, Violet and Payne have been hauled off, and others will be laid up soon. The catches, which formerly ran from 1,500 to 2,500lbs. per lift, now yield but 50 to 300lbs.

American fishermen in Canadian waters are having a decidedly interesting experience this spring with the authorities. The cutter Petrel has already made two large hauls of nets belonging to American boats, which were discovered inside the boundary line.

Last week, in one day, eighty-two gill nets were picked up twenty-two miles south of Rondeau, six miles inside the limit. The nets contained about a ton of fish. The following day over 100 nets were captured and taken to Amherstburg. All the nets, it is said, belonged to Cleveland parties. The vigilance of Canadian officials is making poaching in those waters very unpleasant and somewhat expensive. If every gill net fished in Lake Erie, whether in Canadian or American waters, were utterly destroyed, it would be a blessing to the fishing interests of these waters. FRANK HEYWOOD.

DETROIT, May 11.

WHY DO HOOKED FISH LEAP?

FRANKFORT, Ky., May 13.—*Editor Forest and Stream:* Please put my "affidavy" alongside of "Kingfisher's" in the matter of response to Dr. Ellzy's statement that fish only leap from the water through fright when hooked.

Why can't a fish have instinct for self-preservation as well as a fox or a deer or a squirrel, and resort to expedients to save its life? Fright may be the original predisposing cause that induces such expedient, but the action is not a mere blind, unreasoning, frantic movement, such as Dr. Ellzy intimates. I have seen bass over and over again thrust their heads out of the water, and with open mouth shake their jaws as "savigerously" as Dr. Ellzy could wish, until it seemed they would dislocate the muscles of the bass anatomy in the effort to dislodge the hook. They would come to the surface after fighting below its line without avail, and standing on their tails, as it were, open their mouths and shake as a terrier sometimes shakes a rat in the attempt to remove the cruel barb, and sometimes it went flying through the air and the line came back limp and with a scornful slackness that gave a sinking feeling to the heart.

There was no doubt about the object and purpose of this shaking—no more than to doubt there was a bass at the end of the line that wanted to get back to his accustomed haunts. The shaking was not a mere physical contortion, without instinct, performed *en route* during the leap in a spasm of fright; but the bass did it premeditatedly, with a mature forethought, by exposing a part of its body above the surface, using the water as a fulcrum and the free air as room to do business in.

A small-mouth black bass is one of the gamest of game fish, and there's no telling what he is capable of when the mood strikes his brain. Last summer, when fishing near Alpena, Mich., in company with C. C. Farr, of Frankfort, Ky., I hooked a 4½-pound black bass that performed the double act of first standing on his head on top of the water and then reversing, standing on his tail, in the desperate struggle to get away—which he didn't.

At another time, as heretofore related in FOREST AND STREAM, I saw one leap from the water and strike dead a butterfly that was winging its zigzag flight across the surface. Oh! they are darlings—the dear, daring and delicious small-mouth black bass. Look in his eye when he is in the midst of his efforts to get from your silken chain, and you'll see the devil there as plainly as ever you saw it glare from the optic of the royal maskinonge.

As for the catfish, they don't do things that way. I have caught hundreds of them—mud cat, yellow cat, blue cat, channel cat, shovel cat—and I never saw one leap from the water in fright or from any other cause. They fight beneath the surface, and generally rely on main strength and awkwardness, coupled with a certain amount of stupid stubbornness, to get loose from the hook. The big ones will often go to the bottom and sulk, and no amount of persuasion outside of a sharp prod will induce them to move.

Old Lish McCurdy once caught a catfish with hook and line below Lock No. 4, on Kentucky River, that weighed close to 100 pounds; but to tire him out, he had often to stir him from the bottom with a long pole to keep him on the move.

My knowledge of the black bass is "a condition and not a theory," as is that of dear old "Kingfisher," my comrade of many seasons in wrestling with this gallant warrior of the waters, but I much fear that with Dr. Ellzy it is a "theory" and not a "condition." OLD SAM.

FISHING ON THE NICHNABOTANY.

Editor Forest and Stream:

Up in the extreme northwest corner of the State of Missouri there is a quiet, unassuming little river called the Nichnabotany. For years it flowed on in quiet and peace, finally emptying into the Missouri River a few miles north of the city of St. Joseph; the last twenty-five or thirty miles of its course parallel to its burly neighbor and is separated from it only by a narrow strip of land. One day, however, the ever restless and uneasy Missouri took a notion to change the scene of its operations, so taking a sudden shoot into the State of Missouri, it cut the little Nichnabotany off, giving it a new outlet some twenty-eight miles north of its former mouth. Whether this may or may not have been satisfactory to all parties concerned, the fact remains that it left a fully developed river bed with no visible occupation or means of support.

Ordinarily, the old bed would have dried up and that would have been the end of it—not so with "Nichny," however; it quietly went to work, closed the old outlet with sand, gathered to itself a number of cold springs, and kept right on doing business at the old stand. With the outlet dammed up, the water deepened and formed a long, narrow lake of clear, cold and sparkling water, twenty-eight miles long, fifty yards wide and with an average depth of about twenty feet. Whether it should be called river, lake or bayou, no one seems to know or care. They just call it the "Nichny" and let it go at that.

The many natural advantages it possesses make it an ideal fishing water. What with the fish left there when its character was changed and the fry since planted by the State Commissioners, it is fast coming into prominence as a desirable resort for anglers, and with proper care and attention will be second to none in this section of the country.

In the matter of protection it has every advantage. The banks are lined with trees and, as the water increased in depth, those nearest the water were overflowed and killed, gradually falling and being blown into the stream. The network of treetops, limbs and stumps puts an effectual barrier between the finny tribes and the vandals with seines, and the majority of those owning land along the banks are alive to the importance of its fish supply. They will not themselves indulge in illegal or wanton destruction, or permit others to do so knowingly.

I understand that dynamite and set nets have been used to a small extent, and I know from my own observation that trot and set lines are used. The only thing caught on the latter, however, they claim, is channel catfish.

It contains quite a variety of fish—black bass (large-mouth variety), croppie, pickerel, sheepshead (locally called drum), blue and channel catfish, and I understand that recently the Commissioners have planted a large number of wall-eyed pike and rainbow trout. None of the latter two have been seen since planting, but I have no doubt they are taking on avoirdupois in some part of the stream and will be heard from in good time.

For two or three seasons past I had heard rumors more or less vague of this place, and had determined to investigate for myself at the first opportunity; and therefore, when my friend, Robert Lorton, suggested to me the other day that it was fishing time, and that he had heard that the fish were biting on the "Nichny," it didn't take me long to get ready. I just took my Bethabara in one hand and my tackle box in the other, and together we started for the depot, with Langdon, Mo., as our objective point.

One P. M. found us at our objective point, and, after a hurried dinner, rods were put together, a boatman hunted up, and off we started in search of the bronzed-back warriors, as some of the brotherhood put it. Several parties from St. Joe and other towns were on the stream and reported indifferent success. Friend Lorton, however, is the Christopher Columbus of this stream, and knows every spot in which a bass can hide. Inside of fifteen minutes he had hooked a bass that tried the timber of his rod, and the skill acquired by many years of practice. Shortly after this, something tried to steal my nice new hook and the pretty little green frog that was kicking for joy on the point of it. First it got mixed up in a log jam, and when I carefully and with infinite pains extricated it from that, it hunted up a submerged tree top and tied my line into all sorts of complicated knots.

It at last consented to move, under the boat, however, and with such suddenness that in the shock my tip broke in half. Then there was grief—with a broken rod and a strong pull I finally got the gentleman to the surface and within reach of the landing net. It proved to be a channel cat of 5lbs. weight. How is that for the much despised catfish?

After landing this fish I sat down to rest and repair damages. With the aid of my jack-knife and a piece of line I managed to splice the broken joint together and went to work again.

Our outing was brief, only twenty-four hours, for Brother Lorton had to return to his business and I to mine. But short as was our stay, we returned to the city infinitely refreshed, and I convinced that the Nichny was a spot well worth revisiting. Our catch, while not large, was enough to satisfy all reasonable mortals: seventy bass running from ¾ to 3¾lbs. each, and a few channel cats and sheepsheads.

While on this trip I tried a lure that was new to me. Our supply of live frogs was limited and I tried a frog made of rubber, and the results were thoroughly satisfactory in every way. W. R. H.

JEWFISH AND TARPON TACKLE.

Editor Forest and Stream:

The big fish at the Pass have been biting freely all winter, and in the last month some especially fine catches have been made. Tarpon and jewfish, or the black sea bass, have come up into the shallow waters in immense numbers. A few weeks ago thirteen tarpon were caught in one haul of a seine; and to top the thing off, seiners at Corpus Christi Pass caught a jewfish that weighed 1,015lbs. That is no "fish story" either, but can be proven for the benefit of any doubting Thomas.

The real fishing with rod and reel, trolling for tarpon, has been excellent. Monday Messrs. Albert Maverick, A. W. Houston, Reagan Houston and P. H. Swearingen returned from the Pass with a score of five tarpon, not speaking of smaller fish. A. W. Houston and Reagan Houston each captured two and Mr. Swearingen one. Mr. Maverick hooked a large one, one of the biggest ever seen to leap from the water here. He ran out with the 200yds. of line and kept right on going, taking hook, line and a piece of Mr. Maverick's thumb with him.

Week before last 26 jewfish, from 80lbs. up to 300, were caught at the Pass, principally on hand lines.

Such news as this gives me the fever, and you may be sure that as soon as possible I will be down there on a vacation.

Monday I received a letter from Ode Wilson, which I inclose with this, and if there had been any doubt about my going before, it all vanished when I read it. Of course I don't agree exactly with Ode's ideas of a correct jewfish tackle, and I am going to try to get him to make a trial of 200yds. of 21-thread linen. Following is the letter:

"ARANSAS PASS, Tex., May 12.—*Dear Friend:* Yours of the 8th received several days ago. Glad to hear that you are coming down. Yes, I have the sloop Iola for the season; also the Edith, which is in first-class order and as fast as any boat on the bay. She can carry eight or ten persons, but has camping room for three or four. The Iola has camping room for eight or ten. I charge $3 a day for the Edith and $5 for the Iola. I carried out on the Edith yesterday twenty-two people to a boat race off Wilson Island

"About the fishing tackle—you know what a good tarpon outfit consists of; and in regard to the jewfish tackle, I have been trying all the spring to get a reel large enough for the purpose, but have failed. I sent to New York for the largest reel I saw advertised, but find it entirely too small for the common cotton line that I have to use for the jewfish. The idea of the coiled spring is very good; that is, if you could get a spring small and long enough to recoil about 100ft. of good big line; but I believe that the best tackle for this big fish would be just the same as a tarpon outfit, only about five times as heavy and stout as the largest tarpon outfit.

"I have hooked several jewfish that I could not handle on account of not having long enough line and not being able to pay the line out with a good, strong tension. The fish, when he finds himself hooked, goes off so fast that it would burn my hands to hold even the tension on the line that my common cotton lines would hold. By this you will be able to get my idea of a jewfish outfit.

"I consider the jewfish a very game fish, and he makes a good fight until he is pulled into shoal water, when he gives up, and is easy to handle except for his immense weight of from 50 to 1,000lbs. The jewfish's main fight is his first long strong pull, which he makes just as soon as he is hooked, and I have my first fish to lose after breaking this first pull. After that they make several more rushes, but not nearly as strong as the first. This is why I would recommend the extra heavy rod, reel and line. I will also use a cork on the line, just the same shape as a common fish cork, only about 5in. in diameter and about 15in. long. These I have already made and tried, and found to be a success. I landed a 100lb. jewfish the other day with one of these corks on my line, and I tell you it was fun to see the big cork bob. He bit like a perch two or three times, and then the big cork went down to stay. I was out in a skiff and the big cork stood off about 50ft. in about 20ft. of water. I was in no hurry about landing him, as I knew the big cork would keep up the slack of the line so that the fish could not get the hook out of his mouth, and I could tell by the pull that he was no 500-pounder, so I just played him about until I got ready to take him in.

"There have been more jewfish caught at the Pass this spring than common; twenty-eight in one week were reported; but the catch early in the season is always small fish, ranging from 50 to 200lbs., but the big fellows will be biting by the time you come down. The 1,015-pounder that was caught at Corpus Christi Pass was caught in a seine.

"Now, if you can get 300 or 400ft. of good stout linen line ½in. in diameter, and two good reels that will take 150ft. of that line, I will pay my part of the cost, and when you come down we will give the big jewfish a trial. And this outfit will be just the thing for the tarpon, we will only have to change the hooks.

"Write me when you are coming and I will be ready for your trip, and in the meantime if you find the kind of tackle that I speak of let me know. Yours,

"O. S. WILSON."

If some FOREST AND STREAM reader can tell me where to get some such tackle for my friend I will appreciate it. And then if some of those same readers would like to spend the month of July as comfortably as though they were in the mountains, and with no mosquitoes to bother them, they might join our party. As for myself, I can hardly wait. WILL M. S.

SAN ANTONIO, TEX.

THE FLORIDA FREEZE AND FISHING.

ROXBURY, Mass., May 13.—*Editor Forest and Stream:* Having seen no account of the remarkable winter in Florida and its effect on the winter's fishing, it occurs to me that it might interest your readers to know what the Florida freeze did.

With some friends I left St. Augustine, Dec. 11, on my naphtha yacht to cruise around the coast of Florida to Charlotte Harbor. Taking the inside route through Matanzas River and out into the Atlantic to Mosquito Inlet, and then through the Hillsboro River to Mosquito Lagoon, through Haulover Canal to Indian River and down Indian River to Jupiter Inlet, we passed though a 'most lovely winter climate; and through from New Smyrna to Rockledge, the fine orange country; then through the pineapple plantations to Lake Worth. Passing out of Jupiter Inlet we ran out into the Atlantic to Biscayne Bay. We arrived here just before the freeze of Dec. 28.

At Miami and Cocoanut Grove the thermometer went to 27° above zero—a most unusual freeze. All tender vegetation was killed, but not the cocoanuts nor any trees. At Cocoanut Grove the day after the freeze I saw men and boys scooping up kingfish, Spanish mackerel and other varieties with scoop nets—the fish being so chilled that they could not swim. We could not quite understand why they did not work into deeper water.

As we passed down Biscayne Bay by the inside route, we saw dead and dying fish all along—sharks, tarpon, catfish, Spanish mackerel and all sorts of smaller fish; this continued all the way to Florida Bay. As we rounded Cape Sable we still saw some floating.

At Marco, on the west coast of Florida, we saw many of the same variety and some mullet, jewfish, mangrove snappers, cavalli and ravelli. It was the same in the Colloosahatchie River and Charlotte Harbor.

On Jan. 27, four weeks after the first freeze, we were up the Myakka River—which runs into Charlotte Harbor—and this is the record in our log book: "Jan. 27—Tried tarpon fishing at the old pool. In passing up the river to the pool we passed thousands of dead fish, some large tarpon, many small ones. Saw ten tarpon lying in one heap with scales all on. The shores were lined with bones and hundreds of whole fish; and this after a month since the freeze in December. There are thousands of buzzards and vultures, eagles and crows, feeding on them. Even the catfish seem to be all killed.

"The stench was so great it was very uncomfortable staying here. This river seems to have suffered more than any place we have visited—possibly because it is shoal and runs nearly north to south, and as the norther which brought down the cold had a clean sweep, and blew the water out of the stream. It was almost beyond belief that such a sight could be possible.

"We shot some yellow leg snipe, but they were so lean and poor that they were hardly fit to eat. The small shrimps and sand worms were no doubt all killed, so they had no food. The only fish which seemed to escape in this river were the mullet. We saw no dead ones. They are rich in oil and no doubt not so easily chilled."

The tarpon season was not so good as usual, and the winter continuing so cold seemed to keep this fish in or near the Gulf. The fishing seems likely to change next year to the inlets and to a different manner—no more bottom fishing, some say. MYAKKA.

Fishing with Minnows.

Editor Forest and Stream:

As I devour the contents of the paper and puff away at my friend—a pipe—I read that "Jay Pee" wishes information as to the "best way to hook a minnow to insure living on the hook." I do not give a great deal of time to sport, but I think I have hooked about as many minnows on hooks during the time I have to spare as most men—around here, at any rate.

My way is: Never keep a minnow in the hand or out of water longer than necessary. I use the finest hooks I can procure and always attached to gut. Hook the minnows about the center, just below the back fin, and be sure not to touch backbone with hook. By hooking thus the minnow will balance on hook, will live longer, swim around more actively, and if a fish takes the minnow the fish is almost sure to be well hooked.

I have tried hooking minnows by the tail, the head, and by inserting hook in the mouth, through the gills, and then slightly in belly; but I prefer to pass the hook through the back, just below the fin. I always use live bait; don't care for fly, spoon or phantom minnow, and detest the use of worms.

I was glad to hear of E. Hough's way of keeping minnows while traveling. My way has been to have two pails—where I could not procure fresh water—both pail

full of water. When starting out I keep all the minnows in one of the pails. When they begin to come to top of water, I pour off the water and pour in water from other pail; when they come up again, pour both water and minnows back into first pail, and repeat as often as they rise to top. I sent 500 minnows a distance (by rail) of 100 miles in a three-gallon pail, cover reversed, with a hole in center, and placed a large piece of ice in the cover, so as it melted the water would run into pail, and thus keep water fresh. Only one died.

During the summer I have a tank in the yard, with waterworks pipe to supply it water, and an outlet that connects with drain. I have had as many as 3,000 minnows at one time. I am always ready for an outing at a moment's notice. Fish for sport, not for market. An outing is refreshing after 54 hours' confinement indoors.. If there is a better way to hook minnows, would like to hear of it.

E. T. L.

THE CANADIAN ANGLING SEASON.

Editor Forest and Stream:

The Canadian fishing season has opened with a rush. To-day a large party of American anglers chartered a special train on the line of the Quebec & Lake St. John Railway to reach their club house at Kiskisink. These gentlemen are all members, or guests of members, of the Metabetchouan Fish and Game Club. They were preceded a few days ago by Major Bailey, patent solicitor, of Washington, and Mr. Parker Page, of New York, whose catch so far has been a very large and satisfactory one. In to-day's party are Dr. Porter, of Bridgeport, and Major D. F. Read, of the same place, whose father, D. M. Read, was president of the State Senate. These gentlemen last year made a remarkable cross-country trip of some 200 miles by canoe from Kiskisink, ascending the Metabetchouan to its headwaters at the height of land, thence to the headwaters of streams flowing into Lake Kenogami, and afterward over other heights of land to the waters of La Belle Riviere, by which stream they reached Lake St. John.

Another splendid tour that may be made from the headwaters of the Metabetchouan is over a series of divides to the south until the waters of the River Ste. Anne are reached, bringing the tourists out at St. Raymond, only a few miles north of the city of Quebec. This trip was made a year or two ago by Dr. Porter's two sons, the same young gentlemen who had just then rescued two Montreal youths from a pretty sorry plight on the lower waters of the Metabetchouan. The Montrealers went into the river to swim, miles from any camp, leaving all their clothing, provisions and supplies in their canoe, which they partially drew out of the water on to the bank. Unnoticed by them the canoe floated off by itself at the head of a heavy rapid, in which it overturned and was wrecked, destroying or losing provisions, clothing, guns and rods. It was the height of the mosquito, black fly and sand fly season, and when, foodless, clotheless and shelterless, the two adventurers were discovered by the Messrs. Porter a couple of days later, they were a pair of living pictures more fit for the hospital than for the stage.

Other members of the party that left for Kiskisink to-day are: Mr. Coe, of Meriden, chairman of the executive committee of the Metabetchouan Club; C. E. Mitchell and J. H. Flagg, of New York; J. P. Stevenson, Wallingford, Conn.; J. Stevenson, G. H. Wilcox, W. B. Ives, G. A. Fay, J. S. Fay, A. Chamberlin, W. B. Cashen, Samuel Dodd, W. Huffurd, N. W. Sims, O. H. Platt and W. B. Hall, of Meriden, Conn. Among those who are bound to-day for the Standacona Lakes are: Messrs. W. H. Swift, E. T. Brooks and Preston Lea, of Wilmington, Del.; L. W. Beecher, of Westville, Conn., and Sheffield Philps, of New York.

Lakes Beaufort and St. Charles have already yielded some good baskets of fish to city anglers, who can reach them from Quebec in a couple of hours' drive. But the center of attraction for heavy fish at present is Lake Edward, where a number of Canadian anglers are camping, some of whom report among their catches red trout over 5lbs. in weight.

Ouananiche have been taken for over a week past by bait along the Roberval shore of Lake St. John and at the mouth of the Metabetchouan. There is no doubt, too, that by this time they would rise at the fly, but nobody has so far tried them this season that I can learn of. Fly-fishing in the Grande Décharge for ouananiche will undoubtedly commence this year in the first week of June.

E. T. D. CHAMBERS.

QUEBEC, May 18.

TEXAS TARPON.

SAN ANTONIO, Texas, May 13.—Tarpon were never so plentiful at this time of the year as they are at present at Rockport and Aransas Pass. Last Wednesday, May 8, our Hon. A. W. Houston, Mr. Reagan Houston, Mr. Albert Maverick, accompanied by Mr. P. H. Swearingen, of the law firm of Swearingen & Brooks, left for Rockport and Aransas Pass to try their hand at tarpon and other minor fish. Up to Friday afternoon they were fortunate to land five very large tarpon, each one a royal beauty that would send the blood of any man coursing through his veins at the rate of forty and a half miles an hour. Mr. Swearingen landed one, Mr. Reagan Houston two and the Hon. A. W. Houston two; Mr. Albert Maverick hooked at least ten or twelve, but was unfortunate at landing on account of having a very delicate line. The news spread very rapidly to San Antonio, and on Saturday, May 11, the following party of gentlemen started for the tarpon grounds at Rockport and Aransas Pass, and a right merry party it was: Louis Frankel (with his koninoor), Wm. Hardie, Allen Irvin, Gen'l Agent of the S. A. & A. P. Ry.; E. G. Seng, who talks to all the ladies on the train and loses his grip; Mr. E. K. Bixby, T. P. A. of the great and only Vandalia Line; Jacob Waelder (honest Jakie); Fred. Dagget; P. Wooldridge, who has to go courting at every station he comes to and gets left at Rockport; E. J Coward; Ira N. Turner, who don't know what it is to say no or refuse; J. A. McDonald (silent Jack); G. P. Spaulding; J. Hamer, who says, "Boys, keep quiet or I can't go again;" W. Berry, who was lost; J. C. Mangham, who knows how to fish, and L. F. Meyers to pull the corks and keep the flies off the mess chest. They expect to stay some time, that is if they can keep Frankel and Seng in their limit with their harness on.

Mr. Swearingen's catch was his maiden tarpon, and he has grown at least a foot and several inches taller, and says that tarpon fishing beats practising law. L. F. M.

Game and Fish Protection.

Minnesota Association.

THE Minnesota Game and Fish Protective Association is now an accomplished fact. At a meeting yesterday afternoon in the assembly room of Temple Court, attended by a number of prominent amateur sportsmen of the Twin Cities and outside towns, a constitution was adopted and a full set of officers elected. From the euthusiastic way in which those in attendance took hold, the association is assured of success from the very start.

The meeting was but the consummation of a vigorous campaign which has been conducted by a few enthusiastic sportsmen, with the close co-operation of the State Board of Game and Fish Commissioners. S. F. Fullerton, executive agent of the board, has been very active in the movement, and was present at the meeting yesterday. The association will be a voluntary auxiliary to the State officers, and one of its prime objects is the prevention of poaching and other violations of the State game laws. Every fine collected on information furnished by the association will be divided, one-half going to the State board, the other to the association. A number of local clubs, organized for trap and field shooting, fishing etc., have already signified their intention of joining the association in a body. Besides a large contingent from Minneapolis and St. Paul, there are clubs in Duluth, Crookston, Alexandria, Tower, Ely, Breckenridge, Perham, Park Rapids, Northfield, Nashua and South Haven, which are expected to co-operate. These clubs are none of them organized for game protection, but have been working in that line, and hail the State association as a great move in the interests of amateur sport.

The officers were all elected by acclamation, as follows: President, Uri L. Lamprey, St. Paul; first vice-president, W. S. Benson, St. Cloud; second vice-president, F. F. Davis, Minneapolis; third vice-president, E. S. Palmer, Duluth; secretary, Wm. L. Tucker, St. Paul; treasurer, Wm. L. Woolford, Minneapolis; attorney, H. P. Goodenow, St. Paul. A number of new members were then voted in, increasing the number on the rolls to 241.—*Minneapolis Times, May 16.*

Frank Lawrence.

IN Japan there grows a peculiar grass with properties deadly to American ducks. It is cut by Jap farmers, woven into suits for duck hunters to wear, and so imported into this country by Frank Lawrence. When a man sets out to kill a duck, he puts on one of these Lawrence suits, makes himself look like a bunch of grass, and fools the fowl. It is a long shot from Japan to America, but the Jap grass kills American ducks, and for that matter it could quite as easily kill the American eagle. Mr. Lawrence formerly did a big business in Chicago. He expects to do a bigger one with new headquarters in New York; and wishes all his old customers to know that in his new association with Henry C. Squires & Son he still keeps up his own business in all its branches.

Many Anglers

now say that the best reels for the money are the improved "Expert" Reels—and for little money at that. All dealers have them.—*Adv.*

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

THE DOG IN LIFE AND DEATH.

"WHERE is my Dog? or, Is Man alone Immortal?" is the title of a book of 202 pages, by Rev. Charles Josiah Adams, and which, as the title implies, is devoted to the question of the dog's existence and immortality. The treatment of the subject is exhaustive and able. The preface contains a brief explanation of the author's purpose in writing the work. He says: "Man never does a serious thing in his life without some reason. Every effect has a cause. I have been asked why I wrote this treatise. With all who think I have asked the question: Is man immortal? This question is intensely active when one has lost a friend. My dog Tip was a surer friend to me than most men and women whom I have known. When I lost him, I asked: 'Where is my dog? Is death the end of the lower animal? What argument adduces in favor of man's immortality that goes not to establish a belief in the immortality of the lower animal?' The question of man's immortality can not be answered without an analysis of man's nature. An introspective analysis gives only the elements of my nature. May there not be some elements of human nature which I lack, or which are so faint in my composition that they are not noticeable or apt to be overlooked? * * * As I regarded each faculty, I found it not only related to matter, but also to substance—that it pointed to immortality. Then the primary question which had started the train of questions—the question, 'Where is my dog?'—caused me to ask: 'What faculty or element of nature has the man which the lower animal has not?' I was astonished to find how nearly man and the lower animal are one as to faculty. If one as to faculty, then what is the essential difference between them? If no essential difference, then, if man be immortal, must not the lower animal be immortal also?"

In the first chapter the author touches upon the love, loyalty and devotion of the dog. "Your servant and your friend once, he is your friend and your servant always. Open the door of his cage or slip the bridle from his head and your bird or your horse will fly or gallop, with note or neigh of joy, to his own kind. Your dog is as naturally gregarious, but you can not ever drive him away from you. He licks the hand that smites him, and rubs the whole length of his back upon the foot that kicks him. Your cat loves your house or your rug, not you. The love of place is a primary love with the cat. When you move into another street, he will not follow you. The dog has the love of location as well. There is some particular spot in the house where he loves to sleep. The dog turns around before he lies down. Why? Because, we are told, his primitive ancestors had their home among the reeds of the Nile, and turned around to push those reeds away that they might lie down. We can imagine the same reeds rising and bending each time any one of these early dogs arose from or lay down to his rest, because simply he had lain there before. You may form the modern dog's habit as to place, if he is your dog, by placing a garment which you have worn there. You may hear him settling upon it with a low sound of satisfaction, because it reminds him of you. The love of place is a secondary love with the dog. There are three upon whom man, in his virtue, may always depend—God, his mother, and his dog. This is the great trinity of love. There are two upon whom man may always depend so long as his iniquity is not proven—his mother and his dog. There is one upon whom man may always depend, no matter how miserably fallen—his dog."

The author then recounts, in an interesting manner, the dogs which he has owned and the individual traits of each. Of two he writes: "Dennis was never a favorite with the mistress of the house. He was a great, sprawling, awkward brute, that made more noise and dirt than a whole pack of average dogs should have made. As a murderer of sleep, he was worse than a critic or a tin bath tub the faucet of which is defective, and which is constantly sucking into the escape pipe what it appears to think is the last gill of water. His snore was uniquely strident and discordant, and he never recovered from an omniverous disposition to chew. * * * When Dennis would get a rebuke, Tip would get a caress. Where Dennis would be stricken with the broomstick, Tip would receive a gentle-voiced reprimand. Tip was even more widely known than Dennis. He was nearly as ugly. He was small—about two-thirds as long, tail and all, as your arm—with eyes as confiding as those of Dennis; they were brighter, more active, and seemed to be 'the windows of a soul' that was anxious for the incoming of more light. He was very receptive; you had little trouble in conveying a simple idea or even a plain thought to him. When he understood what you said, or when he wanted you to do something for him, or when he had performed some one of the numerous tricks which we had taught him, his eyes fairly gleamed, and his beautiful tail (after the white spot on the very end of which he was named) waved and switched like a willow wand in a storm. He would have been called a cur, I presume. He was pure in the cross between the Dandy Dinmont and the poodle. Excepting the spot on the tip of his tail, to which I have referred, and a narrow vest, he was black as 'the cloth.'

"He had one bad habit, of which he could never be broken; he would bark. He never did nip anybody, but I have always believed that a trio of exquisite young gentlemen who boarded next door feared for their lavender pantaloons or the pink skin of their calves. At any rate, as I sat reading my paper one morning, I heard a cry from my wife in an adjoining room, and on looking up saw through the folding doors the poor little beggar roll over in a fit. I sprang to my feet and rushed for a physician. He sneeringly remarked that he did not treat dogs. I had only time to say as I turned away that I had, when a boy, owned a big bulldog named Joe, that I would like to see treat him; but the remark did Tip no more good than a milder one would have done. When I reached home Tip was dead, and my wife, whom I had never before seen very demonstrative in grief, was sitting near where he lay on the floor, the tears running through the fingers of the hand which she held to her face, and convulsed with sobs. I went up to the boy's room—he not having risen yet—and told him what had happened. Shall I confess it? We cried together—the man as deeply moved as the boy, and as unable to control himself. Tip was gone from us, by the road by which Dennis went a couple of years later. He was poisoned. I was very anxious to know who did the miserable deed. Though—I might as well confess it, for it will crop out sooner or later—though a parson, I wanted revenge. Some one asked me in a company of gentlemen, whether I would pray for the man who poisoned my dog, did I find him. I replied: 'I would pound the daylights out of him,' and added: 'I might pray for him when he got so weak that he really needed it.' And on mature deliberation, I do not know that my remark was too strong."

The reverend author asks and answers the question, "Who may say what may not be immortal? If the dog is immortal, then we would not probably be going too far in concluding that all sentient beings are immortal. And may not the empire of sensation be wider and deeper than we imagine? Man can see and hear and feel. It has taken the world untold ages to realize this as true of all men. Does a kick hurt the laborer as badly as the nobleman, the servant as the millionaire? Before our civil war, did any one imagine that the black mother really loved her baby as much as the white mother? A French nobleman before the Revolution had no more thought of giving pain in smiting a peasant than in striking a stone. The fundamental kinship of man is a modern discovery. Now, the question is: 'Are not all sentient beings akin?'"

"I ask the question, Where is my dog? not because I think the dog the only animal that should be immortal, nor the only one that can be loved. There is something in every animal that responds to man and something in man that responds to every animal, because man is the microcosm—all animals in one."

In the chapter entitled "Annoyances and Immortality," the author says: "But some will say: 'You speak of animals that are faithful, intelligent, beautiful and beloved. How about the loathsome and the annoying?' I may answer here briefly: First, that there are few animals that are not faithful in return for faithfulness. What animal has shown himself more faithless than man—than especially the Anglo-Saxon. To slaughter is man's instinct. We decoy that we may fill with shot; we scratch the pig's back while he feeds that he may contentedly grunt and grow fat, that we may eat him; we speak gently to the horse as we hold out the salt in our hand, that we may bridle him, ride him, sink our spurs into

him, maybe kick him because he was so hard to catch. Read human history, and say whether any animal in the kingdom is so faithless to his kind as man. The adage goes, 'All things are fair in love and war.' The same rule largely applies in business. The very man who makes the loudest professions of friendship is the one to watch, lest he may 'hug you hard, that he may after scandal you.' I do not write this as a pessimist. The side of a man's faithfulness I know; but if you pronounce against the lower animals because of their faithlessness in my case, man must go, too. This is the point that I make here. Second, there are other intelligences than those which make an animal attractive to man. Even the clam learns from experience when to close and when to open its shell. Then there must be whole worlds of intelligence which come not within the sphere of man's cognizance. We only get hints of what is without and of what is within through the telescope and microscope."

From the inferential to the material, the author makes his points as follows:

"Passing from the general to the specific, physically man is a beast, and a beast is a man. The same bones and nerves and muscles enter into the composition of your horse or your dog that enter into your composition. He has the same organs. With some difference in detail, he is built on the same plan. We must not be too proud. The hog is more nearly man physically than any other animal. The difference in detail is the result of the difference in relationships of correlation. * * * Between man and his dog, or his horse, or his bird, physically, the difference is not in element, but in arrangement of elements."

As to the scope of his effort, the author states that in the treatise he proposes to—

"(1) Call attention to the fact that man possesses the physical faculties in common with the beast.

"(2) To tacitly, or more openly, insist that if their exercise makes the beast of the earth simply earthy, they do the same for man.

"(3) To attempt to show that in a degree the lower animal has the intellectual, moral and spiritual faculties in common with man; and

"(4) To try to discover whether there is any argument in favor of man's immortality which may not give us a hope for a future for our more humble brethren who can not speak for themselves.

"All chiefly in the hope that I may slightly lessen the sum of mundane misery by lessening the number of thoughtless strokes and kicks and cuffs to the dumb, and open up to human vision new empires of God's love."

The reverend author then dwells most forcibly and interestingly on traits common to all immortals: The fear of death, courage, "a glimpse of the future through the stomach," the desire to possess, secretiveness, forethought, "what others think," self-esteem, firmness, amativeness, grief, friendship, love of home, continuity, individualization; perception of forms, size, weight, color, order, numbers, locality; individuality, memory, time, tune, conveyance of ideas, cause and effect, recognition of character, agreeableness, the reflectives and immortality, ideality, imitation, mirthfulness, conscience, hope, spirituality, veneration and benevolence.

To appreciate the work in its full broadness and kindliness, it must be read in full, and the least that any reader can gain from it is a better appreciation of the true value of all animals and an admiration for the author who writes of them so interestingly, courageously and intelligently.

DEATH OF A MOHAWK FOX.

SYRACUSE, N. Y.—*Editor Forest and Stream:* I notice that the columns of the FOREST AND STREAM have something every week about all kinds of hunting. I find but little in regard to fox hunting, a sport I admire more than all others. I see in the issue of Jan. 5 how the foxes in the Mohawk Valley are committing many burglaries and how the correspondent says the boys are going to make the fur fly. How many times I have made the same resolution, and alas! how many times it has been broken. Of all the game that is hunted "Mr. Fox" (allow me to call him Mr., for he is worthy of that title) is the most cunning and shows more generalship than all others combined. I had been told several times of a large fox that had been committing bold burglaries on the farms. Several attempts had been made to bring him to justice, but had been unsuccessful. I have a dog that has grown old in the art of fox hunting, which I think is as good a foxhound as can be produced.

I went out one night last week to where the fox had committed his depredations, passed a very pleasant evening with a farmer and his family, and retired about 11 o'clock, and was soon asleep. About 5 A. M. I heard the dog moving around, and I tried to make him lie down; he would be still for a few moments, but would get up again. Thinking he must be sick, I got up and let him out; the moment I opened the door he went out. As the house set back about three or four rods from the road and his long black nose went up into the air, I knew in an instant what it meant. I called to him to come back, as it was not yet daylight, but he had got a good scent in the wind and commanding and coaxing were in vain. He turned his head around, and with his eyes snapping said as plainly as a dog could say, "Come on;" then turning his head, he made a few jumps and was over the fence, and away he went toward a large hill a mile away. I could see him as he crossed the lot, as the moon was bright and there was not a cloud. In a few minutes he gained the top of the hill, up in the air that nose went again, and I heard the challenge sent out, long and clear as a bugle cry. I instantly turned and made for my room. Quickly getting my gun, I went quietly out. I could just hear his voice as it came floating back on the still morning air till he went out of hearing. Back of "the corners," as it was called, was a long hill where the foxes used to cross. I hurried as fast as possible, wishing to get there so as to get a shot if he should cross, and I had gone about half way when I heard him coming back. When I saw the fox on the hill where the dog first struck the track, he looked around for a minute and then started and took the road, and ran by the house I had just left. I watched him a few moments, and then hurried to the top of the hill. I could see him coming through the lots, and was satisfied he would cross the hill I was on, as he had made a circle around "the corners." Back of the house he turned and came straight toward me, with the dog about a quarter of a mile behind. He came along till he was about twenty rods away, stopped short, wheeled to the right, and went like a flash below me on the other side of the hill. His nose had saved him. The dog appeared to be gaining on him fast, and back they went to the hill where I first saw him. The dog was gaining fast as the fox came over the hill, and the dog got his eye on him and then the race began. They came down the hill at a rate of speed that would ruin the fast time of the Empire State Express. When the fox reached the road he turned and came straight for the hill where I stood; the hills were about half a mile apart and a little up grade. I could see him straighten himself out, and he looked like a red streak; he was doing his best, but it was of no use. The old campaigner had met his match at last. Pilot was gaining every jump, until at last I could see his neck begin to stretch out and his mouth would open and close for the white spot on the end of that bushy tail. It was soon over—he got a little closer, and the race was finished. I hurried down the hill, picked up the fox, and got back to the house at half-past 8. For once my resolution had been kept. S.

The Foxhound.

Editor Forest and Stream:

The foxhound is my favorite dog. Since my early youth I have owned and followed hounds, and to me there is nothing so sweet as the excited cry of the hound when nearing the quarry.

When one has spent two decades in the study of one subject, the experience and opinion of the student and observer should be worth something.

The first hunting I ever did was with a pack of leather-eared, dew-clawed hounds. We hunted gray foxes, and these hounds would cry a track eight hours old, and gallop and give tongue freely on a trail that the modern hound would not notice. They would smell on a chunk or bush, turn around and open four or five times in the same place.

These blue ticked hounds seldom failed to jump a fox that they could trail. And what music when the fox was up, for two of those hounds would give as much tongue as ten of the modern hounds. You could sit on your horse and listen. There was no need to dash over fences and gullies, for they would run an hour and scarcely get out of hearing.

If we had good luck we would catch the fox in four or five hours. Sometimes a little gray would run all day and then give them the dodge. These hounds never appeared to grow tired. They had a steady gallop from which they would never vary. They were fine dogs to drive a deer through a stand.

Then the red fox took possession of the gray's grounds and we soon discovered that our hounds were not fast enough, even to warm up the reds.

They all made good coon hounds, so we gave them away and purchased hounds that were fast and game enough to catch the red fox; at least, that was what the man wrote from whom we bought the hounds. They did not do it, however. We got rid of those hounds, retaining only one or two. We continued to buy and kill out until at last we got a fair pack, which we have been steadily improving ever since, until we can now catch any red fox in open country.

The red foxhound should be a good, steady hunter, going in a fast trot or slow gallop. He should not dash helter-skelter, but hunt with judgment.

A hunting pack is always a game pack.

When a trail is cried the pack should be gotten together as quickly as possible, and the hounds should all work industriously.

They should give but little tongue on a red fox trail, as a much closer jump can be obtained thereby, and a good jump is always desirable. I have seen hounds work a running trail all day on account of too much yelling and tongue at the first strike.

A running trail is much harder on a pack than a race for the same time, and it is imperative that a pack have good trailers—the more the better.

The red foxhound should be keenly built, well muscled, have a straight hindleg and be of medium size—a large hound can go up hill fast, but a small hound can go down hill the faster.

A pack should be of as nearly the same speed as possible—have no leader, he is an abomination and will ruin any pack. When a hound strikes off the scent he should remain ahead until another leads, and so on.

A red foxhound should always dash or circle to the front, for a single minute lost means a quarter of a mile for the fox. A red fox never stops until the chase is ended, but a gray fox will lie down in a brier patch within 20yds. of the hounds.

A pack to be successful fox killers should be fast and game to the core, and never let up for a moment during the chase.
